The stage and screen works were first and foremost a lucrative proposition – Shostakovich's first film project, the 90-minute score for Kozintsev and Trauberg's silent film *Noviy Vavilon* ('The New Babylon') of 1929 – netted him 2000 rubles; this payment enabled him to holiday that summer in the Crimea (the return flight to Moscow cost 54 rubles). In these scores he was able also to indulge his predilection for grotesque humour, at the expense of caricatured bourgeois-capitalist figures. However, the thin plots and crass production values made these projects frustrating to work on, and in the case of *The New Babylon* the participation of a live orchestra, playing from defective parts, produced a fiasco. Nor did political correctness guarantee the approval of the proletarian-dominated press. Regrettably, Shostakovich was obviously more fluent in producing satirical caricatures than affirmative paeans, so that the music representing the decadent bourgeoisie tended to be more enjoyable than

that portraying the heroic-revolutionary, positive role-models.

1929 also saw Shostakovich's first commission for a ballet score. *Zolotoy vek* ('The Golden Age') came about as the result of a competition for a ballet on contemporary ideological themes, and the results were as keenly scrutinized as *The Nose* had been. Aleksandr Ivanovsky's storyline, concerning a group of Soviet sportsmen foiling capitalist opponents during an industrial exhibition in 'Fasch-landia', went through many variants at the committee stage, and its progress through rehearsal was fraught with difficulties, reflected in the complex picture presented by surviving scores. The eventual première in October 1930 was a public success; despite savage reviews, productions followed in Kiev and Odessa. Shostakovich's dissatisfaction with the piece focussed primarily on the theatrical and visual aspects of the production. He publicly resolved to commit himself in future only to projects that excited him and over which he could exert a measure of artistic control; *Lady Macbeth* was already at the back of his mind. In the meantime, however, he had further commissions which were hardly in line with this resolution, including a second ballet, *Bolt* ('The Bolt') which was composed during the period 1930–31 and concerned the topical subject of industrial 'wreckers'. In the summer of 1931, he was persuaded to provide music for a vaudeville show at the Leningrad Musical Hall, entitled *Uslovno ubitïy* ('Declared Dead'). The story, loosely based around the topic of civil defence, features a character who is 'declared dead' during an air raid drill, but it also contrives to work in a dizzying array of circus acts. As with several of Shostakovich's theatre projects of this time, the fun and games seem to be the main point of the exercise, the ideological dimension just a pretext. This at least is how many such projects were received at the time, which makes the outrage they provoked in some quarters the more understandable.

Shostakovich was initially excited by the prospect of working with directors of the calibre of Meyerhold – on Mayakovsky's *Klop* ('The Bedbug') in 1929 – and Mikhail Sokolovsky at the Leningrad Theatre of Young Workers (known usually by its Russian acronym TRAM). Originally a forum for amateur performances of agit-prop plays, TRAM had turned professional by the time Shostakovich became associated with it (from 1929 to late 1932). After some initial enthusiasm on Shostakovich's part, disillusion soon set in. As soon as he sensed the official line turning against the proletarian wing, he distanced himself from the theatre.

Near the end of 1931, he reflected on three years of work mainly in the service of theatre and film. He rated only his Third Symphony and *The Nose* as worthy contributions to Soviet art, and with the exception of the planned production of *Hamlet* at the Vakhtangov Theatre he resolved to abstain from theatrical commissions for five years. He took the opportunity to lament the 'catastrophic' state of Soviet music in general. This duly brought forth a vituperative response from RAPM, but his views chimed in with official reasons given for the shakeup the following year with the creation of the

Composers' Union. Whether Shostakovich had foreknowledge of the impending reorganization is not known, but he was certainly in the select consultation group that met in April 1932 with Lunacharsky's successor Andrey Bubnov to discuss the formation of the new Union. Shostakovich served on the governing body of the Leningrad branch from its inception in August.

The Nose had been a conspicuous exception to the tacit requirement that stage works should display positive ideological commitment, and as such, it had demanded special pleading from the composer. Notwithstanding the negative reactions in the press, Shostakovich had now become the focus of hopes for the future of Soviet opera, which in the past 15 years had failed to produce a single new repertory piece. Having turned down various proposed projects, Shostakovich plumped for his own idea to adapt Nikolay Leskov's short story *Lady Macbeth of Mtsensk District*. With the help of Aleksandr Preys he fashioned a libretto and worked on the composition on and off between September 1931 and December 1932. So confident was he of its quality that he had negotiated productions in both Moscow and Leningrad with only half of the music composed.

Completion of *Lady Macbeth* was delayed by work on the incidental music Shostakovich had promised for the unconventional production of *Hamlet* and by a film score for *Vstrechnïy* ('Counterplan'), set in a Leningrad turbine factory and dealing with workers' determination to meet production quotas despite lazy management. For the film he took unusual pains to perfect the theme-tune, 'Song of the Counterplan', which became immensely popular and won international recognition from 1942 when it was published with a new text by Harold F. Rome as 'The United Nations'. Shostakovich continued to provide incidental theatre and film music even after the completion of *Lady Macbeth* in December 1932. He tried his hand at operetta (the incomplete *Bol'shaya molniya* ('The Great Lightning') to a libretto by Nikolay Aseyev) and even cartoon-film-opera – *Skazka o pope i rabotnike yego Balde* ('The Tale of the Priest and his Worker, Blockhead'), after a story by Pushkin. He also made a decisive return to instrumental composition. He had reportedly composed the first movement of a Symphony *Ot Karla Marksa do nashikhdney* ('From Karl Marx to Our Days') in February 1932 (now missing). There followed 24 Preludes, composed December 1932 to January 1933, still Prokofievian in spirit, but emulating the latter's *Visions fugitives* and hence much milder in tone than Shostakovich's previous piano works. Next came the First Piano Concerto, an uproarious piece studded with in-joke quotations and including an obbligato trumpet part designed for the Leningrad PO's Aleksandr Shmidt, followed by a Sonata for cello and piano composed at the suggestion of his cellist friend and recital partner Viktor Kubatsky. For several years, Shostakovich had been advocating that Soviet composers should not neglect chamber music, and in its outwardly traditional four-movement layout the Cello Sonata was his first significant

attempt to lead by example. It also presaged a new restrained classicism in his style. A suite for bassoon and orchestra, a violin concerto and a quartet were among works planned at this time that never came to fruition.

On 13 May 1932, Shostakovich married Nina Varzar (1910–54), without initially informing his mother and sisters. Nina moved into the family's communal apartment until early 1934 when he used honoraria from performances of *Lady Macbeth* to purchase a private apartment. In the summer of that year the marriage was shaken when Shostakovich fell in love with a 20-year-old translator, Yelena Konstantinovskaya (who was to be anonymously denounced and arrested in 1935, shortly after the end of her relationship with Shostakovich). Although the Shostakoviches had agreed that their marriage would be open, this affair nearly ended it. After separation and, according to Nina, an official divorce, the marriage was patched up; with the conception of their first child (Galina, born May 1936) it was definitively stabilized, even though both partners later pursued extra-marital relationships.

The two premières of *Lady Macbeth* – in Leningrad on 22 January 1934, in Moscow two days later – turned the spotlight on Shostakovich as never before. The opera was a resounding popular and critical success, and prominent musicians were lavish in their praise. Negative reaction came from the conservative wing of the Composers' Union, but at this stage Shostakovich was able to shrug it off with confidence. In a little over two years the two productions ran up 177 performances at near-capacity attendance, and productions were mounted in the provinces and abroad. His position at the cutting-edge of Soviet operatic composition was now unchallenged and his views were sought in all sorts of deliberations on the state of the art. He announced plans for a *Ring*-style tetralogy on Russian heroines, with *Lady Macbeth* as its *Rheingold*, and he assisted the young Ivan Dzerzhinsky with his opera *Tikhiy Don* ('Quiet Flows the Don').

He made one final effort at producing a successful ballet score with *Svetlïy ruchey* ('The Limpid Stream'), composed mostly in late 1934. This insipid tale of Soviet artists and farmers who reach comradely understanding on a *kolkhoz* in the Kuban region, was a characteristic product of the early Socialist Realist era. Whatever enthusiasm for the project Shostakovich may initially have had soon evaporated during his work on it. He pressed into service numbers from *The Golden Age* and *The Bolt*, and even the devoted Sollertinsky was less than thrilled with the result.

Stalin's unleashing of mass purges (the Great Terror) following the murder of Sergey Kirov in December 1934 touched musicians less than writers, but only in the sense that no more than a handful were actually deported or murdered. At the time, they enjoyed no such reassuring hindsight, and in any case, it was readily apparent that their careers, if not their lives, were threatened. Whatever his private or publicly expressed beliefs, Shostakovich's role as the most prominent and internationally renowned Soviet composer made him an obvious target when the clampdown came. On 17 January 1936, Stalin and a group of high-ranking officials attended a performance of Dzerzhinsky's *Quiet Flows the Don* at the Leningrad Malïy Theatre, and their approval was widely reported. Nine days later they went to the new Bolshoy production of *Lady Macbeth*, and the upshot was an unsigned condemnatory article which appeared in *Pravda* on 28 January. This now notorious article was headed 'Muddle instead of music'. It castigated Shostakovich for '"leftist" confusion instead of natural, human music' and warned him plainly of the consequences if he failed to mend his ways. The judgment was reinforced on 6 February when a further unsigned article damned *The Limpid Stream* as 'balletic falsity'. The shock to the cultural establishment was profound and Shostakovich was toppled almost overnight from his position as the leading light of Soviet music. He would eventually recover his position but it would be a long time before he again felt secure in it. This reduction of Shostakovich's stature and the warning to his musician colleagues was probably the main point of the exercise. These colleagues joined in the 'discussions' which followed amid the atmosphere of fear which characterized the Great Terror. With the honourable exceptions of Andria Balanchivadze, Vladimir Shcherbachyov, Shebalin and Sollertinsky, all of these colleagues spoke in favour of the censorious official resolutions; even Sollertinsky was soon forced to change his tune. Asaf'yev was particularly quick to condemn, thereby earning Shostakovich's undying scorn. It should, however, be remembered that the risks of not falling into line were dire. Virtually every family in Moscow and St Petersburg would be touched by the ongoing purges. Shostakovich's own brother-in-law, mother-in-law and uncle were among those arrested, as was his former lover Konstantinovskaya. Artists associated with Shostakovich who were arrested included Meyerhold, the poet Boris Kornïlov (author of 'The Song of the Counterplan') and Adrian Pyotrovsky (librettist of *The Limpid Stream*).

In the wake of the *Pravda* denunciations Shostakovich instructed his friend, correspondent and, for a while, unofficial secretary, the young literary historian Isaak Glikman, to compile a scrapbook of those statements in the press which castigated him. According to several witnesses, he contemplated suicide at this time. He turned to Tukhachevsky for advice, and the prominent marshal wrote to Stalin personally to intercede, as did Gorky, who attributed the tone of the article to jealous rivals of Shostakovich and deplored its effect on the still young composer. But Tukhachevsky's days were numbered; he perished the following year in Stalin's purge of the Red Army generals. Gorky predeceased him in still unclarified circumstances. Unconfirmed stories have circulated of Shostakovich being interrogated as an associate of Tukhachevsky; the NKVD apparently had him down as a Trotskyite.

What kept Shostakovich going was the imminent birth of his first child (Galina, born on 30 May 1936) and a major ongoing composing project. In May 1934, Shostakovich had been planning a symphony ostensibly about the defence of the homeland. In November he had made some sketches, expanding these to drafts in the following year and producing *Five Fragments* for orchestra, which seem like further preliminary studies for the Fourth Symphony. His work was interrupted by a trip to Turkey in April–May 1935, by rehearsals for *The Limpid Stream*, by his contributions to discussions about Meyerhold's production of Tchaikovsky's *The Queen of Spades*, and finally by the *Pravda* affair and its repercussions. He eventually completed the piano score of the symphony in April 1936, and the orchestration in May. In November, shortly before the scheduled première, Shostakovich bowed to official pressure and withdrew the work. It was

published in duet form in 1946, shortly before his second fall from grace, but not performed until 1961 as part of his final rehabilitation during the post-Stalin thaw.

(ii) Works. On 16 June 1926, two months after being admitted to the postgraduate course in composition at the conservatory and one month after the première of his First Symphony, Shostakovich compiled his first *curriculum vitae*. A drily factual document, excepting the stated determination not to go back to 'hack-work' as a cinema accompanist, it gave no indication of the crisis of creative confidence he had been undergoing since completing the symphony. This crisis had led him to burn a number of manuscripts, including a juvenile piano sonata, a ballet on Hans Christian Andersen's *The Little Mermaid*, and an opera on Pushkin's *The Gypsies* (the poem also set by Rachmaninoff as *Aleko*). For a while his future creative direction seemed unclear; plans for a piano concerto and a second symphony were abandoned.

The crisis passed, and during the next two years Shostakovich struck out in the most modernistic manner he would ever adopt, composing at high speed and without apparent inhibition. Much influenced by the 'linear counterpoint' of Krenek and Hindemith, which his friends and mentors Yudina, Asaf'yev and Yavorsky had put his way, the grotesque-scherzo vein of his undergraduate years hardened into wilful experimentation in his next four works. The Romantic lyricism of the First Piano Trio went underground, to be glimpsed only in the form of vaporous mysticism (as in the First Piano Sonata) or vicious parody (as in the *Aphorisms*). The Sonata's angular brutalism is indebted to Prokofiev, whose Third Sonata and Third Concerto supply the principal models, while its torpid lyrical interludes recall Skryabin. The ten *Aphorisms* are even more extreme. Ronald Stevenson's suggested alternative designation, *Graffiti*, seems entirely appropriate.

Armed with his newly forged modernist idiom, Shostakovich then returned to orchestral writing. The 'Symphonic Dedication to October' – later designated the Second Symphony – is a single-movement oratorio-symphony. The work is notorious for its miasmic opening, with layered polyrhythms prophetic of 1960s Ligetian micropolyphony, and for a passage of manic 13-part free-association counterpoint as anarchic as anything in Schnittke. The influence of Berg's *Wozzeck* pervades this part of the work. Both of these passages appear to have a programmatic function as representations of the oppression and chaos of life under tsarist rule, before the redemptive appearance of Lenin and the Bolshevik Revolution is heralded in an agitprop-style final chorus. So vivid is Shostakovich's thematic invention that this stylistic disparity may be viewed not as weak composition but as a kind of bold objectivity, a thesis and antithesis denied culminatory synthesis, expressing a dichotomous world-view; later symphonies explore similar creative possibilities, albeit with more subtlety, over multi-movement cycles. In its broad outline of modernistic first half and bombastic final chorus, the Third Symphony follows the same pattern as the Second. This time, however, the themes and textures are more traditional in cut, and the structural premise is one of non-repetition. In this work Shostakovich seems to quarry out enough thematic and textural raw material for the rest of his symphonic career.

With the exception of his two operas and the theatre music for *Hamlet*, the 20 or so scores for stage and screen Shostakovich reeled off between 1928 and 1936 give the impression of hasty, off-the-top-of-the-head composition, largely indifferent to their propagandistic textual content. None of them is without intrinsic interest, however, and many contain pointers to the future. This is the heyday of Shostakovich's waltzes, marches, polkas and galops, learned largely from Offenbach with Sollertinsky's encouragement, but also from Tchaikovsky, Lehár, Johann Strauss and other operetta composers. A significant musical pointer to the future is Shostakovich's first passacaglia, albeit a rather timid affair, for the eighth scene of *New Babylon*, depicting the tragic aftermath of the violent overthrow of the Commune. After this and *Odna* ('Alone') the style of Shostakovich's film and theatre scores gradually becomes more conventional. The score of *Hamlet* stands out for its memorable material and exceptionally light touch, and the suite of 13 numbers

5. Shostakovich (centre) with Prokofiev (left) and Khachaturian, Moscow, 1945

compiled by the composer from it has won a place in the concert repertory.

Just as there is nothing like the sustained inspiration of Prokofiev's *Lieutenant Kijé* or *Ivan the Terrible* in Shostakovich's film scores, so his three ballets cannot compare with Prokofiev's *Romeo and Juliet*. Next to the operas they are, however, the most substantial of his stage works. By 1930 Soviet choreographers were faced by the problem of producing scenarios of contemporary relevance while still using classical steps and ensemble routines which had changed little since Tchaikovsky. The musical interest of Shostakovich's ballet scores is sporadic and relies heavily on linear counterpoint blended from Hindemith and Stravinsky. *The Golden Age*, however, has some finely sustained composition in its finales and in the whole of act three. Each ballet features a half dozen or so memorable numbers, later collected into concert suites. The cheeky, wrong-note Polka from *The Golden Age*, originally intended for a send-up of a Geneva international disarmament conference, was an instant hit; it was subsequently arranged by the composer for piano and for string quartet, and by others for all manner of ensembles. The Bureaucrat's Polka from *The Bolt* is another memorable cameo, its malevolent bassoon writing anticipating the characterization of Katerina's father-in-law in *Lady Macbeth*. Among the other highlights in this score are a spoof-Tchaikovsky opening, a naughty habañera, music for radio gymnastic exercises and some coy Soviet ragtime. *The Limpid Stream* pales by comparison, thanks largely to the virtual elimination of grotesquerie and satire. Unable or unwilling to indulge in such antics since around the middle of 1934, Shostakovich produced a farrago of pretty polkas, chaste waltzes, oom-cha café music and low-pressure Tchaikovskian adagios.

His film, theatre and ballet scores may have been composed at breakneck speed and with no heed for the verdict of posterity, but Shostakovich spared no effort with his operas. Inspired by the example of Meyerhold, Shostakovich made *The Nose* the most uncompromisingly modernist of all his stage-works, its language pushed to extremes in most conceivable respects. Its reception was therefore always going to be problematic, and thanks to bad timing, it became caught up additionally in heated debates over the desirability of satire. Even the most negative reviews were not wrong in detecting wilful extremism and indebtedness to Western models. Nor would they have been wrong had they confined their censure to complaints of artistic one-sidedness, since the unremitting shock tactics of the tactics of the instrumentation (for chamber orchestra but with a large percussion section) and of the vocal writing (for a cast of around 80 soloists) are excessive by almost any standards. With hindsight, Shostakovich's arguments for the fundamental seriousness of his setting, its faithfulness to Gogol's text, and its attempt to fashion each act as a 'Theatre Symphony' on the lines of Meyerhold's 1926 production of *The Government Inspector*, seem to have an element of defensive special pleading. At the time they were made, however, the future of Soviet opera the general direction of the country's artistic policies were impossible to foresee, so experimentation of this kind was by no means foredoomed to failure. More to the point is the phenomenal energy of the writing – be it the hilarious onomatopoeia of Kovalyov's waking scene (outdoing the snoring scene in *Wozzeck*) or the relentless accumulation of the preceding percussion-only interlude (by no means the first percussion-only composition, but still three years before Varèse's often-cited *Ionisation*).

Shostakovich began work on *Lady Macbeth of the Mtsensk District* hard on the heels of the controversies which removed *The Nose* from the stage. Where in *The Nose* Shostakovich professed maximum fidelity to Gogol, here he deliberately inverted Leskov's attitude to his heroine, Katerina Izmaylova, excusing her murders and laying the blame on the surrounding social order. There is nothing to stop us reading the indictment in *Lady Macbeth* as allegorically applicable to other societies, including Shostakovich's own. Since the rehabilitation of the original version of the opera in the late 1970s, this possibility has been much exploited by producers and commentators in the West. But the thrust of the infamous 'Muddle instead of music' article was precisely against the opera's lack of political commitments and the tastelessness of its sex scenes. Such evidence as there is, beyond Shostakovich's official statements which may contain an unquantifiable element of camouflage, suggests that the *Pravda* writer was not entirely misguided in those respects, since Shostakovich was concerned with Katerina's embodiment of reckless passion more than with any contemporary relevance. The dehumanization of her oppressors, which some now read as complicity with Stalin's de-kulakization and others as coded anti-Stalinism, may have been mainly an outlet for the composer's barbed sense of humour and his enthusiasm for the work of Berg and Krenek. Whether or not contemporary relevance figured in Shostakovich's initial artistic intentions it certainly did so in his later calculations. In various essays and interviews, he stressed the point of Katerina's oppressors being akin to 1930s 'kulaks'. Yet nothing in his correspondence or reported views suggests he was doing anything more thereby than covering himself. Nor, at the other ideological extreme, is there evidence that the depiction of the police was an allegorical dig aimed at Stalin's security forces. At least equally plausible is the supposition that the various elements of the story simply allowed Shostakovich to make a compelling large-scale drama, deploying his own over-riding interest in blending tragedy and satire, on the lines of the 'Dostoyevsky narrated in the language of Charlie Chaplin' Sollertinsky identified in Mahler's symphonies.

In retrospect, virtually all Shostakovich's music for stage and screen from these years seems like a preliminary study for *Lady Macbeth*. Some of it he transferred almost note-for-note, such as the 'Bacchanale' from *Declared Dead* which became the music for Aksinya's molestation in scene ii of the opera. Some of it established a mood-archetype that could easily be adapted, such as the 'Music for the Strolling Players' from *Hamlet*, which was adapted to express Katerina's outrage in Act 4. Even the lyrical and fateful tone of *Lady Macbeth* is prepared for in the *Six Romances on Words of Japanese Poets* op.21. More generally, both *The Golden Age* and *The Bolt* had been testing-grounds for the portrayal of positive and negative characters by means of genuine-lyrical and artificially decadent, Western-orientated music respectively. In *Lady Macbeth* the decadent music is used to highlight the cruelty of the father-in-law, the husband and eventually even the lover, all of whom oppress Katerina, in addition to the ineffectuality of the priest, police and farm-hands. The 'genuine' lyricism is reserved for Katerina herself and

the prisoners in Act 4, symbols of the oppressed individual and the oppressed community respectively.

Shostakovich's involvement with the theatre had forced him to neglect instrumental composition and performing. In 1933 and 1934 he addressed both aspects with three works for his own concert use, all of which would become repertory favourites. They show him at a stylistic crossroads. The 24 Preludes, composed between December 1932 and March 1933, follow Chopin's ordering of major and relative-minor arranged in an ascending circle of fifths, while their style emulates the comparatively restrained manner of Prokofiev's *Visions fugitives*. Prokofiev is again behind the Piano Concerto, which takes over much more of the theatrical element from Shostakovich's stage works, complete with galops, can-cans and hilarious quotations. Critics singled out the lyricism of the score for comment, which may seem strange given its preponderance of circus-act tumbling routines. But they were right to see the lyricism as a significant development. Whether as a result of self-evaluation, or from a need for self-preservation, or simply with an ear to a general international spirit of the times, Shostakovich had been voicing his personal concern about the need for a new lyricism and had begun to put it into practice in *Lady Macbeth*. He took it a crucial stage further in his Cello Sonata of 1934. This was his first large-scale piece of chamber music. It was without programme, relatively conservative in idiom and cast in the four traditional movements, including, for the first time in his life, a repeated first movement exposition. Yet for all the Sonata's restrained exterior, Shostakovich's personal experiences never seem far from the surface. It would not be difficult to find echoes of his stormy love-life in the alternately troubled and amorous first movement, while the intense climax to the elegiac slow movement seems to reach out compassionately towards the suffering around him. It is ironic that Shostakovich was performing the Cello Sonata on the very day the *Pravda* article appeared, since it puts into practice many of the principles he was accused of neglecting. But at least he had the experience of this work to fall back on when it came to writing the classically proportioned large-scale works necessary for his rehabilitation.

Before he could follow that path, he was faced with the task of completing the Fourth Symphony, which he had embarked on as a kind of 'symphonic credo'. Unusually, abortive sketches for the first movement survive, and the Five Fragments seem like further preliminary studies for its themes. What finally emerged in its three-movement 60-minute span was a colossal synthesis of Shostakovich's musical development to date and a range of character and style from grotesquerie to high tragedy, all carried along on waves of delirious enthusiasm. The massive structure is drawn together largely by lessons learned from his recent Sollertinsky-inspired study of Mahler. Musical imagery from Mahler's Second and Fifth Symphonies and *Das Lied von der Erde* went almost directly into Shostakovich's symphonies from the Fourth onwards; the emulation of Mahler's tone of sustained ambivalence offered him a survival strategy when ideological pressures narrowed his options.

3. 1936–53.

(i) Life. The *curriculum vitae* Shostakovich wrote for the December 1936 edition of *La revue musicale* made no mention of the traumas of the earlier part of the year, and it ended with an orthodox Stalinist statement of his commitment to 'the development of socialism in my country'. In reality, having survived the immediate aftermath of the *Pravda* denunciations, he now had to find means of surviving creatively. He needed a formula for balancing his artistic conscience with requirements handed down from above, which could be as unpredictable as they were imperative. He found the solution largely by continuing to moderate his style in the direction of 'acceptable' lyrical and heroic intonations, while at the same time devising an interplay of contextual and intertextual meanings which could modify or even contradict the surface impression.

The cycle of Pushkin Romances he composed mainly in December 1936 for the poet's upcoming centenary celebrations, opens with a setting of 'Rebirth'. It is tempting to read this as an emblem for Shostakovich's personal situation: its text refers to the permanence of art despite the interference of a 'barbarian'. When the characteristic accompaniment figure to this song, and the opening motif of its vocal line, reappear in the finale of the Fifth Symphony, on which he worked between April and June 1937, the strong inference is that the symphony is, at least at one significant level, another document of creative survival and rebirth. Such possibly veiled statements in Shostakovich's works are commonly referred to as 'aesopian', and their frequency increases rapidly from this time. By definition the subtext is partly left to the imagination of the listener; it is never so blatantly spelled out as to endanger the composer's safety or to make his intention verifiable except on a balance of probabilities which may always remain contentious.

The première of the Fifth Symphony on 21 November 1937 was the scene of extraordinary public acclamation. There was open weeping in the slow movement and a half-hour ovation at the end, suggesting a mixture of jubilation at the composer's presumed imminent rehabilitation and recognition of a channel for a mass grieving at the height of the Great Terror, impossible otherwise to express openly. Well versed by now in politically correct jargon and able to use it with masterly ambivalence, Shostakovich approved what he claimed was a journalist's description of the work as 'a Soviet artist's practical creative reply to just criticism'; since the source of this description has never been located, it is possible that the composer himself coined it, or was advised to, as a subterfuge to assist in his rehabilitation. A few negative criticisms of the new symphony were heard, including some perceptive ones that pointed to unresolved tensions in the Finale. The overwhelming consensus, however, was positive.

In spring 1937, at the instigation of a group of students, the director of the Leningrad Conservatory Boris Zagursky had invited Shostakovich to join the teaching staff, at the same time as Sollertinsky and Sofronitsky were taken on. In the aftermath of his fall from grace, with fewer commissions and a new baby daughter to support, Shostakovich accepted with alacrity. The post, to teach instrumentation and composition, was also a useful sign of his commitment, undoubtedly genuine, to the fostering of musical education in the country. He began work in September 1937, taking on Georgy Sviridov and Orest Yevlakhov, whose teacher Pyotr Ryazanov was on leave. They were soon joined by eight other pupils, of whom the best known were Yury Levitin, Veniamin Fleischmann

[Fleyshman] and Galina Ustvol′skaya. Shostakovich taught in two sessions of five to seven hours each per week and had two assistants working under him. Apart from overseeing his students' compositions, he supervised duet performances of masterworks, including some that he himself had transcribed, such as Stravinsky's *Symphony of Psalms*. He aired questions of aesthetics and the sociological function of music and led group discussions of work in progress. In class, he most often analysed works of Beethoven, Brahms, Mahler and Tchaikovsky, and he claimed that he often turned to Tchaikovsky for solving formal problems.

His pupils attended rehearsals of his new works and many of them naturally gravitated towards his style. But he also occasionally took the cue from them, especially from the ascetic intensity of Ustvol′skaya, whose 1949 Clarinet Trio he quoted in his Fifth Quartet and Michelangelo Suite, but also in various ways from Fleischmann and in later years from Boris Chaykovsky, Karen Khachaturyan, Kara Karayev and Boris Tishchenko. Most importantly perhaps, the analysis and supervision he had to carry out on a regular basis underpinned his own move in the direction of classical restraint that had been partly enforced, partly voluntary.

Shostakovich was made a full professor in June 1939. His conservatory teaching career was interrupted in mid-1941 by the siege of Leningrad and his evacuation, but was resumed officially in June 1943 in Moscow and in February 1947 in Leningrad. His teaching broke off again with his fall from grace in 1948, resumed again in 1961 with a postgraduate seminar in Leningrad, and finally concluded around 1966–8.

His teaching activity, combined with the relief of rehabilitation, made it temporarily difficult for him to contemplate major creative enterprises. In the year following the Fifth Symphony he abandoned a large number of projects, including plans for a Lenin Symphony, which he mentioned repeatedly in interviews over a number of years, but which he may never have seriously intended to write until circumstances eventually forced him to in 1962, resulting in the Twelfth Symphony. Those works he completed were generally undemanding: a succession of film scores, a second Jazz Suite for the recently formed State Jazz Orchestra (not to be confused with the suite for variety stage orchestra sometimes heard under that title, which is merely a compilation of tunes from various film scores), and his First String Quartet, the most easy-going of all his instrumental works, composed at the behest of the Glazunov Quartet. Between 1939 and Russia's entry into the war in June 1941 he added to these a Piano Quintet for himself to play with the Beethoven Quartet, produced more film scores, toyed with but abandoned more ideas for operas and ballets, and produced his own instrumentation of Musorgsky's *Boris Godunov*, a spin-off from his involvement in that composer's centenary celebrations. His professional activities were many and varied, and these years were generally outwardly free from strife. For many artists in the Soviet Union there was a certain superficial truth in Stalin's maxim 'life is getting better, life is getting happier'. Material rewards for approved activity were considerable, the price being conformity, constant fear of denunciation and silence about the misery in which the vast majority of the population were living. Shostakovich's most significant work from these times was the Sixth Symphony, composed between April and October 1939. This work disappointed those who were expecting something on the lines of the Fifth, but its bizarre succession of apparently unrelated moods parallels the profoundly contradictory spirit of the times.

On 22 June 1941, when Shostakovich was involved with piano examinations at the Conservatory, the Nazis invaded Russia. Within a month he had begun work on the Seventh Symphony, which was to become an icon of resistance to the siege of his home city and one of the most widely discussed documents in the history of music. The known details of his activity in the second half of this year suggest that he was caught up in the general wave of patriotic fervour which Stalin astutely orchestrated by appealing for loyalty not to the Communist State but to the Russian Nation. Before embarking on the Symphony, Shostakovich completed *Klyatva Narkomu* ('Oath to the People's Commissar') in mass-song style and made 27 arrangements mainly of Russian art songs, for use at Leningrad frontline concerts. He served on firewatch duty at the Conservatory and on 16 August refused a first offer of evacuation from the besieged city. The Seventh Symphony was initially conceived as a single-movement tone poem, but he rapidly completed three movements before agreeing to leave Leningrad. On 1 October he flew to Moscow and two weeks later went by train to Kuybïshev (now Samara), 800 km to the east in the southern Urals. There he completed the symphony on 27 December.

The work was first performed in Kuybïshev on 5 March 1942, and its propaganda value was immediately realized. A microfilm of the score was flown to the West, where Toscanini and Stokowski were vying for the Western première; they were narrowly beaten to it by Sir Henry Wood at the London Proms. Other Russian orchestras took up the work, and on the day Hitler had decreed Leningrad should fall the besieged city itself mustered a historic performance from its few remaining musicians, reinforced by others recalled from the front; this was broadcast to the German troops in a show of defiance. Anti-Fascist and communist sympathizers in the West now took up Shostakovich's cause with renewed vigour. Alan Bush and others organized lectures in London, and in September 1942 Charlie Chaplin, Paul Robeson, Toscanini and Stokowski sent him 36th birthday greetings from a San Francisco Festival devoted to his music. In 1942 Shostakovich travelled between Moscow, Kuybïshev and other provincial Russian cities. He worked on an opera to Gogol's *Igroki* ('The Gamblers'), but gave it up as impractical at the end of the year, having completed some 45–50 minutes of music. Also in 1942 he composed his Six Romances op.62, orchestrating them the following year, and assembled a suite of patriotic pieces entitled *Native Leningrad* for a concert play spectacle *Otchizna* ('Native Country'). He also wrote the first of three scores for the Ensemble of Song and Dance of the NKVD, headed by Lavrenty Beriya; its successors were *Russkaya reka* ('Russian River') of 1944, and *Vesna pobednaya* ('Victorious Spring') of 1946, the last of which included another popular hit song, 'Torches'.

In early 1943 Shostakovich settled in Moscow, and from June he resumed teaching when he was appointed by Shebalin to work at the Moscow Conservatory. Here his best-known pupils included Karen Khachaturyan (nephew of Aram), Kara Karayev, German Galïnin and

6. *Autograph MS of the opening of Shostakovich's Symphony no. 7 ('Leningrad'), composed 1941 (RUS-Mcm)*

Boris Chaykovsky. From 1 February 1947 he also taught at the Leningrad Conservatory, commuting there one day a week, but he decided not to return to live in his former home town. Late in 1943 he met Stalin for the first time when the latter judged a competition for a new national anthem. His main work in this year was on the Eighth Symphony, at the newly established Composers' Rest Home at Ivanovo, 240 km north-east of Moscow. As with the Sixth Symphony, expectations aroused by its enormously successful predecessor were dashed. Shostakovich had tried to gloss over the symphony's prevailing gloom in a newspaper article, describing it as 'on the whole . . . an optimistic life-asserting work', whose 'philosophical conception . . . can be summed up in three words: life is beautiful. All that is dark and evil will rot away, and beauty will triumph'. The critics were not fooled, and the more hostile ones hastened to point out that he had produced an optimistic symphony (the Seventh) when the country was under dire threat and now a pessimistic one when victory was in sight. From this time, compositions conceived as memorials became an increasingly common feature of Shostakovich's output. If the Seventh Symphony commemorated the sufferings of the population of Leningrad, then the Eighth seemed more like a memorial to the whole nation. The Second Piano Sonata was composed in early 1943 in memory of his piano teacher, Nikolayev. A year later, the Second Piano Trio was dedicated to the memory of the recently deceased Sollertinsky, and also paid concealed homage not only to his pupil Fleischmann, who had died at the Leningrad battlefront, but also to the victims of the Holocaust. Shostakovich began work early in 1944, around the time he finished the orchestration and completion of Fleischmann's opera *Rothchild's Violin*,

whose memorable Jewish dance themes are echoed in the finale of Shostakovich's Trio; this inaugurated a significant strand of musical imagery in his work. The Trio was not completed until August, and he followed on almost immediately with the Second String Quartet.

The great memorial work expected of him was the Ninth Symphony, which was scheduled to appear in the victory year of 1945. Having announced and, according to some sources, composed parts of a heroic victory symphony, he produced instead a deceptively lightweight score that caused some consternation. The wartime years had been a paradoxical window of opportunity for Russian composers. It had been possible to compose overtly tragic music on the pretext of referring to oppression from outside (which at one level it no doubt did), as well as private, relatively complex music, in the knowledge that the authorities had other calls on their watchfulness. After the war, close official scrutiny rapidly returned. Celebration of victory, and especially the role of Stalin and the Party in it, was now *de rigueur*, and vigilance against Western contamination was all the more stringent given the contact that Russians had had with the West during the war. One consequence of this renewed zealotry was that there was an eight-year gap before Shostakovich's next symphony; in the meantime the symphonic urge was deflected into concertos and string quartets.

1946 was a relatively quiet year, with the highly symphonic Third Quartet being the main project. Shostakovich was still sufficiently in favour for his Fourth Symphony to be published in piano duet form. That year he began a family routine of spending the summer in Kellomäki, a village outside Leningrad, known as Komarovo from 1948. In February 1947, he took on administrative posts in addition to his teaching work, including chairmanship of the Leningrad Composers' Organization and deputy for Leningrad to the Supreme Council of the RSFSR. This offered him little protection from the oppression to come, however. In July 1947, inspired by the artistry of David Oistrakh, he began the First Violin Concerto, another crypto-symphony, and he was working on it when the storm finally broke. The renewed clampdown in the arts, which had already affected writers and film-makers, reached composers in January 1948, courtesy of Andrey Zhdanov, Politburo member with responsibility for the arts. It was enshrined in a Party Decree on 10 February, which, while criticizing the opera *The Great Friendship* by the modestly talented conformist Vano Muradeli, mainly targeted Shostakovich along with Myaskovsky, Popov, Prokofiev, Shaporin and Shebalin, all of whom were accused of leading Soviet music astray and of other sins under the catch-all heading of 'formalism'. Zhdanov's January speech provided material for Shostakovich's lampoon, *Antiformalisticheskiy Rayok*, a satirical chamber cantata conceived at the time but probably notated mainly in 1957 and further elaborated in the 1960s. For obvious reasons, this piece was not made public in the composer's lifetime; its first performance was in 1989, in the era of *glasnost'*.

As in 1936, former colleagues and friends queued up to denounce him. This time Shostakovich felt compelled to join in, and he ritually abased himself, following the example of the poetess Anna Akhmatova two years earlier. His speech of contrition was probably written by Leo Arnshtam. He still had some tried and tested coping strategies – including card games, alcohol, cigarettes, chess, and watching football – but to his few loyal friends he complained of rapid aging. He was again faced with acute material difficulty, having been dismissed from his teaching posts and with his music effectively having been placed on a blacklist. After completing the Violin Concerto he wrote scores for a number of films, some of them involving the obligatory hailing of Stalin as military genius and hero (*Encounter at the Elbe*, *The Fall of Berlin*, *The Unforgettable Year 1919*). These brought him much needed income. In 1947, before the Zhdanov inquisition, he had offered only a tokenist cantata for the 30th anniversary of the Revolution – *Poèma o rodine* ('Poem of the Motherland') op.74, consisting largely of arrangements of others' music. Now he composed full-blown vocal and choral works to unimpeachable texts by the conformist poet Yevgeny Dolmatovsky. The oratorio *Pesn' o lesakh* ('The Song of the Forests') eulogized Stalin's ill-fated campaign for reafforestation (the references of Stalin were expunged in later editions of the score). This won him a Stalin Prize and 100,000 rubles (the entire production costs of Muradeli's *The Great Friendship* had been reckoned unusually lavish at 600,000 rubles). This was followed by the cantata *Nad rodinoy nashey solntse svetit* ('The Sun Shines over our Motherland'). Similar strategies of appeasement were probably behind the *Ten Poems* (on texts by Revolutionary poets) and *Two Russian Folksong Arrangements* for unaccompanied chorus. However little effort Shostakovich may have expended on these works, his technique was such that they stand up as respectable compositions, and they were well received in the Soviet Union. The first of the op.86 Dolmatovsky songs (1950–51) was used as a signature tune on Soviet news broadcasts and was sung by Yury Gagarin on the first manned space-flight in 1961. Shostakovich continued to set Dolmatovsky's banal patriotic verses as late as the 1970 male-voice cycle *Vernost'* ('Loyalty') for the Lenin centenary celebrations.

Meanwhile his more serious works joined the Violin Concerto 'in the drawer'. These included the Fourth String Quartet, which occupied him for much of 1949, the Fifth Quartet and a second cycle of Pushkin romances (both in 1952). More ambiguous was the case of the song-cycle *Iz yevreyskoy narodnoy poèziy* ('From Jewish Folk Poetry') of 1948. Although an anti-Semitic campaign was well under way in the Soviet Union, official policy statements asserted the contrary, and Shostakovich may well have been trying to have it both ways – composing a piece which fulfilled official desiderata for folkloristic composition, yet speaking obliquely of solidarity with oppressed communities. When the penultimate song proclaims 'I am happy on my kolkhoz', for instance, the character of the music seems to assert the exact opposite. This putative subtext came strongly to the fore when the selective persecution of Soviet Jewry became more open from early 1949. This was another work that could not be publicly performed at the time, although it was heard in private.

A major role in Shostakovich's post-1948 rehabilitation was played by his duties as part of various delegations to international congresses, in which he was a mouthpiece for the supposed humanitarian progressiveness of the post-war Soviet Union. After a personal phone call during which Stalin promised to ensure his music was not blacklisted, Shostakovich was sent in March 1949 to a

Peace Conference in New York, where he had to endure being forced to voice agreement with the constrictions of the Soviet system. His reward for this charade was a State dacha in Bolshevo. He went on similar missions to Vienna in December 1952 and June 1953. His membership of a Soviet delegation in summer 1950 to East Germany to take part in the Bach bicentenary celebrations bore significant creative fruit. Between October 1950 and February 1951, he composed a cycle of 24 Preludes and Fugues for piano. Even this had to run the gauntlet of hostile criticism at the Composers' Union. Similarly, the Tenth Symphony, which develops musical implications from the Preludes and Fugues and on which he worked mainly in the summer of 1953, would be the subject of four days of official deliberation in March–April 1954. By this time, however, following the death of Stalin on 5 March 1953, the artistic climate was discernibly beginning to relax, and voices openly supporting Shostakovich's creative stance were heard again.

(ii) Works. As early as the Second Symphony, with its confrontation of avant-garde and mass song styles, a phenomenon known to Russians as 'the two Shostakoviches' had been apparent. The 'real' Shostakovich would remain an altogether elusive concept, by no means tied to stylistic uniformity or ideological one-sidedness. The 'official' Shostakovich had to be mindful of expectations from above, without wholly selling out. The dichotomy between these musical personas increased markedly after 1936.

At the official extreme stands a 1937 orchestration of the 'Internationale' which the Soviet Union adopted as a national anthem between 1917 and 1944. Then came wartime arrangements for performances at the battlefront, a Solemn March for Military Band, and arrangements of Russian, English, American and Greek folksongs. Patriotism, both voluntary and enforced, dictated a new emphasis on choral works, none of which now remain in the repertory (opp.63, 66, 72, 74). Shostakovich's music for another dozen or so films in these years is of little intrinsic interest, though on occasion it helped him discover useful material for later 'serious' use; parts of *The Fall of Berlin* are taken up in the Tenth Symphony, for instance.

At the other extreme were works where his private thoughts were close to the surface, such as the Four Pushkin Romances, op.46 and the *Six Romances to Words by English Poets*, op.62. The latter cycle includes a setting of Shakespeare's Sonnet 66, whose original contains the suggestive line 'And art made tongue-tied by authority'. Although this sentiment is disguised in Pasternak's translation it was almost certainly known to the composer and to the song's dedicatee, Sollertinsky. From the time of the two completed operas, Shostakovich had a convenient excuse for what might otherwise be interpreted as anti-Soviet critical social comment; he could pass it off as referring either to Tsarist Russia or to an external enemy such as capitalism or fascism. This applied equally to the cycle *From Jewish Folk Poetry*. Whatever the ideological force may be of the Jewish themes found here and in the Second Piano Trio, the Fourth Quartet and First Violin Concerto, they are fitted without incongruity into a language already saturated in expressive ambiguity and characterized by modal alterations (especially flattened seconds, fifths, sevenths and octaves, and fourths both flattened and raised).

The First Violin Concerto is in several respects a parallel work to the Fourth Symphony. Both summarize Shostakovich's compositional explorations over the preceding decade without detectable aesthetic compromise; in both cases work on the Finale was interrupted by a cultural purge; in both the première was long delayed because of that purge. The Concerto's many structural and idiomatic similarities to Britten's Violin Concerto of 1938–9 may be coincidental (Britten knew Shostakovich's music from the mid-1930s; but there is no evidence for Shostakovich having encountered Britten's before their first meeting in 1960). The Nocturne first movement is repressed in tone, allowing the devilishly driven Scherzo to unfold at imposing length, followed by a shock-absorbing Passacaglia and a massive Cadenza accumulating dramatic tension towards the Finale. The range and complexity of mood makes this work at least as worthy the title of Symphony-Concerto as Prokofiev's 1950–52 reworking of his Cello Concerto which carries that designation.

Part of the reason for the Violin Concerto's highly concentrated invention may rest with Shostakovich's experience of chamber composition in the preceding years. The gradual introduction of chamber music into his oeuvre opened up a field in which he could compose with maximum seriousness and minimum external pressure. The string quartets in particular are arenas for concentrated musical thought, exemplified in the habitual cyclic recalls in the Finales, which feed back into several later symphonies. This development, however, is by no means entirely a retreat into 'pure' music. The artless C major which frames the outer movements of the First Quartet is as suggestive of rebirth as anything in the Fifth Symphony, and Shostakovich himself claimed that the work was associated with images of spring; it also established a tone of watchful neutrality which was new in his music. The movements of the Second Quartet carry the generic titles Overture, Recitative and Romance, Waltz, Theme and Variations. According to members of the Borodin Quartet, the five movements of the imposing Third Quartet once carried programmatic subtitles connected with World War II. The Fourth contains a prominent Jewish dance theme. The Fifth has thought-provoking quotations from Ustvol'skaya's Trio for clarinet, violin and piano; the hard-edged intransigence and severe economy of means of this work is also emulated. Virtually every one of the Quartets has at least one prominent muted passage, often in the scherzo, suggestive of the appearance of an especially intimate tone of voice.

Until 1945, the public voice was mainly embodied in epic symphonies. The fourth to ninth symphonies appeared at roughly two-year intervals from 1936–45; the Tenth Symphony followed after a gap of eight years. All these have won a firm place in the repertory, and together they might be taken as evidence for the paradox that the greatest music can be written under the greatest political pressure.

As propounded by the apparatchiks of the Composers' Union from 1934 on, the doctrine of Socialist Realism presented composers with the task of representing contemporary reality in a musical language comprehensible to 'the People'. Shostakovich found a remarkable solution to this conundrum. His intention apropos the Tenth Symphony was 'to convey human emotions and passions'. This apparently anodyne phrase carries extraordinary implications in the heyday of Stalinism. Obeying it to the

letter meant, in effect, providing an outlet for mass emotional needs – to mourn and to commemorate – which were too dangerous to vent in words or through any other art form.

The nature of instrumental music offered some protection: although the nature of the real-life causes of such emotions might be hinted at in inter-textual references for those in the know, they could never be incriminatingly specified. At the same time those emotions were refracted through Shostakovich's long-established mastery of satire and the grotesque, which were no longer admissible tones of voice in a theatrical context but which were certainly compatible with his friend Sollertinsky's theories of the 'Shakespearean' symphony. The result was that the boundary between genuine and ironic statement would always be open to debate. In all this, Shostakovich drew on the formidable resources of his training, his previous compositional experience and his teaching activity, creating musical structures more highly integrated than any he had previously attempted.

Where the Fourth Symphony relied heavily on thematic transformation and cinematographic (dis)continuity, with tonal and formal features providing a relatively passive framework, symphonies five to ten maintain a more traditional balance between these elements, especially in the four-movement cycles of the Fifth, Seventh and Tenth. Their first movements are all masterly examples of large-scale tonal and modal construction, to which the Tenth adds a particularly skilful handling of transitional passages and interdependent structural idiosyncrasies. Their finales share an apparent triumphalism, complicated in the case of the Fifth by allusions to the first Pushkin Romance, and in the Tenth by disturbing disjunctions of mood which open the way for reference back to the oppressive second movement, countered in turn by the composer's musical signature (D–S–C–H = D–E♭–C–B). This signature appears overtly for the first time in Shostakovich's music in the third movement of the Tenth Symphony, alongside an encrypted version of the first name of Elmira Nazirova, pupil, confidante and object of affection at the time of composition. Such covert allusions increase in frequency in his late works. In some cases, their function is fairly explicit; in others it is a moot point whether the allusion is pointing at a significant level of concrete meaning or whether it is serving as a means to a musically articulated sense of mystery.

The sixth and eighth symphonies evolve their symphonic dramas from deliberately unbalanced movement-schemes. The three-movement Sixth appears to lack a first movement altogether. It starts with an *ABA* slow movement in declamatory Bachian contrapuntal style and virtually goes into hibernation in its middle section; the following movements are a spectral scherzo and a manic galop. The opening movement of the five-movement Eighth Symphony reaches a frightening climax early in its development section, which it sustains and surpasses to awesome effect before collapsing into a mournful cor anglais recitative at the recapitulation. There follow two brutal scherzos, a mournful passacaglia slow movement and a shell-shocked C major Finale, whose striving for and failure to achieve straightforward jollity is its most disconcerting yet moving aspect. The exhausted coda allows the merest glimmer of hope. This mood was adumbrated in the Piano Quintet and was soon to feature powerfully again in the Third String Quartet.

The fourth, seventh and eighth symphonies all work with the C minor/C major frame established in Beethoven's Fifth. The Fourth, nominally in C minor, has a double coda, proposing a C major apotheosis but negating it with C minor tragedy. The 'Leningrad' uses the major/minor opposition both structurally and emblematically. The initial C major seems to symbolize the heroism of the Russian people, in a striding theme closely related to Shostakovich's 'Oath to the People's Commissar'. Some 15 minutes later this theme is recapitulated in the tonic minor, as a kind of requiem, after the notorious prolonged 'Invasion' episode (never so called by the composer) that substitutes for the development section. The finale works its way from C minor back to a C major of terrifying balanced tensions, conveying inner resistance all the more powerfully for leaving the political colours of the oppressive force to the imagination. The Eighth Symphony, nominally a C minor work, bases its entire Finale in C major, but employs apparently inconsequential anti-heroic material, as though simultaneously questioning the Beethovenian archetype it invokes.

In its time Shostakovich's Ninth Symphony was perceived as referring back to Haydn rather than to Beethoven. Certainly it sidestepped the role of crowning glory of a 'War Trilogy' (symphonies seven to nine) which many expected it to fulfil. The rough playfulness of its first and third movements shows this clearly enough. Yet its darkness, especially when the Finale frog-marches its polka-like main theme into forced celebration, should not be underestimated. Russian commentators were quicker to detect this subtext than were their counterparts in the West, who for the most part found the symphony simply lightweight.

Shostakovich habitually turned to contrapuntal composition when he experienced a creative block (as for instance in mid-1934). Part of his rehabilitation strategy after his fall from grace in 1936 had a Bachian aspect, evident in three of the five movements of the Piano Quintet and the opening movement of the Sixth Symphony. With the cycle of 24 Preludes and Fugues for piano of 1950–51 he confirmed his second return to creative life in the most monumental of his Bachian homages. As with the First String Quartet, the purity of the C major Prelude and Fugue suggests a *tabula rasa*, a new beginning from untainted sources. Like the Third Symphony, this work quarries out all sorts of musical gestures and motifs which would sustain him in his following works, most notably a ubiquitous 1–5–6–5 melodic shape, which he may have subconsciously remembered from Glazunov's Seventh Symphony, which he had prefigured in *Song of the Forests*, and which he went on to use in the *Ten Poems* for unaccompanied chorus, the Pushkin Monologues, and the Finale of the Tenth Symphony. The last Prelude and Fugue, in D minor, not only makes an impressively defiant culmination to the cycle; it also adumbrates motifs and textures crucial to the first movement of the symphony.

4. 1953–62.

(i) Life. The post-Stalin era in Russian history up to the accession of Leonid Brezhnev in 1964 is usually characterized after the title of Ilya Ehrenburg's 1954 novel as the 'Thaw'. During this period, extreme social and cultural oppression slowly gave way to more normal conditions, albeit within the framework of continued political conformism. In February 1956 Nikita Khrushchyov, who had

emerged with effective power early the previous year, made a famous 'secret' speech denouncing Stalin. The outward signs of Shostakovich's life suggest that he shared in some of the benefits of the Thaw. Most of his previously withheld or banned works were performed. The Fifth String Quartet was first performed in November 1953 and the Fourth Quartet a month later, soon to be followed by the new Tenth Symphony. The Violin Concerto and the song cycle *From Jewish Folk Poetry* had to wait until 1955, the Fourth Symphony until 1961 and the revised *Lady Macbeth* until 1963. On 28 May 1958, the 1948 anti-formalism decree was partially rescinded. Shostakovich was increasingly garlanded with honours at home and abroad. In August 1954 he was made People's Artist of the USSR, and in September 1956 he received the Order of Lenin. Numerous international awards, mainly honorary doctorates and membership of academies, came his way in this period.

Along with tentative de-Stalinization came renewed contact with artists from the West. The First Tchaikovsky International Competition, held in Moscow in 1958, of which Shostakovich was president, was symptomatic, and it was followed by highly publicized visits by composers from America and elsewhere, culminating in that of Stravinsky in 1962. Shostakovich himself travelled widely, making his first visit to England in June 1958 and his second visit to the United States in November 1959. During his second visit to England, in 1960, he began what was to be a significant artistic friendship with Britten.

The price for the Soviet Union's tentative liberalization, however, was to be increased adherence to the Party line; Khrushchyov sought every opportunity to bolster his never-solid political position with support from prominent members of the intelligentsia. Shostakovich's capacity for resistance was by now greatly reduced and his yearning for a peaceful working environment all the greater. He accepted all manner of official posts and duties. He was on the committee for the Glinka centenary in 1957 and contributed three variations to a collective set with seven other composers. In the same year, he was voted secretary of the Union of Composers of the USSR (as the Union of Soviet Composers had just been renamed). He took part in regional musical organizations in L'viv, Sverdlovsk and Azerbaijan; in April 1960, he became First Secretary of the Composers' Union of the RSFSR.

In the mid-1950s he appears to have been striving to compose more straightforward and cheerful music, as in the Sixth String Quartet, the tuneful film score to *Ovod* ('The Gadfly'), the Concertino for Two Pianos and the Second Piano Concerto (both for his aspiring concert-pianist son Maxim), and the operetta *Moskva, Cheryomushki* ('Moscow, Cheryomushki'). Far from cheerful, but presenting a façade of conformity, were his Eleventh and Twelfth Symphonies (1957, 1961), commemorating the Tsarist 'Bloody Sunday' atrocity of 1905 and the Bolshevik Revolution of 1917 respectively.

In reality, Shostakovich's artistic freedom was still severely limited. In 1956, he attended an unsuccessful re-auditioning of *Lady Macbeth*, at which Kabalevsky and others impressed on him the continued validity of the 1936 *Pravda* criticisms. His scorn for the continued philistinism on display at the second Composers' Union Congress in March/April 1957 was expressed in the satirical cantata *Rayok*, which he had begun after the 1948 denunciations and to which he added through the 1960s.

His personal life was far from happy. On 4 December 1954 his wife died unexpectedly of cancer, leaving him more vulnerable than before to outside pressures. His distress increased when his mother died in November 1955. His proposal of marriage to his former pupil Galina Ustvol'skaya was turned down, and he eventually married Margarita Kaynova, a worker at the Komsomol (Communist Youth League) in July 1956. For reasons not entirely clarified, the relationship proved unviable and the marriage ended in divorce in August 1959. Shostakovich again proposed to Ustvol'skaya who again turned him down.

Early signs of physical decline were by now becoming evident. Since the war he had had attacks of diphtheria, angina and inflammation of the lungs. In 1958 he began to experience symptoms of what was eventually diagnosed as a form of polio. In August–September 1958 he underwent his first hospital treatment for the condition. Initially his right hand was affected, leading to severe difficulties in piano playing, which he first experienced when he had to perform and record his two Piano Concertos in Paris. He had been recording a number of his works since the late 1940s, and it is ironic that just as recording technology was making huge advances his health prevented him from capitalizing on them. In 1960 and 1967 he suffered leg fractures as a result of falls. The increasing tendency of his late works to reflect on the career of the artist may have much to do with enforced inactivity during his ever more frequent stays in hospital.

Shostakovich was physically ailing and without domestic support when he came under intense pressure to join the Communist Party in 1960. He yielded, and his membership was confirmed in stages over the next two years, but he experienced acute feelings of shame. Against this background, he composed his Eighth String Quartet, reportedly as a kind of obituary for himself, incorporating quotations from and allusions to some of his most fateful works.

He now had to make the best of a bad job as a confirmed establishment figure, trying to hold to his ideals and to be a force for good without jeopardizing his position within the system. He was relatively free to compose and able to exert some beneficial influence, not least as a teacher. He resumed his teaching duties at the Leningrad Conservatory in December 1961 with a class of postgraduate students, of whom his favourite was Boris Tishchenko. Given his personal circumstances it is difficult to see how he could have adopted a more confrontational political stance. However, his refusal to oppose officialdom openly exposed him to the contempt of some of the younger generation who were, in any case, caught up in the excitement of discovering progressive musical trends from the West and therefore increasingly inclined to look on him as an anachronism.

His Party membership seems to have been part of a complex *quid pro quo* with authority. He had already been fulfilling an increasing number of official duties. Now he finally produced the 'Lenin' Symphony he had been promising since the 1930s (the Twelfth, subtitled 'The Year 1917'), and he allowed his name to be used for all sorts of Party propaganda declarations, sometimes reading speeches others had written for him, sometimes having articles and letters published under his name but

7. Dmitry Shostakovich with his son Maxim

written by friends or functionaries. In return for this, he was allowed performances of the banned Fourth Symphony (30 December 1961) and of *Lady Macbeth*, which he revised as *Katerina Izmaylova* (8 January 1963). The first performance of the Fourth Symphony took place 25 years after its aborted première. The score, which had been lost in the war, had to be reconstructed from the orchestral parts. According to its conductor, Kirill Kondrashin, not a note was changed, and the performance was an overwhelming success, as was the Western première the following September at the Edinburgh Festival under Gennady Rozhdestvensky, with the composer present. Along with his Thirteenth Symphony ('Babiy Yar', 1962) the Fourth reminded Russians of the 'real' Shostakovich, and it opened the way for new developments in the Soviet symphony: Vaynberg [Weinberg], Shchedrin, Kancheli, Salmanov and later Schnittke and others, all responded.

Excoriating Russia's social evils under the flimsiest of allegorical disguises, the Thirteenth Symphony again strained his relationship with officialdom, and the première on 18 December 1962 was nearly sabotaged by official pressure. This was the last of Shostakovich's major brushes with authority, however.

In 1960 he had met the young literary editor Irina Antonovna Supinskaya, and after she had obtained a divorce he married her in November 1962, the same month in which he made his only public appearance as conductor, in his First Cello Concerto and Festive Overture. At a time of steadily deteriorating health his third marriage provided him with invaluable support, and Irina continued to devote herself to his music after his death, preserving a family archive in the house in Moscow's Nezhdanova Street where she and Shostakovich lived from April 1962.

(ii) Works. By 1961 the phenomenon of 'The Two Shostakoviches' had become so familiar it was the subject of an article in *Time* magazine. The reference was prompted by the recently completed Twelfth Symphony, 'the most banal of his works to date', but the supposed split personality was dated to 1948. The article provoked disclaimers from the composer and from Soviet musicologists, but in reality its concept was not so much misguided as insufficiently subtle. Certainly, there were works such as the Twelfth Symphony whose political conformism was almost devoid of discernible subtext and whose artistic value is now generally considered to be minimal, suggesting as near disdain for the task on the composer's part as he could risk. Yet, other 'official' or trivial-seeming works may reflect a genuine need to alternate between works of highly passionate or tragic content and ones that could be tossed off in a relatively light-hearted way. In fact, some of the lighter works composed in the wake of the Tenth Symphony, for instance the Festive Overture and the 'National Holiday' movement from *The Gadfly*, though of scant intrinsic interest, help throw into relief the often overlooked complexities of the symphony's finale. Immediately after the Tenth Symphony Shostakovich composed an undemanding Concertino for two pianos for his son Maxim, followed three years later by the Second Piano Concerto which he considered of little artistic worth but which nevertheless has a deeply felt slow movement. In between came more Dolmatovsky Romances, the Spanish Songs and the deceptively innocent Sixth Quartet – deceptive because the naive G major of the opening keeps slipping from view, to be reinstated as if nothing had happened.

Shostakovich's interest in light music culminated in the opera-comedy *Moscow, Cheryomushki*, composed in 1957–8. This gentle send-up of urban mores on a newly

built overspill housing estate was the belated fulfilment of plans to compose an operetta, plans he had cherished since the early 1930s. Its numerous cross-references to earlier scores might conceivably suggest a hidden commentary on the machinations of officialdom, but, on the whole, its succession of easy-going waltzes and innocuous polkas, most of them marked *allegretto*, represents a considerable dilution from the heyday of his stage music in the early 1930s.

For his 50th birthday in September 1956, Shostakovich published an article in *Sovetskaya muzïka* reflecting on his career. Its mixture of straight fact and evasive generalization is symptomatic of the position of Soviet artists in the Thaw years. Even the seemingly conformist clichés invite reading between the lines. After mentioning his 'naive attempts to reflect "real life"' in his earliest piano pieces, he continued: 'the same desire to write pithy music, reflecting the experiences of my contemporaries, runs through everything I have written'. If *Lady Macbeth*, the Fourth Symphony, the Six Romances op.62, *From Jewish Folk Poetry* and works to come such as the song cycle *Satires* of 1960 and the Thirteenth Symphony of 1962 are indeed intended to reflect the 'real life' experiences of his contemporaries, they must be counted as profoundly subversive.

The Eleventh Symphony was composed for the 40th Anniversary of the October Revolution and programmatically represented the 1905 Bloody Sunday Massacre; yet appearing as it did in October 1957, its message concerning the abuse of dictatorial power invited aesopian reading as a comment on the Soviet repression of the Hungarian uprising. Although Shostakovich himself later encouraged this interpretation, the publication of his intent to write such a symphony had actually preceded the Soviet invasion of October 1956, and the programmatic scenario is extremely closely wedded to the events of 1905 – unimpeachable subject matter for a good communist.

Since the Tenth Symphony, the death of Nina and the difficulties of his second marriage, Shostakovich had been in something of a creative trough, and despite his careful integration of a dozen revolutionary songs in the Eleventh Symphony, this work remains a crudely constructed tapestry compared with its predecessor. It was not until the summer of 1959 that he produced a work to match the concentration and complexity of the Tenth. This was the First Cello Concerto, composed for Rostropovich. Here pithy motifs, pared-down textures and obstinate forward motion are grafted on to familiar Shostakovichian gestural archetypes, establishing a lexicon of devices for his late instrumental works. Fiercely intense invention is equally a feature of the Seventh String Quartet, dedicated to the memory of Nina. Here, metrical transformations, motivic economy and cyclic recalls all feature in greater concentration than ever before.

The array of song quotations in the Eleventh Symphony prepared the way for the self-quotations in the Eighth Quartet, including the ubiquitous D–S–C–H. This piece became inordinately famous, inspiring transcriptions for various media, especially string orchestra, sanctioned by the composer. Every one of its quoted themes acquires either a sadder or a more violent character than it had in its source-work. The moment of most heart-stopping plangency comes in the fourth movement when Shostakovich quotes Katerina's aria of longing for her lover from the fourth act of *Lady Macbeth*, mirroring the composers own personal loneliness at a time of intense need.

Patriotic film scores and other commissioned work continued to occupy Shostakovich, but to an ever-decreasing extent. The Twelfth Symphony represents an unhappy infiltration of that official manner into the main oeuvre. The naivety of its programme, structure and thematic invention lends weight to claims that the composition had to be quickly thrown together after the abandonment of an earlier, possibly rashly satirical project. As in the Eleventh Symphony, there are four continuous movements, but instead of a kind of newsreel commentary, the music unfolds as a series of static tableaux or reflections; the first movement is more academically conformist than anything in Shostakovich's symphonic output, as is the thoroughgoing cyclic unity between movements.

As if to cleanse himself of this apparent act of appeasement, Shostakovich ensured that his next two projects – the Thirteenth Symphony and the already largely completed revised version of *Lady Macbeth* – would be as near as possible to the real thing. In the Thirteenth Symphony, Yevgeny Yevtushenko's poems pointed to egregious social ills in Soviet Russia, from anti-semitism through the suppression of humour, oppression of women, and the climate of fear, to the dilemma of maintaining integrity in an artistic career.

Katerina Izmaylova, as he entitled the revised version of *Lady Macbeth*, is a source of ongoing controversy. Shostakovich's revisions, involving two re-composed interludes, confirmation of the trimmed version of the notorious seduction scene (it had already been cut for the 1935 publication of the score), and a large number of rewordings and vocal transpositions, were carried out for a mixture of motives. Some were practical considerations, reflecting the experience of staging the opera in the 1930s. Others, such as the toning down of sexual imagery and the addition of an ideological element to the prisoners' music in Act 4, may have been a compromise with the criticisms of the 1936 article, or may reflect the composer's own preferred shift of emphasis.

5. 1963–75.

(i) Life. The première of *Katerina Izmaylova* took place on 8 January 1963, two months after the appearance of Solzhenitsyn's *One Day in the Life of Ivan Denisovich*, a story of life in a Kazakhstan prison camp in the last years of Stalin's rule. Approved by Khrushchyov, this publication represented a high-water mark of de-Stalinization in the arts. But a backlash against Soviet authors soon followed and the climate of gradual liberalization itself came under increasing threat when Khrushchyov was ousted and replaced by Leonid Brezhnev in October 1964. The invasion of Czechoslovakia in 1968 and the increasing profile of the dissident movement intensified the reactionary pressure; Shostakovich put his name to political documents such as the condemnation of the nuclear physicist turned human-rights campaigner, Andrey Sakharov, on 3 September 1973. If his distaste for such things was not always perceptible to those who looked to him for moral example, that may indicate the effectiveness of the pretence. His music came close to contradicting his actions, as in the setting 'To the Exile' from the Michelangelo Suite, composed in 1974 immediately after Solzhenitsyn's enforced move to the West.

Shostakovich's declining health made a more openly defiant stance hardly possible. His hand weakness worsened and he gave his last performance as pianist on 28 May 1966, suffering a heart attack later that night. The polio-related condition responded to treatment at an orthopaedic clinic in Kurgan in 1970 and 1971 and deterioration was partially arrested. Shortly after completing his Fifteenth Symphony, on 17 September 1971, he had a second heart attack. This forced him to give up smoking, but for the last two and a half years of his life he suffered from lung cancer, which spread to the kidneys and liver and eventually to the artery between heart and lungs.

Outwardly, his career was again marked by steadily increasing recognition and success. He continued to travel extensively within the Soviet Union and abroad, especially for the numerous premières of *Katerina Izmaylova*, meeting composers and collecting honours. Coinciding with his 60th birthday in September 1966, he was made Hero of Socialist Labour and received a second Order of Lenin as well as the Gold Medal of the Hammer and Sickle. Earlier that year a collected edition of his music was mooted (a rare honour for any composer in his lifetime), and he composed a sardonic *Preface to the Complete Edition of my Works and a Brief Reflection apropos of this Preface*, the title mimicking verbose Russian officialese. His own text for this song remarks ironically but accurately on his title of 'People's Artist of the USSR' (conferred in 1954), his 'many other honorary titles', his position as First Secretary of the Composers' Union of the RSFSR (since 1960) and ordinary Secretary of the Composers' Union of the USSR (since 1957) and 'very many other highly responsible duties'.

With Rostropovich, Oistrakh, Richter, and conductors Mravinsky and Kondrashin in the forefront, his works were now performed and recorded with increasing regularity. In February 1964, the town of Gor'kiy mounted a festival with 43 concerts of his music. Seemingly encouraged, Shostakovich came out of a comparatively fallow creative period since the Thirteenth Symphony and produced the Ninth and Tenth Quartets in quick succession (a previous Ninth Quartet composed in 1961 was destroyed), followed by the Yevtushenko cantata *Kazn' Stepana Razina* ('The Execution of Stepan Razin').

Inwardly his thoughts and creative projects turned increasingly to the topic of death; at the same time he became interested in 12-note composition, still the subject of official disapproval. In this he was inspired by the example of Britten, whose *The Turn of the Screw* he had seen in Edinburgh in 1962, and by his own pupils. In May 1965 he got to know Karayev's Third Symphony and in the following year Tishchenko's Third Symphony. In 1968 he himself built his Twelfth Quartet around 12-note themes, and such themes also appear in the Violin Sonata, Thirteenth Quartet and Fourteenth and Fifteenth Symphonies. He never applied the technique in the manner of the Second Viennese School; rather, themes of this kind took on symbolic associations with death or stasis.

From the Second Cello Concerto of 1966, each of Shostakovich's last ten years with the exception of 1972 saw at least one major composition. The Second Violin Concerto was composed in 1967 for Oistrakh, and in the following year the Violin Sonata (also for Oistrakh) and 12th Quartet. In 1969 came the 14th Symphony, a vocal symphony consisting of 11 settings on the subject of death, in 1970 the 13th String Quartet, which catches much the same mood, and in 1971 the enigmatic 15th Symphony. His second heart attack just after completion of this symphony put a temporary halt to his output, and he spent the remainder of that year in hospital and sanatorium. 1972 was a year of travel, to East and West Germany in May and June, to London and Dublin in July, returning via Copenhagen, and a further visit to England in November before another extended stay in hospital. 1973 saw return trips to Berlin and Copenhagen and the USA (chiefly Chicago), around which Shostakovich fitted the Fourteenth Quartet and the Tsvetayeva settings op.143. In 1974 he produced the 15th Quartet and Michelangelo Suite, whose orchestrated version, completed later in the year, is tantamount to a Sixteenth Symphony. Also this year *The Nose* was finally restaged in Russia, the last of his effectively banned works to be rehabilitated. The Moscow production was masterminded and conducted by Gennady Rozhdestvensky, marking the advent of a new generation of musicians committed to his music. By now, Maxim Shostakovich was conducting extensively, and Rozhdestvensky himself was unearthing and recording numerous obscure and almost forgotten works. In 1975 Shostakovich orchestrated Musorgsky's 'Song of the Flea' and composed his Viola Sonata, for which he was reading proofs only days before his death on the evening of 9 August 1975 in hospital at Kuntsevo. He was buried five days later in the Novodevichy Cemetery.

(ii) Works. The musical trends established over the previous decade continued, the only significant new features being exploration of 12-note themes. That there was no fundamental evolution in Shostakovich's style is suggested by the fact that his last major work, the Viola Sonata, could quote extensively from the overture to his unfinished opera *The Gambler* of 1941–2, without any stylistic discrepancy being apparent. By the same token the Violin Sonata of 1968 owes much to the example of Prokofiev's First Violin Sonata of 1938–46, both in its gestural character and its layout of movements.

In these years, very few 'official' works were demanded of him, and in those that were it is increasingly tempting to read subtexts and in-jokes. *Oktyabr'* ('October'), his symphonic poem for the 50th anniversary of the Revolution, feels like no more than a grudging discharge of duty, for instance, and the *March of the Soviet Militia* is reputedly dedicated to the memory of Zoshchenko, himself a one-time Red Army officer but best known as a trenchant satirist. Shostakovich did agree to undertake two film scores of more or less official stamp for friends (Leo Arnshtam's *Sof'ya Perovskaya* on the life of an activist associated with the assassination of Tsar Aleksandr II, and *A Year is Like a Lifetime* to Galina Serebryakova's scenario on the life of Marx). But he took considerably more seriously his work on Grigory Kozintsev's *Hamlet* and *King Lear*, producing music of a starkness of texture to match the ascetic qualities of the cinematography.

The symphonic impulse continued to shift away from symphonies to quartets (especially Nos.9, 10 and 12), concertos, sonatas and song cycles. The Second Cello Concerto, Second Violin Concerto and Violin and Viola Sonatas have much in common, in particular a sense of familiar territory being traversed but in a wan, alienated

manner, as though experienced by a lost soul. Moments of tonal clarification register increasingly as out-of-body experiences, and they are surrounded by paroxysms of pain, inscrutable soliloquies and ghostly revisitings of the past. Themes containing eleven or all twelve notes of the scale are contrasted with blank oscillating perfect fourths which often conclude movements in anxious stasis. To all this the finale of the Viola Sonata adds an extremely dark-hued tribute to Beethoven, brooding on the affinity between the repeated-note motif of the first movement of the 'Moonlight' Sonata and Shostakovich's own favourite dotted-rhythm funeral march gestures. This world of purgatorial numbness was passed on to the following generation of Schnittke and others.

Quartets 11 to 14 were dedicated to each member of the Beethoven Quartet in turn, in recognition of a partnership of more than 30 years' standing; the Fifteenth Quartet bears no dedication but could easily be read as a requiem for the composer himself. Quartets 13 and 15 in particular abound in stark musical imagery, while the Fifteenth echoes the black humour of the early piano *Aphorisms*, with contorted re-interpretations of innocent-seeming movement titles such as Serenade and Nocturne.

The vocal works focus ever more intently on the subject matter of love, death, and the role of the artist (especially in the Blok cycle, the Fourteenth Symphony and the Tsvetayeva settings respectively). The last cycle, *Four Verses of Captain Lebyadkin*, from Dostoyevsky's novel *The Devils*, ends Shostakovich's vocal output on a note of sour vituperation. The importance he attached to the Tsvetayeva and Michelangelo cycles is reflected in the orchestral versions he made of them, and the same is indicated by his re-orchestrating the Six Romances, op.62. In general the importance he attached to texts in his later years is reflected in his renunciation of the title *romansï* ('romances'): the Blok, Lebyadkin and Tsvetayeva cycles are dubbed *stikhotvoreniya* ('poems' or 'verses') while the proper full title for the Michelangelo settings is *Syuita na slova Mikelangelo* ('Suite on Words of Michelangelo'). The instrumentation of the Blok verses, for violin, cello and piano, prepares the ground for the Fourteenth Symphony (soprano and bass soloists, strings and percussion), and, in general, the borderline between symphonic and vocal works is blurred at this time. The Fourteenth Symphony itself consists of eleven settings of poems, subtly arranged to suggest outrage at the imposition of death by human hand.

The Fifteenth Symphony is haunted by a legion of ghosts – subtle allusions to Shostakovich's own past works and to musical styles that had influenced him. Paradoxically, these allusions make the overall tone of the work all the more difficult to define. The last pages gaze back over the past with unfathomable sadness, and the coda is probably the most desolate music ever to have been written in A major. The end of the Viola Sonata is no less poignant; it is yet another extraordinary reinterpretation of C major, with the rocking fourths so often associated with death in Shostakovich's late work now suggesting a measure of calm and reconciliation.

6. Posthumous reputation. 25 years on, Shostakovich's obituary notices make bizarre reading. *Pravda*, in an article with 85 signatories from the country's political and musical élite, described him as 'a true son of the Communist Party, outstanding public and state activist, an artist – citizen Shostakovich devoted his entire life to the development of Soviet music, to asserting the ideals of Soviet humanism and internationalism, the struggle for peace and friendship of nations'. *The Times* called him 'a committed believer in Communism and Soviet power'; the *New York Times* referred to him as 'a committed Communist who accepted sometimes harsh ideological criticism'. Suggestions to the contrary in books by émigrés such as Yury Jelagin and Yury Olkhovsky as early as the 1950s had been little heeded and were even dismissed as embodying biassed Cold War tactics.

For many years, serious scholars in the West had scarcely bothered with Shostakovich, being seemingly unable to hear past the surface conservatism of language, which Stravinsky, Adorno, Boulez and others equated with reactionary conformism and attributed to a combination of weak-mindedness and *force majeure*. The evaporation of avant-garde prejudices had already cleared the way for a more realistic assessment when Solomon Volkov's *Testimony: the Memoirs of Dmitry Shostakovich as Related to and Edited by Solomon Volkov* made its sensational appearance in 1979. This presented a picture of Shostakovich's profound disaffection with the communist system, stretching back at least to the mid-1930s. This book continues to be a source of controversy, mainly because it was shown to contain substantial passages – appearing on seven of the eight pages signed by Shostakovich – drawn almost verbatim from Shostakovich's articles and speeches. The editor declined to explain how the situation might have come about or how it might be reconciled with the title of the book. Further doubt has been expressed as to whether Shostakovich, in so far as the book may contain his actual words and thoughts, might not have been reinventing his own past. Friends, family and musical associates of the composer expressed conflicting opinions on the book's authenticity and the veracity of the opinions it contains, although a substantial and increasing majority have spoken in its favour. Accusations and counter-accusations have made the question of Shostakovich's relationship with the Communist regime one of the most bitterly fought musicological controversies in the late 20th century. This issue has overshadowed efforts to understand the non-ideological dimensions of his music, to disentangle those aspects of the Soviet system he approved of from those he abominated and to identify when and how his attitudes changed. Scholarly interest in the music has gained new impetus, but at the expense of concentration on a vulgarized, mono-dimensional view of its meaning.

Unlike that of many composers, Shostakovich's reputation with the musical public has grown steadily since his death, fuelled by post-*glasnost'* revelations about the society in which he lived. By most conceivable measurements, he has become the most popular composer of serious art music in the middle years of the 20th century.

His influence on composers spread through the work of his most gifted pupils and protégés (Vaynberg, Boris Chaykovsky, Tishchenko) and kindred spirits abroad (such as Britten, who however, died only a year after him). Others in the Soviet Union emancipated themselves from his style but took up some of the deeper implications of his work, especially his fondness for mixing styles and tones of voice, his use of musical ciphers, his exploration of the no-man's-land between dynamism and stasis and his compulsion to question the same things as he affirms. In these respects, Alfred Schnittke has the strongest claim

8. *Dmitry Shostakovich*

to being the 'true successor', though the musical quality of his invention rarely reaches comparable heights. The doctrinaire rump of the Western avant garde never became reconciled to Shostakovich's importance, although some who started in that camp have at least come to recognize the multi-faceted complexity of his music. On the other hand, natural conservatives in Russia, Scandinavia, Britain and the United States acknowledged the influence but generally failed to grasp the underlying complexities of tone. Those complexities could only have taken the shape they did under the unique coercions of Stalin's Russia. As the most talented Soviet composer of his cursed generation Shostakovich was uniquely equipped to transcend those pressures, and as such his achievement is unrivalled.

WORKS

OPERAS AND BALLETS

op.	
15	Nos [The Nose] (op, 3, Shostakovich, A. Preys, G. Ionin and Ye. Zamyatin, after N.V. Gogol), 1927–8, Leningrad, Maliy, 18 Jan 1930
22	Zolotoy vek [The Golden Age] (ballet, 3, A. Ivanovsky), 1929–30, Leningrad, State Academic, 27 Oct 1930
27	Bolt [The Bolt] (ballet, 3, V. Smirnov), 1930–31, Leningrad, State Academic, 8 April 1931
—	Bol'shaya molniya [The Great Lightning] (comic op, N. Aseyev), ?1931–2, unfinished, Leningrad, Philharmonic Bol'shoy Hall, 11 Feb 1981
29	Ledi Makbet Mtsenskogo uyezda [Lady Macbeth of the Mtsensk District] (op, 4, Shostakovich and Preys, after N. Leskov), 1930–32, Leningrad, Maliy, 22 Jan 1934; rev. as Katerina Izmaylova, op.114, 1955–63
39	Svetliy ruchey [The Limpid Stream] (ballet, 3, F. Lopukhov and A. Pyotrovsky), 1934–5, Leningrad, Maliy, 4 June 1935
—	Igroki [The Gamblers] (op, after Gogol), 1941–2, unfinished, concert perf., Leningrad, Philharmonic Bol'shoy Hall, 18 Sept 1978, staged Moscow, Chamber Musical Theatre, 24 Jan 1990; completed by K. Meyer (3), Wuppertal, Opernhaus, 12 June 1983
105	Moskva, Cheryomushki [Moscow, Cheryomushki] (operetta, 3, V. Mass and M. Chervinsky), 1957–8, Moscow, Operetta, 24 Jan 1959
114	Katerina Izmaylova, 1954–63, Moscow, Stanislavsky–Nemirovich-Danchenko Music Theatre, 8 Jan 1963 [rev. of op.29]

OTHER DRAMATIC WORKS

incidental music

19	Klop [The Bedbug] (V. Mayakovsky), 1929, Moscow, Meyerhold, 13 Feb 1929
24	Vïstrel [The Shot] (A. Bezïmensky), 1929, Leningrad, Working Youth Theatre, 14 Dec 1929
25	Tselina [Virgin Soil] (A. Gorbenko and N. L'vov), 1930, lost, Leningrad, Working Youth Theatre, 9 May 1930
28	Prav', Britaniya [Rule, Britannia] (A. Pyotrovsky), 1931, Leningrad, Working Youth Theatre, 9 May 1931
31	Uslovno ubitïy [Declared Dead] (stage revue, V. Voyevodin and Ye. Rïss), 1931, Leningrad, Music Hall, 2 Oct 1931
32	Gamlet [Hamlet] (W. Shakespeare), 1931–2, Moscow, Vakhtangov, 19 May 1932
37	Chelovecheskaya komediya [The Human Comedy] (P. Sukhotin, after H. de Balzac), 1933–4, Moscow, Vakhtangov, 1 April 1934
44	Salyut, Ispaniya [Hail, Spain] (A. Afinogenov), 1936, Leningrad, Pushkin Theatre of Drama, 23 Nov 1936
58a	Korol' Lir [King Lear] (Shakespeare), 1941, Leningrad, Gor'ky Bol'shoy, 24 March 1941
63	Otchizna [Native Country] (spectacle), 1942, Moscow, Dzerzhinsky Central Club, 7 Nov 1942
66	Russkaya reka [Russian River] (spectacle), 1944, Moscow, Dzerzhinsky Central Club, 17 April 1944
72	Vesna pobednaya [Victorious Spring] (spectacle), 2 songs (M. Svetlov), 1946, Moscow, Dzerzhinsky Central Club, 8 May 1946
—	Gamlet [Hamlet] (Shakespeare), 1954, Leningrad, Pushkin Theatre of Drama, 31 March 1954 [from op.58a]

film scores

18	Novïy Vavilon [New Babylon] (dir. G. Kozintsev and L. Trauberg), 1928–9 [for live perf. with silent film]
26	Odna [Alone] (dir. Kozintsev and Trauberg), 1930–31
30	Zlatïye gorï [Golden mountains] (dir. S. Yutkevich), 1931
33	Vstrechnïy [Counterplan] (dir. F. Ermler and Yutkevich), 1932
36	Skazka o pope i rabotnike yego Balde [The Tale of the Priest and his Worker, Blockhead] (dir. M. Tsekhanovsky), 1933–4, unfinished, rev. as comic op by S. Khentova, 1980
38	Lyubov' i nenavist' [Love and Hate] (dir. A. Gendel'shteyn), 1934
41	Yunost' Maksima [The Youth of Maxim] (dir. Kozintsev and Trauberg), 1934 [no.1 of Maxim trilogy]
41a	Podrugi [Girl Friends] (dir. L. Arnshtam), 1934–5
45	Vozvrashcheniye Maksima [The Return of Maxim] (dir. Kozintsev and Trauberg), 1936–7 [no.2 of Maxim trilogy]
48	Volochayevskiye dni [Volochayev Days] (dir. G. and S. Vasil'yev), 1936–7
50	Vïborgskaya storona [Vïborg District] (dir. Kozintsev and Trauberg), 1938 [no.3 of Maxim trilogy]
51	Druz'ya [Friends] (dir. Arnshtam), 1938
52	Velikiy grazhdanin [The Great Citizen] (dir. Ermler), 1st ser., 1937
53	Chelovek s ruzh'yom [The Man with a Gun] (dir. Yutkevich), 1938
55	Velikiy grazhdanin [The Great Citizen] (dir. Ermler), 2nd ser., 1938–9
56	Glupïy mïshonok [The Silly Little Mouse] (dir. Tsekhanovsky), 1939
59	Priklyucheniya Korzinkinoy [The Adventures of Korzinkina] (dir. K. Mints), 1940–41
64	Zoya (dir. Arnshtam), 1944
71	Prostïye lyudi [Simple People] (dir. Kozintsev and Trauberg), 1945
75	Molodaya gvardiya [The Young Guard] (A.A. Fadeyev, dir. S. Gerasimov), 1947–8
76	Pirogov (dir. Kozintsev), 1947
78	Michurin (dir. A. Dovzhenko), 1948
80	Vstrecha na El'be [Encounter at the Elbe] (dir. G. Aleksandrov), 1948

82	Padeniye Berlina [The Fall of Berlin] (dir. M. Chiaureli), 1949
85	Belinsky (dir. Kozintsev), 1950
89	Nezabïvayemïy 1919-y [The Unforgettable Year 1919] (dir. Chiaureli), 1951
95	Pesnya velikikh rek (Yedinstvo) [Song of the Great Rivers/Unity] (dir. Y. Ivens), 1954
97	Ovod [The Gadfly] (E.L. Voynich, dir. A. Faintsimmer), 1955
99	Pervïy eshelon [The First Echelon] (dir. Faintsimmer), 1955–6
106	Khovanshchina, 1958–9 [orch of op by M. Musorgsky]: see ORCHESTRATIONS [Khovanshchina, 1958–9]
111	Pyat' dney – pyat' nochey [Five Days – Five Nights] (dir. Arnshtam), 1960
—	Cheryomushki (dir. G. Rappaport), 1962 [arr. of op.105]
116	Gamlet [Hamlet] (Shakespeare, trans. B. Pasternak, dir. Kozintsev), 1963–4
120	God, kak zhizn' [A Year is Like a Lifetime] (dir. G. Roshal'), 1965
—	Katerina Izmaylova (dir. M. Shapiro), 1966 [arr. of op.114]
132	Sof'ya Perovskaya (dir. Arnshtam), 1967
137	Korol' Lir [King Lear] (Shakespeare, dir. Kozintsev), 1970

DAVID FANNING (text), LAUREL E. FAY (work-list, bibliography)

Shostakovich, Maxim [Maksim] (*b* Leningrad, 10 May 1938). Russian conductor and pianist, son of Dmitry Shostakovich. He took music lessons from an early age and entered the Moscow Conservatory as a piano student of Yakov Fliyer, gaining his entrance qualification by performing his father's Piano Concerto no.2, written for him. His interest in conducting developed at the conservatory, and he studied first with Nikolay Rabinovich and Aleksandr Gauk, later with Rozhdestvensky and Markevich. He was appointed assistant conductor with the Moscow PO in 1963 and with the USSR State SO in 1966, later becoming principal conductor of the State RSO. His British début in 1968 with the LPO at the Royal Festival Hall was followed the next year by his first North American tour with the USSR State SO. In 1981 he settled in the USA as a political refugee with his son Dmitry, also a pianist, and he was chief conductor of the Hong Kong PO, 1983–5, and chief conductor and artistic director of the New Orleans SO, 1986–91. The first opera he conducted in the theatre was his father's *The Nose* for the New Opera Company at the London Coliseum in 1979; he later drew praise for his conducting of *Lady Macbeth of the Mtsensk District* at New York in 1984 (Juilliard Opera Center) and at the Hamburg Staatsoper in 1990. He conducted the premières of some of his father's later works, including the Symphony no.15. His earlier performances were characterized by youthful dynamism and a nervous intensity of feeling; latterly his conducting has become more refined, dignified and subtly nuanced. His recordings include both his father's piano concertos, several of his symphonies and other Russian works.

NOËL GOODWIN

Shostakovich Quartet. Russian string quartet. It was founded in 1967 by students at the Moscow Conservatory: Andrey Shishlov, Aleksandr Balashov, Aleksandr Galkovsky and Aleksandr Korchagin. At first they appeared under their individual names and were successful in that guise for more than a decade, with a residency at Moscow Radio. Balashov was a talented composer and the quartet played his music; but after nine years he wished to leave – he later died tragically young. Aleksandr Semyannekov filled in as second violinist for a year, then Sergey Pïshchugin became available on the dissolution of the Glinka Quartet in 1977. Since then the group's personnel has remained stable. In 1979 the four took Shostakovich's name and began dedicating themselves to a special study of his chamber music, some of which they already played. In 1985 they gave their first cycle of his quartets in Amsterdam, repeating the feat in Adelaide in 1986 and Edinburgh in 1988 – in Moscow they have usually performed the cycle across two seasons. Their interpretations display considerable imagination; individually they have fine tones and they are not afraid to play without vibrato or to use the open strings for effect. Their repertory ranges from Purcell to Schoenberg, Bartók and contemporary music; Vasily Lobanov and Mikhail Yermolayev have written for them and they play works by Prokofiev, Myaskovsky, Yevgeny Golubev, Nikolay Peyko and Arno Babajanian. They have frequently collaborated with the pianist Aleksey Nasedkin and the cellist Aleksey Kovalov. Their recordings include all Glazunov's quartets, two Shostakovich cycles, most of the Beethoven quartets and an outstanding account of Haydn's *Seven last Words* – a work they have sometimes played in concert with a narrator. Shishlov and Korchagin teach at the Moscow Conservatory and Galkovsky at the Gnesin Institute. The ensemble's instruments are a 1740 Giuseppe Guarneri violin, a school of Amati violin, a 1710 Carlo Antonio Testore viola and a 1751 Giovanni Gabrieli cello.

Showalter, A(nthony) J(ohnson) (*b* Rockingham Co., VA, 1 May 1858; *d* Chattanooga, TN, 24 Sept 1924). American music educator, publisher and composer. He moved to Dalton, Georgia, where he established in 1884 a branch office of the Ruebush-Kieffer Co. In the same year he founded his own company, which grew into the largest music publishing house south of Cincinnati, with branches in Dallas, Texarkana, Arkansas-Texas and Chattanooga. Sales of its gospel song collections had exceeded two million copies by 1904; by 1940, when the firm ceased to publish music, approximately six million copies of Showalter's song and hymn collections, as well as theory books, had been issued. Showalter edited well over 100 collections containing more than 1000 gospel and secular songs, anthems and hymns of his own composition; he was recognized during his lifetime as the leading composer in this tradition in the southern and southwestern states, but his only composition to have achieved lasting popularity is *Leaning on the Everlasting Arms*. Showalter also published the monthly *Music Teacher and Home Magazine* and wrote *The Best Gospel Songs and their Composers* (1904). In about 1885 he established the Southern Normal Conservatory, which educated more teachers and composers of gospel songs than all other southern schools of this nature combined.

Showground organ. *See* FAIRGROUND ORGAN.

Shrider [Schrider, Schreider], **Christopher** (*b* ?Germany, *c*1680; bur. Soho, London, 31 May 1751). English organ builder. Sumner claimed he was born in Leopoldsburg (?near Wettin) in Germany. He is often referred to as Father Smith's son-in-law, though soon after Smith's death in 1708 he married Helen Jennings (possibly his second wife). On Smith's death he was instructed to

complete the new organ at Trinity College, Cambridge, and he also succeeded Smith as organ maker to the royal household. It appears that he had associations with the two Abraham Jordans, father and son, reputedly collaborating with them on their instrument at St Magnus's, London Bridge, in 1712, and being assisted by them in building the organ at Westminster Abbey in 1727. His organs include those at the Chapel Royal, St James's Palace, London (1710); the Chapel Royal, Hampton Court Palace (*c*1710); Exeter Cathedral (1713; a rebuilding of the Loosemore organ with new soundboards, action and bellows); St Mary Whitechapel, London (1715; also attributed to Renatus Harris); St Mary Abbots, Kensington (*c*1716; also attributed to Jordan); St Mary the Virgin, Finedon, Northamptonshire (*c*1717; also attributed to Gerard Smith); St Martin-in-the-Fields, London (1726; the gift of King George I; it was removed in 1799 to Wotton-under-Edge, Gloucestershire, where parts remain); Westminster Abbey (1730; for the coronation of George II); and Henry VII's Chapel, Westminster Abbey (1737; temporary organ). Several other instruments have been attributed to Shrider on doubtful evidence: that at St Alkmund's, Whitchurch, Shropshire, is now known to have been built by Marc-Antoine Dallam. Shrider's son Christopher (*d* London, 16 Oct 1763) succeeded his father as organ maker to the king.

GUY OLDHAM/STEPHEN BICKNELL

Shrubsole, William (*b* Canterbury, bap. 13 Jan 1760; *d* London, 18 Jan 1806). English organist. He is celebrated as the composer of the hymn tune 'Miles Lane'. He was a chorister of Canterbury Cathedral and became organist of Bangor Cathedral in 1782; but his tendency to associate with religious dissenters there led to his receiving notice of dismissal in December 1783. He went to London and became organist of Spafields Chapel, Clerkenwell (Countess of Huntingdon's Connexion), in 1784 and at St Bartholomew-the-Less in 1800. His famous tune, one of only four attributed to him, was first published anonymously in the *Gospel Magazine* for November 1779 (facsimile in *MT*, xliii, 1902, p.244). His name was first attached to it in the eleventh edition of Stephen Addington's *Collection of Psalm-Tunes* (London, 1792).

WATKINS SHAW/NICHOLAS TEMPERLEY

Shrude, Marilyn (*b* Chicago, 6 July 1946). American composer and pianist. She studied at Northwestern University (DM 1984), where her teachers included Alan B. Stout and M. William Karlins. She has taught at Bowling Green State University (from 1977) and the Interlochen Arts Camp (from 1990), and served as director of the MidAmerican Center for Contemporary Music (at Bowling Green), an international organization for the study and promotion of contemporary music and new technology. Among her honours are a Kennedy Center Friedheim Award for orchestral music (third place, 1984), Chamber Music America awards (1993 and 1998), a lifetime achievement award from the American Academy and Institute of Arts and Letters (1997), a 'Meet the Composer' New Music for Schools Residency Grant (1997) and commissions from the Toledo (Ohio) SO, the St Louis SO Onstage series and the Cleveland Chamber Symphony. She was awarded the Cleveland Arts Prize in 1998. Her works are highly linear, featuring layered constructions, timbral contrasts and intervallic transformations in both tonal and atonal contexts. In addition to composing, she has remained active as a recitalist.

Shteynpress, Boris Solomonovich. *See* STEINPRESS, BORIS SOLOMONOVICH.

Shtoharenko, Andry Yakovych (*b* Novyy Kaidaky, 2/15 October 1902, *d* Kiev, 15 Sept 1992). Ukrainian composer. In 1912 he entered the Russian Musical Society's school in Katerynoslav, and in the 1920s, in Dnipropetrovs′k, he taught singing in schools and organized his own orchestra. In 1930 Shtoharenko entered the Khar′kiv Conservatory where he studied with Bahatïyryow and graduated in 1936. Throughout his active life, he occupied several key administrative positions in the musical hierarchy of the USSR: secretary to the Turkmen Composers' Union during World War II; vice-chairman (1947–56) and chairman (1968–89) of the Composers' Union of the Ukrainian SSR; vice-chairman of the USSR Composers' Union (1948–54); teacher of composition and rector of the Kiev Conservatory (1954–68) and head of the composition faculty (1968 until his death). His many awards include two state prizes (1946, 1952), People's Artist of the Ukrainian SSR (1971), People's Artist of the USSR (1972), the Shevchenko prize (1974) and Hero of Socialist Labour (1980). After the death of Lyatoshyns′ky in 1968, Shtoharenko became the official voice of Ukrainian music. A prolific composer of considerable but

very uneven talent, his eclectic style was an amalgam of the Lysenko Ukrainian national school, The Five (primarily Musorgsky and Borodin), Bartók's more folk-oriented works and of the style of his fellow composer and friend Mykola Kolyada (1907–35). Early on, Shtoharenko was also shaped by the populist aesthetics of the Association of Proletarian Musicians of Ukraine and their emphasis on mass culture and topical themes – he gained his first success with the symphonic cantata *Pro kanal's'ki roboty* ('About the Canal Work'). One of the later landmarks of this style was the symphonic cantata *Ukraino moya* ('My Ukraine') written in 1943 in response to the German invasion. The compositions written in post-Stalin years, such as the well-crafted and inspired Second Symphony in D major for strings (1965), fall well within the mainstream of slavic modern conservatism as characterized by neoclassical phrase structures, aphoristic themes, motoric rhythmic patterns, clear harmonic construction and broad gestures. Most of his music also tends to be programmatic, but, at best, the message is an underlying feeling and is handled with subtlety as in the Third Symphony 'Kyiv' ('Kiev').

WORKS
(*selective list*)

ORCHESTRAL

Pokhid [The Cruise], sym. poem, 1936; Sym. no.1 'Kazky' [Tales], 1947, rev. 1958; Marsh-uvertyura, 1951; Pam'yati Lesi Ukrainky [To the Memory of Lesya Ukrainka], suite, 1951; Partyzans'ki kartynky [Partisan Scenes], conc.-suite, pf, orch, 1957; Molodizhna poėma [Youth poem], 1959; Molodizhna syuita [Youth Suite], 1959; Pam'yati Kobzarya [To the Memory of Kobzar], sym. poem, 1960; Sym. no.2 'Pam'yati tovarisha' [To the Memory of a Comrade], 1965, rev. 1970; Satira, scherzo, 1966; Pioners'ka syuita, 1966; Divertissement, fl, chamber orch, 1967; Vn Conc., 1968–9; Bolgars'ki vrazhennya [Bulgarian Impressions], 1971; Sym. no.3 'Kyiv', 1971; Pf Concertino, 1972; Vn Concertino, 1972; Poėma-Kontsert, pf, orch, 1977; Simfonyehny tantsi [Sym. Dances], pf, orch, 1982; Vc Conc, 1984

VOCAL

With orch: Pro kanal's'ki roboty [About the Canal Work], sym. poem-cantata, 1936; Dytynstvo [Childhood], vocal orch suite, 1939; Ukraino moya [My Ukraine] (Malyshko, M. Ryl'sky), cantata-sym., 1943; Zdravytsya na chest' velykogo rosiys'kogo narodu [A Toast to the Great Russian People], 1949; Do 800-richchya Moskvy [To the 800 Years of Moscow], cantata, 1950; Rosiya [Russia], vocal sym. poem, 1950; Pro partiyu ridnu [On the Native Party], vocal sym. poem, 1953; Ziyshla komunizmu zorya [The Story of Communism has Risen], vocal sym. poem, 1955; Lirychna oda Zhovtnyu [Lyrical Ode to October], 1958; Shlyakhamy Zhovtnya [On the Paths of October], tale, solo vv, chorus, wind, 1967; Pro nezabutnikh lyudey [On the Unforgettable People], ballads, 1969; Iz Putyvlya na skhid sontsi [From Putyul to Sunrise], poem, 1970

Other works: over 80 smaller choral pieces, *c*40 solo songs, *c*20 folksong arrs.

OTHER WORKS

Chamber: Str Qt, 1935; Virmens'ki ėskizy [Armenian Sketches], str qt, 1960; Trio molodizhne [Youth Trio], 1961

Inst: Fantasia, vn, 1960; Ballada, Zhartivlyvy marsh [Jocular March], vc, pf, 1973; Ukraïns'ki tantsi, vn, pf, 1973; Sonata, vc, pf; *c*20 accordion pieces, other smaller works

Pf: Kartynï z bïta narodnïkh mstyteley [Pictures From the Daily Life of the Folk Avengers], suite, 1954; Pam'yati muzykantiv [To the Memory of Folk Musicians], 3 poems, 1961; Obrazy [Images], 5 preludes, 1969–70; Etyudy-malyunky, 1974

Dramatic: 12 incidental scores, 5 film scores

VIRKO BALEY

Shuard, Amy (*b* London, 19 July 1924; *d* London, 18 April 1975). English soprano. She studied at Trinity College of Music, London, and later with Eva Turner. After singing Aida, Venus and Giulietta (*Les contes d'Hoffmann*) in Johannesburg, in 1949 she joined the Sadler's Wells Opera, remaining there until 1955, and singing the title role of *Káťa Kabanová* in the British première in 1951. Her repertory also included Magda Sorel (*The Consul*), Carmen, Eboli, Tatyana and Tosca. In 1954 she joined Covent Garden Opera, where she distinguished herself first in the Italian repertory as Aida, Turandot (a thrilling portrayal) and Lady Macbeth in the first production there of Verdi's *Macbeth*, then in the German repertory as Sieglinde, Brünnhilde, Kundry and Electra. She sang the title role in *Jenůfa* in the opera's first stage production in Britain in 1956, and the Kostelnička in its 1972 and 1974 revivals. She sang Isolde in Geneva in 1972, and also appeared in Bayreuth, Vienna, Buenos Aires, San Francisco and Milan. Shuard had a bright, gleaming tone and sang with dramatic awareness, as can be heard on a Verdi and Puccini recital recording made under Edward Downes at the height of her career.

HAROLD ROSENTHAL/ALAN BLYTH

Shudi [Schudi, Tschudi, Tshudi], **Burkat** [Burkhardt] (*b* Schwanden, canton of Glarus, 1702; *d* London, 19 Aug 1773). English harpsichord maker of Swiss birth. He came to England as a joiner in 1718 and worked for HERMANN TABEL. In 1728–9 he married Catherine Wild (whose parents also came from Schwanden), and in 1739 took up residence at 1 Meard Street, Soho, remaining there until 1742, when he moved to Great Pulteney Street. It was there that his portrait by Marcus Tuscher, now in the National Portrait Gallery, was painted (see illustration).

In 1761 John Broadwood started working for Shudi. Eight years later Broadwood married his employer's daughter Barbara and was taken into partnership by his father-in-law. Shudi's 'Venetian swell', whereby the volume could be varied by moving louvres, was patented on 18 December 1769. In 1771 Shudi retired to a house in Charlotte Street, and on his death his place in the partnership was taken by his son, Burkat (*b c*1738; *d* 1803); after the son's death the ownership of the firm passed to Broadwood, who by then was devoting almost all his time to piano making. Details of some 23 surviving Shudi harpsichords and 27 Shudi–Broadwood harpsichords are given by Boalch.

Two other harpsichord-making members of the family are known: Joshua Shudi (1739–74), the son of Burkat

'Shudi Family Group': portrait by Marcus Tuscher, c1742 (National Portrait Gallery, London)

Shudi's elder brother, Nicholas, spent a short time at sea and then went to work for Shudi in 1761. That his work was not satisfactory is attested by an affidavit sworn on 12 January 1767 by John Broadwood and two fellow apprentices (see Russell, appx 13). However, by 1766 Joshua had set up on his own in Silver Street, Golden Square, and Boalch records three surviving harpsichords, signed 'Joshua Shudi', from 1770, 1773 and 1776 respectively. The relationship (if any) of Bernard Shudi to the rest of the family is not clear, and his existence is known only from a two-manual harpsichord of 1769 signed by him.

Shudi was one of the two most important English harpsichord makers of his period, the tone of his instruments being preferred by Burney to Kirkman's; his clients included Frederick the Great, the Empress Maria Theresa, Haydn, the Prince of Wales, and his friends Gainsborough, Reynolds and Handel. Described as 'celebrated' by Gerber (*Lexicon*, 1790–92), he had among his workers Zumpe (according to Burney) as well as Broadwood; he also worked with Snetzler (again according to Burney) on claviorgans (although none of these have survived), and left Snetzler a ring in his will. Mozart tried one of his harpsichords (no.496) when in London on 13 May 1765 (the numbers were recorded in the workshop books and often on the instruments themselves); Clementi took one of his instruments to Paris; others were exported to Russia (1772–3), and at least 11 to Oporto (1773–5), presumably for dispatch to various places in the peninsula. Mrs Hamilton's instrument in Naples was said by Burney to be regarded locally as a musical phenomenon.

Trained in the Flemish-orientated workshop of Tabel, Shudi is also known to have hired out two Ruckers harpsichords. From 1782, Broadwood's piano production was immense, but previously the Shudi–Kirkman output had been largely geared to three basic models: the single-manual harpsichord – 8′, 8′; another single-manual harpsichord of 8′, 8′, 4′; and a double-manual harpsichord – 8′, 8′, 4′ and lute. Usually there was a buff stop; on some single instruments a pedal operates it. Modifications or additions can be dated approximately: from *c*1760 the buff stop; from *c*1765 the machine stop and the music desk; from *c*1765 a long compass down to C′; from *c*1769 the Venetian swell; from *c*1770 a change in scaling to somewhat longer bass strings and more distant plucking-points. The 'machine stop', perhaps invented for Frederick the Great's instruments, was the name given to the mechanism engaged by a handstop but operated by a foot-pedal, which on being depressed gradually reduces the registration on each manual (*see* MACHINE STOP (i)). Variety of tone, dynamic changes, and a certain degree of crescendo-diminuendo were made possible by this means, corresponding roughly to the knee-levers of such French makers as Taskin. The Venetian swell, perhaps invented as an improvement on Kirkman's raised-lids or nag's head swell, was the name given to the row of framed longitudinal louvres tightly fitting the harpsichord above the strings and opened and closed by a mechanism worked by a foot-pedal. The chief purpose is uncertain, since the device changes the timbre of the sound, affects its volume, permits both gradual and sudden operation, and can rest open or closed. Whatever the various builders' intention with the Venetian swell, it can hardly be compared to the organ swell which in 1769 still concerned only the upper or melodic parts of the compass; nor can it be truly said to have been intended to aid 'the harpsichord's fight for survival against the pianoforte' (Russell) since in England pianos had not become very common by 1769, and Frederick had then owned two Silbermann pianos for over 20 years. Of instruments with the long compass C′ to *f*‴, 11 examples dating from 1765 to 1782 are now known; of Shudi's supposed 16′ stop, nothing is known and the phrase 'upper and lower octave' in the advertisement in the *Morning Herald* for the sale of Handel's harpsichord on 26 June 1788 is much too vague and of too dubious a provenance for the historian (see Russell, 81). Other terminology is also a little unclear; for example Shudi's phrases 'guitar or harp' for the buff stop in one of Frederick's instruments, and 'cimbal' for the basic, lower-manual 8′ stop.

The general nature of a Shudi harpsichord, including its inner construction, can be described as 'developed Flemish', like its French and English contemporaries. With regard to the tonal differences between Shudi and Kirkman harpsichords, it is generally said that Shudi harpsichords are rounder, deeper and less incisive, due possibly to the use of leather plectra in some registers (not normally found in Kirkman harpsichords), and the later changes in plucking point and string layout. Such judgments must remain essentially subjective, and the opportunities to hear and compare side by side a Kirkman and a Shudi harpsichord of the same date, in as near as

possible the same state of preservation, are still rare. In fact, these judgments are of little real value, for whatever subtle variations of tone may be found between the two makers there can be little doubt that Hubbard's dictum that the harpsichords of Shudi and Kirkman represent 'the culmination of the harpsichord maker's art' is still valid. His further claim that 'for sheer magnificence of tone, reedy trebles and sonorous basses, no other harpsichords ever matched them' is possibly equally true, but again must remain subjective. It is interesting, however, that in the late 20th century, performances of music of the 18th century tended to favour the classical French harpsichord with its beguiling tones and more flexible registration scheme, and it has been less common for modern builders to make true and faithful copies of either a Shudi or a Kirkman.

For illustration *see* HARPSICHORD, fig.14.

DONALD HOWARD BOALCH, PETER WILLIAMS, CHARLES MOULD

Shudraga [shidurgu, shandz]. Mongolian lute. Traditionally, this three-string fretless lute was played by some ethnic groups of West Mongolia and in Ulaanbaatar. During the Qing dynasty, the *sanxian* was used in Mongolian music and in shamanic rituals.

The instrument has a circular or sub-circular wooden frame and a long neck that carries three strings over a single bridge (see illustration). The three strings, which allow a range of three octaves and a major 3rd, are believed to symbolize past, present and future. It is made from elm or sandalwood, and the body formerly had the groinskin of cattle stretched over both sides. Horse-hair or silk thread was used for the strings. Modern instruments have an upper bridge made of bone and a lower bridge made from bamboo with snake- or goatskin over the two faces. During the summer, when dairy produce is plentiful, skins are tanned with yoghurt, then softened. They are moistened for two or three days, then washed, stretched and smoke-dried to make them stronger. Strings are made from animal gut after cleaning, par-boiling, stretching and drying.

A variety of playing techniques is used. Emsheimer (1943) described a Mongolian instrument with three silk strings, plucked or strummed with horn plectrum or fingers. Since the sound is short lived, the player strikes each note more than once in succession. When Western Mongols, such as Torguts, play the instrument to accompany the *biy*-dance, the strings are strummed with fingers of the right hand across the lower section of the neck. The four fingers of the left hand used to stop the strings are also used to sound them by plucking.

As with other instruments, tunings varied in the pre-Communist era according to group tradition and genre of music played. The pitch was not fixed. In contemporary Mongolia, the instrument is played by women in folk music ensembles.

Oyuunsüren playing the shudraga, 15th Festival of Asian Arts, Hong Kong, 1994

CAROLE PEGG

Shuffle. (1) A dance step of indefinite southern black-American origin, perhaps dating from the 18th century, in which the feet are moved rhythmically across the floor without being lifted.

(2) A rhythm derived from the dance step. The term is onomatopoeic, "sh" describing its characteristic smoothness (and especially its sound when played on the snare drum). The alternation of long and short syllables (shuf-fle, shuf-fle, . . .) evokes its distinguishing rhythm, a subdivision of the beat into uneven triplets which is more specific than the fundamental swing or boogie-woogie rhythm only in that it is usually played legato and at a relaxed tempo. The shuffle rhythm is generally confined to early styles of jazz, up to and including swing; however it is not unknown in later styles, and may be heard, for example, on a version of *Birdland* recorded in concert by

Weather Report and included on the album *8:30* (*c*1079, Col. PC2-36030). Although the rhythm is most often executed on the snare drum using brushes, some drummers, notably Paul Barbarin, were adept at producing it with sticks.

(3) A term used in the titles of jazz pieces, principally in the late 1920s and the 1930s; although the shuffle rhythm was widely used during this period, such pieces are not necessarily associated with the dance step or rhythm.

JOHN SNELSON

Shugliashvili, Mikhail (*b* Tbilisi, 17 Jan 1941; *d* 23 Nov 1996). Georgian composer. In 1964 he graduated from the Tbilisi Conservatory where he studied composition with Andria Balanchivadze and from 1959 taught music theory at various Tbilisi music schools. One of the board members of the Georgian Composers' Union, in 1996 he founded, and was the artistic director of the first computer music studio at the Kvali film studio. He is one of a line of Georgian exponents of experimental music. During the 1960s and 70s, he wrote a series of almost solely instrumental works, in which he moved away from serial counterpoint towards a meditative minimalism. His musical thinking was influenced in part by scientific positivism, and also by information theory and structuralism. Much is determined by a cult of the objective, in which his conception of sound is arrived at constructively and logically by means of various number categories inherent in the music, a process to which he attached special importance. In his development of the concept of the transformation of nature in art, he investigated the exterior and interior qualities of structure, analysing its properties from the widest possible range of means. This method led to constant changes in the tension, solidity, rhythm, dynamics and timbre of the structure. In a manner related to some of Stockhausen's experiments, he tried to unite these parameters into acoustic impulses and subjected the initial cell or group to spatial displacements. Later this method is enriched by the inclination, characteristic of minimalist music, towards the exposure of the semantic meaning of the structure. His music consists of the extended intonating of separate intervals and chords which themselves comprise a single row of overtones; he presupposes the listener's concentration on the micro-details of the sound process. Among the composer's most significant works are the *Pastoral'* and *Gradatsii*.

LEAH DOLIDZE

Shukh, Mikhail Arkad'yevich (*b* Krasnïy Luch, Lugansk province, 14 Dec 1952). Ukrainian composer. In 1977 he completed his studies at the faculty of composition with V. Zolotukhin and D. Klebanov at the Kharkiv State Institute of Arts. That same year Shukh became a teacher of theory and composition at the Donets'k State Music College, and in 1981 he graduated from the professional development faculty of the Kiev Conservatory. During the 1980s he frequently participated in seminars for young composers held in Ivanovo, and in 1991 he became a laureate of the Prokofiev Prize and a stipendiary of the Art-Radon fund for culture and charity. His works have been heard in festivals in Georgia, Germany, Italy, Russia and Ukraine.

As Shukh was establishing himself artistically during the 1970s, in Russia it became possible for the first time to study the works of Stravinsky, the composers of the Second Viennese School, as well as those of Boulez, Messiaen, Stockhausen and Xenakis; Shukh armed himself quickly with the latest musical techniques. However, innovation in composition and technique did not become an end in itself, but simply helped him to find his own path. In his sacred works, Shukh fuses genres and modes from Gregorian and Protestant chorales, Catholic and Orthodox music and elements of non-European cultures; an important stylistic aspect in his work of the 1990s is a tendency towards meditative moods.

LESYA LANTSUTA

Shukur, Salman (*b* Baghdad, 1921). Iraqi *'ūd* player and composer. He is the sole guardian of the Arab-Ottoman repertoire in Iraq. Between 1936 and 1944 he studied the *'ūd* at the Institute of Fine Arts in Baghdad with the Arab Ottoman prince, al-Sharīf Muḥiiyy al-Dīn Haydar (1888–1967). In 1947 Shukur was appointed by his

master to teach the *'ūd* at the Institute, and he subsequently became head of the music department. From 1955 until the 1990s he gave recitals in many parts of the world and worked on Arab-Islamic manuscripts. He has composed about ten works which are largely based on suite or sonata forms with programmatic tendencies. He has also written a concerto for *'ūd* and orchestra. As a performer, his interest in instrumental improvisations (*taqsīms*), however, is limited. He rather favoured composed pieces and is known to be the main performer of al-Sharīf Muḥiyy al-Dīn's compositions, which are noted for their technical difficulty and evidence of Western influence; Shukur is a learned and dedicated virtuoso, who has transmitted his art and technique to a generation of Iraqi *'ūd* players.

SCHEHERAZADE QASSIM HASSAN

Shulman, Alan (*b* Baltimore, 4 June 1915). American cellist and composer. He began cello lessons at the age of eight and later studied at the Peabody Conservatory with Bart Wirtz; there he also studied theory and harmony with Louis Chislock. In 1928 he won a New York Philharmonic scholarship to study the cello with Joseph Emonts and harmony with Winthrop Sargent, and in 1932 he was awarded a scholarship to the Juilliard School, where until 1937 he was a pupil of Felix Salmond (cello), Bernard Wagenaar (composition) and Albert Stoessel (orchestral training). He was a founder member of the NBC SO under Toscanini in 1937, remaining in the orchestra until 1954 except for the war years, when he served in the US Marines. Shulman was co-founder of the Stuyvesant String Quartet (1938–54), which was noted for its performances of contemporary music; its many acclaimed recordings included the First String Quartet by Bloch and rarely heard quartets by Paganini and Kreisler. From 1962 to 1969 he was a member of the Philharmonia Trio. He wrote his first composition at the age of ten and while still a student composed incidental music for a New York performance of the play *The Chinese Nightingale*. His other works include Theme and Variations for viola and piano (1940, later rewritten for viola and orchestra) and a cello concerto (1948) dedicated to Leonard Rose, who gave the première with the New York PO in 1950. Shulman founded the Violoncello Society of New York in 1956 and was the society's president from 1967 to 1972.

MARGARET CAMPBELL

Shumeyko, Volodymyr (Viktorovich) (*b* Gleyuvatka, Krivoy Rog region, 21 Jan 1949). Ukrainian composer. In 1973 he graduated from Skoryk's class at the Kiev Conservatory, then taught at the Institute of Culture in Rovno (1973–6), and at the Dïmer Music School in the Province of Kiev (1976–8). He then worked as an editor for the Muzychna Ukraïna publishing house (1978–84) before taking up composing full-time. At the start of his artistic career he followed along the path of neo-folklorism. He made extensive use of traditional Ukrainian genres such as the *duma* and the lament (the Partita no.2 for piano, and all his orchestral compositions). His attraction to folk instruments has led him to write compositions written purely for them, among which were the first in the Ukraine to make use of pointillist and sonoristic techniques. He frequently combines folk instruments with those of a standard orchestra: the *Duma pro tr'okh brativ* ('Duma about Three Brothers') for baritone and orchestra makes use of a folklore model, and includes in the scoring a bandura and the Ukrainian lyre. In his Second Symphony a small orchestra is supplemented by a whole set of folk instruments. Many of his works can be perceived as meditations in the style of a *duma*, as a distinctive form of music-making with elements of folklore and ritual; note should also be made of the composer's interest in the *kant* (his Sonata for flute and harpsichord, and *Starosvit's' ki spivanitsi* ('Old World Songs') for vocal ensemble). With regard to genre, Shumeyko has a preference for chamber works and cycles in suite form.

WORKS
(*selective list*)

Preludio, Toccata ed Aria, hn, str qt, pf, 1977; 4 karpats'ki pastorali [4 Carpathian Pastorales], ww qt, fr hn, pf, 15 str, 1979; Partita, pf, 1981; Pf Sonata, 1982; Duma pro 3 brativ [The Ballad of 3 Brothers] (after F. Kolessa), Bar/dramatic T, orch, 1983; Intermezzo diatonico, 15 str, 1984; Sonata, fl, hpd, 1985; Quartetto sassofonico, 1988; Str Qt, 1988; Vypovid'/Sym. no.1 [Declaration], 1990; Neznanomu voiakovi [To the Unknown Warrior] (O.Ol'zhych), poem, male chorus, orch, 1994; Spomin pro Vyry/Sestetto pastorale [Remembrance of Paradise], fl, cl, perc, vn, vc, pf, 1994; Vypovid'/Sym. no.2, small orch (incl. many Ukr. folk insts), 1995
Choral works, film scores, children's pieces

Principal publisher: Muzychna Ukraïna

NINA SERGEYEVNA SHUROVA

Shumsky, Oscar (*b* Philadelphia, 23 March 1917; *d* Rye, NY, 24 July 2000). American violinist and conductor. At the age of eight he made his début with the Philadelphia Orchestra under Stokowski. He studied with Auer privately from 1925, and at the Curtis Institute, Philadelphia (1928–36), entering Zimbalist's class following Auer's death in 1930. He made his débuts in New York in 1934 and in Vienna in 1936. In 1939 he joined the NBC SO under Toscanini and became leader of the Primrose String Quartet. He also appeared as a soloist with the principal American orchestras, and on radio and television. In the early 1960s he joined the Bach Aria Group as the solo violinist. Shumsky made his début as a conductor in 1959 with the Canadian National Festival Orchestra and served as music director of the Canadian Stratford Festival (1959–67). He also conducted the Westchester SO and the Empire Sinfonietta in New York, and the Colonial SO in New Jersey. He taught at the Peabody Conservatory, Baltimore, and the Curtis Institute; in 1953 he joined the faculty of the Juilliard School in New York.

In 1982, after some years of absence, Shumsky returned to the concert platform and gave memorable performances in Britain and the USA. He was a player of virtuoso technique, pure style and refined taste; yet never sought recognition as a soloist, preferring to concentrate on teaching, chamber music playing and conducting. He made outstanding recordings of Bach's concertos and Ysaÿe's sonatas for solo violin. In 1965 he was granted a Ford Foundation Award. He played a Stradivari of 1715 known as 'Ex-Pierre Rode' or the 'Duke of Cambridge'.

BORIS SCHWARZ/MARGARET CAMPBELL

Shupo, Sokol (*b* Gjirokastra, 4 Feb 1954). Albanian composer and ethnomusicologist. In Gjirokastra he studied the accordion and the piano (the latter with Gjon Simoni) before attending first the Jordan Misja Art Lyceum, Tirana (1969–73), and then the Ciprian Porumbescu Conservatory, Bucharest (1973–6), where his teachers included Comes, Stroe and Vieru. On his return to Tirana, he continued his studies at the conservatory with Zadeja, graduating in 1978. He also served as musical director at the Palace of the Pioneers, Tirana, until 1982, when he was appointed to teach composition and Albanian folk music at the Tirana Conservatory. He founded the Albanian section of the ISCM (1991) and the International Days for New Chamber Music, Tirana (1994; renamed Vjeshta e Tiranës [Tirana Autumn] in 1998), heading up both organizations.

In the 1980s, as one of the most promising younger Albanian composers, Shupo attempted (e.g. in the Second and Third Symphonic Suites) some daring combinations of Albanian folk and traditional symphonic idioms. He attempted to keep up with contemporary musical developments abroad, and after 1991 his style changed dramatically. Shifting to chamber music composition, he developed a vocabulary based on isolated sounds or intervals, short melodic or harmonic fragments, occasional ostinato figures and fleeting echoes of Albanian folk music. Three works of 1995 – *Sans titre*, *Interferences* and *Agoraphobia* – demonstrate his delicate sense of contrast, timing and economy. Through his writing and administrative work, he has done much to raise the profile of Albanian music internationally.

GEORGE LEOTSAKOS

Shuttleworth, Obadiah (*b* London, *c*1700; *d* London, 2 May 1734). English violinist, organist and composer. According to Hawkins, he was the son of Thomas Shuttleworth (*d* 1725) of Spitalfields, a London music teacher and copyist, and played the violin in family concerts with his two brothers (violin), his father (bass viol) and his sister (harpsichord). He also played in Thomas Britton's concerts, and was 'first violin at the Swan concert in Cornhill'. Hawkins thought he 'played the violin to such a degree of perfection, as gave him a rank among the first masters of his time'. According to an advertisement in the *London Journal* (22 April 1722), he was composing by the age of 13. Having unsuccessfully competed with Maurice Greene and John Stanley for the post of organist of All Hallows Bread Street, in October 1723, he was appointed at St Michael Cornhill, at Christmas that year, also becoming organist of the Inner Temple at the Temple Church on 16 May 1729. On his death he left his wife Anne and two daughters.

Hawkins wrote in his *History* that Shuttleworth was 'celebrated for his fine finger on the organ, and drew numbers to hear him, especially at the Temple Church where he would frequently play near an hour after evening service', though in his 'Memoirs of Dr. Boyce' he criticized him as 'a mere harpsichord player, who having the advantage of a good finger, charmed his hearers with such music as was fit alone for that instrument, and drew after him greater numbers than came to hear the preacher'. John Shuttleworth (*d* 1730), organist of St Olave's, Southwark, was presumably a relative.

Sibelius, Jean [Johan] (**Christian Julius**) (*b* Hämeenlinna, 8 Dec 1865; *d* Järvenpää, 20 Sept 1957). Finnish composer. He was the central figure in creating a Finnish voice in music in the late 19th and early 20th centuries. His most significant output was orchestral: seven symphonies, one violin concerto, several sets of incidental music and numerous tone poems, often based on incidents taken from the Kalevala, the Finnish-language folk epic. His work is distinguished by startlingly original adaptations of familiar elements: unorthodox treatments of triadic harmony, orchestral colour and musical process and structure. His music evokes a range of characteristic moods and topics, from celebratory nationalism and political struggle to cold despair and separatist isolation; from brooding contemplations of 'neo-primitive' musical ideas or slowly transforming sound textures to meditations on the mysteries, grandeurs and occasionally lurking terrors of archetypal folk myths or natural landscapes. A master of symphonic continuity and compressed, 'logical' musical structure, he grounded much of his music in his own conception of the Finnish national temperament. Throughout the 20th century Finland regarded him as a national hero and its most renowned artist. Outside Finland, Sibelius's reputation has been volatile, with passionate claims made both by advocates and detractors. The various reactions to his music have provided some of the most ideologically charged moments of 20th-century reception history.

1. 1865–89: EARLY YEARS, FIRST STUDENT COMPOSITIONS. Christening records from Hämeenlinna (Swedish, Tavastehus), a small garrison town roughly 100 km north of Helsinki, clarify the original order of his given names: Johan Christian Julius. In March 1886, as a first-year music student in Helsinki, 20-year-old 'Janne' adopted the first name Jean as 'my music-name' (his uncle Johan, a sea captain who had died a year before the composer's birth, had also used that name). He was the second of three children born to Christian Gustaf Sibelius, a military physician and the town doctor, and Maria Borg: the eldest was his sister Linda (1863–1932), the youngest his brother Christian (1869–1922), born after his father's death.

When Christian Gustaf died, from typhus, in 1868, the family was plunged into debt and received the support of close relatives. The children often spent their summers with their paternal grandmother and their aunt Evelina Sibelius in the southern coastal town of Loviisa (Lovisa). Young Janne, who had been attracted to the family's piano from about the age of five, received a few piano lessons when he was about seven from Evelina's sister, Julia, although at the time he was more interested in improvising than in disciplined study. Even more important was the unflagging encouragement of his uncle Pehr Sibelius in Turku (Åbo), a seed merchant who was also an amateur violinist and music lover. Much correspondence from the 1880s between the two still survives; most of it concerns Sibelius's developing love of music.

In the second half of the 19th century Finland was stirring with the economic and cultural changes with which the young Sibelius would soon be identified. Long controlled by Sweden (from the 12th century up to the early 19th), it had since 1809 been an autonomous grand duchy governed by Russia. Its population was divided by rival languages. On the one hand, its government, education, coastal commerce and fine arts were dominated by a longstanding élite culture of Swedish-speaking Finns, a minority within the country. On the other, the Finnish-speaking majority in the interior had traditionally wielded no social power, although a movement ('Fennicization') was under way to legitimize the language and to embrace it as the driving force of an authentic, assertive self-identity. The cultures articulated by these unrelated languages – the two sides of the Finnish character – were substantially different: the one Scandinavian, and hence potentially more urbane, sophisticated and international in outlook; the other Finno-Ugric (or Uralic), rooted in the rugged peasantry, uncompromisingly idiosyncratic, inscrutable to the outside world.

Sibelius grew up amid this growing language dispute, and his life and career reflect the aspirations of both sides and the tensions between them. He came from a Swedish-speaking family; even later in life his letters and diaries would be written largely in that language. His first extended exposure to Finnish came when he was ten: in 1876, after four years of Swedish-language education, he enrolled in the country's first Finnish-language secondary school, the Normaalilyseo, in Hämeenlinna. Although Sibelius learnt the rudiments of Finnish at this time, the language is absent from his 'Hämeenlinna letters' of the 1870s and 80s. There is little evidence that he had a high regard for it during those decades (although in a letter to Uncle Pehr dating from August 1885, shortly before his move to Helsinki, Sibelius mentioned that he 'could give lessons in Finnish' to earn money; a letter two months later suggests in passing, though somewhat unclearly, that he might have made himself available for such work). Whatever young Sibelius's initial abilities with Finnish might have been, his fuller, more sympathetic immersion in this language-world came only in the 1890s.

The traditional date of 1875 assigned to his earliest preserved composition, *Vattendroppar* ('Water Drops'), a 24-bar trifle in E minor for violin and cello, both pizzicato throughout, seems suspiciously early. As is clear from the recently published 'Hämeenlinna letters', his formal study of music began in September 1881 (not 1880, as commonly cited), when at the age of 15 he started taking violin lessons with Gustaf Levander, the local military bandmaster. By the late 1880s the intense, nervous Sibelius would become a competent violinist, although one temperamentally suited more to chamber and ensemble performances than to solo appearances. Much of his chamber-music activity was in conjunction with a string quartet in Hämeenlinna (in which he played second violin), although music-making also took place at home, where he and his brother and sister constituted a piano trio: Janne on the violin, Christian on the cello and Linda on the piano.

During most of the 1880s he regarded himself primarily as a violinist, but his thoughts were also turning to composition. The gift of a 'long desired but unbelievably expensive' harmony book from Aunt Evelina in August 1882 led in the following year to the composition of the

earliest surviving pieces after *Vattendroppar*: a three-movement Trio and a small Minuet in F for two violins and piano. He wrote to Uncle Pehr on 25 August 1883, 'The compositions are, of course, very bad, but on rainy days it is fun to have something to work on'. Another letter to Pehr (24 February 1884) refers enthusiastically to his work with a newly acquired copy of J.C. Lobe's *Lehrbuch der musikalischen Komposition*, although later in life he reported that his conception of musical form in the early 1880s had crystallized around A.B. Marx's *Die Lehre von der musikalischen Komposition*. Thus towards the end of this 'Hämeenlinna Period' (1880–85) Sibelius began to write chamber works more or less imitative of the Viennese Classical or early Romantic style (Haydn, Beethoven, Schubert), albeit in a simplified manner. 1884 saw a few larger chamber works, and in summer 1885 he wrote his first piano pieces and his earliest string quartet, in E♭, sometimes charitably described as Haydnesque.

In autumn 1885 Sibelius left Hämeenlinna, supported by a loan from Pehr, to enrol both in Helsinki University as a student of law – a half-hearted aspiration lasting only a year – and in Martin Wegelius's newly-founded Helsinki Music Institute as a violinist. This phase of his music study would last four years (1885–9). Under the teachers Mitrofan Vasil′yev and (from 1887) Hermann Csillag his violin technique improved remarkably, but during this time 'Jean' Sibelius found himself drawn more deeply into composition. In spring 1887, following some terms of classroom harmony, he began to study composition privately with Wegelius, a former pupil of Reinecke in Leipzig who now favoured the harmonic and contrapuntal textbooks of Ludwig Bussler. A wellspring of energy and organization, Wegelius was an educational traditionalist who nonetheless admired Wagner and Liszt.

Sibelius soon became Wegelius's protégé. In the years 1887–9 the young violinist composed over a dozen conservatory-style chamber works and individual movements flavoured with Nordic mannerisms and sentimental earnestness. Some were written for the institute itself, others for private performances. Hints of the mature Sibelius are rare in these student works, which he never sanctioned for publication. They typically feature simple melody-plus-accompaniment textures, along with a striving for 'serious' sonorities and tonal colours; contrapuntal interplay (*thematische Arbeit*) rarely pervades all of the voices. They include: a Piano Trio in C 'Loviisa', a virtuoso Suite for violin and piano in E; a Grieg-influenced Violin Sonata in F, whose slow movement, a set of variations on a folk-like tune (intended to represent, he told Pehr, 'an authentic Finnish girl' singing with 'sadness and melancholy', unaffected by flirtatious efforts to cheer her up), was his first explicitly 'nationalistic' piece; a String Trio (Suite) in A; and a laboured fugue for Martin Wegelius for string quartet. The most promising of these early works was the String Quartet in A minor, performed at the institute in May 1889 and praised by the influential Helsinki Swedish-language music critic Karl Flodin, who welcomed Sibelius to the front lines of Finnish composition. These years also saw his first published work: in 1888 his song *Serenad*, with text by the celebrated Swedish-Finnish poet Johan Runeberg, was printed in an anthology, *Det sjungande Finland* 2. By 1889 his future path was clear: 'Jean' Sibelius had determined to become a composer.

During his final year at the Helsinki Music Institute (1888–9) Sibelius's circle widened to include figures that were to become increasingly important in his life. In Ferruccio Busoni, freshly hired as a professor of piano, he discovered a kindred, sympathetic artist (and vice versa). The two musicians, along with three Finnish contemporaries – pianist and writer Adolf Paul and the two Järnefelt brothers, the composer Armas and the painter Eero – joined together convivially as the 'Leskovites' (named after Busoni's dog Lesko) and exchanged ideas in Helsinki's cafés and restaurants. The connection with the Järnefelts proved especially significant: it was at this time that Sibelius fell in love with the Järnefelts' younger sister Aino, his future wife. Moreover, that distinguished family staunchly supported the pro-Finnish-language cause. The Järnefelts' lobbying on behalf of Finnish history and literature as virtually a moral imperative, along with their preference for speaking and writing in that language, must have begun to influence the Swedish-speaking Sibelius. His interest in the Finnish language and its recently collected folk poetry was doubtless rekindled at this point; it would deepen remarkably in the next few years.

2. 1889–91: The transformation (Berlin, Vienna). Following Sibelius's graduation from the Helsinki Music Institute at the age of 23, he secured, through Wegelius's recommendation, a state stipend of 2000 Finnish marks for a year's study of composition in Germany. The eager young composer, bursting with local promise, was packed off to Berlin – his first visit to a leading European capital – from September 1889 to late June 1890 to study privately with Albert Becker. Sibelius's self-image was dashed at once. At his first lesson the pedantic Becker ('an old fogey from head to foot', growled Sibelius in a letter to Wegelius) put his finger on the weaknesses of the student's recent quartet and promptly placed him on a regimen of Bach counterpoint (chorales, motets and fugues) that would last most of the year. Experiencing the big city, however, had its own rewards: concerts, recitals, Wagner operas and fervent aesthetic debates. At the same time, Sibelius's wildly impractical personality succumbed to the enticements of Berlin. Throughout the year he spent with abandon, drank excessively and ran into financial and medical difficulties.

In Berlin, his own composition ground to a near halt. It was only in early 1890, after travelling to Leipzig with Adolf Paul and Busoni, who was performing Sinding's Piano Quintet, that Sibelius was roused to compose something new. This was his own five-movement Piano Quintet in G minor, written in Berlin in March and April 1890 and sent off directly to Wegelius in Finland. The first and third movements were performed immediately in Helsinki (with a sympathetic Busoni at the piano), but Wegelius criticized its underdeveloped piano writing, its impulsive indulgences here and there, and its occasionally awkward formal layout. Wegelius's remarks were not unfounded: notwithstanding its compelling seriousness, the Quintet displays a selfconscious obsession with the opening motto (which dimly foreshadows that of the First Symphony some nine years later) and a striving for grand effects in the absence of a convincing inner-voice polyphony. Still, Sibelius's insistence on sonority itself – pure sound – may also be heard as an emerging promise foreshadowing features of the later composer (for example, the poetically static open 5ths in the piano that

precede the opening motto, the dramatic pauses throughout and the heterophonic enhancement of texture through inner-voice arpeggiation).

Dissatisfied with Berlin, Sibelius returned to Finland for the later summer and completed another string quartet, in B♭, along with a lengthy, somewhat discursive Adagio in D minor for the same instruments. He then moved to Vienna from October 1890 to early June 1891 – again supported by Finnish state funds – where he studied composition and orchestration with Karl Goldmark and, at the conservatory, Robert Fuchs.

Vienna proved to be the turning-point of his musical life because of the convergence of four factors. First, his letters reveal an intense Sibelius brooding on his own potential: he was becoming more self-critical, embracing hard work (although continuing to indulge his penchant for drink and profligacy) and seeking to fashion a unique style. Secondly, it was here that he turned away from academic-classical chamber composition – the hallmark of the Brahmsians and Viennese Liberals – and towards the orchestra. After some preliminary, discarded attempts for Goldmark, he produced in February and March 1891 an Overture in E and a waltz-like *Scène de ballet* (originally planned as two movements of 'a kind of suite or rather symphony'), his earliest pieces for orchestra. Thirdly, Sibelius's aesthetic was wrenched in the direction of the progressive, in part as a result of coming into contact with certain key works. One was Bruckner's Third Symphony (the 1888–9 version, which he heard in December), with its monumental scale and throbbing ostinato sound-sheets. At the time Sibelius declared Bruckner 'the greatest of all living composers', thus taking sides in the divisive Brahms–Bruckner controversy and growing more dismissive of the academic classicism advocated at the conservatory. Towards the beginning of April he attended a performance of *Siegfried*; shortly thereafter he joined the Wagner Society.

Fourthly, and most significantly, in Vienna the Swedish-speaking Sibelius began to steep himself in Finnish-language culture, clearly taking steps to redefine himself more emphatically along those lines. Much of this must have been occasioned by his secret engagement to the pro-Finnish Aino Järnefelt the previous summer: her letters to him are consistently in Finnish, his to her in Swedish ('so that it does not take five minutes to write out each word', he explained in October). By 26 December he reported to Aino that he was enthralled with the Kalevala, the national folk epic, whose archaic, trochaic-tetrameter 'runes' (poems) of creation, nature, gods, and heroes (Väinämöinen, Lemminkäinen, Kullervo and others) embodied elemental Finnish culture. Above all, he was captivated by the unyielding sameness of the incantatory Kalevala poetry and reported to Aino that he was experiencing it as 'extraordinarily modern'. Its repetitive recastings of similar rhythms, images and general moods impressed him as 'pure music', as 'themes and variations'.

At the same time he pondered the cultural implications of folk music, especially the reiterative Kalevala recitation formulas, the most Finnish of musical patterns. These formulas constitute a family of brief, constricted melodies, each a pattern for the delivery of complementary pairs of poetic lines, spun out in an endless line-by-line alternation and sometimes performed back-and-forth between two male reciters. Each variant is typically bounded by a minor pentachord and unfolds in an implied 5/4 metre with two longer stresses on the final two beats (ex.1*a–c* shows three such repetitive formulae of hundreds that have been transcribed). On 8 January 1891 Sibelius wrote to Aino, 'I certainly do believe in Finnish music, regardless of the smirks of the self-appointed authorities. That sonorous, remarkably melancholy monotony in all Finnish melodies, although it is a defect, properly speaking, is nevertheless characteristic'. The occasion for this declaration was his composition of the (Swedish-language!) song *Drömmen* ('The Dream'), whose vocal line's first phrase, although in 3/4 metre, manifestly alludes to the 5/4 Kalevalaic pattern (ex.2*a*). Similarly, with his Overture in E he hit upon the practice of writing minor-mode, 'runic' second themes as characteristic nationalist moments within sonata forms. Such circular, often-reiterative theme-whirlpools – typically preoccupied with 'fatalistically' fixed intervallic patterns within the minor pentachord (with occasional decorative extensions above and below) – became characteristic features of the composer's 'Finnish' style in the 1890s and beyond (ex.3*a–f*).

By spring 1891 – he was still in Vienna – Sibelius's plans swerved towards the monumental. Doubtless recalling the Finnish conductor and composer Robert Kajanus's brief (and stylistically unremarkable) *Aino* Symphony (which he had heard in Berlin), based on a story from the Kalevala, he began to plan the massive *Kullervo*, a five-movement 'symphonic poem for soloists, chorus and orchestra', precipitating his new, 'modern' Finnish style. 'All my moods derive from the *Kalevala*', he wrote to his own Aino on 20 April 1891, jotting down a major-mode version of what would become the minor-mode opening theme of *Kullervo*. Fuchs himself, he reported, had praised what he had seen of the newly imagined composition of his 'Finnish barbarian': 'Everyone thinks I am so strange and original, unnatural and highly strung'. Sibelius's life's work begins in earnest from this moment.

3. 1891–8: FORGING A FINNISH NATIONAL MUSIC. Once returned from Vienna, Sibelius threw himself into the grand *Kullervo* project, continuing to construct his new 'Finnish-culture' self-image in ways that were to inform the rest of his life. He ruled out the direct citation of folksong, for example, and sought instead to capture the essential feeling that animated such music. This self-definition demanded slow, cautious work, particularly because, as he wrote to Aino on 21–2 October 1891, 'I would not wish to tell a lie in art . . . But I think I am now on the right path. I now grasp those Finnish, purely Finnish tendencies in music less realistically but more truthfully than before'. At the same time he was becoming

engrossed in Finnish-language Karelianism, a political and artistic feature of the 'National Romanticism' that swept through Finland in the 1890s. The Karelianists paid special homage to the pre-industrial region of Karelia, much of which lay in Russian hands to the east of Finland's legal borders, although a portion, centred on Viipuri (Vyborg), then formed Finland's south-easternmost province. This region was venerated as preserving the most authentic traditions of Finnish music and poetry: larger Karelia had been the source-area of much of the Kalevala epic.

Sibelius sought out touchstone representatives of these folk-music practices during at least two periods at this time. The first occurred not in Karelia but in the coastal town of Porvoo (Borgå), between Helsinki and Loviisa. In later 1891 the Ingrian-Karelian singer Larin Paraske had been brought there as part of the preparation of a new edition of the Kalevala. By that point the 57-year-old woman had become widely famous as the leading memorizer and most authentic performer of these folk traditions. Sibelius heard Paraske perform laments (and probably also Kalevalaic rune-formulae) at the Porvoo home of the folksong collector Adolf Neovius in the final weeks of December 1891. 'We have become good friends', he boasted to Aino on 21 December, and he reported that he had penned the quasi-runic lullaby theme of 'Kullervo's Youth', the second movement of the future symphonic poem (ex.3*c*). Within a few days he mentioned the completion of the first movement.

Sibelius's second direct encounter with folk music occurred the following year, after the completion of *Kullervo* and immediately preceding the composition of the tone poem, *En saga*. During June and July 1892, following his marriage to Aino, he made a pilgrimage to Karelia itself – a personal extension to his honeymoon travels in south-eastern Finland – and noted down numerous melodies, especially from the remote Korpiselkä region.

About two months earlier, on 28 April 1892, the Helsinki première of *Kullervo*, conducted by Sibelius himself, had scored a telling success. This large-scale work established him overnight as the musical voice of a rising generation of pro-Finnish-culture activists. An unrelenting, mythic tale of hardship, incest and tragedy, *Kullervo* combines features of the standard programmatic symphony with cantata-like epic recitation and quasi-operatic soliloquies and brief dialogues. The non-texted movements, the first, second and fourth, provide a sonata-form structure, a slow movement and a scherzo. The texted movements, the third and fifth, with Finnish texts from the Kalevala, were recognized immediately as landmarks in the proper, idiomatic setting of Finnish. Sensing that *Kullervo*, despite its local triumph, was not yet the utterance he had hoped it would be, Sibelius never consented to its publication (it was printed only in 1966 – though with a copyright date of 1961 – nine years after his death).

Kullervo may have been compositionally untidy and occasionally sprawling, yet it proclaimed his new artistic identity in a startlingly original style. Most importantly, it seemed to bypass significant features of the academic-classical traditions altogether – traditions that Sibelius may never have fully mastered – in favour of a colouristic, grippingly earnest plunge into folk-saturated content and quasi-ritualized musical objects. With *Kullervo*, Sibelius began to turn a potential weakness into an immense strength. Shunning conservatory correctness, the work gave prominence to modally-tinged ('Finnish') melodies and reiterative accompaniment patterns; obsessive ostinato repetition, long pedal points and epic recyclings of brief melodic ideas; bluntly cut rhythms; broodingly thick, dark and often minor-mode textures, redolent of stern historical burdens and inescapable

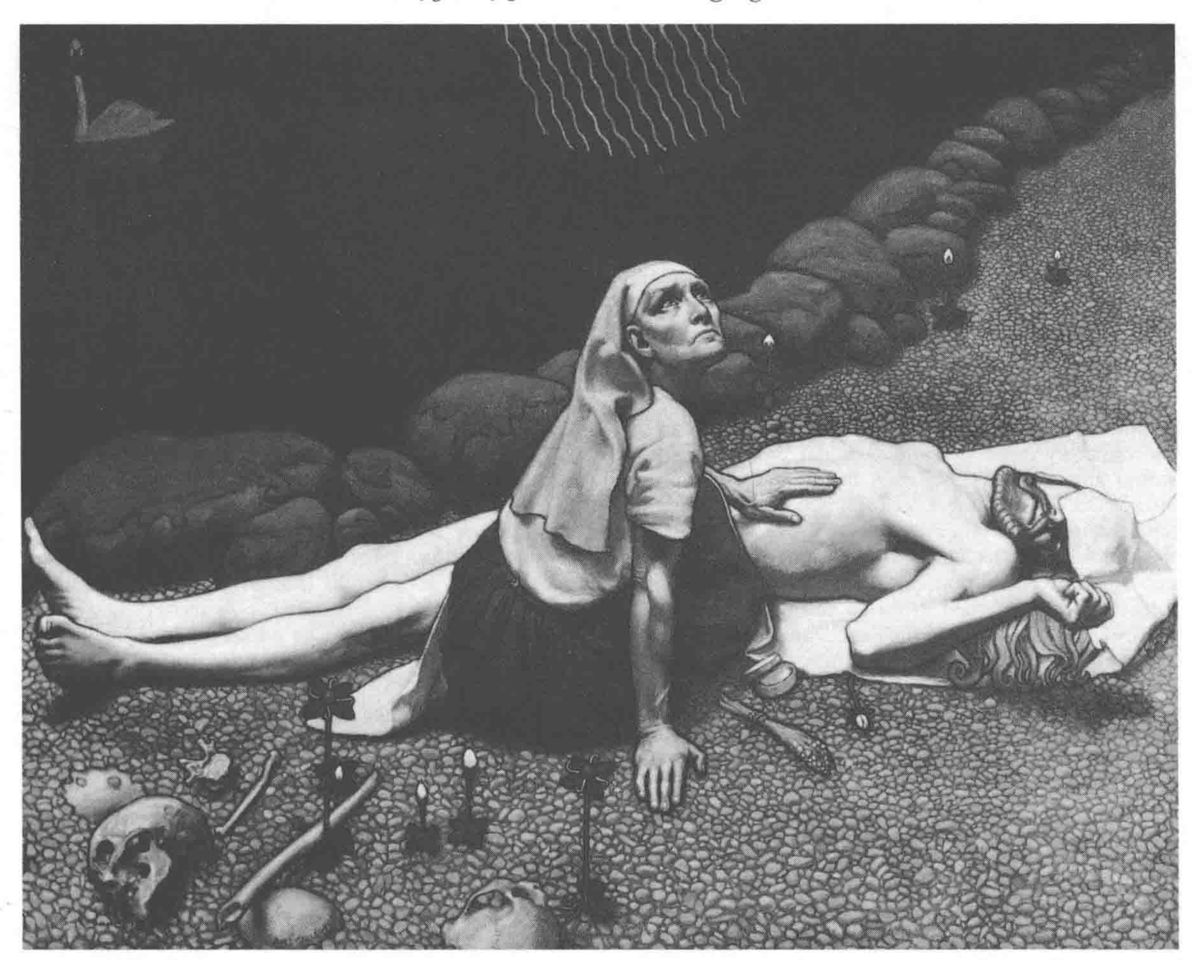
Ex.3 Characteristic 'runic' melodies in the orchestral works

tragedy; unmediated juxtapositions of utterly contrasting timbre fields; and a favouring of texturally stratified, prolonged sound-images at the expense of traditional, linear-contrapuntal development.

The natural-minor opening pages, among the boldest in all of Sibelius, convey the sense of a dam breaking, a releasing of mythic floodwaters, a rushing and roaring rhythmic stream bursting in from silence, turbulently churning up ancient memory. The hauntingly original, Dorian lullaby theme of the second movement ('Kullervo's Youth'), harmonized with pungent dissonances, is among the most characteristic runic-styled ideas in early Sibelius (ex.3*c*). In the work's dramatic centrepiece, the texted third movement ('Kullervo and his Sister'), Sibelius grappled with the problem of writing differing styles of music in 'Karelian' quintuple metres, a characteristic concern of these early years: the opening ritornello, ex.2*b*, is dance-like (perhaps a trepak); ex.2*c* is recitational. The same movement provides an early instance of embracing the non-standard formal practice of unfolding ideas in epic or ritualistic semi-parallel cycles. The first third of the movement, for example, is built around three varied rotations (cycles) of the pattern: orchestral ritornello – male-chorus recitation – brief dialogue. The pattern unravels only towards the end of the third cycle, probably to suggest, along with the text, a slide into disorder.

The next few years saw Sibelius developing further his local-nationalist musical image and busying himself with the conflicting demands of family, career and anti-bourgeois, immoderate personal impulse. Three of his six daughters were born in the 1890s, Eva (1893), Ruth (1894) and Kirsti (1898, died 1900). In autumn 1892 he began teaching theory (and violin) both at the Helsinki Music Institute and at Kajanus's Philharmonic Orchestra School: he continued to teach until the end of the decade. He also made periodic trips abroad. In summer 1894 he visited Bayreuth (and later Innsbruck and Venice): 'overwhelming' experiences with *Parsifal*, *Tristan* and *Die Meistersinger* plunged him into a short-lived Wagner crisis, which he managed to resolve within a month. By 19 August 1894 he declared himself closer to Liszt and the symphonic poem than to Wagnerian music drama; by 22 August he wrote, 'I am no longer a Wagnerian', and two weeks later he was studying Liszt's *Faust* Symphony. In spring 1896 he travelled to Berlin with Aino and visited Busoni. Summer 1897 brought a holiday in Venice. In November 1897 the Finnish Senate voted to support Sibelius as a national artist with a pension of 3000 marks for each of the next ten years; after that time it was renewed to extend over the rest of his life.

In the mid-1890s, Sibelius's loyalties shifted away from the pro-Swedish-Finnish Wegelius (who had disapproved



1. 'Symposium: the Problem': painting by Akseli Gallen-Kallela, 1894 (private collection, Helsinki); (from right to left) Jean Sibelius, Robert Kajanus, Oskar Merikanto (?) and the artist

of the Finnish nationalism of *Kullervo*) and towards a group of 'modern', more pro-Finnish intellectuals dedicated to agitated aesthetic debates, typically prolonged – sometimes for days – by alcohol. Sibelius's self-styled 'Symposium' circle included Wegelius's rival, Robert Kajanus, the gifted painter Akseli Gallen-Kallela (then undertaking his 'Karelian-Symbolist' *Kalevala* canvases, now Finland's most celebrated paintings; fig.2), Adolf Paul and Armas Järnefelt. Gallen-Kallela immortalized this camaraderie in a notorious 1894 painting, 'Symposium: the Problem': it depicted the bottle-flanked 'discussions' of three of the group (Sibelius, Gallen-Kallela himself and Kajanus) in the bleary-eyed, dishevelled company of a fourth (perhaps Oskar Merikanto) who had already passed out on the table (fig.1). The *bon vivants* frequented, among other establishments, the Kämp restaurant in Helsinki. These visits gave rise to dozens of still-repeated 'Kämp stories' featuring Sibelius's irresponsibility, characteristically counterpointed with Aino's long-suffering patience.

In autumn 1896 Sibelius, Kajanus and the musicologist Ilmari Krohn competed for a prestigious academic appointment at the University of Helsinki. In pursuit of the position (ultimately awarded to Kajanus), Sibelius delivered a lecture at the university on 25 November that was something of a nationalistic musical manifesto: 'Some Perspectives on Folk Music and its Influence on the Art of Music'. The subject had long occupied him: apart from his intersections with folk music in 1891–2, he and the folklorist Lähteenkorva (Borenius) had edited a selection of Finnish folktunes for the Finnish Literary Society in 1895.

The 1896 lecture emphasized three points. First, folk and recitation melodies were instinctive products of nature. Modern composers should not harmonize them artificially or intellectually; only someone steeped in their folk spirit would be able to provide an intuitively correct harmonization or adaptation. Secondly, the most stable feature of Finnish folk music was the minor pentachord, representable as D–E–F–G–A. The pentachord had no mandatory final; melodies or phrases could end on any of its pitches, and they could be backlighted with different harmonizations carrying diverse tonal implications. Moreover, in some melodies the Finnish pentachord was extended upwards to include B and C ($\hat{6}$ and $\hat{7}$) as tense upper auxiliary notes; the five-pitch complex also implied a complementary pentachord a 5th below, G–A–B(♭)–C–D, all of which encouraged a variety of modally inflected harmonizations. Thirdly, the repetitive Kalevalaic recitation formulas (rune melodies) were not static; rune singers varied these melancholy cycles through improvisation and personalization, especially as the text grew more intense. The nearest art-music analogue to these varied cycles (as Sibelius had noted in 1890) was 'theme and variations'.

Throughout this decade Sibelius continued to develop the style first declared in *Kullervo*. At that time he surely

2. 'Lemminkäinen's Mother': painting by Akseli Gallen-Kallela, 1897 (Athenaeum Art Museum, Helsinki), from a series based on the Finnish national epic Kalevala

regarded his formulation of this new language as an aggressively 'modern' project in the sense carried by that newly circulating term in younger German and Austrian artistic circles. The style was modern in several ways: its sheer strangeness was a mark of the brash generational difference separating Sibelius from his musical predecessors, whose norms it challenged; it strove unapologetically for vivid primitivist effects through an intensely personalized, non-academic treatment of harmony, melody, orchestral colour and musical continuity; and in its stern, anti-traditional manner it claimed to uncover a deeper human truth than that afforded by the complacent conservatory traditions.

His own command over this idiom expanded with a series of promising orchestral compositions, although in each case – as with *Kullervo* – he held back from immediate publication, preferring to set the works aside for possible later revision. These were: the tone poem *En saga* (1892, revised 1902); the set of tableau-vivant music for the Viipuri (Karelian) Student Association (1893, movements of which were published as the *Karelia* Overture and Suite, 1906); the tone poem *Skogsrået* ('The Wood Nymph', 1895, unpublished; recovered and recorded in 1996); and the *Lemminkäis-Sarja* ('Lemminkäinen Suite'), four tone-poem 'legends' from the Kalevala, in effect a programme symphony (1895, subjected to multiple revisions in the ensuing years). The period also saw a handful of pioneering Finnish-language pieces for male chorus, such as *Venematka* ('The Boat Journey', 1893: ex.2*d*), the mini-triptych *Rakastava* ('The Lover', 1894; ex.2*e*), *Saarella palaa* ('Fire on the Island') and *Sortunut ääni* ('The Broken Voice', 1898; ex.2*f*). In addition, he was intermittently attracted to post-Wagnerian opera. Towards that end he worked in 1893 and 1894 on the Kalevala-based *Veneen luominen* ('The Building of the Boat'. Although it was ultimately abandoned, material from its prelude was recast as *Tuonelan joutsen*, 'The Swan of Tuonela'). Two years later in 1896 he completed an unsuccessful one-act opera, *Jungfrun i tornet* ('The Maiden in the Tower').

Sibelius's modern nationalism of the 1890s was a confluence of several musical streams. At first the impact of Liszt was keen – the liberation from (or radicalized dialogue with) formal conventions and the narrative-pictorial aspirations of the symphonic poem – but reverberations of Wagner and Bruckner were also present (vibrant colours, chromatic shifts, reiterative background ostinatos, muscular eruptions). By the end of the decade his growing self-criticism, reinforced by occasional stinging disapproval in the Helsinki press, led to an increased discipline and formal concentration: with time he came to aspire to the motivic severity (though not the counter-

point) of the Austro-Germanic tradition of Haydn and Beethoven. He also absorbed features of the Scandinavian and Russian nationalists: Grieg, Sinding, Svendsen and the St Petersburg school (including Borodin and Glazunov). In works from the late 1890s onwards, especially, one often senses a strong influence of Tchaikovsky in the general approach to orchestral sound and in certain local effects, though not in larger questions of structure. And nourishing the whole was his personal adaptation of Finnish language rhythms and folk idioms: obsessive, rune-like melodies, modal harmonies and a spirit of unflinching determination.

To grasp Sibelius's maturation throughout the 1890s (and to come to terms with the seasoned composer thereafter) is to recognize that a substantial part of his creativity was propelled by a deep-seated conflict of contradictory aesthetics and personal motivations that would gnaw as irreconcilables throughout his life and music. On the one hand, as the insecure, self-doubting outsider, he longed time and again to prove himself within the traditional circles and musical formats of the idealistic, neo-romantic establishment. One side of Sibelius ached for acceptance, yearned to thrive and be praised in the plushy afterglow world of the European institution of art music and its comforts, longed to furnish with appropriately Nordic, melancholy sentiments the culturally contented and luxuriate in the polished-mahogany satisfactions of 'art' as it existed. In these wishes, however, he was destined to fall short, never to achieve satisfaction. Whenever the aesthetic balance tipped too far in this direction, he would stumble, handling matters awkwardly or selfconsciously.

On the other hand, a compensatory, rebellious drive, even a streak of early-modernist defiance, incited him to transgress commonplace or outworn stereotypes, regardless of the consequences for his reputation. This neo-primitivist side of Sibelius sought to plunge recklessly towards an essential truth hidden in sonority (*Klang*) itself, to reawaken sound back to its crude or primal essence, to do violence – abrupt violence – to the conventions. Thus Sibelius the 'Finnish barbarian' undertook his mission to validate himself by defamiliarizing sonic norms, endeavouring to startle sound awake with surprising strokes. The tension between these two impulses – a residual longing for recognition within bourgeois conventions versus a defiant attraction to the break-up of the same conventions – tears at the heart of Sibelius from *Kullervo* onward. Wrestling with their complex interactions was central to his musical career.

During the 1890s then, Sibelius cultivated and blended not one style but two, generated by different aspects of his personality. At the risk of oversimplification, one might also suggest that these differences intersected in vital ways with the ever-present dialectic of language and world-view in Sibelius's (and Finland's) life: the 'Finnish-language' (or Kalevalaic) and 'Swedish-Finnish' tendencies. The two styles were not mutually exclusive: there was much overlap between them, but certain compositions tilted towards one or the other. While the rugged Finnish manner, concerned with burning issues of ethnic authenticity and cultural legitimacy, was the more politicized and disruptive, the Swedish-Finnish impulse sought a larger, more international audience on traditional terms. This latter tendency favoured the conventionally melodic; more frankly mercantile, it sought out the sentimental and confessionally sincere: although generally smoother it was still tinged with Finnish (or Scandinavian) melancholy. Sometimes this latter style came to the fore in lighter orchestral works, such as *Vårsång* ('Spring Song', 1894, revised 1895 and 1902) or some of the later incidental music. For Sibelius its most elevated home was the Swedish-Finnish (Swedish-language) 'romantic' Lied, which occupied him throughout his career, sometimes in experimental ways. The seven Runeberg songs op.13 was his first publication with his name on the title-page (1892). In 1895 the Finnish soprano Ida Ekman managed to perform for Brahms another early song on a Runeberg text, *Se'n har jag ej frågat mera* ('Then I questioned no further') (1891–2). According to her report almost 50 years later, Brahms's reaction was positive: 'Aus dem wird was' ('Something will become of him').

There can be no doubt, however, that Sibelius made his strongest utterances in orchestral works in which the radically Finnish style was pushed to the forefront. The high points before the First Symphony (1899) were *Tuonelan joutsen* ('The Swan of Tuonela') and *Lemminkäinen palaa kotitienoille* (literally, 'Lemminkäinen Returns to his Home Districts'), two movements of the *Lemminkäinen Suite* that he published separately, after revision, in 1901 (the remaining two movements were revised again in 1939 and were not published until 1954). Broodingly immersed in the vaporous presence of its prevailing A minor tonal colour, the suite's slow movement, *The Swan of Tuonela*, depicts the gloom and near-immobility of the world of Death (*tuoni*) from the Kalevala. In this Northern-symbolist work Sibelius emerged as a master of orchestral atmosphere. The famous, extended solo for english horn (featuring the twisting rhythm of the 'Sibelius triplet') is supported by a bed of sustained, muted strings, each group of which, with the exception of the double basses, is normally subdivided into four parts: 17 string parts in all, some of which are occasionally divided further for searching solo phrases. The result is an uncommonly rich background texture, subjected to register shifts, dynamic swells and chromatic slippages. (Some of the colours recall passages in the *Parsifal* prelude and Act 3 of *Tristan*; *Swan Lake* and other works by Tchaikovsky might also be present as residual memories.) As one phrase merges into the next, the piece's impression of 'inexplicable' organic cohesiveness relies more on the varied resurfacing of interrelated themes, colours and motifs treated as independent sound objects than on any standard formal plan. The slow transformations build towards climactic textures near the end, where the divided strings merge to produce a sonorous, death-march *cantabile* melody in octaves.

Sibelius's experimentation is even bolder in the suite's finale, *Lemminkäinen's Return*, a watershed in his career and, at least in the 1901 revision, a harbinger of formal innovations more characteristic of his later works. This breathless *moto perpetuo* shrugs off references to traditional architectonic forms in favour of a coherent process of cumulative growth towards the production of a goal statement (or *telos*). In this case the goal to be achieved (the Kalevala hero's home to which he is returning) involves three elements in succession: attaining the 'colour' of the suite's tonic key, E♭ major (bar 315, letter 'N', a 'border-crossing'); sounding an ecstatic *telos*-melody in that key (bar 342, one bar after letter 'O'); and, at the end, producing an adrenalin-driven *accelerando* to

secure E♭ major with an assertive IV–V^7–I authentic cadence (bars 431–7, letter 'R'). The piece begins off-tonic in a 'modal' C minor (in vi, 'away from home') with a 19-bar block bristling with scarcely contained fragments and wild cries. This energetic block is then subjected to continuous recyclings, but each rotation of the cycle accumulates additional motifs, expanding the size of each rotation block and gradually generating later *telos*-events. The whole piece is best described as a single-minded process unfolding in three stages: bars 1–139 (C minor, vi); bars 140–314 (letter 'D', wide-ranging tonal shifts, attaining the tonic minor – E♭ minor – in bar 243, letter 'I'); bars 315–481 (E♭ major, production of goal statements). Two decades later, Sibelius recreated the excitement of the manically rhythmic, E♭ major conclusion of *Lemminkäinen's Return* at the end of the first movement of his Fifth Symphony.

4. 1898–1904: FIRST INTERNATIONAL SUCCESSES AND LOCAL POLITICS. By 1898, several of Sibelius's major orchestral works had been performed in Finland. Apparently uncertain of his command over certain formal or textural aspects of his still-developing Kalevalaic style, he had withheld these pieces from publication in order to revise them further. Nevertheless his local reputation had been secured. As the century drew to an end, Sibelius sought to realize three related aims: to tighten his rough-cut, primitivist textures to a more impressive level of motivic concentration and formal purpose; to have new works and revised versions of the strongest of his earlier pieces published, thereby entering the larger marketplace of music; and to seek wider international recognition, especially by establishing a foothold in Germany, the most prestigious arbiter within the cultural institution of art music.

The success of the 'lighter' incidental music for Adolf Paul's *Kung Kristian II* ('King Christian II'), first performed in February 1898 (Helsinki), played a pivotal role in all of this. In the first place, it was promptly published locally, by K.F. Wasenius. More importantly, this work established Sibelius's crucial connection with the Leipzig publisher, Breitkopf & Härtel, who agreed to acquire the rights to it during Sibelius's prolonged trip to Germany from late February to June 1898. A year later, in February 1899, his music received its first public hearing in Germany: a Leipzig performance of four of the seven movements from *King Christian II*. After reading the largely negative reviews, Sibelius complained to Busoni that he was embarrassed to have been introduced to Germany as a composer of 'salon music': 'I have the greatest ambition [instead] to stand before you as a composer for whom you can have some regard'.

But grander things were afoot. In 1898 Breitkopf had apparently promised to support 'something from [the] *Lemminkäinen* [*Suite*]', yet to be revised. This would spur Sibelius to final work on *The Swan of Tuonela* and *Lemminkäinen's Return*, published in 1901 by Wasenius, with a direct Breitkopf connection. The composer may have mentioned even broader plans to the German publisher, for in April 1898, in Berlin, he began sketches for a First Symphony. This was to receive its Helsinki première in April 1899, undergo revisions and a second 'première' in the following year, and be published in 1902 by Fazer & Westerlund – again with links to Breitkopf (who acquired the rights to this music in 1905). These pieces, along with *King Christian II* and *Finlandia* (1899), whose revised version (1900) was published in 1901, again by Fazer & Westerlund, formed the nucleus of the orchestral works that introduced Sibelius to larger Europe in the early 1900s.

This introduction began in earnest in July 1900 – only a few months after the death of his youngest daughter, Kirsti – when Sibelius, Kajanus and the Helsinki Philharmonic went on tour throughout northern Europe: Sweden, Norway, Denmark, Germany (Lübeck, Hamburg and Berlin), the Netherlands and France (Paris, concluding with concerts at the Finnish pavilion at the World Exhibition). Apart from presenting Sibelius to these countries, the concerts' subtext was Finland's current political struggle against an ever more oppressive Russia, and political metaphors could effortlessly be read into such works as *Finlandia* and the First Symphony. All in all, the tour was successful; Sibelius was gratified by the attention he was beginning to receive in Germany. After Hamburg, he summarized his hopes in a letter to Aino (16 July 1900): 'I can win a place, I believe, with my music. No, I don't believe; I *know* I can'.

In the next few years Sibelius, still indulging in bouts of immoderate drinking, smoking and spending, was consumed with the process of career building. Performances of his works outside Finland, with or without the composer conducting, became more frequent. He experienced an important success in Heidelberg in June 1901 with *The Swan of Tuonela* and *Lemminkäinen's Return*. The Berlin press praised the works, and Richard Strauss himself attended one of the rehearsals: Sibelius wrote home that the famous composer had been 'complimentary'. At about the same time the *Allgemeine Musik-Zeitung* published one of Sibelius's songs from 1901 (with text by Runeberg), *Flickan kom ifrån sin älsklings möte* ('The girl returned from meeting her lover'): a piercingly effective representation of old-world sexual shame, with only slightly concealed metaphorical extensions to the world of modernity and lost innocence. The song was destined, deservedly, to become among the composer's most celebrated.

Sibelius composed his most frequently performed songs during this period (published as opp.36, 37 and 38). Some were introduced to a wider Europe by the soprano Ida Ekman; a few were recorded, by various artists, in Helsinki, Berlin and Stockholm in 1904 and 1906. The most characteristic songs are deeply melancholy, soberly chilling, an atmosphere enhanced by the resonances of the Swedish language. They include, from 1899, *Svarta rosor* ('Black Roses') and *Men min fågel märks dock icke* ('But my bird is nowhere to be seen'); from 1900, *Säv, säv, susa* ('Reed, reed, rustle'), *Demanten på marssnön* ('The Diamond on the March Snow') and *Den första kyssen* ('The First Kiss'); and from 1902, *Var det en dröm?* ('Was it a dream?'). There were also two masterpieces from 1903: the reflective, chromatically ambitious *På verandan vid havet* ('On a balcony by the sea') and the dramatic, declamatory scena, *Höstkväll* ('Autumn Evening').

Within Finland, the turn-of-the-century years were also Sibelius's most overtly political. In the late 1890s Russian policy in Finland turned towards harsh repression. Tsar Nicholas II appointed Nikolay Bobrikov Governor-General in 1898 to carry out a programme of 'Russification', and in 1899, with the much-despised February Manifesto, Bobrikov began the process of stripping

Finland of its political autonomy, limiting free speech and assembly, shutting down newspapers, arranging deportations and the like. Such policies drew fierce resistance from the Finns, and Sibelius composed a number of frankly patriotic, protest pieces, in a simpler, more populist (even incendiary) style. Some had electrifying results in Finland but proved to be crafted for local consumption only. The most politically charged of these was the resistance-march for accompanied chorus, *Atenarnes sång* ('Song of the Athenians', 1899). Others included *Islossningen i Uleå älv* ('The Breaking of the Ice on the Oulu River', 1899), *Isänmaalle* ('To the Fatherland', 1900, which in 1901 became the first piece of Sibelius to be recorded) and *Har du mod*? ('Do you have courage?', 1904, first performed in the same year, only a few months before Bobrikov was assassinated in Senate Square in Helsinki).

One of his resistance pieces proved more exportable. Although by the time of the 1900 tour it had been revised and rechristened as *Finlandia*, this brief, call-to-action tone poem began life in 1899 as *Suomi herää* ('Finland Awakens'), the finale of a set of incidental music accompanying staged, historical tableaux depicting Finland's history. It was destined to become Sibelius's best-known work, an inextinguishable symbol for Finland itself. In terms of its political content, the tone poem's sequence of events could hardly be easier to grasp: political subjugation, sudden awakening and conflict, and a nationally centred hymnic liberation into the future. Yet its musical form is non-traditional, not sharing the sonata form with expanded 'introduction-coda frame' of some of its obvious predecessors, Beethoven's *Egmont* and Tchaikovsky's *1812* overtures. Similarly notable is Sibelius's use of allusion in the famous 'Finlandia Hymn' section, whose incipit apparently paraphrases and reconfigures rhythmically an inner section of a similarly titled, patriotic choral work from the early 1880s by the Finnish composer Emil Genetz, *Herää, Suomi!* ('Awaken, Finland!'), as would probably have been evident to its first listeners (ex.4*a–b*; note the curiously similar opening of Schumann's Piano Quartet).

Sibelius doubtless regarded his First Symphony, in E minor (1899, revised 1900), as a watershed work. About to enter larger European markets, he now tackled head-on the central problem facing his compositional career: the harnessing of a stubbornly separatist, regionally resonant musical idiom according to the assimilationist demands of pan-European musical expectation – the forging of a potentially uneasy rapprochement of the refractory neo-primitivist style with the well-worn conventions of the post-Brahmsian, post-Tchaikovskian symphony. From one perspective, the First Symphony represented a calculated move towards a more international abstraction: the work was nominally non-programmatic and treated the issues of traditional form and the unfolding of motivic 'logic' with high seriousness and remarkable concentration. Yet its impact also resulted from its explosive combination of ethnically charged, latently political factors that were even more direct and would soon be identified throughout Europe as characteristically Sibelian. One might point, for example, to its sweeping, 'nationalistic' melodies of enormous determination and cumulative force (sometimes held fast with lengthy, support-beam pedal points, as in the second theme of the finale). Or to its stubbornly personal

Vas - ta kun lei-jo - na val-veu-tuu, Lop-pu-vi, lop - pu-vi

['Only when the lion awakens will Finland's suffering come to an end.']

(b) Sibelius: *Finlandia* (1899, orig. *Suomi herää*, rev. 1900)

harmonic practice, featuring recyclings of a restricted set of chordal objects – an attraction to harmonic stasis, frequent substitutions of traditional 5th-orientated progressions with chromatic chord transformations (dominated especially by the harmonic mannerism, borrowed from Russian composers, of the smooth shifting of a 5–3 to a 6–3 sonority or vice-versa by means of a passing $\sharp\hat{5}$ or $\flat\hat{6}$) and occasional modal effects. Or to its manifest rhetoric of Finnish commitment: its impassioned articulation, especially in the outer movements, of heroic, though in this case futile, national struggle against overwhelmingly negative forces. Sibelius's First Symphony may be regarded as his 'Karelianist' symphony, the masterly summary-statement towards which his work of the 1890s had been tending (see also ex.3*e* above).

Sibelius followed up the First Symphony with a perhaps even more motivically concentrated, more aggressively modern Second, in D (1901–2). Where the First had ended in smouldering, minor-mode 'injustice', the more radiant Second sang of eventual victory. It opens with pristine Nordic pastoralisms juxtaposed with expressions of swelling self-pride, forceful determination and premonitions of conflict; tracks subsequently through dark struggles and chiaroscuro upheavals (especially in the harrowing, prison-house effect of the tonic-minor second movement); and concludes with a sure-fire, folk-triumphalist finale. Its first-movement exposition is arrestingly original – a succession of abruptly discontinuous fragments and raw elements in which chunks of unprocessed sound intercut and interrupt each other, as though one

were confronting single-minded facets of the cultural world that will be icily chilled, put at risk, in the second movement. Similarly striking is the finale's hypnotically reiterative, Kalevalaic second theme, the insistent, ritualized process of returning to the folk-self, through whose presumed claim to cultural legitimacy the minor mode is to be liberated into the major.

Sibelius's denials that the Second was underpinned by a specific programme of Finnish protest (as claimed by Kajanus in a convincing printed commentary of 1902) have never seemed fully credible. Such disavowals of the obvious probably indicated his desire to multiply the work's significance beyond its self-evident local implications into a more pan-European, humanist utterance. And in fact there is historical evidence to help persuade us to consider this broader interpretation as well: some of its ideas originated either as independent musical thoughts or as sketches planned for quite different compositions. In June 1899 Sibelius hit upon the separate idea that, reworked, became the finale's capstone coda-theme: it emerged as a sudden 'impression', improvised at 2 a.m., of the 'basic mood' of an exotically furnished room in Gallen-Kallela's villa in Ruovesi. Much of the material included in the symphony was sketched during a compositional trip to Italy – Rapallo and Florence (funded by a wealthy Swedish supporter, Axel Tamm) – in February–April 1901. This is particularly true of the second movement, whose spectral, D minor pizzicato opening (explicitly recalling the slow movement of Bruckner's Fifth Symphony?) and *lugubre* bassoon melody he devised for a fleetingly projected tone poem on the legend of Don Juan (a response to Strauss?): the ominous twilight steps of the 'stone guest' and his song of death. The second movement's major-mode consolation theme, first heard in F♯ major, appears in the same sketch with the label 'Christus'. Its proximity with the first idea suggests a similar Don Juan connection, but Sibelius may also have had another image in mind: certainly by early summer 1901 – back in Finland – Sibelius had jettisoned the Don Juan idea in favour of a tone poem based on Dante (a response to Liszt?). By August the tone poems were being transformed into the new symphony, essentially crafted in Finland in the last half of 1901. Even though the Second Symphony is unmistakably Finnish in tone and carries an undeniable political charge, it marks a decided move beyond the purer Karelianism of the First.

Nor was Sibelius alone in this emerging aesthetic shift. While Kalevalaic nationalism and myth-centred symbolism had stabilized the fledgling Finnish arts in the late 19th century, in the 20th several Finnish intellectuals were seeking to break through the confines of the merely local into more cosmopolitan, internationally modernist concerns. One prominent circle was Helsinki's Swedish-speaking 'Euterpists' (including the writer Bertel Gripenberg and the literary historian Gunnar Castrén), whose members and broader, post-Kalevala aims began to attract Sibelius in late 1902. The same year had seen Sibelius's brilliant recasting of his earlier tone poem from 1892, *En saga*. Its Berlin performance in November 1902 generated stormy controversy – to the composer's delight – and it was published by Breitkopf in 1903, along with the Second Symphony.

By this point his broader European career seemed all promise. In 1903 he composed incidental music for Arvid Järnefelt's psychological play, *Kuolema* ('Death'). Its most haunting movement, 'Valse triste', was a valedictory, dreamscape evocation of the faded salon style. Irresistible in late-Romantic appeal, though leagues away from the complexities of the symphonies and tone poems, it was published separately in 1904. With *Finlandia*, it was soon widely regarded as one of Sibelius's signature pieces.

Far more substantial was the Violin Concerto in D minor, whose first version occupied him in 1903 and early 1904: it was first performed in Helsinki in February 1904. Here he took up what would seem an impossible challenge – the fusing of his stern, compromise-resistant neo-primitivism (Sibelius as 'deep and sober thinker') with the tradition of the flashy, exhibitionistic virtuoso concerto, a tradition filled with displays of dazzling technique that sometimes bordered on emptiness. Did the concerto not exist, it would be difficult to imagine such a merger, and at times the strain of the attempt shows through in some of the virtuoso figuration – an occasional tilt toward ostentation that would be out of place in the world of Sibelius's symphonies and tone poems. From a different perspective, though, one could also regard the work as a deepening of the tradition – a virtuoso concerto simultaneously affirmed and transcended by a thoroughgoing seriousness of purpose and 'surplus' density of compositional pondering. Above all, its brooding Nordic atmosphere and motivic sound-world are unmistakably Sibelian. One of its unusual features was an expanded first-movement cadenza that serves as the development section (building, surely, on the Mendelssohnian precedent of placing the cadenza at the end of the development); another was its spine-stiffening enhancement of the display-concerto aesthetic through suddenly eruptive, powerfully resolute orchestral upheavals. Dissatisfied with portions of the 1904 version, which had disappointed the much-respected Helsinki critic Karl Flodin, Sibelius withheld the work from publication (this version was recovered in 1990). Its more dramatically taut revision – now ranked among the world's leading concertos – received its première in Berlin in October 1905, with Karel Halíř as soloist and Richard Strauss conducting.

In these years Sibelius's family and several of his associates became gravely concerned about the effects of his continued heavy drinking. In 1903 his wife, Aino, and his close friend, Axel Carpelan – a fervent supporter who had sought out the composer three years earlier – devised a plan to save him from self-destruction: the family, now expanded with the birth of Katarina in 1903, was to move permanently out of Helsinki, away from city life and its temptations. A rustic, beautifully conceived villa, dubbed 'Ainola' ('Aino's dwelling-place'), was designed and constructed for them in the midst of the rugged Finnish forest at Järvenpää, close to Lake Tuusula – near enough to Helsinki to provide professional access, but far enough to discourage casual visits (fig.3). Here the sense of isolation – of communion with the vast pine forests throughout the cycle of seasons – was palpable. Sibelius and his family moved into Ainola in September 1904. It was his home for the rest of his life.

5. 1905–11: MODERN CLASSICISM. By 1905, Sibelius's impact in Germany had been brought to a promising yet precarious position. On the one hand, such successes as his conducting of the Second Symphony in Berlin in January of that year confirmed his growing reputation as a controversial Northern modernist. On the other hand, the 'exotic' factors that had gained him attention in the

3. Sibelius at his villa, Ainola, in Järvenpää

first place (along with the ominous popularity of a few lighter pieces) were encouraging European musical circles to overlook the depth of his musical thought in favour of a reductive stereotype. By considering him only under the peripheral category of 'nationalist' – outsider status – and by noting that his unusual musical language failed to satisfy the academic-classical expectations of standard symphonic or linear-contrapuntal practice, even modestly sympathetic commentators, such as Walter Niemann, were setting up limits of acceptance that would be difficult to exceed.

'This is the crucial hour, the last chance to make something of myself and achieve great things', he wrote to Aino on 19 January 1905; 'Now the important thing is not to let up but to sustain the momentum'. The next month he broke with the Finnish publishers to sign a four-year contract with the Berlin publisher Robert Lienau (Schlesinger), pledging – too optimistically, as it turned out – the delivery of four new works per year (the first two, from 1905, were the incidental music to *Pelléas och Mélisande* and the revised Violin Concerto). Expanding outward, in November 1905 Sibelius made his first trip to England, where he made a remarkable impression in Liverpool conducting the First Symphony and *Finlandia*. In England he was greeted by a circle of enthusiastic admirers: Granville Bantock, Henry Wood, Ernest Newman and Rosa Newmarch. This trip was pivotal for his historical reception: ultimately his ties with English – and later, American – audiences would become stronger;

within a few years, those with Germanic listeners would deteriorate.

By 1905, sparked by the Lienau contract and sensing himself 'in the grip of change' (as he had remarked the previous summer), Sibelius felt that his European reputation was now on the line. His first response was to return to the formal freedom of the tone poem. In January 1905 in Berlin he had heard Strauss – still the foremost of the musical modernists – conduct *Ein Heldenleben* and *Symphonia Domestica*. 'I was very fascinated', he wrote to Aino on 8 January; 'I learnt a lot'. On 23–4 January he added, 'I'm no longer writing a symphony, rather a symphonic fantasy for orchestra. This is my genre!! Here I can move without feeling the weight of tradition'. Throughout late 1905 and early 1906 the projected symphonic fantasy was *Luonnotar*, to be based on the creation story from the Kalevala. Around June 1906, however, the *Luonnotar* draft seems to have been refashioned into a different tale from another portion of the Kalevala, *Pohjolan tytär* ('Pohjola's Daughter'), recounting 'steadfast, old', white-bearded Väinämöinen's sleigh-ride and futile wooing of the beautiful 'daughter of the North'. The most narratively detailed of Sibelius's tone poems, *Pohjola's Daughter* unfolds as a sonata deformation (a non-traditional structure in dialogue with sonata norms) centred on B♭ major as a referential tonal colour rather than as a key in the usual sense. It is preceded by a brooding, G minor-grounded 'Kalevalaic' introduction, evoking the ancient traditions from which the story springs, and the work's tonally shattered, *morendo* ending represents the wreckage of Väinämöinen's hopes: a lonely aftermath of 'lost', chromatic fragments – a characteristic mood in mature Sibelius – coming eventually to rest on the referential B♭.

If *Pohjola's Daughter* was crafted as an enthusiastic response to the later tone poems of Strauss, that response also contained an element of critique. Increasingly suspicious of what he perceived as the episodic looseness and self-indulgent monumentalism of the most hypertechnically advanced modernists, especially Strauss and Mahler, Sibelius was now seeking a redoubled compression and motivic density: the performance time of *Heldenleben* is about 40 minutes; that of *Pohjola* about 12. In 1905–6 the composer was on the cusp of a crucial development. Was it possible to remain regarded as unequivocally modern – in uniqueness of language and uncompromising attitude, in radical orchestral colour, in boldness and depth of idea – but simultaneously to react against the more sensationalist currents of modernism by recovering the economy and formal logic of the abandoned classical ideal? Though a risky strategy within an unpredictable musical marketplace (these were the *Salome* and *Elektra* years), this 'modern classicism' now became Sibelius's aim. A stylistic ideal at once referentially traditional yet almost compulsively dismissive of overtly popular appeal, it may be regarded as Sibelius's middle-period proposal to accommodate the assimilationist–separatist dialectic that kept pulling him in opposite creative directions.

The leaner, less Kalevalaic Third Symphony in C (1907) was the manifesto of this merging into modern classicism. Less spectacular than his first two symphonies, the anti-monumental Third compensates through a further gain in compositional discipline. In part the work was a counter-response to Mahler's expansive Fifth Symphony, which he had studied in 1905. In October 1907, shortly after Sibelius's completion of the Third, Mahler visited Helsinki, although he knew nothing of Sibelius's major works and thought little of the composer. At that time Sibelius remarked to Mahler that he considered the essence of the genre of the symphony to be its 'severity and style and the profound logic that created an inner connection between all the motifs'. Mahler's reply is equally famous: 'No! The symphony must be like the world. It must embrace everything'.

With the Third Symphony, Sibelius grasped more clearly the artistic project that would dominate his later compositions: to give the impression that his reiterative, uncommonly concentrated language sought to draw out the hidden secrets of sound itself, to free an ontological truth from sound's acoustic materiality. To this end the Third Symphony strives to recover both the diatonic melodic fragment and the pure triad as meaningful modern utterances by presenting them in non-normative ways. Such an unusual aim – the defamiliarization of the diatonic and the consonant within a surrounding European context of multiplying dissonance, ironic detachment and high modernism – was easy for audiences and critics to misconstrue. This dogged, non-ironized retention of the triadic would lead to much misunderstanding and bitterly partisan debate for the rest of the century.

The perceptual effect created throughout the Third Symphony is that of an elemental, C-major-triad sonority gaining cumulative heft and weight, maximizing in presence and insistent self-assuredness, pulling itself free from distracting obstacles, until at the end one is confronted with something extraordinary: the reality of a heavier, more revelatory 'C major'. The remarkable finale is laid out in two distinct parts, welding together aspects of traditional third and fourth movements: a motivically scattered, scherzo-like block, unfolding in repetitive cycles, eventually produces a circular, melodic juggernaut that steamrollers its way to the end, accruing 'surplus' C-triad intensity with every reiteration (ex.5). From one

Ex.5 Symphony no.3, 3rd movt, concluding theme

a tempo, con energia

perspective, the finale can be understood as a radicalized sonata deformation, in which the double-theme scherzo cycles furnish two varied expositions and a development and the juggernaut conclusion serves as a reconceived recapitulation. From another, the scherzo cycles can also appear as a paradigm of what may be called 'rotational form' – broad, varied recyclings of a thematic pattern – within which a separate idea (in this case, the juggernaut theme) is engendered, nurtured and finally brought to flower as a revelatory *telos* or goal. Sibelius himself described the finale's process as 'the crystallization of ideas from chaos'. Foreshadowed most notably in *Lemminkäinen's Return*, this combination of quasi-ritualistic rotations and 'teleological genesis' would take on increased importance in the following years. It eventually became the grounding formal principle of his works after 1912.

The years 1907–12 brought alternating periods of buoyant confidence and corrosive despair, much of which he registered in a diary beginning in February 1909. Both Sibelius's finances and health had reached a crisis point, even as his family continued to expand with the births of his last two daughters, Margareta in 1908 and Heidi in 1911. By 1908 he was awash in debts, he was experiencing the negative effects of prolonged alcoholism – in his own mind intoxication had been a necessary spur to his artistry – and he had developed a menacing throat tumour. Fearing cancer, he consulted specialists in Helsinki and Berlin and suffered through several operations. On doctor's orders he was forced to swear off drinking and smoking. Although such abstinence had been previously unthinkable, this resolution lasted until 1915. For several years after 1908, Sibelius was haunted by the shadow of death, and much in his music and thought at this time turned towards the darker and the more introspective.

Nor were affairs entirely encouraging on the professional level. His monetary problems, compounded by growing self-criticism whenever he undertook large-scale projects, strained his relations with Lienau and made it difficult to fulfil the conditions in his 1905–9 contract. After the Third Symphony, he produced only two other major works for Lienau, neither of which invited public success. One was the proto-minimalist (and non-Kalevalaic) tone poem, *Öinen ratsastus ja auringonnousu* ('Night Ride and Sunrise', 1908). Breaking more decisively away from the sonata principle through multiple, cumulative rotations, it foreshadows much of the sound-world of Sibelius's later works. The second was his return to chamber composition with the sombre String Quartet in D minor, subtitled 'Voces intimae' (1909). As Sibelius himself recognized, this quartet was a milestone in his compositional development. Yet it did not come without a steep price. Anticipating certain features of the Fourth Symphony, the brooding language of the five-movement quartet seems to turn its back on audiences altogether in its entrenched isolation, depression and invasive despair. It reveals its chilling, deeper currents only to initiates into Sibelius's manner of thinking.

Most of what he offered to Lienau, however, proved to be compendia of short pieces of varying quality: fleeting sound-ideas, experimental miniatures or songs. These included the six German-language songs of op.50 (1906), the curiously exotic incidental music to *Belsazars gästabud* ('Belshazzar's Feast', 1906–7), the more significant incidental music to Strindberg's fairy-tale play *Svanevit* ('Swanwhite', 1908), certain features of which would be recalled in the Fifth Symphony, and the eight songs op.57 on Swedish texts by Ernst Josephson (1909–10). In 1910, after Lienau turned down Sibelius's terms for the Ten Pieces for Piano op.58, the composer was lured to Breitkopf, whom he also offered two songs from 1908, published in 1910 as op.35 (and much praised by later commentators): the broadly static *Jubal* and the proto-expressionistic, hauntingly decadent *Teodora* – a rare encounter in Sibelius's music with aestheticist eroticism. Towards the end of 1909, meanwhile, he had been momentarily rescued from his appalling financial situation through discreet contributions from a few wealthy Finnish patrons. This relief effort was organized by his friend Axel Carpelan, who characteristically pressed Sibelius to steer clear of potentially lucrative miniatures in favour of major orchestral statements.

His several trips abroad in 1909–12 kept him abreast of new developments in music and permitted him to reflect on his own position – or lack of it – in the larger European markets. The most encouraging successes occurred in England, where a few influential voices – Bantock, Newman, Wood, Newmarch – continued to champion his cause. Sibelius was fêted in England in February–March 1909 (when he also briefly met Debussy) and September–October 1912. But his experiences in Berlin and Paris during these years were at best mixed, at worst deeply discouraging. There, for the most part, he had been consigned to the position of a second-tier 'nationalist', no longer regarded as a key player in the world of the new music personified by such figures as Debussy, Stravinsky, Varèse (whom Sibelius met, through Busoni, in 1910) or Schoenberg (whose musical principles challenged him to the point of crisis in 1912). Apart from his English connection, Sibelius's career now seemed on the wane. His newer works proved especially difficult to market in the rest of Europe. These included the funeral march *In memoriam* (1909, revised 1910) and a revision of his choral and orchestral setting from the Kalevala, *Tulen synty* ('The Origin of Fire', 1902). His modern-classical gambit and increasingly dark, enigmatic musical utterances were not leading to the success for which he had hoped.

The unresolvable obstacle was his puzzlingly unusual style. As his biographer Erik Tawaststjerna pointed out, 'Sibelius's musical ideas were alien to the Central European mentality'. Traceable in letters and diary entries, the composer's response was to refashion his self-image into that of a man of profound isolation, groping his way along a little understood compositional 'path' that he 'must take', one that would ensure his irremediable alienation from the currents that governed the prestige institutions of his time. This self-assessment crossed a crucial line with the widespread reconstruction of the concept of musical modernism that attended the European compositional revolutions in the years around 1910 – Stravinsky, Schoenberg and others. It was now clear that Sibelius's early modernism, along with that of others of his generation, was being outflanked (and placed under suspicion as traditionalism or 'late Romanticism') by a younger group of high modernists whose new-music posture and practices he came to view as sensationalist, a betrayal of the tradition.

Sibelius's Fourth Symphony in A minor (1910–11) was the climactic utterance of his modern-classical style –

broken, despairingly contemplative, irretrievably lonely in tone, the product of much compositional struggle and, above all, a resolute statement of the separatist side of his conflicted artistic persona. It is a piece of enormous depth and implication, very much a work of its time, harbouring at its core a brilliantly staged contradiction. On the one hand, the standard 20th-century verdict, especially among historians, has been that this is Sibelius's most modern, most harmonically and technically advanced composition. Many factors point in this direction: the Fourth's emphasis on the tritone as a generative interval; its arrestingly acerbic dissonances; the strangeness of its moment-to-moment syntax, including stubborn rhetorical discontinuities and truncations; its unparalleled motivic compression and density of thought; its structurally deformational movement layouts; its uncompromising bleakness and disdain of popular appeal. On the other hand, its selfconsciously anti-sensational tone was intended as a rebuke to the new, post-1910 reconception of modernism. This was the initial view of the symphony put forth by Sibelius's confidant Axel Carpelan in April 1911, shortly after the Helsinki première. It was reinforced the following month by Sibelius himself in a much-quoted letter to Rosa Newmarch: '[My symphony] stands as a protest against present-day music. It has nothing, absolutely nothing of the circus about it'. The modernist/anti-modernist contradiction driving the Fourth Symphony is irreconcilable. In that irreconcilability it exposes, albeit from the sidelines, the conflicts tearing through the fabric of the European musical politics of the period.

6. 1912–26: LATE WORKS. In terms of its initial reception in larger Europe, the Fourth Symphony was a failure. Sibelius's estrangement from the new reception categories of Austro-Germanic and French modernism would drive the remainder of his career. Although his decision in early 1912 to turn down the offer of a position in composition at the Imperial Academy of Music in Vienna was prompted in part by local concerns, it was also a signal that he no longer sought the front lines of compositional battle on the terms offered by Central Europe. Fuelled by struggles with depression coupled with a visceral disdain for the polemically driven politics of musical fashion, his thoughts were turning instead towards withdrawal, private resistance to the new trends and continued explorations of the separatist path that he had set out for himself.

These attitudes were reinforced in early 1914, when Sibelius took a month-long trip to Berlin after a year of isolation in Finland. Once again he threw himself back into the Germanic swirl, and there he sought out alternatives to his own style: the music of Debussy, Mahler, Strauss and above all Schoenberg, including the first *Kammersymphonie*, the Second Quartet and a few songs. In his diary entries of 4 and 9 February he recorded his ambivalence to the new Expressionism: Schoenberg's music was 'a legitimate and valid way of looking at things . . . but it is certainly painful to listen to . . . It gave me a lot to think about. He interests me very much'. Still, it was evident that his own music would maintain only a modest place on the continent and that the language, style and characteristic problems of the symphonic tradition were on the way to being judged obsolete.

In a curious twist of fate, the very qualities that were marginalizing him in Central Europe were proving attractive to certain traditionalist English and American circles, which were beginning to appropriate him as a Northern, 'healthy' antidote to a diseased musical modernism. Generally underexamined on all sides, Sibelius's music was on its way to becoming a much stormed, much defended redoubt in the modernist/anti-modernist culture wars. Anticipations of this had been sounded in England for several years. The next stage unfolded among Sibelius's American champions. In 1913 Horatio Parker invited him to undertake a concert tour the following year in the eastern USA. The principal sponsors, Carl Stoeckel and Ellen Battell-Stoeckel, commissioned a new work, to receive its première at the Music Festival in Norfolk, Connecticut, in June 1914 as the centrepiece of the visit: this turned out to be the tone poem, *Aallottaret* ('The Oceanides').

Sibelius's visit to America in late May and early June 1914 – on the eve of European war – was one of the grandest experiences of his life. He was welcomed as a celebrity, regaled with travel and luxurious accommodation, and praised rapturously; he visited New York, Boston and Niagara Falls (which moved him profoundly), met musical luminaries (Horatio Parker, Walter Damrosch, George Chadwick and others), carried off the première of *The Oceanides* and received an honorary doctorate at Yale University. Among the most important of Sibelius's new acquaintances was Olin Downes, then the critic for the *Boston Post*. Downes had already taken up Sibelius as a personal cause to counter the 'overcultivated' features of modern times – in retrospect, with a coarse vehemence, edgily reflecting his own psychological needs ('music of intense masculinity, from which the erotic element . . . is entirely absent . . . a hero of the North . . . the last of the heroes in music . . . [who can] throw manners to the winds and bring back the gods'). He would pursue this overblown campaign in the 1920s and 30s as the leading critic for the *New York Times*. Although such Downesian projections (and their British analogues) would become leitmotifs among English-speaking traditionalists, their long-term effect would be negative, propping up Sibelius as a perennial 'conservative' target for partisan advocates of the dissonant 'new music'.

Sibelius's actual compositional concerns during the years after the Fourth Symphony elude simplistic classification as either conservative or progressive: this late-period music resists such shopworn binary oppositions. At its centre was an increasing flight from cosmopolitan fashion into near-solitary contemplation – the turn onto 'a lonely ski-trail that leads away to the depths of the forest' (to cite the opening lines of a brief, metaphorically confessional work of 1925, *Ett ensamt skidspår* for narrator and piano, with text by Gripenberg). The deepest and most significant of his career, Sibelius's late works are inseparable from his day-to-day existence at his forest retreat, Ainola, outside Järvenpää: its towering, resinous pines, its crystalline lakes, its boreal plants and wildlife, including its majestic migrating birds (which so impressed the composer), its dramatic and pitiless change of seasons, its utter separation from anything urban. 'Here at Ainola', he would remark, 'this stillness speaks'.

Since 1912 Sibelius had begun to envisage an enormous final project: bringing the 19th-century ideal of organic form to a culmination while exploring the relationship of the resulting form to an enhanced presence of musical sound. The composer had come to regard certain types of sound-image with reverence, as spiritually mappable onto

the manifestations of Being concealed behind the visible surface of nature. At least within the sphere of musical practice, the composer appears to have held the quasi-animist conviction that long-dormant spiritual realities – roughly analogous to ancient, pagan gods – inhabit nature, waiting to be reawakened through meditative reflection. Supplementing what we may regard as Sibelius's aesthetic pantheism was his growing belief in the potential reuniting of music with nature. He now sought to bring the palpable, grainy textures of musical sound and the processes of musical elaboration into alignment with the magisterial spontaneity of nature's cries, rustles, splashes, storms, cyclical course and the like. Thus the act of composition became a neo-pantheist spiritual exercise. The resultant work of art was intended to invite a complementarily mystical, reverential or poetic listening – not to be captured by rational analysis or chalkboard explanation. Hence, one supposes, the mature Sibelius's phobic rejections of virtually all published discussions of his music: he repeatedly lamented that academic or critical explications 'misunderstood' him.

Bearing such conceptual weight, the production of major works became a struggle ('wrestling with God', he wrote in his diary on 26 January 1916). The compositional battles of the final-period works, from *Luonnotar* (1913) and *The Oceanides* (1914) to the Fifth (three versions, 1915, 1916, 1919), Sixth (1923) and Seventh (1924) Symphonies and *Tapiola* (1926), were shot through with an unnerving mixture of creative exhilaration and crushing self-criticism. Most of the late works went through substantial reconceptualizations, recompositions and revisions before he consented to publish them. In April 1915 he compared his compositional practice to the search for the proper reconfiguration of scattered mosaic tiles flung down from heaven. Two years later, on 20 May 1918, he would write to Carpelan, 'I notice how my inner being has changed since the period of the Fourth Symphony. And these symphonies of mine are more confessions of faith than are my other works'.

After the Fourth Symphony Sibelius sought to forge musical structures less dependent on traditional musical shapes than on the non-systematic, intuitive logic of the musical materials selected for any given composition. As he later explained, pieces were to grow by moment-to-moment motivic transformations as spontaneously and self-assuredly as frost patterns. In his diary entries of April, May and August 1912 he repeatedly vowed to develop this new method. For example, from 8 May, 'I intend to let the musical thoughts and their development determine their own form in my soul'. As a result, his major works after 1912, veering from the usual symphonic shapes, have provoked different analytical interpretations. The tonal and rhetorical layout of sonata form (or even 'free sonata form'), which had governed the outer movements of Symphonies nos.1–4, seems much less determinative of *The Oceanides* or the outer movements of the Fifth. With the Sixth Symphony – especially its finale – and the single-movement Seventh, sonata-form references are sidelined altogether, overridden by structures that are self-evidently coherent but not easy to classify with traditional terminology.

Over the years, Sibelius analysts – Abraham, Ringbom, Parmet, Tanzberger, Simpson, Tawaststjerna, Murtomäki and others – have proposed various solutions to this problem. Most of these solutions have been grounded in free adaptations of the standard structural categories: sonata, rondo, *ABA*, strophic construction, scherzo and trio, variations, ritornellos and the like; categories that are often relevant to these works but are rarely satisfactory as total explanations. The most deeply-rooted analytical tradition has marvelled at the concentrated germination and metamorphosis of motivic cells within a piece (analogous to Schoenbergian *Grundgestalten*, 'basic shapes'), the almost imperceptible mechanisms of tempo change and texture change, and the uncanny interrelatedness of the themes. More recently, attempts have been made to submit these works to Schenkerian readings, sometimes merging those techniques with concerns for larger architectural shapes and the conclusions of past analyses. Perhaps most provocatively, Sibelius's son-in-law, the conductor Jussi Jalas, supported Simon Parmet's argument in the 1950s for a golden-section basis for the Seventh Symphony. Jalas even mentioned that Sibelius had told him that the *sectio aurea* informed all of his works, but that how it operated was 'my secret'. Elaborated in published analyses, Jalas's claim is neither supported nor contradicted by external evidence that has yet come to light. No golden-section calculations appear, for example, in the materials of the Seventh Symphony. The claim remains a topic of controversy.

A broader consideration of these later works suggests that their predominant mode of organization is a more thoroughgoing version of the procedure anticipated in such works as *Lemminkäinen's Return*, the finale of the Third Symphony and the slow movement of the Fourth. Sibelius never gave the procedure a name but, again, it may be called rotational form: varied recyclings of the thematic pattern established in the piece's first rotation. Rotational form produces cumulative meditations – recurrent revisitings of past cycles, transforming and gathering new ideas as they proceed – which may or may not be set in tension with the expectations of sonata expositions, developments and/or recapitulations. Sibelius typically coupled rotational form with the principle of teleological genesis: the gradual awakening of a climactic goal-utterance (*telos*) – the more fully awakened 'Being' of nature – near the end of the piece. The free-rotational principle offered maximal formal freedom while encouraging new, coherently disciplined shapes. In most cases, the thematic ordering of the initial rotation remained relatively constant throughout the later cycles, though elements could be expanded or deleted or new ones added. In the final works, such as the highly complex Seventh Symphony, the rotational cycles recur with their constituent elements significantly shuffled or treated freely.

With this new compositional approach Sibelius sought to overcome the much-vaunted distinction between two seemingly opposed orchestral genres, symphony and tone poem, striving to fuse their most basic principles: the symphony's traditional claims of heft, musical abstraction, gravitas and formal dialogue with canonic works of the past; and the tone poem's axioms of structural innovation and spontaneity, identifiable poetic content and sonorous innovation. The stylistic distinction between symphony, 'fantasy' and tone poem in the late works is not easy to make, particularly since ideas that were first sketched for one piece sometimes wound up in another. (The Fifth, Sixth and Seventh Symphonies and *Tapiola* are interrelated works, four tableaux of a comprehensive vision of the spiritual presences animating the Northern

forest-world. All four contain versions of materials first planned for the Fifth in the 1914–15 sketchbooks.). When the compositional result was a multi-movement work, as with the Fifth and the Sixth Symphony, Sibelius generally did not make public the underlying, nature-based poetic ideas, even though suggestions of them might be now recoverable from sketches or other evidence. Instead, he provided it with the abstract title, 'symphony', although in the early stages of each he had toyed with the title of 'fantasy' instead. When the result was a single-movement work with multi-movement implications, as with the Seventh Symphony, the genre became more ambiguous: the manuscript parts used at the Stockholm première of the Seventh (24 March 1924) read 'Fantasia sinfonica no.1'; by February 1925, before its publication by Wilhelm Hansen in Copenhagen, Sibelius changed the title to 'Symphonie Nr.7/In einem Satze' ('in one movement').

The four extended, single-movement works without multi-movement implications received titles identifying them as myth- or nature-based tone poems. Two of these furnish an impressive gateway into the late period: *Barden* ('The Bard', 1913), brief and elusive; and the 'tone poem for soprano solo and orchestra', *Luonnotar* (literally, '[Feminine] Nature-Spirit', 1913), a reshaping of the Kalevala creation story and the most uncompromisingly Finnish of Sibelius's major works. The remaining two are masterworks of the late style: the commission for America, *The Oceanides* (*Aallottaret*, literally '[Feminine] Spirits of the Waves', 1913–14 – whose suppressed, never-performed first draft had been laid out in three contrasting movements, perhaps as something of a reply to Debussy's *La mer*); and, above all, the disturbingly primeval forest-evocation, *Tapiola* (literally, 'Where the Forest God Dwells', 1926).

Apart from these major works, Sibelius assembled smaller compositional scraps, usually with less elevated compositional claims, into other outlets. Some became appropriate incidental music – to Poul Knudsen's tragic pantomime, *Scaramouche* (1913, portions of which foreshadow *The Oceanides*), to the Finnish translation of Hofmannsthal's *Jedermann* (*Jokamies*, 1916) and, most impressively, to Shakespeare's *The Tempest* (*Stormen*, 1925), four or five movements of which are miniatures of the highest mastery, including the ferocious, whole-tone-grounded storm music, the gentle 'Berceuse', 'The Oak Tree' and 'Prospero'. Others were fashioned into modestly saleable works for violin and orchestra (*Laetare anima mea* and *Ab imo pectore*, 1915, both performable alternatively with cello solo; or the Six Humoresques, 1917–18) or into individually titled, occasional pieces (the starkly minimalist, oddly stirring *Andante festivo* for String Quartet, 1922, rearranged for string orchestra and timpani, 1938). The late period also saw a scattering of lesser works (for piano, for solo instrument and accompaniment, for chorus) that he composed for financial or locally patriotic reasons.

Originally composed for the Helsinki celebrations surrounding his 50th birthday, the triumphalist Fifth Symphony in E♭ – so different from the pessimistic Fourth – was performed in two preliminary versions (1915, 1916) before Sibelius decided on its final shape in 1919. The 1915 version, which has now been restored and recorded, contained four separate, motivically linked movements, each in rotational form: its brief, moderately paced first movement ended abruptly and was followed by a bustling scherzo that revitalized and recast the same themes; a slow movement and finale followed. In the 1916 version, no longer fully recoverable, Sibelius not only recast individual sections but also fused the first two movements by composing a climactic bridge between them. A breathtaking apotheosis of opening-page material, this bridge produced an orchestral breakthrough that sweeps commandingly through the tempo change required by the thematically related scherzo (parts of which, consequently, now also seemed somewhat recapitulatory). The 1919 revision – the familiar version – preserved the 'fusion-form', two-movement-in-one opening, with its slow-to-fast E♭ trajectory (a *locus classicus* of Sibelius's art of tempo transformation) pivoting around the majestic, central bridge upheaval on B major, but altered, reordered and condensed numerous local details in all of the movements.

Although Sibelius provided no public information about the natural imagery grounding this 'confession of faith', two early diary entries (21 and 24 April 1915) as well as a private remark in one of Carpelan's letters to him ('that swan hymn beyond compare', 15 December 1916) make it clear that the composer identified the central finale theme (ex.6) with the splendour of the

Ex.6 Symphony no.5, finale, 'Swan Theme'

migrating swans sighted seasonally around Ainola – the circling of the grand birds far above, their wings lifting and pushing against the rushing wind. Nor, apparently, was the swan-related imagery (encompassing swans, cranes and wild geese – including their cries – as disclosers of 'nature mysticism and life's *Angst*!') confined to the finale. The germinal motive on the opening page of the first movement (an ascending 2nd followed by an upward-leaping 5th, scale-steps $\hat{1}$–$\hat{2}$–$\hat{6}$) had been a programmatic motif in his 1908 incidental music to Strindberg's fairy-tale play *Swanwhite* – the horn-call blessing of Princess Swanwhite's marriage-bed, surrounded by the 'magic forest' teeming with fantasy animals. Similarly, much of the Fifth's middle movement recalls delicate passages from the *Swanwhite* movement entitled 'The Harp', which represents the Swan-Mother's magical bestowal of graces on her daughter, the princess.

The late 1910s ushered in a different world for Sibelius – one more isolated from the rest of Europe and more heatedly politicized within Finland. The 1914 outbreak of World War I affected him swiftly and directly: his customary European travels became unthinkable; the gears of German and English publications (and royalty payments) ground to a near halt; and his income plummeted. Three years later, Finland's declaration of independence from the new, Lenin-led Russia on 6 December 1917 fulfilled a long-cherished national dream but simultaneously triggered a brief but bloody Finnish civil war between the socialist Reds and the ultimately victorious liberal-democratic Whites. Sibelius sided emphatically with the Whites, and on the eve of the civil war, in late 1917, he composed a crudely rousing

Jääkärien marssi ('Jäger March') for accompanied male chorus in support of the anti-Red, Finnish Jäger battalion, which had been trained in Germany. Although musically insignificant, its political effect was explosive and unabashedly partisan. From this point onward the composer was identified with the pro-nationalist, anti-leftist cause. In early 1918 the civil war brought Red Guard control to his home, Ainola, and the composer was temporarily obliged to seek shelter in Helsinki. Nor did the German-assisted, pro-White resolution of the civil war put an end to Finnish political controversies. Factional turmoil was henceforth the order of the day, and Sibelius and his family – generally supportive of the right – would be pulled into ideological and Finnish-Swedish language disputes for years to come.

Other factors too seemed watersheds: his resumption, in 1915, of frequently reckless drinking after seven years of abstinence – bringing on, by the end of the decade, a pronounced tremor of the hands; Furuhjelm's 'official' (Swedish-language) biography from 1916, which celebrated Sibelius's status as a classic within Finland; and the emerging maturity and marriages of his oldest daughters (his first grandchild was born in 1915). Some time between February 1918 and May 1919, his decision to transform his appearance one last time – the adoption of the now-familiar, shaved bald head – projected an altered public and private persona: Sibelius as eccentric, uncompromising, alienated thinker, the man of granite, the 20th-century successor, perhaps, to the similarly cropped Bruckner. The next few years saw the deeply personal impact of the death in April 1919 of his friend and musical confidant, Axel Carpelan; his participation in (and occasionally intemperate behaviour at) the Nordic Music Festival in Copenhagen in June 1919; his visit to England in 1921, which turned out to be his last trip to that country; his decision in 1921 to decline an offer to become director of the new Eastman School of Music in the USA; and several European trips in the mid-1920s, including his last appearances as a conductor – in Stockholm, Rome and Göteborg in 1923, Stockholm, Copenhagen and Malmö in 1924, and finally Copenhagen again in 1926.

But it may have been his drinking, his personal and financial unreliability, and the resulting domestic tension that overrode everything else. Perhaps most telling was his scandalously drunken appearance as a conductor of his Sixth Symphony in Göteborg in April 1923. This incident prompted Aino in March 1924, faced with his continued alcoholism as he composed the Seventh Symphony, not merely to upbraid him but to write him a formal note of withering condemnation, vowing not to appear in public with him for its première – a note that remained secret until after his death over three decades later. As for Sibelius, deeply depressed and concerned about his ability to complete the symphony, he confided to his diary on 11 November 1923: 'Alcohol, which I gave up, is now my most faithful companion. And the most understanding! Everything and everyone else have largely failed me'.

The four-movement Sixth Symphony was first performed on 19 February 1923 in Helsinki. In its isolated interiority and restraint – its 'transcendental serenity', in the words of Heikki Klemetti, an early Finnish reviewer – it was the antithesis of sensationalism: the composer described it as 'pure spring water', as opposed to the cocktails served up by younger composers. Many have noted the glowing purity of its quasi-contrapuntal long lines and 'white-note' style, especially in its eloquent opening, and have cited Sibelius's apparently concomitant study of Palestrina and Monteverdi as contributing factors. To a Swedish interviewer in February 1924, Sibelius described the Sixth as 'built, like the Fifth, on linear rather than harmonic foundations. ... [Its] four movements . . . are formally completely free and do not follow the ordinary sonata scheme'. As Tawaststjerna and Kilpeläinen have more recently noted, two of its themes appear in post-1915 sketches (perhaps *c*1919) with nature-grounded programmatic titles: *Talvi* ('Winter', foreshadowing the first movement's eventual bars 29ff, which Tawaststjerna argued was the movement's main theme); and *Hongatar ja Tuuli* ('[Feminine] Pine-Spirit and the Wind', an important interior theme of the finale – related to the rising-theme complex shown in ex.7 below). Extrapolating from this and remarks found in the diaries, both Finnish scholars have also linked the early stages of some of the Sixth's music with Sibelius's work in 1920 on a projected tone poem, *Kuutar* ('[Feminine] Moon-Spirit').

Ex.7 Symphony no.6, finale, theme, bars 72–82

4. Autograph MS from Sibelius's Symphony no.7 in C, composed 1924 (FIN-Hy)

From a different cultural perspective the Sixth may also be understood as a quasi-pastoral meditation on Finnish uniqueness and difference – a maximally distilled summary of his late-style thought on the characteristic turns of minor- or Dorian-inflected Kalevalaic modality, which he had considered a central sign of Finnish ethnicity since the 1890s. Much of the Sixth is steeped in the linear motif of the D-Dorian pentachord, D–E–F–G–A (the 'Finnish pentachord'), often outfitted with two upper extensions: the complementary tetrachord, A–B–C–D or the rounded contour, A–B–C–B–A, which replicates in a higher register the archetypically Sibelian 'Finnish ideogram' of a descending, linear minor 3rd. In the outer movements the D-Dorian saturation, in which sidelights and corners of the pure mode are singled out and caressed in detail, is often contrasted with the lower neighbour C major (or other C-modal) pitch collection, producing large-scale oscillations between D-Dorian and 'C major'. In terms of thematic material – as is strongly suggested by sketch evidence – Sibelius constructed the symphony to grow towards the climactic Finnish-Dorian idea (related to the sketch-theme labelled 'Hongatar ja Tuuli' a few years earlier) presented in full only at a culminating point near the middle of its finale (ex.7, bars 72–83; basically rehearsal letters 'D' to 'E', subsequently recycled in an intensified restatement and led into a process of decay, decentring and valedictory farewell). Capping a four-movement process of motivic transformation, advanced rotational form and teleological genesis, this D-Dorian theme had been sketched about eight years earlier (in E♭ Dorian, and without the later 'Pine Spirit' label) as a proposed melody for the Fifth Symphony. It became instead the basic idea and animating force of the Sixth.

Its companion piece from 1924, the Seventh Symphony – the product of much labour, recasting and revision – is surely Sibelius's most remarkable compositional achievement (fig.4). Although brief in duration (about 22 minutes), this 'symphony in one movement' articulates a vastness not measurable by clock-time: its churning, ever-transforming textures and tempos track a panoramic passage through four discrete sections, each of which aspires to the integrity of a symphonic movement even while participating in the uninterrupted growth process of the whole. The Seventh provides a late example of the historical drive towards a tonally grounded 'multi-movement form in a single movement', a post-Beethovenian compositional problem also confronted by Liszt, Strauss, Schoenberg and others. But with the Seventh the crucial factors are its unique musical language and its fantasy-like freedom from reliance on prior solutions to this problem: Sibelius provided it with the architectural satisfactions and expressive depth of an abstract symphony while breaking away from references to sonata form and other traditional formal models. As such, developing in free conceptual space unmoored by prior expectations, the Seventh stands as the consummate realization of his late-style rethinking of form. Its ad hoc structure emerges link-by-link from the transformational processes of the musical ideas themselves – a content-based form constantly in the process of becoming.

Because of its subtlety and the dizzyingly multiple motivic interconnections between widely separate passages, the Seventh has been resistant to traditional descriptions of its form. Differing interpretations abound. In large-scale terms, three principles seem clearly at work. First, Sibelius framed the symphony with the C major

'bookends' of Sections 1 and 4: the expository materials of the opening Adagio, cresting in the grand trombone theme (bar 60, seven bars after letter 'C'), are given a freely reordered, shortened reprise (or valedictory farewell) beginning with the Presto nine bars after 'W'. The two interior sections, grounded in the same motivic materials (as separate, freely shaped rotations), comprise a scherzo-like Vivacissimo (in place by letter 'J', if not earlier, after several bars of transition) and another, more expansive scherzo (perhaps the 'Hellenic Rondo' proposed years earlier for this symphony), beginning in C major, Allegro molto moderato, 13 bars after 'N'. Secondly, the three full statements of the 'trombone theme' – perhaps consciously alluding to the horn call in Brahms's First Symphony – serve as arrival-points and conceptually organizing 'cornerstones' (Parmet) of the whole: they occur as the culmination of Section 1 (C major), as the chilly, windswept marker of a metrical gear-shift (C minor, around letter 'L') ultimately leading Section 2 into Section 3, and as a deeply affecting 'farewell' gesture near the opening of Section 4 (C major, three after letter 'X'). Sibelius may have associated the trombone theme's grand vista with a contemplation of the breadth of the night sky. One of its early, rudimentary versions had been situated, along with material later placed in the Sixth Symphony, in thematic sketches for what may also have been reworked in the eventually discarded work *Kuutar* ('[Feminine] Moon Spirit': there the theme is labelled *Tähtolä*, 'Where the Stars Dwell'). Thirdly, the rotational principle – the recasting of a collection of motifs in a series of multiple cycles – is dominant throughout, though treated with unprecedented freedom. Section 1, for instance, may comprise two rotations. The first, bars 1–22, lays out and provides an initial processual field for the basic motivic ideas: ascending scale, woodwind motif (bar 8), descending 4th, and so on, each of which seems to grow on its own terms; the second, bars 23–*c*89 (the polyphonic string passage producing the trombone theme) sets out again from the principle of linear ascent (compare bars 1–2) and reshapes the same ideas in substantially different ways.

The same kind of close-knit thinking is evident in Sibelius's last major composition (directly following his main work on the incidental music to *The Tempest* in 1925–6), the tone poem *Tapiola*, occasioned by a commission in 1926 from Walter Damrosch on behalf of the New York Philharmonic Society. Here, however, the specific gravity is even higher, quasi-minimalist in effect. The entire work, seeking an identity with the dark and ancient pine forests harbouring their hidden god, Tapio, is produced from the ramifying growth of a single, brief motif. This may be represented as $\hat{3}$–$\hat{2}$–$\hat{3}$–$\hat{4}$–$\hat{3}$–$\hat{2}$–$\hat{1}$ in minor (often in or around B minor, the piece's governing tonal colour), although the basic motif may be reduced even further to the 'Finnish ideogram', $\hat{3}$–$\hat{2}$–$\hat{1}$ – the heart of the work. In this respect *Tapiola* displays motivic intersections with the Sixth Symphony, and Sibelius may have generated its musical ideas at about the same time.

The content-based form, like its immediate predecessors grounded in transformable rotations, has provoked differing analyses: some have heard the work as a free-form, 'evolutionary' working of the fundamental motif; others as a 'total variation form'; others, noting the break and double-bar before the D major 'scherzo' section (bar 208) and the suggestion of a varied reprise at bar 485, have proposed the presence of an imaginatively free dialogue with aspects of the sonata principle. (Sibelius, astonishingly, later remarked to his secretary Santeri Levas that *Tapiola* had been 'written in a strict sonata form'.) Above all, what impresses is the work's unparalleled atmosphere, unique in the symphonic literature: its brooding stasis, gestational patience and long pedal points; its dark, hypnotic oscillations, registering an underlying, vital sway in the forest; its cold shadows and impersonal, elemental natural processes before which mere humankind fades into insignificance; its slow transformations of chordal colour (including modal, chromatic and whole-tone passages); the terrifying ferocity of its wind-lashed storms; the gathering up and climactic double-discharging of its basic motif (bars 356, 569, both *triple-fortissimo*), the self-disclosure of the animating forest-god.

7. 1927–57: THE SILENCE FROM JÄRVENPÄÄ. *Tapiola* would prove to be the last of Sibelius's major works. 1927–32 were years of compositional crisis, frequent depression and waning self-confidence. They brought forth only a scattering of smaller compositions: a handful of occasional choral pieces, the draft of a suite for violin and orchestra 'op.117', a few curious miniatures for piano solo or violin and piano and the *Surusoitto* ('Funeral Music') for organ in memory of Akseli Gallen-Kallela. In the background were his plans for an Eighth Symphony. His initial work on it, however, probably in Berlin in 1928, appears to have run aground almost at once. This was a period when Sibelius was withdrawing even further by declining conducting engagements and avoiding public appearances. He seems to have returned to the Eighth in 1930 and 1931: as he reported in letters to Aino, it was occupying him during what proved to be his last trip outside Finland, a 1931 visit to Berlin. Within his own mind, at least, he still considered himself an active composer. In the same year he wrote to Olin Downes not only that the Eighth would soon be 'ready for printing' but also that he had several other 'new works in my head'. By 1933 the multi-movement symphony was virtually completed: in the late summer he sent to his copyist what was probably the opening movement, a fascicle of 23 pages – the copyist Voigt's bill for the work survives – and indicated that seven more such fascicles would follow. They never did. The rest of the tale is tragic: Koussevitzky's and Downes's pressing of Sibelius for the long-awaited Eighth throughout the early 1930s; Sibelius's promises, hesitations and delays; the souring of the Eighth into a near-taboo topic of discussion. In the end Sibelius abandoned the project. Aino later reported to Erik Tawaststjerna that in the mid-1940s (perhaps in 1945) the composer destroyed a laundry basket of manuscripts – including what must have been the entire set of materials for the Eighth Symphony, probably in several substantially differing versions – by throwing them into the fire of the dining-room stove at Ainola.

Tapering off drastically in the late 1920s, new compositions from Sibelius came to a stop after 1931. The only exceptions are two small works for men's chorus from 1946 (*Veljesvirsi* and *Ylistyshymni*) and a few revisions of earlier, non-published pieces (most notably the 1938 orchestration of *Andante festivo* and the 1939 recasting of *Lemminkäinen and the Island Maidens* and *Lemminkäinen in Tuonela*, both eventually published in 1954). Anecdotal evidence suggests that he may have continued

to compose intermittently, but in effect the 'silence from Järvenpää' was total. Sibelius retired as a grand personage of Finland, the musical symbol and most famous citizen of the nation. Within Finland official biographies (Ekman, G1935) and formal studies of the works (Roiha, J1941; Krohn, J1942) began to appear. Over the years he received numerous distinguished visitors, and his birthdays were occasions of state celebration and international recognition. The accolades for his much-noted 70th birthday in 1935 included the Germany Goethe Medal, awarded by Hitler, who doubtless (and quite apart from Sibelius's views) considered this gesture an advantageous affirmation of racial and Nordic solidarity. Important recordings of his works also emerged in the early 1930s, beginning with the officially-sponsored Kajanus recordings in 1930 and 1932 of Symphonies nos.1, 2, 3 and 5, two movements from the *Karelia Suite*, *Pohjola's Daughter*, *Belshazzar's Feast* and *Tapiola*. Koussevitzky recorded the Seventh Symphony in 1933, following it in 1935 with the Second; George Schnéevoigt's Fourth, Sixth and *Luonnotar* were produced in 1934. Sibelius himself was persuaded to record the *Andante festivo* in 1939, though as part of a short-wave broadcast, not as a commercial recording. (Decades later, a different recording was wrongly identified and released as Sibelius's; the confusion was clarified only in the mid-1990s.) The 1930s also saw the cresting of a wave of frequent Sibelius performances in England and the USA. Several British composers of the 1930s, in particular, seem to have been caught up in the Sibelius 'cult' and to have reflected it in their own music (Vaughan Williams's Fifth Symphony; Walton's First).

As Sibelius's popularity peaked in English-speaking countries – while Austria, Germany and France remained relatively uninterested – opinions about his work polarized along ideological lines, with disastrous results for his subsequent reputation in the critical and academic world in the second half of the century. Sibelius's traditionalist supporters – Cecil Gray, Constant Lambert, Olin Downes and others – claimed him as the last true successor to Beethoven and adduced the composer's works in their own campaigns against the dissonant new music. Pro-modernist factions responded with lacerating criticism and contempt for the taste shown by Sibelians. On the neo-classical side Virgil Thomson carried the charge forward: the Second Symphony was 'vulgar, self-indulgent, and provincial beyond all description'. In the pro-Schoenberg camp Theodor W. Adorno, in the enormously influential 'Glosse über Sibelius' (I1938), derided the veneration for Sibelius as a shabbily deluded, market-driven false consciousness and denounced the composer's musical technique as reactionary and inept, the 'originality of helplessness'. Nearly two decades later René Leibowitz issued a pamphlet (I1955) labelling Sibelius, on essentially the same grounds, 'le plus mauvais compositeur du monde'.

The issues at stake were not only musical ones. Viewed from certain combative angles, especially among leftist or avant-garde critics, Sibelius's world-view could be interpreted as uncomfortably assimilable into the 'blood-and-soil' ideologies promoted by the Third Reich (this, in fact, was precisely one of Adorno's charges). Such criticism looked warily on Sibelius's lifelong attraction to the 'truth' supposedly embedded in ethnic identity, on his deadly serious aesthetic invocations of archaic folk gods, on his manifest discomfort with modern urbanism and on his anti-technological retreat back to 'nature'. Additional factors, surely, were his well-known anti-socialist politics and the historical fact of Finland's 'continuation-war' alliance of convenience with Nazi Germany in 1941–4 against the much-hated Soviets – for which the composer made an Associated Press appeal for understanding on 12 July 1941. All these things doubtless had their roles to play as underlying, often tacit factors in mid-century Sibelius reception.

Obscured among the politicized charges and implications, it seems, was the complexity of the real man, who was by no means so readily classifiable. It should be added that in several diary entries from September 1943 a deeply troubled Sibelius denounced Nazi racial laws and theories as 'petty', 'puerile' and 'humbug': 'This primitive way of thinking, anti-Semitism and the like, is something that at my age I *cannot* condone. My upbringing and breeding don't fit in with the times'. He went on to counsel himself as a 'genius' and 'artist': 'You are a cultural aristocrat and can make a stand against stupid prejudice'; and he intermixed these remarks with characteristic despair about the reception of his own works: 'Only very few understand what I have done and want to do in the world of the symphony. The majority have no idea of what it is about'.

By the 1950s, the decade of the flowering of the postwar avant-garde, Sibelius's reputation had plummeted among élite modernists, and it seemed to slump among concert audiences as well, notwithstanding the entrenched persistence of the Second Symphony and the Violin Concerto, the devoted support of several eminent conductors and a modest, ever-renewing faction of admirers. For the rest of the century, historians writing official accounts of what came to be called 'modern music' or '20th-century music' would routinely blank him out of their histories or mention him briefly and patronizingly as a mere nationalist or faded holdover from the 19th century. Within the late 20th-century academy, itself conservatively wedded to one-sided conceptions of 'modernism', this inadequate picture has proved difficult to move beyond, even as audiences in recent years have once again shown signs of renewed interest, and even as his technique of slow textural transformation found a new following in the 1970s and 80s among some of the minimalist and post-minimalist composers.

5. Jean Sibelius, 1955

Sibelius died of a cerebral haemorrhage on 20 September 1957: he was buried at Ainola. Over the next few decades Sibelius research – archival, biographical, analytical – began to gather steam, centring primarily around the Sibelius Museum in Turku (Otto Andersson, more recently Fabian Dahlström) and Helsinki University (Erik Tawaststjerna, more recently Kari Kilpeläinen). Grounded in basic research documents, many of which had never before been made public, and in conversations with the family, Tawaststjerna's five-volume biography (1965–88) put Sibelius studies on a new plane. Other factors, too, have given a new push to Sibelius research: the availability of the composer's sketches, drafts and autograph manuscripts, an enormous collection housed primarily, since 1982, in the Helsinki University Library; Dahlström's clarifications in the 1980s and 90s of many elusive issues regarding the chronology of the works and their complicated publication history; the Swedish recording company BIS's project, complemented by releases on the Finnish labels Ondine and Finlandia, of recording the bulk of Sibelius's output, including early works, unpublished works and long-suppressed early versions of known pieces (*En saga*, the Violin Concerto, the Fifth Symphony); the bibliographical, biographical and reception studies of Glenda Dawn Goss; and the launching in Finland of plans for a complete, scholarly edition of the works, the first volumes of which began to appear in 1999. A substantial and long overdue reassessment of Sibelius seems to have begun.

WORKS

Editions: *Jean Sibelius: Works*, ed. F. Dahlström, G.D. Goss and others (Wiesbaden, 1999–) [JSW]

STAGE

op.	
—	Näcken [The Watersprite] (song for play, G. Wennerberg), 1888 [rest of incid music by M. Wegelius]
—	music to historical tableaux, ov. and 9 nos., 1893, unpubd; ov. rev. as Karelia Ov., op. 10, 1893; 3 nos. rev. as Karelia Suite, op.11, 1893: Intermezzo, Ballade, Alla marcia; Intermezzo and Ballade arr. pf, ?1897
—	Jungfrun i tornet [The Maiden in the Tower] (op, 1, R. Hertzberg), 1896, unpubd, Helsinki, 7 Nov 1896
8	Ödlan [The Lizard] (incid music, M. Lybeck), 1909, Helsinki, Svenska Teatern, 6 April 1910
27	Kung Kristian II (incid music, A. Paul), 7 nos., 1898; suite, 4 nos., 1898; 4 nos. arr. pf, 1898; no.4 arr. as Sången om korsspindeln [Fool's Song of the Spider], 1v, pf, 1898
—	music for Press Celebrations, 7 nos., 1899, Helsinki, Svenska Teatern, 4 Nov 1899; nos. 2, 5 and 4 rev. as Scènes historiques, op.25, 1911; no.7 rev. as Finlandia, op.26, orch, 1900; section of no.7 again rev. as Finlandia-hymni, male chorus, 1938, rev. mixed chorus, 1948
—	Kuolema [Death] (incid music, A. Järnefelt), 1903, 6 nos., unpubd; no.1 rev. as Valse triste, op.44/1, orch, 1904, arr. pf, 1904; nos.3–4 rev. as Scene with Cranes, op.44/2, 1906; also 2 addl pieces for new production in 1911: Canzonetta, op.62a, Valse romantique, op.62b
—	Musik zu einer Szene (incid music), 1904, unpubd; arr. pf, op.45/2, as Tanssi-intermezzo, pf version orchd 1907
46	Pelléas och Mélisande (incid music, M. Maeterlinck, trans. B. Gripenberg), 10 nos., 1904–5; suite, 1905, arr. pf, 1905; no.6 arr. 1v, pf as Les trois soeurs aveugles, 1905

Sibilla [Gronamann, Sybilla; Mrs Pinto] (*d* before 1766). ?German soprano. A pupil of Arne, she made her début in his *Comus* at the Aungier Street Theatre, Dublin and took the title role in his *Rosamond* (1743). Her first London appearance was in Arne's *The Temple of Dullness* (1745) at Drury Lane, where she sang for three seasons, mostly in theatre pieces by Arne but also in Lampe's *Dragon of Wantley* and Leveridge's *Macbeth* music. In 1747 she joined the King's Theatre company, appearing in the Handel pasticcio *Lucio Vero* and Hasse's *Didone* and *Semiramide riconosciuta*. She sang in Handel's oratorio seasons of 1748 and 1749, when she created the parts of Aspasia in *Alexander Balus*, the Attendant in *Susanna* and the Second Harlot in *Solomon*. The tessitura and compass (*c′* to *a″*, the latter note once only) suggest a limited voice with a mezzo timbre. Sibilla sang at Cuper's Gardens in 1748, 1749 and (as Mrs Pinto) in 1750, and in Waltz's benefit concert at the New Theatre in the Haymarket in 1748. She was the first wife of the violinist Thomas Pinto, with whom she had a daughter Julia, who sang leading parts at Dublin in Arne's *Artaxerxes* and operas by Michael Arne, Gazzaniga and Piccinni between 1774 and 1777. Julia married one Samuel Sanders and became the mother of George Frederick Pinto.

WINTON DEAN

Sibiryakov, Lev (Mikhailovich) (*b* St Petersburg, 1869; *d* Antwerp, Oct 1942). Russian bass. He studied in Milan and made some guest appearances in Italy before returning

to Russia, where he made his début in 1895. Singing first in the provinces, he established himself as a leading bass at the Mariinsky Theatre in St Petersburg, where his roles included Wotan, made remarkable by his ability to 'penetrate any orchestral forte without forcing, becoming an element of the orchestral sound' (Levik). He sang Don Basilio in *Barbiere* (in Russian) with the Boston Opera Company in 1910 and Marcel in *Les Huguenots* at Covent Garden in 1911. Back in Russia, he continued for some years, leaving for Western Europe after the Revolution. In 1932 he sang in *Aida* and *La favorite* at Monte Carlo and made a final appearance in the title role of *Boris Godunov* at Brussels in 1938. 6′ 6″ tall and with a voice of proportionate volume, he was often compared with Chaliapin. Recordings show a deep-toned voice with an extensive upper range and remarkable control throughout, though for power of vocal characterization he can hardly approach his great contemporary.

J.B. STEANE

Siboni, Erik Anthon Valdemar (*b* Copenhagen, 26 Aug 1828; *d* Frederiksberg, 11 Feb 1892). Danish composer and organist, son of GIUSEPPE SIBONI. He grew up in a musical atmosphere and was taught theory by J.P.E. Hartmann and piano by B. Courländer. In 1847 he went to the Leipzig Conservatory to continue to study theory with Moritz Hauptmann and piano with Ignaz Moscheles, but interrupted his studies the following year to volunteer for service in the Danish army during the Three Years War in Schleswig-Holstein. In 1851 he moved to Vienna, where he studied counterpoint with Simon Sechter. He returned to Copenhagen in 1853, travelling home by way of Paris where he visited Rossini, a friend of his father, and made the acquaintance of some of the leading Parisian musicians. He established himself as a composer and teacher in Copenhagen, numbering among his pupils the Princesses Alexandra and Dagmar, later Queen of England and Empress of Russia, respectively. Josephine Crull, a pupil of Marschner and Moscheles and later to become his second wife (1866), was the soloist in the first performance of his Piano Concerto in 1864. In 1865 he succeeded Peter Heise as organist and singing teacher at Sorø Academy, where he remained until poor health obliged him to retire in 1883.

WORKS

MSS in DK-Kk

Stage: Loreley (op, 1), Copenhagen, 1859; Carl den Andens flugt [The Flight of Charles II] (op, 3, T. Overskou), Copenhagen, Kongelige Teater, 1861

JOHN BERGSAGEL

Siboni, Giuseppe (Vincenzo Antonio) (*b* Forlì, 27 Jan 1780; *d* Copenhagen, 28 March 1839). Italian tenor. He made his début at Rimini in 1797 and then sang in Florence. He appeared in Bologna (1798), in Genoa (1800) and at La Scala (1805). He made his first appearance in London at the King's Theatre (1806), in *Il principe di Taranto* by Paer, who later wrote many roles for him. During that season he also sang in Portugal's *Il ritorno di Serse* and *La morte di Mitridate*, in Paisiello's *Il barbiere di Siviglia* and in Nasolini's *La morte di Cleopatra*. He sang again in London three years later, in operas by Pucitta, Farinelli and Paisiello. In 1810 he created the role of Trajano in Pavesi's *Arminia*. During his career he also appeared in Paris, Vienna, Prague and St Petersburg and throughout Italy. In 1819 he became director of singing at the Royal Theatre in Copenhagen.

ELIZABETH FORBES

Sibyl, Song of the. The song of the Erythrean Sibyl, describing the signs that would precede the second coming of Christ at the Day of Judgment. The most ancient version, in Greek, is found in Book VIII of the *Oracula Sibilina*, which dates from the dawn of Christianity. The lines were included by Eusebius of Caesarea (*d c*340) in his *Oratio Constantini ad Sanctorum Coetum*, and a century later they reappeared in St Augustine's *De civitate Dei*, translated into Latin from Greek and reduced from 34 hexameters to 27, a number symbolizing the Trinity. The next link in the transmission of the Sibylline verses is the *Sermo de Symbolo*, attributed to St Augustine during the Middle Ages but now to Quodvultus, Bishop of Carthage from 437 to 453. It is not known when or where the lines were set to music, nor when the pseudo-Augustinian sermon, which adds the evidence of 12 prophets and gentiles to that of the Sibyl on the coming of the Messiah, entered the liturgy, but this was an important factor in its diffusion. The earliest appearance of the lines in the form of a musical composition is in a miscellaneous 9th- or early 10th-century codex of St Martial de Limoges (*F-Pn* lat.1154), with a refrain consisting of the first line, 'Iudicii signum: tellus sudore madescet' ('Sign of judgment: the earth grows wet with sweat'), alternating with 13 couplets formed by grouping the Sibylline lines in pairs. From the 12th century, in a significant number of French, Spanish and Italian monasteries, the pseudo-Augustinian sermon, with the verses read or sung, constituted the sixth or ninth Lesson for Matins on Christmas Day, a practice which spread to some cathedrals in the following century.

Some 50 versions of the Song of the Sibyl with the Latin verses are currently known, mainly in lectionaries, homiliaries and breviaries from the 10th to the 15th century. Most of these come from Spain (26) and the others from France (14) and Italy (7). No two versions are completely identical but the chant remains relatively stable in them all. The same applies to the six existing versions of the verses translated and adapted into Catalan, to the two in Spanish and to the one in Gallego-Portuguese, *Madre de Deus*, a *Cantiga de Santa Maria* of Alfonso el Sabio in imitation of the Sibyl's song. Seven polyphonic settings of the refrain exist in Spanish sources, one with the text in Latin, two in Catalan (*Al jorn del Judici*) by

Bartolomé Cárceres and Alonso, and four in Spanish (*Juicio fuerte*), of which one is by Alonso de Córdoba, one by Juan de Triana and one by Cristóbal de Morales.

Except for that of Alfonso el Sabio, the vernacular versions date from the 15th and 16th centuries. It is known that in many places in the Iberian peninsula the Song of the Sibyl was dramatized, sometimes as part of the *Ordo prophetarum*, coinciding with the adoption of the vernacular. The leading role was usually taken by a boy dressed as a pythoness, and in some places, such as Toledo Cathedral, he was accompanied by two acolytes bearing swords and by two others with candles; the Sibyl sang the verses and a choir responded with the refrain. The introduction of the new Roman breviary in 1568, which omitted the reading of the *Sermo de symbolo*, led to the abolition of the Song of the Sibyl, but it continued to be used in some religious institutions as a supplement to Matins on Christmas Day. It is still sung in the cathedral of Palma de Mallorca and the Mauorcan monastery of Lluc, although both the Catalan text and the chant have suffered profound changes with the passage of time.

MARICARMEN GÓMEZ

Sicard, Jean [not Laurent] (*fl* 2nd half of the 17th century and early 18th). French composer and singer. His most productive years were spent in Paris, where he was highly esteemed as the 'famous Sicard who sings, teaches and composes very well' (*Mercure galant*, 1678). Titon du Tillet singled him out as one who 'succeeded very well in [the composition of] *airs à boire*'. He may have been on good terms with the influential court singer Pierre de Nyert, to whom he dedicated his fifth book of *airs* ('I am convinced that it is impossible to become illustrious in this beautiful art if one is not acquainted with your work'). The year 1710 found Sicard in Marseilles directing the Académie Royale de Musique en Provence.

A total of 336 *airs* by Sicard were printed in 17 books which, except for a gap in 1672, he produced at the rate of one a year between 1666 and 1683. From book 3 onwards (except for book 7) Sicard included *airs sérieux* with *airs à boire* 'to let the public know ... that I am able to compose both'. A few further *airs* by him survive in printed collections and manuscripts.

The range of invention and variety of musical settings in his *airs à boire* are much greater than one might expect. Those scored for bass voice and two violins are important forerunners of the 'doubled continuo' *air* found in French opera up to Rameau; some are virtuoso pieces for bass (see, for example, the fall of nearly two octaves in *Ne vous estonnez pas*, book 8; see Gérold, 162); and some, like certain *airs sérieux*, are organized as dialogues.

The wit of his prefaces ('I confess that I have an extreme passion to divert those unconcerned with good taste', book 1) appears in his music. Thus the duet *Amis, je suis triste* (book 5) uses the musical language of an *air tendre* to mourn a broken wine bottle. Sicard lavished much attention on his *airs sérieux*: for example, *Languir*, from book 3, is as moving a lament as exists in 17th-century French music.

Sicard dedicated his 12th book to his daughter and student, Mlle Sicard (whose first name is unknown), in the hope that she would become so proficient in composing *airs* that 'one day in seeing your work they will say "it is by the daughter of Sicard"'. Mlle Sicard contributed one *air* to this collection and in subsequent years composed five additional *airs*, included in books 12 (one), 13 (three), 14 (one) and 16 (one).

JAMES R. ANTHONY

Sicher, Fridolin (*b* Bischofszell, 6 March 1490; *d* Bischofszell, 13 June 1546). Swiss organist and composer. At the age of 13 he studied the organ with Martin Vogelmaier, the organist of Konstanz Cathedral. Later he devoted himself to theological studies, and in 1510 the canons of Bischofszell granted him the prebend of St Agnes, which led to his appointment as organist there. In 1512 he returned to Konstanz to perfect his organ playing with Hans Buchner, a pupil of Hofhaimer. At the end of 1515 or the beginning of 1516 he went to St Gallen as organist of the collegiate church. There he was also active as a writer. Because of the Reformation in Switzerland he had to leave St Gallen in 1531, and went (perhaps on Glarean's recommendation) to Ensisheim, Alsace, where he was appointed organist at St Michael's. Six years later the changed religious and political situation enabled him to return to Switzerland, and he went back to St Agnes, Bischofszell, where he was made organist and chaplain. Whether or not he also returned to his post in St Gallen is not known. In 1545 he had an operation from which he never recovered.

Sicher compiled the St Gallen Organ Book (*CH-SGs* 530; ed. H.J. Marx and T. Warburton, SMd, viii, 1992) between 1512 and 1521, adding an appendix in 1531. This collection contains 176 pieces, of which 110 are

transcriptions of contemporary vocal works, mainly sacred. Among the composers of the vocal models are Busnoys, Josquin (13 pieces), Japart, Weerbeke, Agricola, Compère, Isaac (26 pieces), Brumel, La Rue, Mouton, Obrecht, Pipelare, Hofhaimer, Senfl, Buchner and Kotter. Sicher himself composed one piece, *Resonet in laudibus*. In contrast to Bonifacius Amerbach's organ tablature intended for use in the home, the St Gallen manuscript was intended for church and liturgical performance.

The book of songs in mensural notation with an inscription *Liber Fridolini Sichery … 1545* (*CH-SGs* 461; ed. F.J. Giesbert: *Ein altes Spielbuch*, Mainz, 1936; facs., ed. D. Fallows, Peer, 1996) was long thought to be of Netherlands or possibly Italian origin, and from about 1500, but now seems certain to have been copied in Switzerland soon after 1510; moreover, comparison of script and of the main sources used (which are those used for his keyboard tablature) suggests that it may even have been written by Sicher himself.

Sichra, Andrey Osipovich. *See* SYCHRA, ANDREY OSIPOVICH.

Siciliana [siciliano] (It.; Old It. *ciciliano*; Fr. *sicilienne*). A term commonly used to refer to an aria type and instrumental movement popular in the late 17th and 18th centuries. It was normally in a slow 6/8 or 12/8, characterized by clear one- or two-bar phrases, a quaver upbeat giving an iambic feeling to the rhythm, simple melodies and clear, direct harmonies. From the 18th century to the 20th the siciliana was associated with pastoral scenes and melancholy emotions, and it is thought to be the basis for the Christmas carol *Stille Nacht* (see Haid, 1993; *see also* PASTORAL). There have been at least two traditional uses of the term, however, apparently distinct from each other: from the 14th century until the early 17th the word denoted the singing or accompanied recitation of a particular poetic form, the *strambotto siciliano*; from the late 16th to the 18th the term often referred to a dance commonly considered a form of slow gigue (*see* GIGUE (i)).

1. Arie di cantar siciliano. 2. 'La siciliana' as a dance. 3. The 18th-century aria type and instrumental movement.

1. ARIE DI CANTAR SICILIANO. The earliest known use of the word to refer to a musical performance is in Giovanni da Prato's novella *Il paradiso degli alberi* (1389), in which a character is said to have escaped boredom on a journey by singing a 'ciciliano' to poetry by Francesco di Vannozzo. A Florentine chronicle of 1449 describing the effects of a plague in the city mentioned that groups of young Florentines sang 'canzoni di Sicilia' in their attempts to forget their danger, and as late as 1609 a novella by Malaspini included a reference to the singing of 'diverse bellissime siciliane' by a gentleman of Messina, who accompanied himself on the lute (see Tiby). The Roman theorist Pietro della Valle claimed to have introduced the recited or declaimed siciliana to Rome, in a version he had heard in Messina in 1611, but the claim is unlikely (*Della musica dell'età nostra*, 1640). Della Valle added, however, the interesting information that sicilianas were most appropriate for evoking melancholy or piety, a description that may have referred to the subject matter of the poetry rather than to any musical traits.

Giustiniani remarked in 1628 (*Discorso sopra la musica dei suoi tempi*) that each area of Sicily had its own pattern for declaiming the siciliana, attesting to a diversity apparent in the few printed examples specifically called sicilianas in the early 17th century (e.g. in Stefani's *Affetti amorosi*, RISM 1618[15], *Scherzi amorosi*, RISM 1620[13] and Milanuzzi's *Secondo scherzo delle ariose vaghezze*, 1622). Pieces entitled 'aria siciliana' or 'aria di cantar siciliano' have in common the poetic structure of their texts; all are settings of the characteristic Sicilian form of the STRAMBOTTO, eight hendecasyllabic lines with the rhyme scheme *abababab*. Each consists of a declamatory vocal line, often with subtle rhythmic reflections of textual accents, above a basso continuo realized in the Spanish guitar notation and printed above the vocal part (see illustration). While some common harmonic patterns may be found among the several surviving examples, there seems to have been no standard progression or bass line for the *aria siciliana* such as that for the 'aria di RUGGIERO' or the 'aria di Fiorenza'. All *arie siciliane* are notated in the mensuration C, rather than in the compound duple metre usually associated with the late Baroque form. Music is normally given for the first quatrain of the text; each line has its own vocal phrase, the third and fourth lines are often linked together without an intervening cadence, and all or part of the fourth line is usually repeated. The second quatrain of the *strambotto* is printed beneath the music, presumably to be sung as though it were the second stanza of a strophic song. Apparently these *arie siciliane* were realizations of an improvisatory practice: one of the sicilianas included in Stefani's *Scherzi amorosi* was printed in Remigio Romano's *Terza raccolta di bellissimi canzoni* (RISM 1622[20]), a collection of *poesia*

Aria siciliana ('Amante sdegnato') from Giovanni Stefani's 'Affetti amorosi' (Venice, 1618)

per musica, with the same guitar chords indicated above the text but without any printed vocal line. Often a single *aria siciliana* was intended to serve for several poems, rather like the formulae Petrucci had called 'mode di cantar sonetti' a century earlier in his fourth frottola book.

2. 'LA SICILIANA' AS A DANCE. If little is known about the repertory of *arie siciliane* at the beginning of the 17th century, or about the eventual fate of the form, still less is known about the dance called 'la siciliana'. Garzoni (*La piazza universale di tutte le professioni del mondo*, 1599) included the siciliana, along with better-known forms such as the pavan and galliard, in a list of the few popular dances he knew to have resisted the influence of the balletto. No Italian choreographies or descriptions of the 16th-century dance nor any musical accompaniments survive. An anonymous English manuscript of about 1570 (*GB-Ob* Rawl.poet.108) includes choreographies for dances called 'Cycyllya Alemayne' and 'Cycyllia Pavan', all apparently forms of the English country dance, but it is not known if they are related to the Italian dance. The same is true for the single extant 18th-century choreography, three couplets of a dance for a gentleman and a lady entitled *The Siciliana*, by the English dancing master Mr Siris (1714; see Little and Marsh, no.8040). It was as a dance, however, that the siciliana was known to 18th-century theorists. Brossard (*Dictionaire de musique*, 1703) described the 'canzonette siciliane' as a kind of gigue, with its 6/8 or 12/8 metre and the characteristic dotted quaver–semiquaver–quaver figure on downbeats (he elsewhere described the figure as 'in saltarello'), and remarked that the siciliana was usually in either rondeau or da capo form. Mattheson (*Das neu-eröffnete Orchestre*, 1713) linked it with the *napolitana* and the barcarolle, echoing Della Valle's remarks by suggesting that it was to be performed slowly and was best used to evoke melancholy passions. Later 18th-century theorists such as Quantz, Rousseau and Türk apparently based their remarks on those of Brossard and Mattheson, stating that the dance was a kind of slow gigue with a pastoral connotation.

3. THE 18TH-CENTURY ARIA TYPE AND INSTRUMENTAL MOVEMENT. Some early 20th-century scholars linked the Baroque aria type with the dance; Wolff suggested that it began as a popular Venetian dance, perhaps exploiting local colour, like the *forlana* and *napolitana*; Heuss saw an early forerunner of it in the closing *moresca* of Monteverdi's *Orfeo* (ex.1). It rapidly gained popularity

Ex.1 Monteverdi: *Orfeo* (1607), last scene

Moresca

in the late 17th century and was much used as an aria type in the operas of Alessandro Scarlatti and his contemporaries. Although arias in 12/8 had already appeared (e.g. 'Piangi ch'assai mi piace' in Carlo Pallavicino's *Galieno*, 1675), Scarlatti used them abundantly, though not always marking them clearly as sicilianas. 13 of the 49 vocal numbers in *La caduta de' Decemviri* (1697), for example, are in 12/8, although the fast tempos implied for some of them suggest *gighe* rather than sicilianas. Scarlatti also frequently used the Neapolitan 6th in his sicilianas, with the flat supertonic in the upper part, a trait common in siciliana arias by his contemporaries and followers such as Perti, Caldara, Lotti, Porpora and Handel. Few of the arias on pastoral or melancholy texts in a slow 12/8 are actually marked sicilianas. Of Handel's 50 such arias only one, 'Gioje, venite in sen' from *Amadigi* (1715), is so entitled (ex.2). Similarly, Bach seldom labelled the siciliana arias in his cantatas as such, although 'Stirb' in mir, Welt' from the cantata *Gott soll allein mein Herze haben* (BWV169) is a transcription of a concerto movement he called 'Siciliano' in the arrangement he later made of it in his Harpsichord Concerto in E (BWV1053). Slow cantabile arias in 12/8 continued to enjoy popularity throughout the 18th century in both opera and sacred music. Handel used the siciliana style for 'Your charms to ruin led the way' in *Samson* (1743) and for 'And he shall feed his flock' in *Messiah* as well as for many arias, mostly in pathetic situations, in his operas; Haydn may have intended to evoke the pastoral with the 6/8 metre of 'With verdure clad' in *The Creation*, and Mozart in the chorus 'Placido è il mar' in *Idomeneo* and 'Deh vieni, non tardar' in *Le nozze di Figaro*.

Siciliana movements appeared in much 18th-century instrumental music, especially in works influenced by Italian style. The movement entitled 'La paix' in Handel's *Music for the Royal Fireworks*, for example, seems to be a siciliana, as does the Sinfonia opening the second cantata of Bach's *Christmas Oratorio*. Bach, Handel, Telemann, Domenico Scarlatti, J.-M. Leclair and François Couperin wrote siciliana movements conforming to the traditional simplicity of style, with short phrases and the characteristic 12/8 metre, but there seem to have been other

possibilities. Ex.3 shows the beginning of a movement from J.-F. Rebel's *Les élémens* (1737–8), marked 'Siciliane' though written in 3 (effectively 3/4) rather than 6/8

Ex.3 J.-F. Rebel: *Les élémens, simphonie nouvelle* (1737); 'Siciliane'

or 12/8; similar examples can be found in the works of Bonporti. Siciliana movements continued to be written in the late 18th century, as in the slow movement of Mozart's Piano Concerto in A major K488 and Haydn's String Quartet op.20 no.5. After the 18th century, however, the style fell into disuse; Meyerbeer's *Robert le diable* (1831) includes a fast 'sicilienne' in the finale of Act 1, and Fauré used a siciliana in the third entr'acte of his incidental music for *Pelléas et Mélisande* (1898), but these examples seem to have been exceptional.

MEREDITH ELLIS LITTLE

Sicilianos, Yorgos (*b* Athens, 29 Aug 1920). Greek composer. Until 1943 he studied harmony with Varvoglis at the Hellenic Conservatory and with Sklavos at the Athens Conservatory; there he continued his studies in counterpoint and fugue (1944–9). He was then a pupil of Pizzetti at the Accademia di S Cecilia, Rome (1951–3), and of Milhaud and Aubin at the Paris Conservatoire where he came into contact with Messaien. In 1955 a Fulbright Scholarship took him to the USA for further study, mainly with Piston at Harvard but also at Tanglewood with Blacher and with Persichetti at the Juilliard School. Back in Greece he was appointed head of music services to the National Broadcasting Institute (1960–61, 1979) and elected to the vice-presidencies of the Hellenic Association for Contemporary Music and the Greek section of the ISCM (1965–9). He also served as president of the Union of Greek Composers (1981–9) and the arts committee of the National State Opera, Athens (1992–4). His music has evolved smoothly from the modality of the early masterpiece *I apokalypsi tis pemptis sfragidas* ('The Revelation of the Fifth Seal') through the atonality of the Concerto for Orchestra to a use of 12-note and total serialism in the orchestral Variations. Instrumentation and expression are restrained and forms have a geometrical elegance. In some works there are definite echoes from the past, though they do not mar the stylistic homogeneity: Brahms in the Concerto for Orchestra, Bartók in the Third Quartet, sonata form in the Cello Concerto, Debussy in the eight *Etudes compositionelles* for piano. After Sicilianos attained a mastery of 12-note and serial techniques, such echoes disappeared. Treatment of poetical texts, lyrical (*I mellichomeidhi*) or tragic (*Cassandra*), becomes more penetrating, often through exploitation of timbres, while in orchestral and chamber works the musical argument becomes stronger thanks to an increasingly refined instrumentation, which is ultimately inseparable from the overall conception (*Antithésseis*, Fourth and Fifth String Quartets).

WORKS
(*selective list*)

Stage: To margaritari [The Pearl] (ballet, after J. Steinbeck), op.16, 1957, inc.; Tanagraea (ballet), op.17, ?1958; The Bacchantes (after Euripides), op.33, 1973; I fotià [The Fire] (op, 1, M. GEORGE LEOTSAKOS

Sicilienne (Fr.). *See* SICILIANA.

Sidarta, Otok Bima (*b* Yogyakarta, Java, 18 May 1960). Indonesian composer, brother of the composer Djaduk Ferianto. Son of the choreographer Bagong Kusudiardjo, he studied at his father's dance school and at the Indonesian Music Academy in Yogyakarta. Moving to California in 1980, he participated in the world music festivals of the California Institute of the Arts in Valencia (1981) and San Diego (1982) and in the activities of the Indonesian Cultural Centre in Los Angeles. On his return to Indonesia in 1984, he founded the highly acclaimed group Kelompok Musik Sempu. He taught music and dance in Sumatra and Malaysia, then after touring with his father's group in East Asia he founded the Centre for the Study of Javanese Music in 1988; in 1989 he founded and directed the first festival for new music using Javanese gamelan in Yogyakarta. Sidarta has added hand-held percussion instruments such as claves and bells to the gamelan, developed new percussion techniques and created an individual drumming style fusing Javanese, Sundanese and original elements. As well as compositions for gamelan and dance he has created music for *ketropak*, a genre of folk theatre. Sidarta is also well known as a painter. □

Side-blown trumpet (Fr. *trompette traversière*; Ger. *Quertrompete*; It. *tromba traversa*). Indigenous African trumpet or horn with the mouth-hole (which is often oval or rectangular) at the side of the instrument rather than at the end. They are usually made from an animal horn or an elephant tusk, or are carved from wood; instruments made from gourds, bamboo or metal are more commonly end-blown. Some side-blown specimens have an additional small hole at or near the tip, which may be stopped or unstopped by a finger during performance to vary the pitch. Side-blown trumpets may be used for music, for signalling, in hunting or herding, or for conveying verbal messages (in place of 'talking' drums). In some societies they frequently serve, together with drums and other percussion, in ceremonial or ritual roles or as royal insignia. When used as a pair or in larger ensembles, they are often played in hocket fashion. Many European museums have interesting specimens on display (for example, the Städtische Musikinstrumentensammlung, Munich, and the Koninklijk Museum voor Midden-Afrika, Tervuren.

Sidel'nikov, Nikolay Nikolayevich (*b* Tver', 5 June 1930; *d* Moscow, 21 June 1992). Russian composer. He studied under Shaporin and Messner at the Moscow Conservatory and subsequently became professor of the composition department there. Although a composer of a vividly Russian orientation, he was also influenced by Stravinsky. With his tendency towards programme music, he used motifs drawn from Russian folklore and fairy tales. In his last compositions the traditions of Russian religious music – the *Liturgiya svyatogo Ioanna Zlatousta* ('The Liturgy of St John Chrysostom') in particular – are strong. His original rhythmic technique combines *ostinati* motifs of the folksong type and jazz elements. His work mostly falls into choral and symphonic genres.

WORKS
(*selective list*)

Stage: Alen'kiy tsvetochok [The Scarlet Flower] (children's op, after S. Aksakov), 1974 [lost]; Stepan Razin (ballet, A. Chichinadze, after S. Zlobin and M. Gor'ky), 1977, Moscow, 1985; Chertogon [Cross] (operatic dialogue, N. Leskov), 1981; Beg [The Race] (op, M. Bulgakov), 1984

Vocal orch: Podnyavshiy mech [The Raised Sword] (orat, after old Russ. chronicles), solo vv, chorus, orch, 1957–61; Dramaticheskaya simfoniya 'Pesn' o krasnom znameni' [Dramatic Symphony 'Song about the Red Standard'], reciter, solo vv, chorus, orch, 1966–7; Poprochtenii 'Dialektiki prirodï' Engel'sa [On Reading Engels's, 'The Dialectics of Nature'], chorus, org, orch, 1968; Myatezhnïy mir poèta [The Rebellious World of the Poet] (M.Yu. Lermontov), B, chamber orch, 1969–71; Sokrovennï razgovorï [Innermost Conversations] (trad.), cant., chorus, perc, 1975; Smert' poèta [Death of a Poet] (orat, after poem of Lermontov), chorus, orch, 1976; Romansero o lyubvi i smerti [Romancero about Love and Death] (F. García Lorca), cycle of lyrical poems, chorus, elec gui, perc, 1977; Sïchuanskiye èlegii [Szechuan Elegies] (orat, Du Fu), chorus, fl/hp, vib, 1980 [part 1]; Sïchuanskiye elegii [Szechuan Elegies] (orat, Du Fu), chorus, solo vv, fl, fl/pic, hp, pf, perc, 1984 [part 2]; Liturgiya svyatogo loanna Zlatousta [Liturgy of St John Zlatoust] mixed chorus, 1988; Psalmï Davida [The Psalms of David] (cant., Bible: *Psalms*), chorus, 2 fl, 1991

Orch: Romanticheskaya simfonia, 1964–5; Duèlï [Duels], conc.-sym., 1974; Venskaya simfonietta [Viennese Sinfonietta], brass, 1981; Simfoniya o pogibeli zemli russkoy: k tïsyacheletiyu kreshcheniya Rusi [Symphony about the Ruin of the Russian Land: for the 1000th Anniversary of Russia's Adoption of Christianity], 1989

Inst: Sonata, pf, 1954; Russkiye skazki [Russian Tales], conc., 12 insts, 1968; Sonata-fantasia, pf, 1969

Other works: 5 liricheskikh poèm, chorus; 2 collections of children's songs for pf; 2 fugues for pf; and fugues; choral works; over 20 film scores; music for the theatre, radio and television

GALINA GRIGOR'YEVA

Sidharta, Otto (*b* Bandung, Java, 6 Nov 1955). Indonesian composer. At the Jakarta Arts Institute he studied fine arts for a year in 1977 then switched to composition studies with S.A. Sjukur. Sidharta came to notice by performing his live electronics piece *Kemelut* ('Crisis', 1979) at the Young Composer's Festival organized by the Jakarta Arts Council. In 1984 he received an opportunity to study composition and electronic music at the Sweelinck Conservatory in Amsterdam with Ton de Leeuw, Floris van Mannen and Gerhard Trimpin.

On his return to Indonesia in 1988, Sidharta set up the Cantus Studio and began to create computer music using

interactive techniques. For example, he collaborated with the prominent dancer-choreographer S.W. Kusumo on *Detik-Detik Tempo* ('Seconds of Time'), a multi-media installation which made use of an interactive framework for voice and movement through the computer. Sidharta has also used elements of traditional music in his computer pieces, for instance his employment of the sound of the *saluang* (traditional Minangkabau bamboo flute) as the basic material of *Saluang II*, performed in 1992. His works have been performed in Europe and Japan. Chairman of the music committee of the Jakarta Arts Council, he is also active in organizing concerts and contemporary music festivals in Indonesia. He is a pioneering composer of electronic and computer music in Indonesian.

Siebach, Konrad (*b* Pausa, Vogtland, 9 Oct 1912; *d* Leipzig, 22 Sept 1995). German double bass player and teacher. After briefly studying the violin, he was advised to play the bass because of his large hands. He made his solo début in Thüringen at the age of 17 and later played in coffee houses to support his professional studies at the training school of the Sächsische Staatskapelle in Dresden with Alwin Starke (1934–7). He was a member of the Leipzig Gewandhaus Orchestra from 1937 to 1978, for many years holding the post of first solo bassist, and was also renowned as a continuo player at the Thomaskirche, Leipzig. A traditionalist in terms of technique and fingering systems, Siebach was a professor at the Leipzig Conservatory from 1954 until 1992 and served on numerous international competition juries; many of his students have gained principal posts in German orchestras and become leading teachers in their own right. Siebach edited many publications for Hofmeister in Leipzig, some under the pseudonym Spitzbarth.

RODNEY SLATFORD

Siebeneicher, Mateusz (*b* Liebenthal; *d* Kraków, 1582). Polish printer. He took over the firm founded by MACIEJ SZARFENBERG.

Siebenhaar, Malachias (*b* Creibitz [now Chřibská], nr Rumburk, 6 March 1616; *d* Magdeburg, 6 Jan 1685). German composer of Bohemian origin. A refugee during his youth, he wandered with his family from his native Bohemia through several German cities and finally reached Zerbst, where he attended the Gymnasium. From 1637 to 1641 he studied at the University of Wittenberg, where he became a close friend of the writer Philipp von Zesen. He then served as Kantor in Tangermünde and from 1644 to 1651 as Kantor and teacher at the city school of Magdeburg. He served as Protestant minister in Nischwitz, Saxony, in 1651 and in 1656 became second minister of St Ulrich, Magdeburg.

Siebenhaar's works fall into two distinct categories: his motets for several voices written in Magdeburg and his sacred and secular solo songs with continuo printed in the collections of Zesen and Hildebrand. The first group includes vocal concertos; two of the collections contain ritornellos for trumpets and timpani. The solo songs are unpretentious but reach a high artistic level, not least because of the texts, for Zesen's poetry is among the best in 17th-century Germany, and Siebenhaar was one of the composers he asked to set it to music; Siebenhaar set both German and Dutch strophic poems syllabically and simply.

JOHN H. BARON

Siebenkäs [Siebenkees], **Johann** (*b* Nuremberg, 23 Dec 1714; *d* Nuremberg, 22 Jan 1781). German composer. He was the son of a baker, and related on his mother's side to the Nuremberg Kodisch family which produced trumpet and trombone makers in the 17th century. At the age of six he became a pupil of the organist of St Lorenz, Wolfgang Förtsch, who instructed him on keyboard instruments; Siebenkäs also attended the Egidiengymnasium. When he was 12 he moved on to Dresden where he became a pupil of J.D. Heinichen 'in order to receive further instruction in music and its theoretical principles' (Gruber); he remained there for four years. At the age of 15 he was 'summoned to Petersburg' but did not answer the call, and once he had the opportunity of playing 'with much praise and acclaim' before August the Strong and the Prussian King Friedrich Wilhelm I and his son, later to become Frederick the Great. On his return to Nuremberg he first worked in his father's bakery. In 1737 he assumed the post of organist at St Walburg; six years later he moved on to become organist of the so-called 'Musikchor' of the Frauenkirche; and in 1764 he held the same office at St Lorenz. During the years 1761 to 1771 he became known particularly for his regular performances of oratorios. He is said to have rejected an offer to succeed Telemann in Hamburg. Finally, in 1775, he became organist at St Sebaldus, on the death of C.H. Dretzel, who had retired in 1772 and for whom Siebenkäs had already deputized. He fulfilled this office 'in the most praiseworthy way' until his death. 'He was an excellent musician and virtuoso on several instruments, especially on the German flute, the keyboard and the organ' (Nopitsch), and should be regarded as the last important representative of the old Nuremberg school; the tradition of the organists and Kantors of the city died with him. His son Jeremias Paulus (bap. Nuremberg, 25 Nov 1745; *d* Nuremberg, 17 June 1802), one of ten children of his first marriage, began life as a merchant and later became organist at several churches in Nuremberg, finally at St Sebaldus; an obituary said that he played 'the organ with consummate skill'.

GÜNTER THOMAS

Sieber, Georges-Julien (*b* Paris, 15 Nov 1775; *d* Passy, 22 Jan 1847). French music publisher and composer, son of JEAN-GEORGES SIEBER. He studied composition with H.-M. Berton at the Paris Conservatoire, and worked in his father's publishing business from about 1795. In August 1798 he married Anne-Marie, daughter of the publisher Pierre Leduc. In January 1799 he opened a shop at 1245 rue de la Loi, where he traded as Sieber Fils at the sign of 'La flûte enchantée'. The house was renumbered 28 between 10 May and 28 September 1805, and the street reverted to its pre-Revolutionary name, rue de Richelieu, between July 1806 and March 1807. By April 1809 Sieber had moved to 21 rue des Filles-St-Thomas, where the firm remained. In 1824 he took over his father's business and in 1834 retired, being succeeded by his son Adrien-Georges (*b* Paris, 26 June 1802; *d* Paris, 17 Oct 1872). In 1847 Adrien-Georges was bankrupted and in April the plates and stock were sold by auction.

Like that of Jean-Georges, Georges-Julien's output as a publisher was strongly biassed towards instrumental music by foreign composers. In particular he published a great quantity of piano music, including numerous works by Clementi, J.B. Cramer, Dussek, Gelinek and Steibelt. He also published at least 35 of his own works, mainly piano sonatas, fantasias, variations, contredanses and quadrilles, and nocturnes for piano and horn. All the firm's publications were engraved. From his shop, as well as retailing the music of all publishers, he sold instruments, ran a lending library and offered music binding facilities.

For bibliography *see* SIEBER, JEAN-GEORGES.

RICHARD MACNUTT

Sieber, Jean-Georges (*b* Reiterswiesen, 2 Feb 1738; *d* Paris, 13 Jan 1822). French music publisher and instrumentalist. He went to Paris in 1758 and joined a military band. Subsequently he was employed as a horn player in the orchestras of the Comédie-Française (1762–3), the Opéra (1768–85, first horn from 1778) and the Concert Spirituel (1777–86, first horn throughout). Choron and Fayolle state that he was the first harpist to play in the orchestra of the Paris Opéra, in Gluck's *Orphée* (1777); the Opéra employed no regular harpist or trombonist until 1782 and 1783 respectively, but in 1780 and 1781 Sieber's name appears as an occasional player of both of those instruments.

It is as a music publisher, however, that Sieber is chiefly remembered. At some time between 2 July 1770 and 28 January 1771, in partnership with a Signor Fischer, he took over the stock and premises (in the rue des Deux-Ecus) of the publisher Huberty; but the arrangement was short-lived, for in November 1771 Huberty resumed publishing, reclaiming both his former stock and premises. Sieber moved to the rue St-Honoré, where he established his business in the Hôtel d'Aligre (formerly Hôtel du Grand Conseil). By January 1782 he had moved to the building opposite, 92 rue St-Honoré, which was renumbered 85 in, or soon after, 1792. About 1802 he moved back to the Hôtel d'Aligre; at first the house number was 99, but in 1803 it was altered to 199 and in 1805 to 123. In February 1813 Sieber moved to 22 rue Coquillière, remaining there until his death. His son, GEORGES-JULIEN SIEBER, worked with him from about 1795, when the firm was called Sieber Père et Fils. After Georges-Julien had left to found his own business in 1799, Sieber styled himself Sieber Père.

According to Choron and Fayolle, it was J.C. Bach who dissuaded Sieber from buying an existing business and suggested that he would do better to start afresh and make direct approaches to eminent foreign composers. Whether or not Bach had any part in it, Sieber certainly showed uncommonly good judgment in the works he chose to publish. Unlike most of his Parisian contemporaries, he did not indulge the popular taste for trivia: the greater part of his output consisted of good editions of music by first-rate international composers. Among the publications of his first two years were chamber works by J.C. Bach, Dittersdorf, Eichner, Gossec, Haydn, Schobert and Stamitz; he continued to publish the instrumental and symphonic works of the Mannheim school, of Italians like Boccherini, Cambini, Fiorillo, Giardini, Pugnani, Tessarini and Viotti, and of J.C. Bach, Gossec, Gyrowetz, Kreutzer, Pleyel, Vanhal and Wranitzky. He published the first editions of six of Mozart's piano and violin sonatas (K301–6/293*a–d*, 300*c* and 300*l*) in 1778 and of the Paris Symphony (K297/300*a*) in *c*1788, as well as early editions of some two dozen other works; but in 1783 he turned down Mozart's offer of three piano concertos and six string quartets. He published more than 50 of Haydn's symphonies in parts and numerous chamber works. Sieber also published or reissued at least 35 operas in full score, mainly French adaptations of Italian works; these included operas by J.C. Bach (*Amadis des Gaules*), Cimarosa, Duni (12 works), Kreutzer (*Lodoïska*), Paisiello and Sarti, and *Laurette* (based on *La vera costanza*), the only Haydn opera published in contemporary full score. He also enjoyed the dubious distinction of being the first to publish the full score of *Die Zauberflöte*, but in the infamous version by Lachnith entitled *Les mistères d'Isis* (1801).

All Sieber's publications were engraved and from 1789 bore plate numbers (earlier works were given plate numbers when reissued). The date of his death is often given as 1815, but there are references to him in directories until 1822 as a 'pensionnaire de l'Opéra'. His firm continued to advertise their publications in his name until September 1822; but the last advertisement that month was inserted by 'Veuve Sieber' who continued the business until 1824 when it was taken over by her son, Georges-Julien.

RICHARD MACNUTT

Sieczyński, Rudolf (*b* Vienna, 23 Feb 1879; *d* Vienna, 5 May 1952). Austrian composer, lyricist, librettist and author. He learned the piano from his musical mother, was educated at Kremsmünster Abbey and the Theresianum, Vienna, and later obtained the doctorate in law at Vienna University. His fame is founded firmly on one song, the evocative *Wien, du Stadt meiner Träume*, composed in 1913. At the time of its writing he was a junior clerk in the district government offices at Meidling. During World War I he was a director of the internment station of the Wöllersdorf prison camp, south-east of St Pölten, and afterwards was employed by the Lower Austrian regional government as senior clerk and officer-in-chief of the Regional Agricultural Authority. Alongside his composing activities, he wrote a number of melodramas based on poems by Detlev von Liliencron, Franz Karl Ginzkey and Alfred Wurmb, and was the librettist of the childrens' musical play *Die selige Kinderzeit* (1918). Typically, his music is tuneful, sentimental and nostalgic, especially about his native Vienna. He was elected president of the Österreichischer Komponistenbund, and for 25 years was vice-president of the prestigious and influential Austrian society of authors, composers and music publishers (AKM). In recognition of his contribution to his homeland, he was awarded the coveted Ring of Honour by the City of Vienna on 23 April 1948.

WORKS
(*selective list*)

text by Sieczyński, unless otherwise stated

Wienerlieder: Wien, du Stadt meiner Träume, op.1, 1913 (1914); Geh'n ma mit!, op.2 (?1914); Das sind die Frauen und Mädchen von Wien, op.4 (?1915); Ja, so ein Wiener Mäd'l!, op.10 (?1918); Wiener Vorstadt-Lied (Fremde Leut' und neue Häuser), op.14 (1919); Der Grobian (1922); Wien, meine erste Liebe (1927); Märchen der Liebe träumt man im Wienerwald (F. PETER KEMP

Siefert [Syfert, Sivert, Sibert], **Paul** (bap. Danzig [now Gdańsk], 23 May 1586; *d* Danzig, 6 May 1666). German composer and organist. His father, a procurator (*d* 1604), had the same name, and this, along with the existence of a number of other persons with the surname of Siefert in Danzig, has led to biographical confusion. Paul Siefert the younger was the son of his father's second marriage. He received a scholarship from Danzig city council to study for three years (1607–10) with Sweelinck in Amsterdam, together with Samuel Scheidt, after which he returned to Danzig (in late 1610) to become assistant organist at the Marienkirche. The principal organist of the Marienkirche, Cajus Schmiedtlein, died in March 1611, and Siefert applied for the post, but was rejected, due in part to complaints about his playing style and his arrogance.

He left the city and went to Königsberg. From 1611 to 1616 he was organist of the principal church in the 'Altstadt' of Königsberg, after which he became court organist at Warsaw under Asprilio Pacelli, who was succeeded by Marco Scacchi. In 1623 (probably after the deaths of Pacelli in May and Michael Weida, organist at the Marienkirche), he moved back to Danzig, where he was appointed principal organist. He remained there until his death. His application in 1627 for the post of Kapellmeister after the death of the incumbent, Andreas Hakenberger, also failed, and Hakenberger was succeeded by Kaspar Förster the elder.

Siefert apparently had an abrasive personality, which easily made him enemies. He became alienated at the Warsaw court, and his feud with his Danzig colleague Kaspar Förster the elder, choirmaster of the Marienkirche from 1627 to 1652, reached such proportions that the two antagonists petitioned the city council in as many as 24 documents to intercede. His well-known dispute with Marco Scacchi, choirmaster at the Polish court from 1628 to 1649, can be viewed as a ramification of this feud. Scacchi sided with his friend Förster and exposed Siefert as incompetent (for a fuller account of the dispute *see* SCACCHI, MARCO).

Siefert belonged to that group of north German composers, including Scheidt and Scheidemann, which created its own particular style rather than adhering to out-of-date rules or imitating new Italian models. Because of this individual style, the criticism aimed at his first set of *Psalmen Davids* (1640) – that in it he had mixed different genres – is to some extent invalid, since his compositions belong to none of the categories that Scacchi listed in *Cribrum musicum* (1643). His subsequent attempt to justify his psalm settings in the *Anticribratio musica* (1645) on the basis of rules set forth in the *Cribrum* was naturally doomed to failure.

The contents of the first book of *Psalmen Davids*, settings of the Calvinist Goudimel-Lobwasser psalter of the Reformed Church, adhere to the techniques of Siefert's teacher Sweelinck and are unlike the sacred concertos in, for example, the *Symphoniae sacrae* of Schütz: it comprises 12 psalm settings for four and five voices as well as two concertos for three and four voices. The works are in fact chorale motets; the figured bass is of little or no importance, and instruments are not used independently,

only to double or replace voices. The works in *Psalmorum Davidicorum ... II* (1651), which comprise 15 psalms for four to eight voices, a concerto for four voices and an eight-part instrumental canzona, are historically more noteworthy, since they may be seen as leading to the concertato chorale motet and the chorale cantata. They begin with instrumental preludes, which recur as ritornellos, and they are divided into sections; solo and tutti passages alternate and in general the counterpoint is loosened by concertato elements.

Siefert's keyboard works reflect the influence of the Sweelinck school, but the set of chorale variations is weakened by excessive ornamentation and a lack of contrapuntal movement. The highly ornamented line is usually played by the right hand with the chorale underneath. This texture is interrupted by episodes exploiting effects of harmony and colour.

WORKS

published in Danzig unless otherwise stated

VOCAL

Psalmen Davids, nach französischer Melodey oder Weise in Music componieret, 3–5vv, insts, bc (1640)
Canticum seu Symbolum divi Ambrosii et Augustini Te Deum laudamus, 1–5vv insts, bc (1642)
Epithalamium solemnitati nuptiali Augustiis ... ac 6. choris, 25vv, insts, bc (1646), lost; pubd as Ps cxxviii in Psalmorum (1651)
Melisma harmonicum ... 5vv, 3 insts, bc (1647), lost
Psalmorum Davidicorum, ad gallicam melodiam ... pars II ... 4–8vv, insts, bc (1651)
Der Herr herrschen thut, motet, 5vv, *PL-WRu* (according to *EitnerQ*)

INSTRUMENTAL

Canzona a 8 in Psalmorum (1651)
Fantasia and a Lassus motet ornamented by Siefert, *A-Wm*; chorale variations, *D-Bsb*; 1 work, *S-Uu*
13 fantasias possibly by Siefert, *D-LEm*

THEORETICAL WORKS

Anticribratio musica ad avenam Schachianam (1645)
Examen musicum (Breslau, 1649), lost

JERROLD C. BAAB

Siegel, Wayne (*b* Los Angeles, 14 Feb 1953). American composer. He studied composition with Edward Applebaum at the University of California, Santa Barbara (BM 1975), and with Nørgård and Karl Rasmussen at the Royal Danish Conservatory. Although he has made appearances in the USA, he has developed his professional career principally in Denmark after settling there in 1974. In 1986 he was appointed director of the Danish Institute of Electro-Acoustic Music in Århus. Strongly influenced by the American pop and folk music of his youth, he has also been drawn to the music of Ligeti, Reich and Andriessen. Siegel's compositions often combine electronic processing (e.g. various types of digital delays) and computer music with instrumental ensembles of unusual make-up and size. In a work such as *Domino Figures*, scored for up to 100 guitars, players create a complex canon by passing motifs around a circle in a chain reaction. *Autumn Resonance* (1979) for piano and electronics is most representative of his soloistic, repetitive and delayed-effects style. Works composed during the 1990s, such as *Tracking* (written for the Kronos Quartet and computer) and *Jackdaw*, contain an elegant combination of computer-generated sounds with repetitive, gradually changing processes.

INGRAM D. MARSHALL

Siegele, Ulrich (*b* Stuttgart, 1 Nov 1930). German musicologist. From 1951 he studied musicology under Gerstenberg and classical philology at the University of Tübingen, where he took the doctorate in 1957 with a dissertation on Bach's techniques of composition and adaptation. He then held a post as assistant lecturer in the musicology department of the University of Heidelberg, and from 1959 a similar post at Tübingen University. He completed his *Habilitation* in musicology in 1965 with research on the Heilbronn music collection; since then he has worked at Tübingen University first as a lecturer (1965–71), and subsequently as supernumeray professor (1971–95). He retired in 1995. His work focusses on the study and analysis of compositional methods used by composers since the late 16th century (particularly those of Monteverdi, J.S. Bach, Beethoven and serial composers), and the biography and historical background of J.S. Bach and his family.

HANS HEINRICH EGGEBRECHT/KONRAD KÜSTER

Siegl, Otto (*b* Graz, 6 Oct 1896; *d* Vienna, 9 Nov 1978). Austrian composer, conductor and critic. He studied composition at the Schule des Steiermärkischen Musikvereins, Graz (1901–15, 1918–20) with Mojsisovics, Kroemer, Künzel and later Kornauth. During the years 1921–3 he worked as a violin teacher in Leoben, a violinist in the Vienna SO and a conductor, vocal coach and critic in Graz. He edited the Viennese *Musikbote* (1924–5) and in 1926 he moved to Germany, settling first in Munich and then working as a music director in Paderborn and Herford, as a choral conductor in Essen and Bielefeld and as a theory teacher in Hagen. In 1933 he was appointed to teach theory and composition at the Cologne Musikhochschule where he was made professor in 1935. He also took over the direction of the university chorus and the Gürzenich choir in succession to Abendroth (1934). In 1948 he returned to Vienna to teach theory at the academy; there he was appointed head of the department of theory and conducting in 1955 and professor in 1958, holding that post until his retirement in 1967. Among the honours he received were the Austrian State Prize for Music (1957), a seat in the Kunstsenat (1960), the Ehrenmedaille der Stadt Wien (1966), the Ehrenkreuz für Wissenschaft und Kunst (1968) and the Kunstpreis der Steiermark (1971). He produced well over 200 works. Those from the 1920s explore atonal and other procedures new at the time, but they were quickly abandoned for a more conventional style. After 1949 he concentrated on choral music, particularly on pieces for male chorus.

WORKS
(selective list)

Vocal: Das grosse Halleluja (M. Claudius), op.68, solo vv, chorus, org, orch; Eines Menschen Lied (E. Goll), op.73, S, Bar, chorus, org, orch, 1931; Klingendes Jahr (A. JOSEPH CLARK

Siegmeister, Elie [Swift, L.E.] (*b* New York, 15 Jan 1909; *d* Manhasset, NY, 10 March 1991). American composer and writer on music. He studied theory and composition with Seth Bingham at Columbia College (BA 1927) and counterpoint privately with Wallingford Riegger. He went on to study composition with Boulanger in Paris (1927–31) and conducting with Stoessel at the Juilliard School (1935–8). He held teaching positions at Brooklyn College, CUNY (1934), the New School for Social Research (1937–8), the University of Minnesota (1948) and Hofstra University (1949–76). A member of the COMPOSERS' COLLECTIVE OF NEW YORK, he used the pseudonym L.E. Swift for songs written for that group. After helping to found the ACA (1937), he formed the American Ballad Singers (1939), a vocal ensemble that pioneered performances of American folk music. He also served as vice-president of the AMC (1960–65) and a member of the board of ASCAP (1977–91). In 1978 he became the first composer-in-residence at the Brevard (North Carolina) Music Center. His honours include awards and commissions from the Ford Foundation (1971), the American Academy of Arts and Letters (1978) and the Library of Congress (1983).

Like other American composers of the 1930s and early 1940s, Siegmeister wrote music for the 'common folk'. Inspired by American folk material and Amerindian music, his compositional style is characterized by a synthesis of the dramatic and the lyrical, the forceful and the tender, the dissonant and the melodic. Many of his works exhibit elements borrowed from the blues (Clarinet Concerto, 1956) or jazz (last movement of the Sextet,

1965; Double Concerto, 1976). *American Holiday* (1933), *Prairie Legend* (1944), *Sunday in Brooklyn* (1946) and *From my Window* (1949), some of his most important orchestral works, all employ folk material. The symphonies, especially the third and fourth, show a mastery of form in which the musical architecture is masked by fantastical and improvisatory effects.

Seigmeister's early efforts in the genres of opera and musical theatre produced *Doodle Dandy of the USA* (1942), a play with music, and the musical *Sing Out, Sweet Land* (1944). Written in an uncomplicated musical style, these works emphasize a message, rather than a sophisticated compositional language. *Darling Corie* (1952), *Miranda and the Dark Young Man* (1955) and *The Mermaid in Lock no.7* (1958) display a more subtle approach, but one as strongly committed to communication. The final operatic works, *Angel Levine* (1984–5) and *The Lady of the Lake* (1984–5), explore Siegmeister's Jewish identity. *Angel Levine*, in particular, employs Hebrew chants and intonations: both use chromaticism more adventurously and provide greater rhythmic interest than earlier compositions. As other composers' interest in a utilitarian approach to composition waned in the early 1950s, Siegmeister's commitment to his audience continued. His significant accomplishments in all genres of music, but especially those in music theatre and opera, attest to his music's ability to speak skillfully to the masses.

Siegmeister's musical output reflected a heightened musical Americanism, exemplified by his use of folksong. He believed that American music should express the inflections, nuances and social particularities of American society, and that the best American music contained a fusion of both popular and serious art. As a writer, he produced many influential texts reflecting these sentiments, including *Music and Society* (New York, 1938, rev. 1974), an extended social history of music, *The Music Lover's Handbook* (New York, 1943, rev. 1973 as *The New Music Lover's Handbook*) and *Work and Sing* (New York, 1944), a collection of American work songs.

WORKS

(*selective list*)

DRAMATIC

Doodle Dandy of the USA (play with music, S. Lanscourt), 1942, New York, 26 Dec 1942; Sing Out, Sweet Land (musical, W. Kerr), 1944, Hartford, CT, 10 Nov, 1944; Darling Corie (op, L. Allan), 1952, Hempstead, NY, 18 Feb 1954; Miranda and the Dark Young Man (op, 1, E. Eager), 1955, Hartford, CT, 9 May 1956; The Mermaid In Lock no.7 (op, E. Mabley), 1958, Pittsburgh, 20 July 1958; The Plough and the Stars [orig. Dublin Song] (op, 3, Mabley, after S. O'Casey), 1963–9, Baton Rouge, LA, 16 March 1969; Fables from the Dark Woods (ballet), 1976, Shreveport, LA, 25 April 1976; Night of the Moonspell (op, 3, Mabley, after W. Shakespeare: A Midsummer Night's Dream), 1976, Shreveport, LA, 14 Nov 1976; The Marquesa of O (op, 3, N. Rorem, after H. von Kleist), 1982; Angel Levine (op, 1, Mabley, after B. Malamud), 1984–5, New York, 5 Oct 1985; The Lady of the Lake (op, 1, Mabley, after Malamud), 1984–5, New York, 5 Oct 1985; incid music; TV score; film scores, incl. They Came to Cordura, 1959

LARGE INSTRUMENTAL ENSEMBLE

JAMES P. CASSARO

Siegmund-Schultze, Walther (*b* Schweinitz, 6 July 1916; *d* Halle, 6 March 1993). German musicologist. He studied musicology with Arnold Schmitz, and music education, classics and German at Breslau University (1935–9), where he took the doctorate in 1940 with a dissertation on the thematic structure of Mozart's vocal and instrumental works. After the war he was a teacher in Halle, and in 1951 completed the *Habilitation* at the university under Max Schneider with a study of Brahms's style. On finishing his national service (1949–53) he became lecturer (1954) and professor (1956), and director of the musicological institute at Halle University. He served as editor-in-chief of the Hallische Händel-Ausgabe (1957), editor of the *Händel-Jahrbuch* (1955–90), president of the Halle Georg-Friedrich-Händel-Gesellschaft (1989–91) and editor of a series of congress reports on Handel published by the university. One of the most influential musicologists of the German Democratic Republic, he instigated the separation of the DDR musicologists from the Gesellschaft für Musikforschung in 1968. His research was heavily influenced by a Marxist approach and was primarily concerned with 18th-century music, musical aesthetics and reception theory, particularly in relation to Handel, Bach, Telemann, Mozart and Brahms. Two Festschriften (*Dichtung und Musik: Walther Siegmund-Schultze zum 65. Geburtstag*, ed. S. Bimberg, Halle 1982, and *Aufklärerische Tendenzen in der Musik des 18. Jahrhunderts und ihre Rezeption*, ed. B. Baselt and S. Flesch, Halle, 1987) were published to mark his contributions to music scholarship.

WOLFGANG RUF

Siegue (It.). *See* SEGUE.

Siehr, Gustav (*b* Arnsberg, Westphalia, 17 Sept 1837; *d* Munich, 18 May 1896). German bass. He studied in Berlin, making his début in 1863 at Neustrelitz as Oroveso in Bellini's *Norma*. After singing in Göteborg, Prague and Wiesbaden, in 1881 he was engaged at the Munich Hofoper, where he remained until his death. At Bayreuth he sang Hagen in the first *Ring* cycle (1876), Gurnemanz in *Parsifal* (1882–9) and King Mark in *Tristan und Isolde* (1886). His wide repertory included Mozart (Sarastro and the Commendatore), Weber (Caspar in *Der Freischütz*), Meyerbeer and other Wagner roles.

ELIZABETH FORBES

Siems, Margarethe (*b* Breslau [now Wrocław], 30 Dec 1879; *d* Dresden, 13 April 1952). German soprano. She studied with Anna Maria Orgeni, a pupil of Viardot and Marchesi. She was engaged for the Prague Maifestspiele in 1902, when she sang Marguerite de Valois, and that

autumn joined the Neues Deutsches Theater, Prague. In 1908 she became principal dramatic coloratura soprano at Dresden, where she sang until 1920, creating Chrysothemis (1909) and the Marschallin (1911); she also created Zerbinetta (1912, Stuttgart). In 1913 she made her Covent Garden dêbut as the Marschallin in the first London performance of *Der Rosenkavalier*. Siems was an extraordinarily versatile singer and actress. Her repertory included the coloratura soprano roles of Bellini, Donizetti and Meyerbeer, as well as the Queen of Night; she successfully undertook the heavier Verdi parts (Leonora, Amelia and Aida) and Wagnerian roles such as Venus and Elisabeth (she often sang both on the same evening), and even Isolde. Strauss considered her the ideal Marschallin, and her portrayal of this role is, partially, preserved on disc. She made a number of other recordings, which show her charming manner and excellent technique.

HAROLD ROSENTHAL/ALAN BLYTH

Siena. Italian city in Tuscany. Siena has a long tradition of music-making associated with civic events (fig.1), a tradition kept alive in the singing of popular songs for the Palio, the annual horse race. Historically, more formal musical activities centred on the cathedral and the Palazzo Pubblico, the principal seats of church and state.

Cathedral documents record the presence of a cantor and a master of the school by the 11th century. Services were celebrated by a plainchant choir, which grew in size from about 20 members (including canons, chaplains and clerks) in the mid-14th century to about 50 by the end of the 16th. Cathedral chant books notated in Beneventan neumes (now at *I-Sc*) survive from the 12th and 13th centuries, but the most celebrated volumes are the 13 graduals and 16 antiphoners from the period 1450–80, in the Libreria Piccolomini, which have illuminations by Liberale da Verona, Sano di Pietro and others. Two of these, manuscript 27.11 (olim 15) and manuscript 11.M (olim 25), contain a complete rhymed Office and a Mass Proper for the feast of the city's patron, St Ansanus.

Musical practices at the cathedral were first described by the canon Oderigo in his *Ordo officiorum* of 1215. In addition to providing a detailed account of the prayers and chants used in daily offices and masses, he furnished information regarding improvised performances of organum sung by two to four soloists and on occasion by the entire choir, and made it clear that the practices were neither new nor unusual. How long they endured is difficult to determine, but during the late 14th century and the early 15th it became the practice to hire two singers of polyphony. The employment of an ensemble of three or four adult singers in the 1440s mirrors trends evident at other cathedrals, such as Florence and Milan, during the same period. The adults were joined by cathedral school students, whose presence proved indispensable in the later 15th century. From the 1440s onwards, Siena served as a way-station for many of the Franco-Flemish singers recorded at larger and more active centres, such as Rome, Florence, Milan and Ferrara. Though most singers stayed only briefly, their presence in Siena points to its importance in terms of contemporary performance practices and the transmission of repertory. Notable in this regard is the manuscript K.I.2, parts of which were apparently copied, probably in 1481, by the former papal singer Matheus Gay and subsequently rebound with fragments of other manuscripts; the repertory includes motets, psalms,

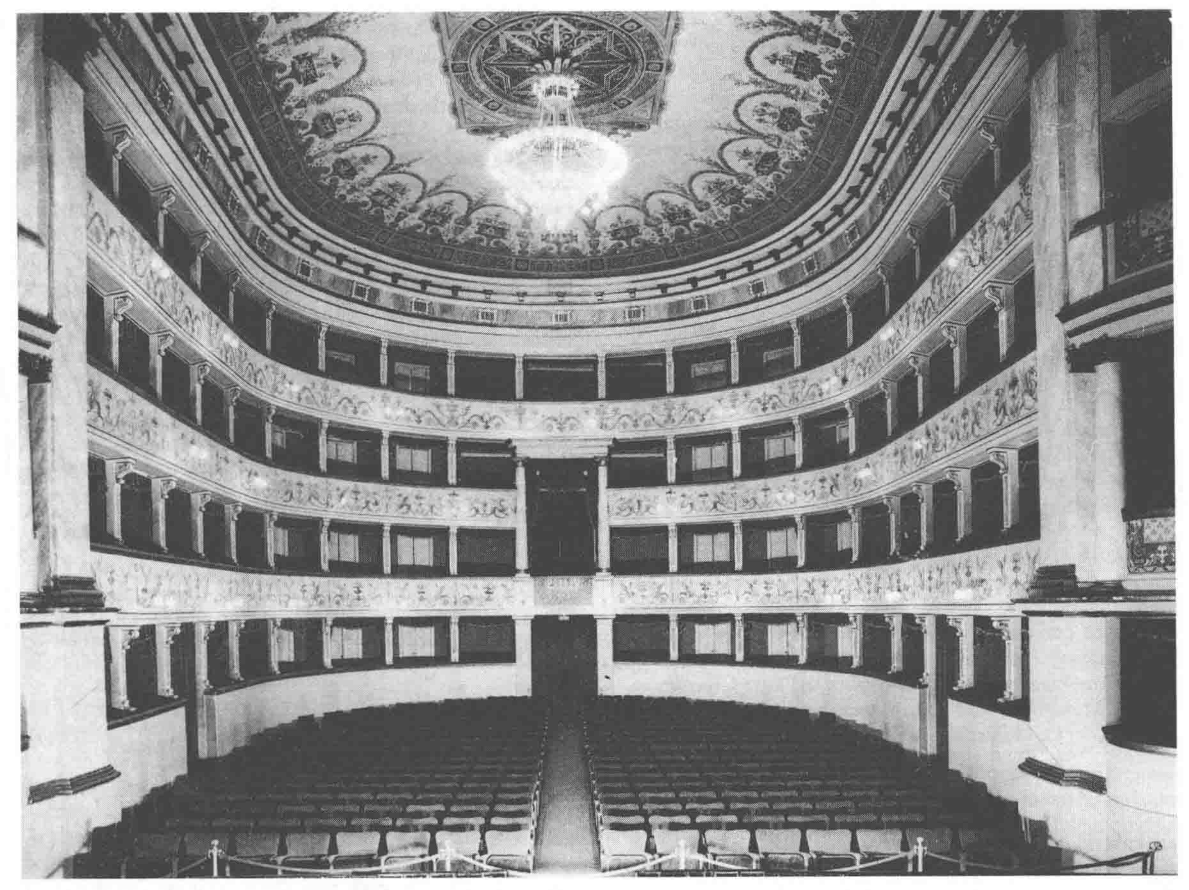
1. Detail of the 'Effects of Good Government on Town and Country' by Ambrogio Lorenzetti: fresco, 1338–9 (Palazzo Pubblico, Siena)

Magnificat settings and masses by Martini, Obrecht, Agricola and Isaac.

Early in the 16th century the cathedral hired its first *maestro di cappella*, Eustachius de Monte Regali, a northerner who later served at the Vatican and Modena Cathedral. His successors included a number of Sienese musicians, among them Ansano Senese and Giovanni di Maestro Antonio (who also built the organ in the Palazzo Pubblico). The chapel felt the effects of the mid-century war and siege, and rebuilding was slow but steady under the leadership of Ascanio Marri and two north Italian Servites, Arcangelo da Reggio and Salvatore Essenga (the latter brought his student Orazio Vecchi to sing in the choir in the mid-1570s). But it was under Andrea Feliciani (*maestro di cappella* 1575–97) that the ensemble, with as many as 20 singers, an organist and trombonist, became a renowned Sienese institution. The repertory included the latest works by Palestrina and Victoria, as well as pieces composed expressly for Siena by Feliciani and his brilliant successor Francesco Bianciardi (*maestro* 1597–1607).

The chapel maintained a core of 12 to 15 singers throughout the 17th century and flourished under the direction of mostly Sienese musicians, including Marcantonio Tornioli, Annibale Gregori, Orindio Bartolini, Agostino Agazzari, Cristoforo Piochi and Giuseppe Fabbrini. In the second decade of the century, Gregori successfully enlarged the old-fashioned repertory by purchasing newer large- and small-scale concerted works by composers such as Belli, Vernizzi, Monteverdi, Tornioli and Agazzari (much of whose sacred music was designed with the cathedral organization in mind). A theorbo player and a cittern player performed sporadically with the choir in the first half of the century, complementing the ever-present trombonist; violinists were added to the payroll after 1650.

The presence of musicians at Siena's seat of government, the Palazzo Pubblico, is documented from as early as 1249, although it was not until a few decades later that the town trumpeters and heralds were officially recognized. From that time until the fall of the Republic, the trumpeters' corps was a cohesive force of some ten musicians who performed fanfares and other pieces learnt by rote. Their duties included playing at official functions, within and outside the Palazzo, and at daily and yearly public concerts. In the later 16th century, the trumpeters' corps was eclipsed in importance by the wind band, founded in 1408. Among the notable players were Niccolò Piffero (whose frottolas were published by Sambonetto), Marri, Tiberio Rivolti and, in the 17th century, Alberto and Annibale Gregori. The repertory of the group in the mid-1650s included Vecchi's *L'Amfiparnaso*, madrigals and motets by Marenzio, Gagliano, Leoni, Vernizzi and Agazzari, and diverse eight-part 'sinfonie'.



Notable among other institutions where music flourished was the hospital church of S Maria della Scala, at which an ensemble can be documented from the early 1580s until 1612. The chapel was formed to display the talents of orphans apprenticed in the art of music. A musical organization was also established at S Maria di Provenzano shortly after its dedication in 1611; among its first *maestri* were Agazzari and Gregori. The Advent Novena was celebrated with special musical services there. Many of the city's other churches, such as S Domenico and S Agostino, employed organists on a regular basis. Ugurgieri Azzolini's praise of singers and instrumentalists at Ognissanti, S Niccolò and S Sebastiano confirms that several convents had active musical traditions. In addition to performing at services, the nuns staged spiritual comedies with musical interludes; a score survives for a sacred opera performed at S Girolamo in Campansi in 1686.

Also prominent in the city's musical life were the lay companies of *laudesi*, among the earliest in Italy. *Lauda* singing is recorded at S Domenico in 1273; by 1288 the monastery had opened a school for training young singers. Professional singers of *laude* were also associated with the cathedral and the hospital church in the 14th and 15th centuries. The continuing musical activities of lay companies throughout the next centuries are documented by a 1596 inventory from S Giovanni Battista in Pantaneto, which mentions at least ten manuscripts of plainchant, falsobordone and polyphony, and by Tomaso Pecci's Holy Week responsories, composed for the company of S Caterina in Fontebranda.

Works in various sources attest to the practice of secular music in Siena in the 14th century, though the history of Sienese secular music may be said to begin with the publication of Sambonetto's *Canzone sonetti strambotti et frottole libro primo* (RISM 1515[2]). Publications of madrigals by Marri and Feliciani, and the volume *Il quinto libro delle Muse* (1575[12]) with works by Essenga, Feliciani and Marri, as well as Vecchi, Porta and Striggio, provide insight into the music performed in the city during that time. In the early 17th century, Siena could boast the composers Pecci and Claudio Saracini, widely admired for their *seconda pratica* madrigals and monodies respectively. Visits of the ruling Medici family to the city were often occasions for specially composed secular music, such as the canzonettas and arias Marri wrote for the pastoral cantata performed on the visit of Francesco de' Medici and his wife Bianca Capello in 1583, and the solos and choruses Gregori provided for the pastoral opera *L'Imeneo d'Amore e di Siche*, performed for a 1629 wedding where the bride was a lady-in-waiting to Duchess Catherine Gonzaga, then governor of Siena (the music for both now lost). Matthias de' Medici, during his reign as governor of Siena, was the moving force behind an operatic production of 1647.

Academies played a large role in the musical life of the city. Members of the Filomeli staged an annual feast in honour of St Cecilia at which they performed *intermedi*. Members of the Congrega dei Rozzi (established in 1531) staged *commedie* and plays with *intermedi*. They obtained their own theatre for such productions from Grand Duke Cosimo III in 1690; the Teatro dei Rozzi, rebuilt in 1836, still stands. Vecchi's *Le veglie di Siena* was based on the games of 'imitation' that enlivened meetings of the Accademia degli Intronati (established in 1525), whose members included Bianciardi, Tornioli and Agazzari. The Intronati and the Accademia dei Filomati united in 1654 as the Accademia dei Rinnovati, which in 1669 mounted its first operatic production (Cesti's *L'Argia*) in what is now called the Teatro dei Rinnovati in the Palazzo Pubblico (fig.2). The theatre (for a time called the Teatro Grande) burnt down in 1742 and 1751, and was rebuilt the second time by Antonio Galli-Bibiena; it later fell into disrepair but was restored in 1950.

Little is known of Siena's cultural life in the 18th and 19th centuries, except that it was the birthplace of the

2. *Teatro dei Rinnovati (formerly Teatro Grande), Siena, rebuilt 1753 by Antonio Galli-Bibiena; interior as restored in 1950*

castrato Francesco Bernardi, known as Senesino, and of the soprano Marietta Piccolomini. In 1932 Guido Chigi Saracini, a talented amateur musician and scion of a family with a conspicuous patrimony, brought Siena back to worldwide prominence with the creation of the Accademia Musicale Chigiana, a summer institute attracting students to the city for master classes with performers of international renown. The institute's activities annually culminate in a series of performances, the Settimane Musicali Senesi. The Accademia Chigiana also promotes research and study. Its publications include the *Quaderni dell'Accademia Chigiana* and since 1964 an annual collection of musicological studies, *Chigiana*.

COLLEEN REARDON

Siena Lutebook (*NL-DHgm* 20.860). *See* SOURCES OF LUTE MUSIC, §2.

Siepi, Cesare (*b* Milan, 10 Feb 1923). Italian bass. After private vocal studies, he made his début as Sparafucile at Schio near Vicenza in 1941. The war interrupted a career that he resumed in 1945 in Verona and 1946 at La Scala, singing Zaccaria in *Nabucco* on both occasions. He appeared at Covent Garden during the Scala company's visit in 1950 and that autumn he opened Rudolf Bing's first Metropolitan Opera season as Philip II in *Don Carlos*. A member of the Metropolitan for 24 years, he performed the major *basso cantante* roles of the Italian repertory as well as Méphistophélès in *Faust*, Boris Godunov and Gurnemanz in *Parsifal*. He was especially admired for his Mozart roles, particularly Figaro, and Don Giovanni (which he sang in Salzburg in 1953 under Furtwängler and at Covent Garden in 1962 under Solti). Like his predecessor, Ezio Pinza, he also attempted a Broadway musical comedy (*Bravo, Giovanni!*, 1962) but with little success. With a strikingly handsome physical presence on stage, and a pleasantly warm, pliant, evenly schooled voice, Siepi could always be relied on for musically polished, dramatically striking interpretations that were consistently satisfying if not always of great individuality. He recorded many of his major operatic roles, from Figaro and Don Giovanni to Padre Guardiano, Boito's Mefistofele and Baron Archibaldo in *L'amore dei tre re*. (*GV*; G. Gualerzi; R. Vegeto)

PETER G. DAVIS

Sieradza, Cyprian z. *See* BAZYLIK, CYPRIAN.

Sierakowski, Count **Wacław** (*b* Bogusławice, 29 Sept 1741; *d* Kraków, 14 Feb 1806). Polish musical organizer and writer. From 1763 to 1765 he studied in Rome, where he was ordained priest and returned to Rome for three years in 1777 before settling in Kraków, where he eventually became a priest at Wawel Cathedral. Socially aware, in 1787 he built (at his own cost) a clothing factory in Kraków, and he financed free medical care at Sandomierz. From 1781 he organized at his own home in Kraków the city's first public concerts at which Polish and Italian cantatas were performed. In the same year he founded and financed (until 1787) a private singing school. He appointed F.K. Kratzer, a cantor at Wawel Cathedral, as director of this school and recruited as teachers such talented musicians as Gołąbek and F. Lang. The school trained singers for church choirs and for the operatic stage, including J.N. Szczurowski, who later became a soloist at the Warsaw Opera. Among the alumni of the school were those who initiated the Towarzystwo Przyjaciół Muzyki ('Society of Friends of Music'), formed in Kraków in 1817.

In 1784 Sierakowski brought an Italian opera company to Kraków and in 1786 he worked closely with Jacek Kluszewski to establish the first, permanent Polish theatre in the city. He wrote or translated the texts of several Italian, French and Latin cantatas. He also persuaded the government to take responsibility for teaching music in schools; his main project was to establish a publicly-funded vocational music school (the 'Alumnatus vocalistarum') with a specialist curriculum spanning eight years and designed for talented children from all backgrounds. Accordingly, in 1792 he petitioned Parliament with his proposals, but the unstable political situation in Poland at this time prevented him from bringing his ideas to fruition. His planned reforms of the cathedral choir are expressed in his *Projekt reformy kapeli kościoła katedry krakowskiej* ('Project for the Reform of the Church Choir of Wawel Cathedral') (MS in Wawel Cathedral Archives, Kraków).

Sierakowski's principal work on the theory of music is the three-volume treatise *Sztuka muzyki dla młodzieży kraiowey* ('The art of music for the country's youth') (Kraków, 1795–6), which remains a valuable source of information about the musical life of that epoch. This treatise contains a reprint of his petition to Parliament dating from 1792 (vol.1), a short encyclopedia of elementary musical terms (vol.2) and advice on musical performance (vol.3).

BARBARA CHMARA-ŻACZKIEWICZ

Sierra, Roberto (*b* Vega Baja, PR, 9 Oct 1953). American composer. He studied at the Puerto Rico Conservatory of Music (1969–76) and the University of Puerto Rico (1971–6). He continued his studies abroad, first at the RCM (1976–8) and then at the Institute for Sonology in Utrecht (1978–9). From 1979 to 1982, he worked with Ligeti at the Hamburg Hochschule für Musik. He returned to Puerto Rico in 1982 and spent seven years in administration at the University of Puerto Rico and the Puerto Rico Conservatory. Sierra first achieved recognition in 1987 when the Milwaukee SO gave the première of *Júbilo* at Carnegie Hall. Two years later, he became that orchestra's composer-in-residence, a post he held until 1992, when he began to teach at Cornell University.

As Sierra's style has evolved, he has synthesized European modernism – with Ligeti, he developed an abstract thought process – with elements of Puerto Rican and Latin American folksong, jazz, salsa and African rhythms, a process he calls 'tropicalization'. Although the descriptive Spanish phrases of his titles may sometimes appear to indicate the character of the music, complex textures and intricate rhythms can belie such implications. Latin American dance rhythms such as the *habanera* are, for example, draped in modern garb by straying from the conventional pulse, while dissonant melodies are superimposed upon a salsa or jazz-based harmonic structure.

He is best known for his instrumental music, equally at ease with chamber and orchestral ensembles. A brilliant and colourful orchestrator, he often integrates unusual percussion instruments into the orchestral fabric. In *Evocaciones* (1994), his expanded percussion section incorporates African and Latin American instruments, contrasting the violin's lyricism and occasionally astringent line with the visceral rhythms of Latin dances.

Concierto nocturnal (1985) shows the more abstract side of his personality, with European influence dominant over tropical imagery.

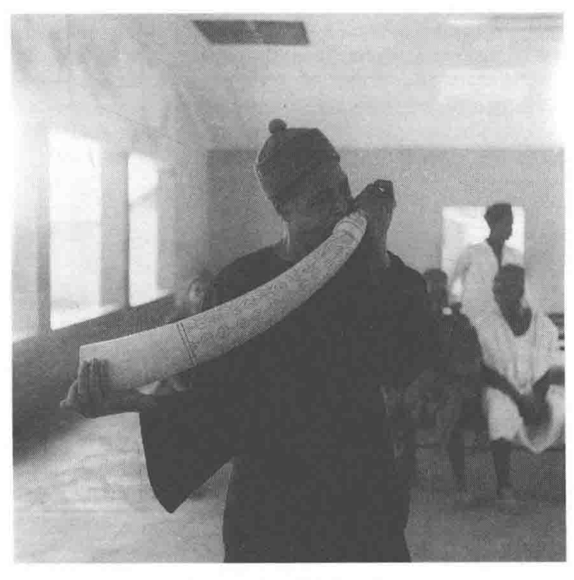
LAURIE SHULMAN



Sierra Leone, Republic of. Country in West Africa. It has an area of 73,326 km² and a population of 4·87 millon (2000 estimate). Colonized by the British in the early 19th century, the state became independent in 1961 and a Republic in 1971. The population comprises the Mende in the south and the Temne in the north, with a number of smaller ethnic groups, including the Kissi, Malinké (Maninka), Fula (FulBe) and Krio.

Although Sierra Leone is a relatively small country, it has a rich variety of music. This is not only because it has different peoples, each with their own musical variety, but also because of their influence on each other. In addition, music is closely connected with dancing, drama, storytelling and the visual arts. Even carving and other arts and crafts are associated with music through the use of masks and costumes by dancers who act as the embodiments of certain spirits, and through the decoration of such instruments as the *kamanine* (ivory trumpet; fig.1).

1. Musical genres and instruments. 2. Style, rhythm and scales. 3. Interaction between rural and urban music.

1. MUSICAL GENRES AND INSTRUMENTS. Praise-songs are widespread throughout Sierra Leone, and travelling musicians may earn a living by composing, singing and accompanying songs in praise of their rich benefactors. Festive songs and songs for or about chiefs are also common, and stories are usually interspersed with songs. Almost anything may be the subject of a song, and chains of songs are common in which the singing proceeds from one subject to another; the tune may change with the subject but the unbroken instrumental accompaniment ensures that the chain itself has musical unity. Group items may be instrumental, vocal or a combination of instruments and voices; if they are purely vocal, they are often accompanied by hand-clapping. Much music of all kinds is provided by the societies that train the young as members of the community. Songs and instrumental pieces are often performed specifically for dancing; dance-songs deal with various subjects (e.g. farming) or they may tell complete stories.

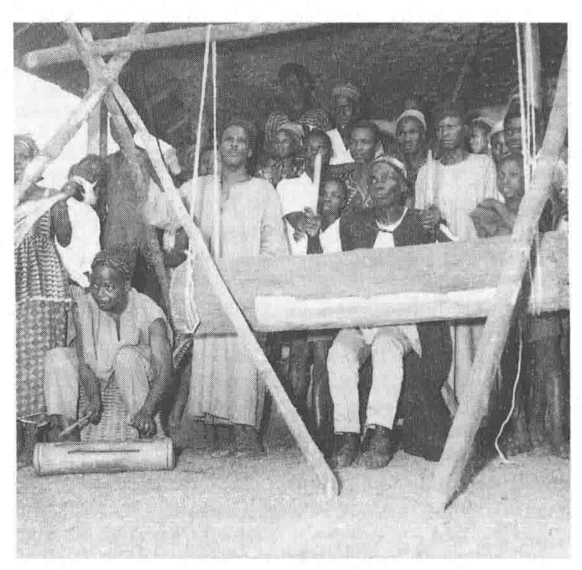
The enormous number of instruments, and the names given to them in the different languages, make it impossible to list more than the most remarkable ones and their usual names. Two lamellophones are common in Sierra Leone, the smaller one in the north among

1. Kamanine (ivory trumpet) played daily by Kono musician Kamande Buffe to wake the paramount chief, Jaiama, Kono district, 1970

Temne, Limba and Loko musicians, the larger one in both north and south. The small one, most commonly called *kondi* (fig.2), on which slender tongues are plucked with the thumbs, is a melodic instrument; the large *kongoma* (fig.3) is a rhythm instrument on which broader tongues are plucked with the fingers of one hand while a rhythm is tapped out on the sound box with the other. Although its tongues produce different pitches, it has a drum-like sound.

A xylophone, commonly called *balangi* (fig.4), is used in the north by Susu, Malinké, Yalunka and Koranko (Kuranko) musicians, and also among the Temne. The bowl-shaped drums (*bote*) in the illustration are played with the right hand while the left, with rings on the thumb and two fingers, strikes a metal clapper (*baba*). A common

2. Kondi (small lamellophone) played by Limba musician Baio Mansaray, Freetown, 1967



3. *Kongoma (large lamellophone) played by Limba musician Sarra Conteh, Freetown, 1967*

4. *Balangi (xylophone) played by Susu musician Yele Baba Kargbo, with a goblet drum (back right), and two bote (bowl-shaped drums) played with the right hand while the left hand plays baba (metal clappers), Nyamba Tanene, Bombali district, 1966*

type of drum with many names, of which *sangbai* is possibly the best known, varies considerably in detail but is always more or less conical, with one skin at the wider end, and open at the other; it is always played with hands and fingers (never with sticks), the hand- and finger-work making for greater variety of pitch and tone. There are double-headed drums in many varieties and sizes, including the hourglass drum (*see* DRUM, §I, 2(ii)(c)), for which the Limba name is *hutamba*. Another instrument of definite pitch is the common slit-drum (fig.5), possibly best known as *kelei*, made from a hollow log or cane with one to four slits. Pitch variety is obtained by striking the instrument between or on either side of the slits, near the ends of the log or cane, or near the middle. The most widespread instrument in the south and east, played only by women, is a gourd rattle strung with a network of beads, shells or buttons, and best known by the name *segbureh* (fig.6).

Chordophones and side-blown horns and flutes, while less common than any of the foregoing, are also found, as well as a variety of different struck, shaken and scraped idiophones. Some string instruments may have been brought into Sierra Leone by travelling Fula and Malinké musicians from Guinea, Senegal and The Gambia; among these instruments are the 21-string KORA bridge harp, used by Malinké; musicians, and the *nyayaru*, a one-string fiddle played by the Fula and adopted by the Temne (fig.7). Mende chordophones in the south, like the one-string musical bow and the *koningei*, a frame zither with

5. *Large and small kelei (slit-drums) played by Gola musicians Bryma and Dera Seguah to accompany an acrobatic dance, Tuasu, Pujehun district, 1966*

6. *Segbureh (gourd rattle strung with beads) played by Ami Kebbei, Musu Kallon and Fatu Sani in an all-female group of Mende musicians, Sahn, Pujehun district, 1966*

7. Nyayaru (one-string fiddle) played by Ansu Sesay, Kamabai, Bombali district, 1967

several strings, do not seem to be connected with any influx from the north. A small three-string pluriarc, called *kondingi* (fig.8), is found among the Susu and Temne; and a harp-lute called *kondene* is used to accompany Yalunka hunting-songs.

2. STYLE, RHYTHM AND SCALES. Throughout Sierra Leone, male soloists and choruses tend to sing in a high register, but female voices are often low in pitch. Apart from the falsetto technique used by male altos, voice production is often fairly natural and related to that of the speaking or calling voice. Singers from the north, however, frequently produce the forceful tone and 'metallic' resonance associated with North Africa. Songs may be unembellished but are sometimes ornamented, particularly by the more celebrated singers. A recitative style of singing is widespread, and song-, speech- and call-like elements are often found within one song.

Musical phrases vary greatly in length. An important phrase in an instrumental piece may be repeated and varied, or divided into sections that in turn are varied: a number of such important phrases may be presented in succession. Songs may have refrains that return periodically, but the refrains may undergo changes in the course of the song. Responsorial singing is widespread, and solo singing occurs among Fula and Malinké musicians in the north. Songs frequently have a staggered beginning, with the different instruments and voices entering in succession. The first phrase or sentence of a song may form an introduction that is not repeated in the song, and such a tune may include notes foreign to the scale on which the rest of the song is built, or it may be built on a different type of scale altogether.

Some songs are stanzaic in structure, and each verse may consist of a solo phrase and answering sentence sung by the solo and chorus together; the verses may be separated by instrumental interludes and may vary in detail. But singing may also be continuous, especially if there are several solo singers whose contributions interlock, each in its own way, with the chorus. At times the overall structure may be uncertain, with the organization and theme or themes changing several times before the end, while the ending itself may introduce an entirely new idea or a different tonality. Within a song there is often movement from comparative simplicity to greater complexity, and sometimes a general quickening of tempo.

Vocal combinations vary from unison singing to three-part polyphony. The simplest type of partsinging is one voice sustaining a note while another singer has a tune. The next type is a more deliberate harmonization of individual notes or sections of a tune, when the supporting voice may be either above or below the main melody. Parallel singing is not usually heard for long stretches, but may continue for the whole of a musical phrase. In many songs, particularly in the south and east, the different voices are far more independent; just as each instrument may have its own rhythm, each voice in polyphonic singing may have its own melody, with the same freedom to change when appropriate. The combination of a solo singer with a two-part chorus may lead to three-part singing; occasionally the chorus may split into three parts. The most original polyphony comes from Vai (Gallinas), Kissi, Kono and Mende singing.

Freedom of vocal rhythm is revealed particularly in songs with hand-clapping. The claps do not indicate beats but simply mark strict, equal divisions against which is set the free rhythm of the singing. Some instruments tend to act as time markers, to which the other instruments set their rhythms, so that instruments playing together often give the impression that each has its own independent rhythm, with freedom to change it at strategic points. They may alternate subtle and exciting rhythmic sections with sections of quiet, steady rhythms, and the exciting sections on different instruments may be staggered.

Most songs and pieces are based on definite scales, although chromatic notes may occur and both scale and tonal centre may change during the music. Songs are sometimes bitonal with singing and playing based on different scales, and occasionally, although with a lesser degree of tonal contrast, the same applies to soloist and chorus. Some instrumental pieces are built on tetratonic scales, and other pieces and songs appear to be pentatonic,

8. Kondingi (three-string pluriarc) played by Abu Kamara, Konakry Dee, Port Loko district, 1965

hexatonic or heptatonic; many of them are found to be more complex when their tonality is investigated. All or part of a song melody sometimes rises or falls in pitch gradually as the song proceeds; in playing *kondi*, *kongoma* and certain harp-like chordophones such as the *kondene* the force and manner of plucking may make the pitch of certain tongues or strings change during a piece.

The tuning of instruments is not standardized and varies widely on the *kongoma*. The *balangi* is always heptatonic; the *kondi* may be pentatonic or hexatonic but a note missing in one octave may appear in the next octave. 'Chromatic' alteration is achieved on both instruments (and also on string instruments) by having, for example, a D in one octave and a D♯ in another. When three or four *balangi* play together, two of them often have many notes in common, while the others have notes foreign to the scale suggested by the first two.

3. INTERACTION BETWEEN RURAL AND URBAN MUSIC. There has been an increase of mutual influence between rural and urban music. Krio musicians in the capital city of Freetown can be hired to play *goombay* music at weddings and wakes, but the *goombay*, a drum resembling a four-legged stool with a drumhead seat, may now also be encountered in small villages far from any towns. Music in such villages may demonstrate a marked relationship with 'milo jazz', which flourished in Freetown in the 1970s and 80s. The song texts may represent a mixture of different languages. At the same time, urban popular dance bands may include a few rural musical instruments in their ensembles and show an interest in particular rural performance styles.

COOTJE VAN OVEN

Siess [Sies], **Johannes** (*b* 2nd half of the 15th century; *d* Stuttgart, ? before 1534). German composer. Eitner and Nowak asserted that he was an Austrian, but this has not been verified; the assertion may have been made because between 1510 and 1513 Siess travelled in Austria and other countries to recruit singers for Duke Ulrich of Württemberg. From 1508 he was a singer in the Stuttgart court chapel. As he received a benefice in the collegiate church there the next year, he would not have been affected by the chapel's dissolution in 1514. When it was re-established in 1517 he succeeded Georg Brack as Kapellmeister. Even after the Duke had been forced to leave Württemberg, Siess remained in his service, although he matriculated as a composer at Tübingen University in May 1519. In 1521–2 he was apparently still in office, but in 1534 when the duke returned from exile he was no longer a member of the chapel. Four songs for four voices (ed. in DTÖ, lxxii, Jg.xxxvi/2, 1930) were printed in Schöffer's *Liederbuch* (RISM 1513[2]). They are polyphonic with little imitation and not without some crudities; their style shows him to be a contemporary of Hofhaimer. The anonymous pieces in *D-Sl* Mus.1.47 may include further compositions by Siess.

HANS-CHRISTIAN MÜLLER

Sievers, Johann Friedrich Ludwig (*b* Oegle, Hanover, 26 Jan 1742; *d* Magdeburg, 28 June 1806). German composer. He began his musical career as an organist in Brunswick, until in 1776, on the recommendation of Duke Ferdinand of Brunswick, he was appointed organist and curate of Magdeburg Cathedral. There he established a weekly concert series and was a popular lied composer and pianist. His *Oden und Lieder aus der Geschichte des Siegwart* (Magdeburg, Leipzig and Brunswick, 1779) are settings of passages from J.M. Miller's sentimental text in imitation of Goethe's *Die Leiden des jungen Werthers*; these songs were written in a unique style combining lyrical elements and recitative, and using key changes to depict character. He included many performing directions, but in places there is too much use of the fussiness then in fashion and of weak suspended notes. Sievers enjoyed particular success with his famous ballad *Es war einmal ein Gärtner*, a sentimental, folklike melody; he also published three harpsichord sonatas (op.1, 1782) and, according to Gerber, a sinfonia for harpsichord, two violins, two flutes, two horns and bass. Apart from a *Miserere* which is in the Wissenschaftliche Allgemeinbibliothek, Schwerin, no record remains of the sacred pieces and chamber music in manuscript mentioned by Gerber.

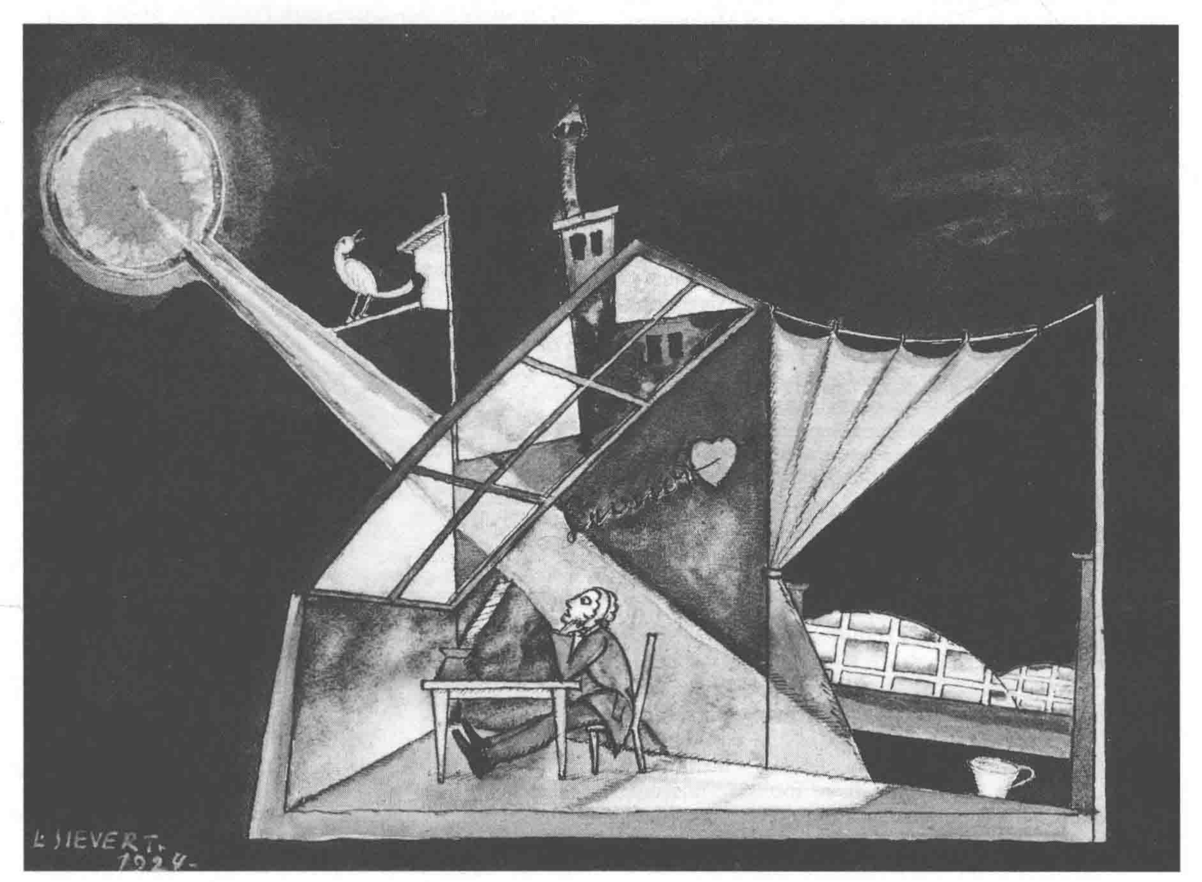
DIETER HÄRTWIG

Sievert, Ludwig (*b* Hanover, 17 May 1887; *d* Munich, 11 Dec 1966). German stage designer. After studying scene painting at the Stadttheater and at the school of applied arts in Aachen, he worked in various, chiefly Rhenish, scenic studios as a painter, 1904–9. He then became artistic director of the Werkstätte für Bühnenkunst in Munich (1910) and of the important Studio Lüttkemeyer in Coburg (1911), before going to the Städtische Bühnen in Freiburg (1912–14) as artistic director. There followed engagements as director of design at Mannheim (1914–18), Frankfurt (1918–37) and Munich (1937–43), as well as invitations to work at other European and American opera houses.



Sievert's work was at first influenced by neo-romanticism and the reforms of *Jugendstil*. He played a part in the development of the anti-historicist and anti-naturalist *Stilbühne*, to which he gave a craftsmanlike, ornamental stamp which asserted itself later, especially in his Mozart productions. The radicalization of the *Stilbühne* concept under the influence of Expressionism, which he had undertaken with the director F.L. Hoerth in his Freiburg Wagner productions, was continued in Mannheim and Frankfurt. He developed an art of expression tending towards abstraction, rich in symbols, which in influential productions (e.g. Hindemith's *Sancta Susanna*, 1922, Frankfurt, and Krenek's *Der Sprung über den Schatten*, 1924, Frankfurt; see illustration) sought to make visual the idealized, almost irrational emotional appeal of Expressionist music drama through cubist forms, expressive colours and suggestive lighting effects. Elements of Expressionism could still be traced in his sketches (especially for Wagner productions) until the 1950s, but after 1925 his work tended towards the concrete objectivity of the 'new realism'. This style, at first working with modernism (e.g. in the première of *Von heute auf morgen*, 1930, Frankfurt), then increasingly moving towards three-dimensional genre-painting and historicism, resulted in creditable artistic achievements (e.g. Orff's *Carmina burana*, 1937, Frankfurt) even under fascism – which however enforced a flight into a conservatism based on craftsmanlike solidity, to which he remained committed even after World War II.

MANFRED BOETZKES

Siewiński, Andrzej. *See* SIWIŃSKI, ANDRZEJ.

Siface [Grossi, Giovanni Francesco] (*b* Chiesina Uzzanese, nr Pescia, 12 Feb 1653; *d* nr Ferrara, 29 May 1697). Italian castrato. He achieved early fame, and his performance of Syphax in Cavalli's *Scipione affricano* in Rome in 1671 earned him the nickname by which he was always known. In April 1675 he was admitted to the papal chapel. Four years later he entered the service of Francesco II d'Este, Duke of Modena, and remained with him for the rest of his life, though he travelled extensively. In 1678 he sang Vespasiano at the opening of the Teatro Grimani a S Giovanni Grisostomo, Venice. In the Venetian carnival of 1679 he sang in Pallavicino's *Nerone*, a report of which in the *Mercure galant* bears witness to his increasing fame, and his singing attracted the attention of Queen Christina of Sweden in Rome. Success seems to have turned his head, and he began to display the arrogant behaviour that marked the rest of his career. He refused to sing for the French ambassador, tactlessly remarking that for his pains he wanted 'delle doble, non dei sorbetti' (doubloons, not ices), which was all one got from the French. In 1683 he sang in *Il re infante* at Venice; a report in the *Mercure galant* describes him as 'Abbe' and, probably mistakenly, states that he was employed by the Duke of Mantua. In 1684 he took the part of Mithridates in Alessandro Scarlatti's *Pompeo* at Naples, and in 1686 he appeared in Florence.

In 1687 Siface was sent to England to entertain Francesco's sister, Mary of Modena, James II's queen. He broke his journey in Paris, where he was acclaimed, though Rizzini, the Modenese agent there, privately noted that like all great virtuosos he was also 'un gran fantastico'. The dauphin heard him, but Louis XIV ignored him, so he pressed on to London, where he arrived on 16 January 1687. He sang in James II's private chapel on 30 January, when there was 'much crowding, [and] little devotion', according to Evelyn, who nevertheless admired the voice, which he heard again at Pepys's house on 19 April:

> I heard the famous Singer the Eunuch Cifacca, esteemed the best in Europe & indeede his holding out & delicatenesse in extending & loosing a note with that incomparable softnesse, & sweetenesse was admirable: For the rest, I found him a meere wanton, effeminate child; very Coy, & prowdly conceited to my apprehension: He touch'd the Harpsichord to his Voice rarely well.

He complained that the English climate affected his voice adversely and soon left again for Modena. His departure on 19 June 1687 was commemorated in Purcell's harpsichord piece *Sefauchi's Farewell*, which appeared in *The Second Part of Musick's Hand-maid* (RISM 1689[7]).

Between 1688 and his death Siface sang in Modena, Naples, Parma and Bologna. Illness appears to have interrupted his career about 1690, though he did appear later at Modena (1692), Milan (1692) and Reggio nell'Emilia (1696). An indiscreet affair with a member of the Marsili family, about which he foolishly boasted, brought about his death at the hands of assassins hired by the family when Siface was travelling between Ferrara and Bologna, where he was engaged to sing. The murder created a great scandal, and the Duke of Modena implacably pursued those responsible for it. His voice was long remembered in England and on the Continent. In Galliard's 1742 translation of Tosi's *Opinioni* he was described as 'famous beyond any, for the most singular Beauty of his Voice'.

MICHAEL TILMOUTH/OLIVE BALDWIN, THELMA WILSON

Sifflet (Fr.). *See* WHISTLE. A *sifflet à coulisse* is a SWANEE WHISTLE.

Sifflöte (Ger.). *See under* ORGAN STOP.

Sifonia, (Liberato) Firmino (*b* Geneva, 6 Feb 1917; *d* Lanciano, 25 Dec 1996). Italian pianist and composer. He studied music first in Munich with Emile Bourdon and Louis Abbiate. In 1934 he moved to Paris, where he studied with Cortot and Jean Dennery and where, beginning in 1935, he took Henri Challon's harmony course at the Ecole Nationale de Musique. He then went on to study composition with Petrassi in Rome. In Italy he was in charge of the music output of the RAI Terzo Programma (1953–9) and secretary of the Italian national music committee at UNESCO. He taught composition at the conservatories in Perugia (1958–65) and Bologna (1965–9), and he was director of the conservatories in Pescara (1969–76) and Florence (1977–87).

Sifonia adopted 12-note technique from his first chamber (*3 pezzi* for string quartet) and orchestral works (*Ouverture*, *Musica*, *2 pezzi*) on. He held to it in an orthodox manner throughout his creative life, achieving his most intensely communicative music in his concertos and in certain pieces for voice and instruments (e.g. *Lines*, *Vòcero II*). With *Canoni* he became one of the first composers in Italy to take an interest in electronic music.

VIRGILIO BERNARDONI

Sigefrid, Cornelius (*b* *c*1550; *d* Zweibrücken, Palatinate, after 1604). German composer and clergyman. He is first encountered in 1568 as a scholarship holder at Hornbach

in the Palatinate, then in 1577 as a schoolmaster at Zweibrücken, and finally as a pastor at Baumholder (also in 1577), Duchroth (1578), Wattenheim (1592) and, from 1595 until at least 1605, in the neighbouring parishes of Ebertsheim and Mertesheim, which were then part of the countship of Altleiningen but are now also in the Palatinate.

Sigefrid's first publication was entitled *Kirchen-Gesäng: Psalmen und geystliche Lieder welche in christlichen Gemeynen und Versammlungen dieser Landen gesungen werden, mit vier Stimmen Contrapuncts weise also abgesetzt dass auch ein jeglicher Christ den Choral durchaus mit singen kan* (Strasbourg, 1602; 2/1605; four pieces in *Handbuch der deutschen evangelischen Kirchenmusik*, i/2, Göttingen, 1942). The wording of the sub-title is very close to that of Lucas Osiander's *Fünfzig geistliche Lieder und Psalmen* (Nuremberg, 1586), a publication that inaugurated a long series of hymnbooks in which the cantus firmus is in the highest part and simply harmonized, thus enabling choir and congregation to sing together.

Sigefrid's work is notable for its adaptations of Strasbourg hymns and especially for its liturgical part-songs, which, as the title-page states, were sung in Altleiningen. He published more four-part devotional music in *Drey und sechzig Psalmen Davids . . . Sampt noch zehen trost-reiche geistliche Lieder, mit vier Stimmen lustig und lieblich zu singen und auff allerley instrumenten heyl-samlich zu gebrauchen* (Neustadt an der Hardt, 1607). An earlier publication, *Newe christliche Gesäng und geistliche Lieder, mit vier Stimmen lustig und lieblich zu singen, und auff allerley Instrumenten heilsamlich zu gebrauchen* (Strasbourg, 1604), is lost. To judge from the title-page, the music of these volumes seems to have been rather more elaborate than that of the *Kirchen-Gesäng*.

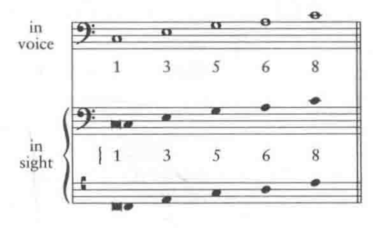
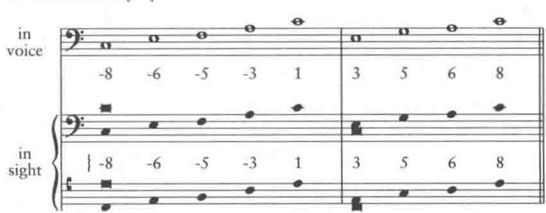
WALTER BLANKENBURG



Sigelius [Sigl], **Rufinus** (*b* Sigmaringen, 1601; *d* Seeon, Bavaria, 26 Nov 1675). German composer. He entered the Benedictine monastery at Seeon as a lay brother, later educated himself privately, studied theology and was ordained as a priest in 1630. He worked as a chaplain at Frauenchiemsee and as the parish priest of Buechberg in Bavaria, finally returning to the monastery at Seeon. He was praised there after his death as an 'experienced organist and composer'. Sigelius was the first named composer from the monastery at Seeon, and probably one of the first Bavarian Benedictines whose music appeared in print. With his *Alveus sacer* (Ingolstadt, 1630), a collection of 21 sacred concertos for one to four voices and continuo, he numbered among the early south German exponents of the new style developed by Viadana around 1600.

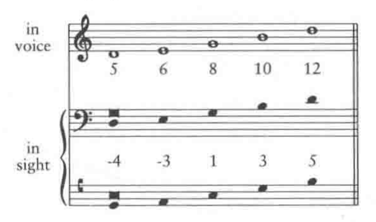
AUGUST SCHARNAGL/RAYMOND DITTRICH

Sigh. A type of ornament. *See* ORNAMENTS, §6.



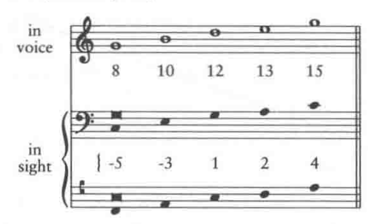
Sight, sighting. Terms used in Middle English discant treatises (*c*1390–*c*1450), and in a few later theoretical works, in specifically musical senses involving the improvisation of a discant above or below a plainchant. The technique of 'sight' or 'sighting' was also called 'imagination' or 'imagining' (Lat. 'fictus visus', 'perfectio ocularis').

(1) A singer was expected to be able to improvise simple discant above or below a plainchant, visualizing the notes he sang as consonances above or below the notes of the chant on the four-line staff. If he was extemporizing his part in essentially the same compass as the plainchant, he could visualize or 'sight' the actual notes that he sang 'in voice'. The mean, for example, might sing a unison with, or a 3rd, 5th, 6th or octave above the plainchant (ex.1):

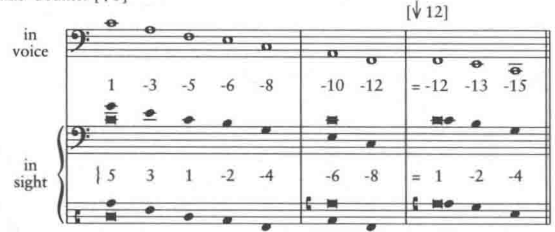


these intervals all fit conveniently on the staff with no need for leger lines or transposition. (It follows that a mean may only sing the wider intervals when the plainchant lies low.) 'Sight' here designates simply the imagined notes or series of notes visualized at their true pitch.

(2) The term also came to be used for the series of 'acordis', the choice of consonances, specified for each 'degree' of discant and for the singer of faburden, and also the rule by which they were derived from the chant. 'Mean sight' has five consonances above the plainchant with no transposition; countertenor sight (ex.2) has the

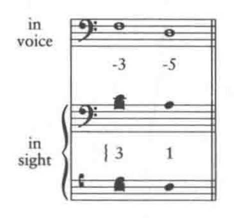


same five, but may also use them beneath the chant, making nine consonances in all, still without transposition. The remaining degrees of discant all need to sing intervals wider than the octave, and cannot therefore visualize their notes directly on the plainchant staff at the sung pitch. They have to transpose. The treble (ex.3) has



the choice of the 5th, 6th, octave, 10th and 12th above the plainchant, and is instructed to 'sight' them on the staff an octave lower: to sing the 5th above the chant 'in voice', he must imagine the 4th below it 'in sight'. A boy quatreble's consonances are the octave, 10th, 12th, 13th

and 15th above the chant (ex.4): he must 'sight' them a 12th lower. The singer of counter or countir (ex.5) keeps below the plainchant all the time: he has seven normal



consonances (unison, 3rd, 5th, 6th, octave, 10th and 12th below), which he arrives at by visualizing them a 5th higher 'in sight'. If the counterer has a low voice and the chant lies high, he may also sing the 13th and 15th below it; but in order to 'sight' these he must increase the interval of transposition to a 12th. The singer of a faburden, though not strictly a discanter, also uses a transposed sight (ex.6): his two consonances, the 3rd and 5th beneath

the plainchant, are to be derived from sighted notes a 5th higher. In all these cases the sight is transposed, so that 'sight' comes also to mean the rule of transposition. By a further extension, the term 'sight' can mean any of the above voice-parts.

Exx.1–6 show the choice of intervals for each degree of discant and for faburden, as recommended by the anonymous treatises in *GB-Lbl* Lansdowne 763, the last and fullest exposition of the subject. The bottom staff gives the plainsong note (breve) at its actual pitch on the four-line staff and shows the sighted notes from which the pitches 'in voice' are derived (black semibreves); the middle staff, for ease of reference, shows the same notes on the modern bass staff. The top staff shows the notes actually sung 'in voice' (semibreves) and, above, the name of the sight in question and its interval of transposition, if any ('=' means there is none). The numbers beneath the upper two staves show the intervals that the sighted and voiced notes make with the plainsong note; a minus sign means an interval beneath the plainsong.

The system of sights was first hinted at in the pseudo-Franconian *Compendium discantus* (*CoussemakerS*, i,

156*b*, *c*1300, English): the term used is 'ymaginabis'. Treble sight with octave transposition upwards was also known in late 15th-century Italy: it was used by GUILLELMUS MONACHUS (*c*1480) both in his description of fauxbourdon and gymel and also as a notational convenience ('in order to have a full understanding of sighted consonances, note that the unison is taken [to mean] the octave', ed. Seay, CSM, xi, 1965, p.35); and the English Carmelite JOHN HOTHBY, who travelled widely and lived and taught in Italy, has left a brief discussion of 'sighted discant', which he described specifically as English, in his *Regule ... supra contrapunctum* ('this way of singing is called sighted discant: I will explain how to "see" this manner on the four lines [of the plainsong staff]', *CoussemakerS*, i, 333). Bukofzer (1936, pp.41, 156ff) also mentioned references to octave sight in Ramis de Pareia and Burzio.

BRIAN TROWELL

Sigismondo, Giuseppe (*b* Naples, 13 Sept 1739; *d* Naples, 10 May 1826). Italian librarian, historian and composer. He studied law and also had lessons in singing, figured bass and counterpoint, including some from Durante and later (1761–7) Porpora. He graduated in law in 1759, but continued to devote much of his time to acting 'all'improvviso' in an amateur theatrical company for which he wrote many comedies, some of which were published. He was also active as an amateur composer. The Naples Conservatory library has much of his music in autograph, including two stage works (1765, 1783), four masses and other sacred works, two oratorios (1765, 1768), 20 sacred and secular cantatas and organ and harpsichord pieces. He was a highly regarded singing teacher in Neapolitan society; four sets of solfeggios by him – one dated 1824 – are in the Naples library (others in *I-Baf* and *Mc*). He provided Saverio Mattei with material for his important book (1785) on Jommelli, of whom he had been a close friend (some say pupil). After Mattei was made *Real Delegato* ('overseer') of the Pietà dei Turchini conservatory, in 1794 he had Sigismondo appointed archivist-librarian of the library that he established there and to which Sigismondo added manuscripts from his own collection (Sigismondo was a prolific copyist; numerous manuscripts transcribed by him are in the British Library and probably other libraries as well). Eventually extreme old age and gout prevented Sigismondo from discharging his duties adequately, and when Florimo succeeded him as librarian in 1826, the collection was in considerable disarray.

Sigismondo gathered materials for a history of music in Naples. His four-volume manuscript, entitled *Apoteosi della musica del regno di Napoli in tre ultimi transundati secoli* and dated 1820, is now in the Berlin Staatsbibliothek. It includes accounts of the four conservatories, music in Naples in the 16th and 17th centuries and the

founding of the conservatory library, and has individual essays on 15 composers (at least one is missing). A few brief sections of it were published by F.S. Kandler (*AMZ*, 1821). After Sigismondo's death his sons showed this work to the Royal Historian, the Marchese di Villarosa, whose eldest son Sigismondo had taught. Because of its rather chaotic organization, Villarosa discouraged its publication as it stood, but used it as the fully acknowledged basis of his own *Memorie dei compositori di musica del regno di Napoli* (Naples, 1840), in which many passages were taken wholly or in slightly revised form from Sigismondo.

DENNIS LIBBY

Sigl, Rufinus. *See* SIGELIUS, RUFINUS.

Signac [first name unknown], Sieur (*b* before 1600; *d* after 1630). French composer. In 1618 he was a musician in the household of the Bishop of Toul. He published three books of *Airs à 4 parties* from 1618 to 1625 (the second book is lost). He was sufficiently well regarded in musical circles in 1618 for Pierre Ballard to include six of his *airs de cour* and four of his psalm settings in an anthology. Signac dedicated his *Cinquante pseaumes de David* (1630) to François II, Duke of Lorraine and Bar, which suggests that even if he was not in the duke's service he at least enjoyed his protection.

For his psalm settings Signac used the translation by Desportes, who was attempting to supplant the Protestant version by Marot and Bèze. The 1630 volume comprises settings of 47 psalms – two of them in two sections – together with the *Libera me* in French; the 15 pieces for five voices cannot be transcribed complete because the fifth part is missing. In his *airs* as well as in his psalms Signac's harmony is discreetly embellished with suspensions and passing notes. His melodies, particularly in the psalms, are quite expansive and often very attractive; they are modal, sometimes with modulations to related modes. The word-setting is usually syllabic, and the note values closely follow the long and short syllables of the texts.

Signal (i). A piece played on a musical instrument to transmit information, commands or encouragement, or to embellish ceremonial occasions.

1. Military signals. 2. Hunting signals. 3. Other signals. 4. Use by composers.

1. MILITARY SIGNALS. Musical instruments have been used to convey information, commands or encouragement to an army during battle or in camp, to a navy during engagement or on voyage, and to royal and noble households; they have also been employed on ceremonial occasions. Trumpet and horn signals were used in the West by the ancient Egyptians, Israelites, Greeks and Romans, and also by the Celtic and Germanic tribes. Their use continued after the fall of the Western Empire. Five single-note trumpet signals (*nodseinn*) were recognized in 8th-century Ireland: *fricath* (for battle), *friscor* (unyoking), *fri imthect* (for marching), *fri sroin* (for victory), and [*fri*]*comairli* (for council). A 'tuba' was used by the Avars (Notker Balbulus, *De Carlo magno*, *c*884), and the military employment of the horn and trumpet (*horn ond byman*) in Scandinavia and England is described in the 10th-century epic *Beowulf*. The existence of these indigenous practices suggests that from the time of the crusades (late 11th century) there may have been a complex interaction between medieval European and Saracen military instruments and practices. Later medieval Irish and Scottish war practices included the use of bagpipes and the simultaneous sounding of single-note horns of different lengths.

Johannes de Grocheio (*c*1300, *Ars musicae*) indicated that the medieval trumpet sounded no higher than the 4th harmonic. Engelbert of Admont (before 1325, *De musica*) described the sound of the trumpet and horn as a 'tremulous voice . . . which is indicated in books by the neume called the *quilisma*'; he was probably referring to the *dran* (see below). The names and functions of the medieval trumpet signals became standardized, and they suggest a French origin: *mit se selles*, *s'armast*, *montast à cheval*, *retraite* and *assaut*. These *bastures* or *mots* also began to find a place in the daily routine at the Franco-Burgundian courts.

Swabian and Swiss foot soldiers were using fife and drum signals by the late 15th century and these were imitated across Europe by the 16th century. Kettledrums were introduced from the East, initially in Hungary. The kettledrummer was stationed with the general staff, the trumpeters with the cavalry troops. At sea, where signals had been given on conch shells, trumpeters were stationed with the officers on the poop deck, fife and drum players with the foot soldiers on the main deck.

New, standardized, monophonic 'Italian style' trumpet signals were introduced during the 16th century. The earliest surviving notated sources are by Magnus Thomsen, a German who worked at the Danish royal court (MS, 1596–1612, *DK-Kk*), Cesare Bendinelli (*Tutta l'arte della trombetta*, MS, 1614, *I-VEaf*), Marin Mersenne (*Harmonicorum libri*, 1635–6, and *Harmonie universelle*, 1636–7) and Girolamo Fantini (*Modo per imparare di sonare di tromba*, 1638). Names of signals (but no music)

are also given in Caspar Hentzchel's *Oratorischer Hall and Schall ... der Trommeten* (Berlin, 1620). Thomsen supplies the signals in their purest form and the others attest the gradual curtailment and deterioration of the style. (Schünemann's transcription of Thomsen's music is unsatisfactory.) There were five principal signals. According to a letter that accompanied the (now lost) earliest notated source of these signals, three were for setting out (the *aufblasenn*): *Sateln* ('Boots and Saddles'), *Aufsitzen* ('The March') and *zur Fahne* ('To the Standard'); and two were for assembly (the *einzüge oder Reittmassenn*): *Pfertruckenn* ('Mount-Up') and *auf der wache* ('The Watch'). The German terms given here (with modern English equivalents) are those used in the letter. (Name forms used in the most important early sources are listed in Table 1.) The trumpet signals Boots and Saddles, Mount-Up 'in the French manner', To the Standard and The Watch were old four-sectional French pieces more-or-less confined to the second and third harmonics. Boots and Saddles shows the signal *Pottesella* as notated by Thomsen (f.174) in the French manner: in four parts, and preceded and followed by an *Ingangk* (tucket). Mount-Up 'in the Italian manner' (which replaced the French version), and The March were new five-sectional Italian signals set one harmonic higher, as notated by Bendinelli (ff.3*v*–4). The type of tucket that was sounded before and after the French signals was only played before the Italian signals. The March was sometimes termed '*Tucquet*' since it often prefaced other signals instead of a tucket (*see* TUCK, TUCKET). These signals had characteristic motifs which employed long-term pan-European employment and recognition. A recurring figure was the *dran* in which the basic interval of a signal was articulated 'hardly touching the first note and passing to the other with a kind of accent' (Bendinelli). A third group of signals, including 'Alarum' and 'Charge', was added before 1600. They were primarily employed to warn of impending danger, featured an *al arma* motif, and were prefaced by a CHIAMATA. Alarm signals were occasionally termed *Chamade* or *Chamado* due to the latter association. Separate ceremonial chiamatas, tuckets and sennets (*see* SENNET) were also introduced.

Bendinelli and Fantini added syllabic underlay to the signals as an aide-mémoire and to guide articulation. Gervase Markham (*The Souldiers Exercise*, 1639) advised that cavalry soldiers should sing the signals or express them in words (*lanquet*). Unofficial titles resulted: for example, the 17th-century English naval trumpet signal for disembarkation was often called 'Loath-to-Depart'. The use of mnemonics has continued to the present day.

English cavalry trumpet signals were mentioned in *The Rules and Ordynaunces for the Warre* (1544). Gervase Markham listed them: 'Butte Sella', or Clap on your Saddles; 'Mounte Cavallo', or Mount on Horsebacke; 'Al'a Standardo', or 'Goe to your Colours'; 'Tucquet', or March; 'Carga, Carga', or an Alarme, Charge, Charge; *Auquet*, or the Watch; and 'other Soundings . . . as, *Tende Hoe*, for listening, a "Call for Summons", a "Senet for State", and the Like'. English infantry fife and drum 'soundes', such as 'Marche', 'Allarum', 'Approach', 'Assaulte', 'Battaile', 'Retreate' and 'Skirmishe', were listed by Ralph Smith (*c*1557). Arbeau (*Orchesographie*, 1588, 2/1589) gave the basic drum pattern of the 'Infantry March' as five sounded beats followed by three silent beats. Francis Markham (*Five Decades of Epistles of Warre*, 1622) advised that 'it is to the voice of the Drum the Souldier should wholly attend, and not the aire of the whistle', and listed the infantry signals:

> First in the morning the discharge or breaking up of the *Watch*, then a preparation or *Summons* to make them repaire to their colours; then a beating away before they begin to march; after that a *March* according to the nature and custom of the country . . . then a *Charge*, then a *Retrait*, then a *Troupe*, and lastly a *Battalion* or a *Battery*, besides other sounds which depending on the phantasttikenes of forain nations are not so useful.

The codification, modification, elaboration and proliferation of military signs continued over the next two centuries, although the principal motifs proved enduring. Other signals – proclamations and signals for bivouac and mealtime, for example – were used, but enjoyed local application only. There was a vogue for signals in two-, three- and four-part homophony during the 19th century.

In France, government orders from the time of Louis XIV onwards regulated the trumpet and drum signals. In 1705 Philidor *l'aîné* assembled a manuscript volume containing some cavalry trumpet signals together with accompanying chiamatas (termed *Preludes*), as well as an array of *batteries* that he, Lully, and others had composed for French and foreign infantry regiments. Each of the *batteries* includes five drum signals (*La Generalle, l'Assemblée, la Marche, la Descente des Armes* and *la Retraitte*) complete with alternative 'airs' written for oboe band rather than fifes. The increasing diversity of the French signals may be noted in Lecocq Madeleine's *Service ordinaire et journalier de la cavalerie en abrégé* (1720) and Marguery's *Instructions pour les tambours* (1754). During the first half of the 19th century successive French governments adopted new and revised *ordonnances* by David Buhl for trumpet, drum and fife; these still form the principal body of French army signals. The extent of his revision can be seen by comparing the beginning of Philidor's and Buhl's versions of *A cheval*, a signal still extant in England as 'To horse' and 'General parade' (ex.1). (*See also* SONNERIE (i), (1).)

The earliest surviving sources of notated trumpet signals originated in areas under German influence, but such sources are less evident there during the late 17th century and the 18th. However, the occasional inclusion of trumpet signals in composed music and the information found in J.E. Altenburg (*Versuch einer Anleitung zur . . . Trompeter- und Pauker-Kunst*, 1795), show that similar developments to those found in England and France also

TABLE 1

Modern English	*Thomsen*	*Bendinelli*	*Hentzschel*	*Mersenne*	*Fantini*	*G. Markham*
Boots and Saddles	Pottesella	Butasella	Putreselle	Boute-selle	Butta slla	Butte Sella

occurred in Austria and Germany. Kastner's *Manuel général de musique militaire* (1848) records contemporary military signal practices from all over Europe (including Germany), as well as many of the earlier European trumpet signals dating from the early 17th century onwards, but gives no German signals from the 1820s. Other 19th-century publications from German-speaking lands include the Austrian Andreas Nemetz's *Allgemeine Musikschule für Militär Musik* (1844) and the Prussian H. Sussmann's *Neue theoretisch practische Trompeten-Schule* (1859).

In England the fife was replaced by the oboe band at the close of the 17th century but reintroduced in 1745–7. Horse regiments used trumpets; marching regiments (and occasionally cavalry) now used fife and drum (horse grenadiers, dragoon guards and foot regiments formerly used side drums only). *A Compleat Tutor for the Fife* (*c*1750–55) and R. Spencer's *The Drummers Instructor with English and Scotch Duty* (*c*1760) include fife and drum signals. Distinct English and Scottish systems were followed until 1816, when the uniform system set out by Samuel Potter in *Art of Playing the Fife* and *Art of Beating the Drum* (1815) was adopted.

Trumpets replaced side drums in the horse grenadier guards and dragoons in 1766. Light dragoons adopted semicircular bugles in 1761, and the light infantry, artillery and regiments of foot followed. James Hyde revised 'the trumpet and bugle soundings' for *The Sounds for Duty & Exercise*, published by the War Office in 1798; he then corrected errors in the original work with a publication of his own, *A New and Complete Preceptor for the Trumpet and Bugle Horn* (1799). Bugle signals also appeared in James Gilbert's *Bugle Horn Calls for Riflemen* (1804) and T.R. Cooper's *Practical Guide for the Light Infantry* (1806).

The bugle gradually replaced the drum and fife. Drum signals were used in the artillery until 1856, but the fife was reserved for a few routine signals as late as the 1890s. Regimental trumpet calls were introduced by Sir Hussey Vivian in 1835. The separate sets of signals for the different divisions of the army were assimilated into a single manual, *The Trumpet and Bugle Sounds for the Army*, in 1902, which however maintained an old anomaly – that rhythmically identical trumpet and bugle signals were often harmonically different because of their scales (ex.2). There are now three categories of signal:

regimental, field and routine.

The Continental Army of Revolutionary America was organized after British military custom; Friedrich von Steuben's *Regulations for the Order and Discipline of the Troops of the United States* (1778) lists the American signals: 'The General', 'The Assembly', 'The March', 'The Reveilly', 'The Troop', 'The Retreat', 'The Tattoo', 'To Arms' and 'The Parley'. Regiments of foot included drummers and fifers; light dragoons used trumpeters and fifers; companies of riflemen included a drummer or a trumpeter; and light infantry units used the bugle. William Duane's *Military Dictionary* (1810) specified that 'the trumpet is . . . the principal military instrument . . . belonging to the line; the bugle horn to riflemen and detached parties'. Drum and fife tutors include *The Fifer's Companion* (1805), J.L. Rumrille and H. Holton's *The Drummer's Instructor* (1817), the *Fife Instructor . . . to which is prefixed Instructions for the Drum including the Principal Duties of the Camp* (*c*1830) and *Strube's Drum and Fife Instructor* (1870). The bugle replaced fife and drum towards the end of the 19th century, initially deriving its signals largely from the French. Truman Seymour revised and assimilated the signals in 1867 and laid the foundation for the present system, which retains reminders of both British and French signals: e.g. 'Boots and Saddles' is French, but 'Stables' is British.

2. Hunting signals. Signals have been sounded at various stages of hunting to convey information, give instruction and for rejoicing. Medieval depictions of hunting scenes often include curved organic and metal horns. Early references to hunting horns occur in *Le dit de la chace dou cerf* (*c*1260), Guyllame Twici, *L'art de venerie* (1315) and Henri de Ferrieres, *Le livre du roy Modus* (1330). Hardouin de Fontaines-Guérin's *Tresor de venerie* (1394) includes 14 single-note signals which are distinguished by their rhythms, as are those in Turbervile's *Noble Art of Venerie* (1575). Lingual and labial articulations were probably employed. Jacques du Fouilloux (*La vénerie*, ?1561) used the syllable *tran*, indicating articulation similar to that of the trumpet *dran* figure. One example shows a signal indicating that the stag is at bay. The sounding pitch was 'whooped' from below with the effect of a rise of as much as a 4th, and the true pitch may have been quavered.

The large hooped hunting horn was developed at the court of Louis XIV during the second half of the 17th century. Philidor transcribed the signals for horn in C alto in 1705 (*Premier appel*, *Pour le Chien*, *Pour la Voye*, *Le Defaut*, *La Fanfare*, *La Retraitte* and *La Soureillade*) and added a set for horn in C basso. The signals are in triple or compound duple metre and include tuneful fragments, triadic passages, lingual and labial articulations and the

tayauté, or 'jerked note'. Two- and three-part signals followed later. Hunting signals were included in mid-18th-century horn methods, in Diderot and d'Alembert's *Encyclopédie* (1751–80) and in Dampierre's *Recueil de fanfares* (1778).

The coiled horn was used in the English hunt, but a more enduring instrument was the short straight horn developed during the 16th century and made of copper by the middle of the 17th. English hunting signals have been printed in many sources, including Tubervile's *The Noble Art of Venerie* (1576), Thomas Cockaine's *A Short Treatise of Hunting* (1591), Nicholas Cox's *The Gentleman's Recreation* (2/1677) and L.C.R. Cameron's *The Hunting Horn* (1905). For a time the German hunt employed the bugle and had a military-derived signal repertory. The bugle was replaced by the coiled 'Prince Pless' horn during the 19th century. German hunting signals have been published by Kastner, among others. Single-note horns were developed in Russia in the late 18th century, initially to permit concordant signalling. They later formed a large musical band, which spread to other countries and lasted until the second half of the 19th century (*see* HORN BAND).

Tons de chasse encourage the hounds, give warning, call for aid and indicate the circumstances of the hunt; best known are *Lance* and *Hallali sur pied. Fanfares* distinguish between the animals hunted, with several for the stag; the *Royale* is used for a stag of ten points, the *petit Royale* for the boar. Musical *airs* are performed for rejoicing after successful hunting. The *Fanfare de St Hubert* is associated with the feast (3 November) of the patron saint of the hunt. These terms have been employed since the 18th century and are still in use today wherever hunting with coiled horns is practised.
See also JAGDMUSIK.

3. OTHER SIGNALS. Signals have long played a part in religious ceremonial. Such signals include the peal of church bells before Christian services, the call to prayer of the muezzin in the Islamic mosque, the sounding of the shofar in the Jewish synagogue and the use of bands of shawms and trumpets in Tibetan Buddhist monasteries. Trumpets featured in religious processions in the West in medieval times; they were used in Venice from the 12th century. During the 15th and 16th centuries many cities maintained trumpet ensembles to embellish important religious and civic ceremonies, including processions, elections, banquets and the announcement of judicial deliberations. The repertory was the same as that of the military trumpeters.

From an early period proclamations and bans were announced by town criers to the sounding of trumpets, or horns. Horns, and later trumpets, were employed by tower watchmen to warn of internal dangers, such as fire, as well as external, such as attacks. According to Froissart (*c*1337–*c*1405), they sounded *trahi!* on such occasions. Bakers and butchers played horns to announce their wares and pilgrims purchased ceramic horns.

With the beginning of mail services in the 15th century postal couriers sounded signals on small horns, initially using the 1st and 2nd harmonics only. Higher harmonics were added as the horns were lengthened, and the 1st and 2nd harmonics had vanished from the signals by the 19th century. Published POST HORN methods with signals include the Prussian *Anleitung zum Trompetblasen für die Königl. Preussischen Postillione* (1828) and the English *Complete Tutor for the Coach Horn, Post or Tandem Horn, Bugle and Cavalry Trumpet* (1898).

The herder's horn, or ALPHORN, was used in rural communities and survives today in Switzerland, Norway, Sweden, the Baltic States and parts of Russia, Hungary, the western Slav countries and Romania. They were used for communication, to summon and drive the herds and to gather people together for defence. Many of the traditional signals survive in folk music collections.

4. USE BY COMPOSERS. Composers have often incorporated references to signals into their music. Janequin's chanson *La guerre* includes cavalry trumpet signals, and his *La bataille de Mets* imitates the sound of fifes and drums. Trumpet signals form the bass parts of a *Symphonia nobili frenetur organo* (MS, *c*1504, *D-LEu* 1494) and a *Laudate Dominum* (*c*1548, *DK-Kk* Gl.kgl.saml.1842). Among the 'battle' pieces imitating the sounds of the trumpet, kettledrum, fife and drum are Andrea Gabrieli's polychoral *Aria della battaglia* (1590), Byrd's virginal suite *The Battle*, Tobias Hume's *The Souldiers Song* (1605) and various pieces in Monteverdi's *Madrigali guerrieri et amorosi* (1638). Trumpet signals are included in Christoph Straus's *Missa 'Veni sponsa Christi'* (1631), Joseph Haydn's Symphony no.100 'The Military', Beethoven's *Wellingtons Sieg*, Berlioz's *La damnation de Faust*, the overtures to Suppé's *Die leichte Kavallerie*, (1866) and Auber's *Fra Diavolo* (1830), Tchaikovsky's *Capriccio Italien* (1880), and Bizet's *Carmen*.

The sounds of the hunt are found in Gherardello da Firenze's *Tosto che l'alba* (for illustration *see* CACCIA, ex.1), J.-B. Morin's divertissement *La chasse du cerf* (1708), Carl Stamitz's symphony *La chasse* (1772), and Joseph Haydn's Symphony no.73 'La chasse' and oratorio *The Seasons*. Watchman's signals presumably inspired the *Tagelieder* by the Monk of Salzburg (late 14th century): *Nachthorn*, *Taghorn* and *Trumpet*. Alphorn music is quoted in a *Sinfonia pastorella* by Leopold Mozart, in Beethoven's Symphony no.6, Rossini's Overture to *Guillaume Tell*, Berlioz's *Symphonie fantastique*, Brahms's Symphony no.1, and Wagner's *Descendons gaiment la courtille* WWV 65. For usage of post horn signals by composers, *see* POST HORN.

Signal (ii). A time-varying parameter which carries information. In the musical context, the signal is typically a fluctuating electrical voltage which, after appropriate amplification, can be applied to a loudspeaker to generate an audible sound. A musical signal may be generated in a variety of ways. A microphone senses the fluctuating pressure in a sound wave and converts it into an electrical signal. The pickup on an electric guitar generates a signal which depends on the string motion. In a synthesizer the signal is generated purely by electrical circuits. Once the signal has been generated, it can be modified by a range of techniques known collectively as signal processing. The most common of these are amplification, in which the signal is multiplied by a constant factor, and filtering, in which selected parts of the frequency spectrum of the signal are amplified or attenuated. The voltage output from a microphone is a continuously varying representation of the sound pressure. Neglecting any distortion introduced by the microphone, the voltage waveform is a strict analogue of the pressure waveform, and this type of signal is known as an analogue signal. Most modern signal processors and recording systems require that an analogue signal is first passed through an analogue-to-digital converter (ADC), which periodically samples the signal. The result is a sequence of numbers, representing the signal values at the sampling times, known as a digital signal.

Digital signals have two major advantages over analogue signals. Firstly, they can be copied and transmitted effectively without degradation. An analogue signal is always in practice accompanied by unwanted noise. Each stage of processing, transmission or recording introduces additional noise, and the signal-to-noise ratio, by which the signal's quality is measured, decreases. In contrast, digital signals are represented by sequences of logic pulses of fixed height; as long as the noise level is kept well below the pulse height it does not affect the information content of the signal. Secondly, digital signals can be stored, edited and processed on a computer. A digital signal is a sequence of numbers, and cannot be fed directly to a loudspeaker. A digital-to-analogue converter (DAC) is required, which recreates an analogue signal in the form of a continuously varying voltage matching the rise and fall of the numbers in the digital signal. The fidelity of the reproduction improves as the interval between the samples diminishes; the digital signal stored on a CD is obtained by sampling the original analogue signal 44,100 times per second.

MURRAY CAMPBELL, CLIVE GREATED

Signalhorn (Ger.). *See* BUGLE (i).

Signalpfeife (Ger.). *See* WHISTLE.

Signate. *See* SENNET.

Signature. In Western notation a sign or signs placed at the beginning of a composition. A KEY SIGNATURE indicates which notes in the piece are to be sharpened or flattened; a TIME SIGNATURE indicates its metre.

Significative [Romanian] **letters.** Letters added beside neumes in some Western chant notations to clarify or supplement the meaning of the neumes (*see* NOTATION, Table 5). They may affect the rhythm, pitch or manner of execution of the neumes. They appear most frequently in St Gallen manuscripts and it was a St Gallen tradition to ascribe their invention to Romanus, a Roman cantor who had brought authentic Roman chant books to St Gallen in the late 8th century; hence the name invented by Schubiger: *Romanus-Buchstaben*, 'Romanian letters'. The term 'significative letters' derives from Notker's letter to Lantbert as transmitted in *CH-SGs* 381 (facs. in PalMus, iv, 1894, pls.B–D) which includes the words 'quid singulae litterae ... significent'. Other significative letters are found in Lorraine and Breton notations.

Signoretti, Aurelio (*b* Reggio nell'Emilia, 25 April 1567; *d* Reggio nell'Emilia, before 2 Nov 1635). Italian composer, trombonist and singer. He was born in the parish of S Prospero, took holy orders in 1593, and is recorded as a singer at the cathedral in Reggio for the first time on 16 March 1596. According to the chapter acts he was promoted to *maestro di canto* in 1602. During Viadana's brief period as *maestro di cappella* in 1602 Signoretti is recorded as a trombonist, and immediately after Giulio Belli's equally short tenure as *maestro* he may have acted as *maestro di cappella*. On the appointment of Pisanelli

in 1604 Signoretti assumed the responsibilities of *vice-maestro*, and between about 1614 and 1632 he held the post of *maestro*. An entry in the chapter acts for 2 November 1635 refers to him as having recently died.

Signoretti's earliest published works, *O altitudo divitiarum* and the five-voice *Agnus Dei*, were published in Serafino Patta's *Sacra cantica* (Venice, 1611), which suggests that Patta, organist of SS Pietro e Prospero, Reggio nell'Emilia, from 1609, may have been Signoretti's teacher. In Signoretti's *Primo libro de mottetti* the works written under the influence of the new song style make much use of rapid melismatic passage-work not always prompted by textual concerns. The collection concludes with a double-choir setting for eight voices of the *Ave Maria*. In 1619 he composed a festal mass for seven choirs for the opening of the temple built in honour of the Madonna della Ghiara. There are seven *Magnificat* settings, one in each of the ecclesiastical modes except the 5th, and three masses by him in manuscript (*I-REm*), together with Palestrina's *Missa 'Iste confessor'* (presumably copied from G.F. Anerio's edition, in RISM 1619[2]).

Signoretti's music displays an intriguing blend of conventional and modern features. The *Missa 'Loquebantur'* is a parody, often quite strict in its contrapuntal technique, of Palestrina's four-voice motet *Loquebantur variis linguis Apostoli*; together with the other two masses in the manuscript it is for four voices, and not, as Fétis and Tiraboschi believed, for seven. As Tagliavini noted, the vesper psalms are written for soloists with an optional ripieno choir often doubling the solo parts at climactic points. The *Vespertinae* includes a sequence of psalm settings for Marian feasts and three workings of the *Magnificat*. Elsewhere Signoretti used the concertato style, but his melodic style frequently seems inhibited, perhaps by his contrapuntal training.

IAIN FENLON

Signorucci, Pompeo (*b* Borgo S Sepolcro [now Sansepolcro], province of Arezzo; *fl* 1594–after 1609). Italian composer and organist. From at least 1594 to 1603 he was organist and *maestro di cappella* at Borgo S Sepolcro, where he also taught music at the convent of S Margherita. About 1608–9 he was *maestro di cappella* of Pisa Cathedral and later held a similar position at Siena Cathedral. He was a member of the Accademia degli Unisoni of Perugia. One of Banchieri's *Lettere armoniche* (1628) is addressed to him, but he was not necessarily still alive then. Banchieri also mentioned him, together with Gabriele Fattorini, in his *Conclusioni nel suono dell'organo* (1609) in connection with the use of the *basso seguente* without indication of accidentals. In his op.6 the characteristics of the *falsobordone* style are not always evident; some of the *falsobordoni* are for one voice and continuo. The motets in this volume are often homophonic.

Signum concordantiae (Lat.: 'sign of congruence'). The term comes from the theorist Anonymus 12 (*c*1400; ed. *CoussemakerS*, iii, 483; CSM, xxxv (1990), 64), who described it as 'ubi cantus universi congruunt' ('where all the voices come together'). But Anonymus 12 was trying to distinguish twelve different signs in music. The surviving sources are by no means consistent in their use of these signs or in their shape; and the term is used today to describe the mark written like a fermata or *segno* with a wide range of different meanings in sources from about 1300 to 1650. They can denote the point where a canonic voice enters (or ends), the point where other voices enter, the point from which the music of a secular song repeats, some kind of a fermata, a point of embellishment, and much else. For illustration *see* PORTA, COSTANZO, fig.2.

DAVID FALLOWS

Sigtenhorst Meyer, Bernhard van den (*b* Amsterdam, 17 June 1888; *d* The Hague, 17 July 1953). Dutch composer and musicologist. He studied at the Amsterdam Conservatory with Pauw (organ), Lange (theory), Zweers (composition) and Röntgen (chamber music). For many years he lived in The Hague, where he enjoyed a considerable reputation as a piano and composition teacher. He wrote the first major studies on Sweelinck and, in 1950, undertook the reprinting of the collected edition; he produced several other scholarly and practical editions. He also enjoyed a great reputation as a pianist and accompanist, especially with the singer, poet and painter Rient van Santen, who inspired him with visions of old cities and castles (e.g. *Doode steden*) and also of the orient (*Het oude China*, *Zes gezichten op den Fuji* and *De verzoeking van Boedhha*). These early compositions, as well as the String Quartet no.1, have a strong Impressionist tendency. In the early 1920s, however, his style became less romantic, and was more controlled in a 17th-century Baroque manner (*Jesus en de Ziel* for soprano, female chorus and organ, a setting of poems by Jan Luyken). Much of his output is chamber music, including two string quartets, two violin sonatas, piano pieces and solo works for oboe and violin.

Siguidilla. *See* SEGUIDILLA.

Siguiriya. An Andalusian or Gypsy corruption of SEGUIDILLA.

Sigurbjörnsson, Thorkell (*b* Reykjavík, 16 July 1938). Icelandic composer, pianist, conductor and teacher. He studied the piano, the violin, the organ and theory at the Reykjavík College of Music, where his teachers included Róbert A. Ottósson, Victor Urbancic and Árni Kristjánsson. At Hamline University, St Paul's, Minnesota, he studied the piano, theory and composition with R.G. Harris (BA 1959). Further studies included composition with Kenneth Gaburo and electronic music with Lejaren Hiller at the University of Illinois (MM 1961), and conducting at the Académie internationale de la Musique, Nice and at Darmstadt. In 1962 he returned to Iceland to teach at the Reykjavík College of Music, where he played a major role in establishing the department of music theory and composition. He also worked as a composer, pianist, critic and commentator for Icelandic broadcasting. As president of Musica Nova he pioneered the programming of avant-garde music in Iceland at a time when much of the core classical repertory had still not been performed. He has also been secretary and president of the Society of Icelandic Composers, artistic director of the biennial Reykjavík International Festival of the Arts, and founder member of the Iceland Music Information Centre. He was a creative associate of the Center for Creative and Performing Arts, Buffalo, New York (1973), a guest of the Center for Music Experiment at the University of California, San Diego (1975), and a lecturer at the Shanghai Conservatory (1995).

One of the most prominent of Icelandic composers, Sigurbjörnsson writes prolifically in a wide range of genres, though not large-scale opera and symphonies, and in many styles, frequently writing functional, small-scale works tailored to the requirements of specific occasions and the skills of specific performers. He has always striven to do more with less: to assimilate seemingly unrelated elements using minimal material, often developed through motivic elaboration, clarity of structure and virtuoso performing techniques. Internationally known also as a pianist, he has given many performances of his own works both at home and abroad, and has been an energetic supporter of the music of both his contemporaries and his pupils, many of whom are now represented in the succeeding generations of Icelandic composers.

Sikhra, Andrey Osipovich. *See* SYCHRA, ANDREY OSIPOVICH.

Siklós [Schönwald], **Albert** (*b* Budapest, 26 June 1878; *d* Budapest, 3 April 1942). Hungarian educationist, musicologist, composer and cellist. He began to compose at the age of six and started piano and theory lessons the next year. At the Hungarian Music School he studied the cello, composition and chamber music. He made his début as a performer in 1891 and played his own Cello Concerto in 1896. Then he studied composition with Koessler at the National Hungarian Royal Academy of Music until 1899, while reading law at the University of Jurisprudence, Budapest. He was a cellist in the Budapest PO (1901–4) and a teacher at the Ernő Fodor School of Music, (1905–19) and at the High School of Musical Art (from 1910). He was appointed professor at the High School in 1913, and from 1919 until his death taught one of the composition classes there, the other being taken by Weiner, then Kodály from 1921. The name Siklós was adopted by the composer in about 1901.

Siklós's importance rests primarily on his educational work: his publications provide a complete course for professional music education, and they were the only Hungarian textbooks available for advanced study. He edited the music journal *A zene* from 1928 to 1938 and wrote a large quantity of criticism, essays and popular introductions. In his music he was less independent and original; he remained faithful to the German Romantic

tradition, although in his later years he was influenced by Debussy. A thorough knowledge of resources was evident in everything that he wrote. He followed neither Liszt nor Bartók in his treatment of national material, but was interested rather in Hungarian music of the Baroque period, as demonstrated explicitly in his numerous transcriptions.

JOHN S. WEISSMANN

Sikora, Elżbieta (*b* L'viv, 20 Oct 1943). Polish composer. A graduate in sound engineering from the Warsaw Academy, she completed her studies in electronic music with Schaeffer and Bayle in Paris (1968–72) and studied computer music with John Chowning at Stanford. Between 1972 and 1974, back in Warsaw, she was a composition pupil of Baird and Z. Rudziński. Together with Knittel and Michniewski, in 1973 she founded the composers' group KEW. In 1981 she moved to France, and in 1985 was appointed to teach electro-acoustic music at the conservatory in Angoulême. She has created pieces at the Groupe de Recherches Musicales, at IRCAM and Radio France. Among her awards are first prize at the GEDOK (Mannheim) competition in 1982, for *Guernica* and second prize for the chamber opera *Ariadne* at the 1978 Weber Competition (Dresden).

Sikora has written mostly for the stage, radio and electronic media. In the operas the often multilingual texts are as much spoken as sung, and her generally rhapsodic approach to drama incorporates a range of musical idioms and references. Among her most representative electro-acoustic works are *Głowa Orfeusza II* ('The Head of Orpheus II', 1982) and the first and second suites. Elsewhere, Sikora's music contains expressionistic qualities in the early songs; energetic instrumental scenes in the orchestral music; and a tendency towards neo-classicism in works such as the String Sextet (1993).

ADRIAN THOMAS

Sikorski. German firm of music publishers. In 1935 Hans Sikorski (*b* Posen [now Poznań], 30 Sept 1899; *d* Bad Wiessee, 22 Aug 1972) founded a drama and music publishing concern in Berlin whose main publications were popular and entertainment music. In 1948 Hamburg became the headquarters of the group, which grew to more than 20 subsidiary firms in ten countries. Publications cover a wide range of music including operas,

symphonies, chamber music, operettas and musicals. The firm has published works by such contemporary composers as Theodor Berger, Nico Dostal, Kabalevsky, Kelemen, Milko Khachaturian, Künnecke, Mark Lothar, Prokofiev, Shostakovich and Wellesz. Early in 1970 Sikorski began to place greater emphasis on contemporary music; important representatives of the Russian avant garde, such as Edison Denisov, Gubaydulina, Kancheli, Pärt, Schnittke and Ustvol'skaya, were now joined by a number of young German composers such as Ulrich Leyendecker, Jan Müller-Wieland, J.-P. Ostendorf, Peter Ruzicka and Manfred Trojahn. It is also noted for its publications of school music, methods for guitar, recorder, violin and other instruments, and music literature. Today Sikorski is co-managed by Hans Sikorski's son and daughter, Hans Sikorski (*b* Marburg an der Lahn, 10 March 1926) and Dagmar Sikorski-Grossmann (*b* Hamburg, 12 March 1956).

THEODOR WOHNHAAS

Sikorski, Józef (*b* Warsaw, 1813; *d* Warsaw, 4 May 1896). Polish critic and composer. Between 1843 and 1858 he wrote music reviews and articles, mainly in the monthly *Biblioteka Warszawska*. In 1849 he appealed to the ecclesiastical authorities for the church archives to be opened so that he could examine the collection of Polish music. In the following year he began work on the sources, assembling much valuable material which was later useful to Poliński, Chybiński and others. He founded the first significant Polish musical periodical, the weekly *Ruch muzyczny*, in April 1857; it appeared regularly until December 1862. From 1866 to 1874 he was editor of the daily *Gazeta Polska*, and in 1870 he helped to found the Warszawskie Towarzystwo Muzyczne (Warsaw Music Society). After 1874 he withdrew almost completely from musical and literary activities. Sikorski was a conscientious and objective critic and an advocate of a national school of Polish music. He also composed about 20, mainly unimportant, works for piano, solo voice and chorus.

WORKS

Radość [Joy] (cant., K. Brodziński), 1845; Dzwon [The Bell] (cant., J.D. Minasowicz, after F. von Schiller); Mass, chorus, org; Alpuhara (A. Mickiewicz), chorus, pf; Psalm Dawidowy, chorus, pf, 1887; songs; pf pieces

STEFAN JAROCIŃSKI

Sikorski, Kazimierz (*b* Zürich, 28 June 1895; *d* Warsaw, 23 July 1986). Polish composer and teacher. He studied composition with Szopski at the Chopin High School of Music in Warsaw (to 1919) as well as graduating from the philosophy department of Warsaw University (1921). Simultaneously, he studied musicology with Chybiński at Lwów University. He furthered his musical studies in Paris with Nadia Boulanger (1925–7, 1930) before returning to Poland to take up a series of important teaching posts in Łódź, Poznań and Warsaw; he was rector of the Warsaw Academy of Music from 1957 to 1966. He served as president of the Union of Polish Composers (1954–9) at a time of great political and cultural change in Poland. He was awarded many state prizes, including two from the Polish Composers' Union in 1951 and 1975.

Although his early works, like the String Sextet, show the influence of German late Romanticism, his period in Paris resulted in an abiding attachment to the clarity and vivacity of the French neo-classicists. This was supported by traditional craftsmanship, especially in his harmonic and contrapuntal language, and a capacity for intense expressivity in slow tempos. Although he rarely pushed forward stylistic boundaries, his contribution to the concerto genre is notable and the six symphonies are a just measure of his steadfast compositional achievements. Sikorski's contribution to the amateur choral movement and to the resurrection of 19th-century Polish masterpieces was typically altruistic. His lasting legacy was as the exceptional teacher of many of Poland's future composers and musicians, among them Bacewicz, Baird, Kisielewski, Krauze, Krenz, Maciejewski, Malawski, Palester, Panufnik, Serocki and his own son TOMASZ SIKORSKI.

ADRIAN THOMAS

Sikorski, Tomasz (*b* Warsaw, 19 May 1939; *d* Warsaw, 14 Sept 1988). Polish composer and pianist, son of KAZIMIERZ SIKORSKI. He studied composition with his father and the piano with Zbigniew Drzewiecki at the Academy of Music in Warsaw (1956–62). He also studied in Paris (1965–6) and worked at the Columbia-Princeton Electronic Music Center, New York (1975–6).

Tomasz Sikorski cut a somewhat isolated figure in Polish music during the cultural turmoil after 1956. He rapidly established his own voice – introverted, often tense and bleak, and deeply influenced by his readings in philosophy. The writings of certain authors – Heidegger, Kafka, Kierkegaard and Beckett included – fuelled his existential outlook, which manifested itself in the sense of ritual, reductive musical ideas and restricted timbral palette.

His music is concerned with motivic fragments (usually chordal, often iambic), repeated and marginally developed; *Sonant* for piano (1967) is especially uncompromising in this regard. In works for two or more instruments or voices he establishes an almost passive dialectic between the periodic fragments and a subdued continuum elsewhere in the texture. His harmony is often based on the tritone but sometimes, as in *Homofonia*, on combinations of triads. Sequences of events rarely develop, except in the larger ensemble works (i.e. *Concerto breve*, *Sequenza I* and *Music in Twilight*), though many have a perceptible coda, if not closure. His preference for his own instrument was lifelong, alongside wind (usually brass) and metal percussion, while he returned to string sonorities during the 1980s. His distinctive soundscape was not minimal in the conventional sense: his obsessive contemplation on fractured ideas was an uncompromising commentary on the madness of the world around him.

ADRIAN THOMAS

Siku [sicu, sico]. South Andean PANPIPES.

Sikuri [sicura]. A type of PANPIPES of the Bolivian altiplano, used by Aymara and Quechua musicians among Titicaca immigrants to La Paz and Irpo Chico, a village 30 km south of La Paz.

Silas, Edouard [Eli] (*b* Amsterdam, 22 Aug 1827; *d* London, 8 Feb 1909). Dutch organist, pianist and composer. He was taught by Neher, a member of the Mannheim court orchestra, and made his first public appearance in Amsterdam in 1837. He continued his piano studies in Frankfurt with Louis Lacombe from 1839 and in Paris with Kalkbrenner from 1842, later entering the Conservatoire where his teachers were François Benoist for the organ and Matthäus Nagiller and Halévy for composition; in 1849 he won a *premier prix* for organ playing, competing with Saint-Saëns and Jules Cohen. In 1850 he moved to England and after playing first in Liverpool made his London début on 21 May. He took the post of organist at the Roman Catholic chapel in Kingston upon Thames and soon established himself as a teacher. He was a friend of Berlioz and at the Crystal Palace on 22 March 1852 played the piano under his direction in Beethoven's Triple Concerto. In 1858 he composed a 'sacred drama' *Joash* with words by George Linley, which was dedicated to Berlioz and first performed in 1863 at the Norwich Triennial Festival; it combines the oratorio tradition represented by Mendelssohn with the style of French grand opera. His first symphony (1852)

was performed in London in April 1863, repeated the following year and later published; a Fantasia and an Elégie, both for piano and orchestra and dedicated to Anton Rubinstein, were played in London in 1865 and 1873 respectively and in 1866 his Mass in C major op.62 for four voices and organ won a prize in an international competition of sacred music held in Belgium. His other published works include many light polyphonic organ pieces, dances, impromptus and nocturnes for piano, chamber music, and vocal works, both sacred and secular; he also wrote a burlesque symphony, entitled *Mr Punch's Musical Recollections* (1856–66). A treatise on musical notation remained unpublished, but his essay on harmony was printed in London in 1885. For many years he taught harmony at the GSM and the London Academy of Music.

CHRISTOPHER SENIOR

Silbato (Sp.). *See* WHISTLE.

Silbenstrich (Ger.). A feature of medieval modal notation. *See* STRICH.

Silber (Franck), Euchario (*fl* late 15th century). German printer from Würzburg, active in Rome. First printer of music in a drama (*see* PRINTING AND PUBLISHING OF MUSIC, §I, 2). His son Marcello published music in collaboration with ANDREA ANTICO.

Silbermann. German family of organ builders and instrument makers. Two distinct lines of organ building emanating from Alsace and Saxony were established, headed by Andreas Silbermann and his brother Gottfried respectively. All the members of the family also made string keyboard instruments.

1. Organs, Alsace: Andreas, Johann Andreas and brothers. 2. Organs, Saxony: Gottfried Silbermann. 3. String keyboard instruments: (i) General (ii) Harpsichords (iii) Spinets (iv) Clavichords (v) Pianos.

1. ORGANS, ALSACE: ANDREAS, JOHANN ANDREAS AND BROTHERS. The Alsace branch of the family was headed by Andreas Silbermann (*b* Kleinbobritzsch, nr Frauenstein, Saxony, 16 May 1678; *d* Strasbourg, 16 March 1734). The son of a master joiner, he learnt the joiner's trade from George Lampertius in Freiberg from 1691 to 1694. It is not known who taught him to build organs. In 1699 he was in Alsace, where he renovated the Baldner organ in Bouxwiller; he then worked for the Strasbourg organ builder Friderich Ring (1666–1701). Andreas finally settled in Strasbourg in 1701, receiving citizenship on 15 March 1702. In 1703 he and his younger brother Gottfried (i) (whom he had trained himself) built an organ for Ste Margarethe, Strasbourg. From 1704 to 1706 he worked with François Thierry in Paris, 'in order to perfect himself yet further in the French taste'. After returning to Strasbourg he worked first with Gottfried, building organs for the Collegium Wilhelmitanum in 1706 and the church of St Nicolas in 1707; when Gottfried returned to Saxony in 1708 Andreas continued to run his workshop on his own. Major commissions now began to come his way, such as for the church of Marmoutier Abbey (1709–10), Basle Cathedral (1711) and Strasbourg Cathedral (1714–16; three manuals, 39 stops). The Strasbourg Cathedral instrument was his largest organ; for this he retained the case built in 1491 by Friedrich Krebs. Louis Marchand played it on his way to Dresden in 1717. Andreas Silbermann built 35 organs in total (including nine positives) in Alsace, Baden and Switzerland. Many of his instruments were altered or destroyed later. The organs of Marmoutier and Ebersmünster (1731–2) are by far the best preserved of his works. Those built for the Dominican church, Colmar (1726; now in Niedermorschwihr), Altorf, near Molsheim (1729–30), St Matthieu, Colmar (1732), and Rosheim (1733) are partially preserved, as is the positive in the Château des Rohan in Strasbourg.

Andreas tended towards the French style of organ building, using French scaling. His dispositions also followed French principles, incorporating the three typical groups of *plein jeu*, *jeu de tierce* and *grand jeu*. However, he also took local customs into account, e.g. in his use of the 16′ pedal stop, which was always situated behind the lower case, and the use of basic stops such as Viola da gamba 8′ or 4′ in his early organs. Typically, his cases have three towers in the *Hauptwerk* and two in the *Rückpositiv*. The pitch of his organs varied between Cornet-Ton (a semitone higher than the modern pitch standard of a′ = 440) and deep French pitch (a whole tone lower than modern pitch). His manuals had compasses of 48 or 49 notes, and his pedals 12 or 13, 19 or 20, or 24 or 25 notes. Andreas Silbermann corresponded with Johann Christoph Egedacher in Salzburg, and with his brother Gottfried.

Andreas trained his sons as organ builders. The most prolific was Johann Andreas Silbermann (*b* Strasbourg, 24 June 1712; *d* Strasbourg, 11 Feb 1783), who learnt his trade from his father, and helped to build the last of Andreas's organs. He took over the business after his father's death, and continued building instruments in Andreas's manner, while developing a new form of case with a tripartite central rank. In 1741, after building an organ for St Thomas, Strasbourg, he spent six months on a study tour of Germany, most notably visiting his uncle Gottfried, whom he helped with the building of the organ in Zittau. Under Gottfried's influence, Johann Andreas gradually developed his own style. He built two three-manual organs with an *Oberwerk* on the model of Gottfried's instruments, for the Neue Kirche (now Temple Neuf), Strasbourg (1749), and for St Blasien Abbey, Baden (1774). These two organs did much to establish his reputation. His later organs have higher Mixtures, including a Sifflet 1′. The Echo, divided into separate choruses, is complemented by a bass section with a Fagott 8′. He built 57 organs in total in Lorraine, Baden and Switzerland, including two positives. To some extent Johann Andreas Silbermann achieved a synthesis between the French and German styles of organ building. His major works in the Neue Kirche, Strasbourg, and St Blasien Abbey are now destroyed, and most of his other organs have undergone alteration. Those partially preserved are the organs in St Thomas, Strasbourg (1740–41), Guebwiller (1745; now in Wasselonne), Saint Quirin (1746), Soultz-Haut-Rhin (1750), Arlesheim (1761; see illustration), Châtenois (1765), Ettenheimmünster (1769), Blodelsheim (1779), Molsheim (1781) and Gries (1781). His early organs were tuned to French pitch; after 1752 he preferred Italian concert pitch (a semitone lower than modern pitch). Most of his early instruments had 49 notes in the manuals, those from 1766 onwards had 51. The pedals had 13, 20 or 25 notes. The instruments tended towards equal temperament. On his visit to Strasbourg in 1778 Mozart gave public performances on Johann

Organ by Johann Andreas Silbermann, 1761, at Arlesheim Cathedral

Andreas Silbermann's organs in the church of St Thomas and in the Neue Kirche.

Johann Andreas was also well known as a writer and antiquarian. He left useful notes on the building of organs in documents now known as the Silbermann Archive, and corresponded with scholars and organ builders of note such as K.J. Riepp. He was also a talented graphic artist and illustrator, and a member of the Strasbourg City Council.

Johann Andreas worked with his younger brothers Johann Daniel (i) (1717–66), Gottfried (ii) (1722–62) and Johann Heinrich [Jean Henry] (1727–99). Johann Daniel also made mechanical musical instruments. In 1752 he joined his uncle Gottfried in Freiberg and became his sole heir. He was also organist at the Neue Kirche in Strasbourg, and composed several works. Gottfried (ii) was also a painter, while Johann Heinrich specialized in the building of stringed keyboard instruments. Johann Andreas's sons Johann Daniel (ii) (1745–70) and Johann Josias (1765–86) were also organ builders. Johann Josias ran the workshop after his father's death. He was succeeded by the firm's journeyman (Johann) Conrad Sauer (i) (1735–1802), his son (Johann) Conrad Sauer (ii) (1775–1828) and grandson Théodore (*b* 1806; *d* after 1863). Subsequently both George Wegmann (*b* 1795; *d* after 1857) and Martin Wetzel (1794–1897) described themselves as successors to the organ-building firm of Silbermann.

The organs made by the Strasbourg branch of the Silbermann family are notable for the very high quality of their craftsmanship and their use of the best material. Andreas and Johann Andreas valued simplicity in the design of the instruments and their actions, solidity in the construction of wind-chests and cases, rational uniformity of scaling, and efficient sound production. These almost legendary qualities in their work left a permanent mark on the organs of the Upper Rhine area.

2. Organs, Saxony: Gottfried Silbermann. The younger brother of Andreas, Gottfried Silberman (i) (*b* Kleinbobritzsch, 14 Jan 1683; *d* Dresden, 4 Aug 1753) built most of his organs in Saxony. In 1701 he went to Strasbourg where he was trained by his brother and worked with him. During Andreas's absence in Paris (1704–6) Gottfried probably took charge of the workshop. He returned to Saxony in 1710, building an organ in Frauenstein, and in the same year he was commissioned to build the organ of Freiberg Cathedral (completed 1714; three manuals, 44 stops; extant, *see* Organ, Table 24). Freiberg remained his home and the place from which he worked for the rest of his life. In 1723 Elector Friedrich August granted him the title of court and *Land* organ builder. Of his colleagues and pupils, Joachim Wagner and Zacharias Hildebrandt were outstanding for their own organ building. The latter supervised the construction of Silbermann's last and greatest organ, that in the Hofkirche, Dresden, completing it after his master's death. Silbermann was acquainted with a number of famous musicians including J.S. Bach and his son Wilhelm Friedemann, Bach's pupil Johann Ludwig Krebs, Johann Kuhnau and Johann Georg Pisendel. Johann George Silbermann (*b* Frauenstein, 19 May 1698; *d* Freiberg, 1 Sept 1749), the son of a half-brother of Gottfried and Andreas, was also an organ builder. He was trained by Gottfried and worked with him, occupying a prominent position in the Silbermann workshop.

Gottfried built 46 organs in central Germany, including: Sophienkirche, Dresden (1718–20; Unda maris 8′ added by Silbermann's colleague David Schubert in 1747); Georgenkirche, Rötha (1718–21; extant); Marienkirche, Rötha (1721–2; extant); Reinhardtsgrimma (1729–31; extant); Frauenkirche, Dresden (1732–6); Petrikirche, Freiberg (1733–5; extant); Ponitz (1734–7; extant); Grosshartmannsdorf (1738–41; extant); Johanniskirche, Zittau (1738–41); Schlosskapelle, Burgk (1739–43; extant); Nassau, near Frauenstein (1748; extant); Hofkirche, Dresden (1755; three manuals, 47 stops; reconstructed by Gebrüder Jehmlich, 1967–71, with restoration of parts destroyed in air raids, including the front and bellows). His work is characterized by his consistent and programmatic building of certain types, the easily surveyed design of his instruments, and the rationally standardized construction of the details. His specifications fall into five categories: positives and small organs based on Prinzipal 4′ or 2′, single-manual organs based on Prinzipal 8′ in the manual; two-manual organs without a manual 16′, two-manual organs with a manual 16′, organs with three manuals. The subsidiary manuals were built as *Oberwerk*, and sometimes, in his two-manual organs without a 16′ manual, as *Hinterwerk*. His three-manual organs also have a *Brustwerk*. Only his three-manual organs have a pedal in the nature of a *Werk*: in smaller instruments it is confined to the bass function. The compass of the manuals is *CD* to *c‴* or less frequently *d‴*, the pedal extends from *CD* to *c′*.

The voicing of his pipes is very powerful by today's standards, with high wind pressure (the Freiberg Cathedral organ originally had 97 mm pressure for the manuals and 109 mm for the pedal). The tuning of most of his organs was originally between *a′* = 460 and *a′* = 465

(*Chorton*), or higher in some of the early organs. The organ of the Sophienkirche in Dresden and several later instruments were tuned to *Cammerton* (between *a′* = 410 and *a′* = 414). Silbermann used a mean-tone temperament that was regarded as controversial by his contemporaries: according to measurements from the Freiberg Cathedral organ, originally nine 5ths were tempered smaller than pure by one-fifth of the Pythagorean comma on average; the C♯ minor/E♭ minor and E♭ minor/B♭ minor 5ths were pure; the wolf 5th was set at G♭ minor/D♯ minor.

Gottfried Silbermann is regarded as one of the central figures in the history of organ building. Even at the beginning of his career, his masterly realization of his concept of the organ, an individual synthesis of the French tradition of Alsace and the Saxon tradition, placed him in the forefront of the leading makers of his time. His achievements were seen as models, and to this day they continue to set standards and inspire organ builders.

3. String keyboard instruments.

(i) General. In addition to building organs, all the members of the Silbermann family were trained to make string keyboard instruments ('Claviere'), though the two most active in this regard were Gottfried in Freiberg and his nephew Johann Heinrich (Jean Henry) in Strasbourg. A number of harpsichords, spinets, clavichords and pianos survive. Gottfried is also credited with the invention of the Cembal d'amour (although no surviving instrument has yet been found), for which he obtained a royal patent from Augustus the Strong in 1723. Adlung, however, claimed that its inventor was in fact the 'berühmte Herr Silbermann aus Strassburg' (1768). Gottfried also built all of Hebenstreit's pantaleons, until they quarelled in 1727.

Whereas the organs are recognizable as products of either the Strasbourg or the Freiberg workshop, many of the string keyboard instruments are neither signed nor dated, and they all share the same stylistic origin. There are enough instruments with Johann Heinrich's printed labels inside, and enough pianos with Gottfried's handwritten signature under the soundboard (and are on the balance rail of his only surviving clavichord) to be able to distinguish, by analogy, the maker of the others. Nonetheless, the general conception and techniques of both Alsatian and Saxon workshops show so many similarities that identification is not always easy. The most accurate way of establishing the workshop of origin is by identifying the unit of measurement used for string lengths and case dimensions: the Strasbourg unit was 1 inch = 24 mm (except for clavichords), whereas Gottfried's unit is 1 inch = 23 mm (except for his Hammerflügel). It is also clear that Gottfried Silbermann's pianos were designed in Strasbourg, though built in Saxony; conversely, Johann Heinrich's five-octave, unfretted clavichords were constructed in Strasbourg after a Saxon model. (The sharing of information between the Strasbourg and Freiberg workshops was kept secret within the family, although Adlung had his suspicions concerning the origins of Gottfried's pianos.) Thus there was really only one Silbermann 'school' comprising the two workshops.

The cases of all the Strasbourg instruments are made of rather thin walnut (4–8 mm for harpsichord bentsides) and oak. The undersides are made of pine. All Silbermann soundboards are of spruce with stained walnut bridges (with the exception of the bridges of Gottfried's pianos, which are unstained). The framing of each of Johann Heinrich's instruments is adapted from a single basic principle. Gottfried used ivory for the facings of the sharp keys in all his instruments; Johann Heinrich only used it in his harpsichord and pianos (otherwise he used bone).

Silbermann string keyboard instruments were all tuned in *hoher Cammerton* (*a′* = *c*415), with the exception of one of the harpsichords from Andreas's workshop (now in the Museo Municipal de Música, Barcelona, a′ = *c*392). Two of Gottfried's pianos had keyboards which transposed down a semitone, from *hoher* to *tiefer Cammerton* (*a′* = *c*415/392).

(ii) Harpsichords. The harpsichords (all two-manual) stem from the French 17th-century tradition; of the four surviving instruments, two are from the workshop of Andreas Silbermann (now in the Musée de la Musique, Paris, and the Museo Municipal de Música, Barcelona), one from Gottfried's workshop (Musikinstrumenten-Museum, Staatliches Institut für Musikforschung, Berlin) and one from the workshop of Johann Heinrich (Musée Pyrénéen, Lourdes). The Paris instrument has a compass of *C*–*e‴*; all the others have *F′*–*f‴*. They each have two 8′ stops and one 4′, and all originally had a dogleg jack (with the exception, perhaps, of the Barcelona instrument). The 4′ stop plucks near the soundboard in the Berlin instrument, and between the two 8′ stops in the others. The harpsichords from Andreas's workshop have a buff stop and their soundboards are painted *à tempera*. The soundboard roses are made of parchment; that of the Berlin instrument is cut with an 'S'.

(iii) Spinets. The surviving spinets are all by Johann Heinrich. It appears that he built his instruments in small series at any rate, the spinets are all built according to the same pattern, wing-shaped or 'Zenti-form', with a compass of *F′*–*f‴*, and constructed using the Strasbourg unit of measurement. Examples are preserved in Paris (private collection); the Kirschgartenmuseum, Basle; Rastatt (private collection; signed, 1785); the Bachhaus, Eisenach (two instruments; signed, but not dated); the Germanisches Nationalmuseum, Nuremberg (signed, 1767); the Musikinstrumentensammlung, Universität Erlangen; and the Musikinstrumenten-Museum, University of Leipzig.

(iv) Clavichords. All but one of the surviving clavichords are by Johann Heinrich Silbermann; most are unfretted, with a compass of *F′*–*f‴*, and are modelled on a Saxon design using the Saxon unit of measurement. They are preserved in the Musée de la Musique, Paris; the Gemeentemuseum, The Hague; the Musikinstrumenten-Museum, Staatliches Institut für Musikforschung, Berlin; and the Germanisches Nationalmuseum, Nuremberg. His single surviving fretted clavichord is in the René Prunières Collection, Chaumontel. Its compass is *G′A′*–*d‴*; the original fretting has been altered. There is also an unfretted clavichord (?1723), with a compass of *C*–*e‴*, by Gottfried, in the Musikinstrumentenmuseum, Markneukirchen. One of Gottfried's clavichords was the prized possession of C.P.E. Bach for almost 50 years.

(v) Pianos. All of the surviving pianos have actions copied from Bartolomeo Cristofori's invention; the string lengths are measurable in the Strasbourg unit. Three examples by Gottfried are preserved at the Schloss Sanssouci, Potsdam (1746; compass *F′*–*d‴*), the Neues Palais, Potsdam (?1749; *F′*–*e‴*), and the Germanisches Nationalmuseum, Nuremberg (1749; *F′*–*e‴*). They each

have a 'Cembalo-Zug' (harpsichord stop) consisting of thin pieces of ivory rattling slightly on top of the strings. The dampers may be raised throughout the range. The Neues Palais, Potsdam, and Nuremberg instruments, which are both provided with a transposing device, may also be played *una corda*. Johann Heinrich abandoned the *Cembalo-Zug* and the transposing keyboard, but retained the *una corda*. Two instruments by him survive, in the Musikinstrumenten-Museum, Staatliches Institut für Musikforschung, Berlin (1775) and a private collection, Venice (1770s); both have a compass of *F'–f'''*. There is also a *Tafelclavier* by Johann Heinrich, now in the Augustiner-Museum, Freiburg im Breisgau (1789).

Silbote. A large duct flute from the Basque region, also called *txistu aundi*. *See* PIPE AND TABOR.

Silcher, (Philipp) Friedrich (*b* Schnait, Württemberg, 27 June 1789; *d* Tübingen, 26 Aug 1860). German composer and folksong collector. He was taught music first by his father and later by N.F. Auberlen, the organist at Fellbach (near Stuttgart), who trained him to be a teacher and gave him a thorough musical education. In 1806 he became a private tutor in Schorndorf and from 1809 he taught at a girls' school in Ludwigsburg. A meeting with Weber decided him on a career in music. He settled in Stuttgart in 1815, giving private lessons and continuing to study the piano and composition with Konradin Kreutzer and Hummel. After composing a cantata for the University of Tübingen (celebrating the tercentenary of the Reformation) Silcher became the university's director in 1817 and a teacher at the Evangelical College. He founded the Akademische Liedertafel in 1820 and the Oratorienchor in 1839. The university conferred an honorary doctorate on him in 1852, and on his retirement in 1860 he was awarded the Knight's Cross of the Order of Peace.

Silcher is known primarily for his research on folksongs. He met Pestalozzi in 1816, was profoundly influenced by his ideas and, working closely with Hans Georg Nägeli, became one of the leading promoters of popular musical education. Folksong was, in their view, the most suitable genre that the general public could be encouraged to perform. Choral societies and smaller domestic groups were formed, and the cause of school music was fostered. Silcher collected and arranged folksongs from Germany and other countries. He also composed some 250 songs modelled after Mozart, Weber and Mendelssohn but folklike in style, and prepared some practical editions of chorales. A critical edition of his works was published on the centenary of his death, and a Silcher archive (with research facilities) and museum were opened in Schnait in 1956.

Silesia. Region of Central Europe, now part of the CZECH REPUBLIC.

Silesian National Theatre (Cz. Slezské Národní Divadlo). Opera and drama company founded in OPAVA in 1945.

Silesius, Angelus. *See* ANGELUS SILESIUS.

Silesu, Lao [Stanislao] (*b* Samassi, Sardinia, 5 July 1883; *d* Paris, 12 August 1953). Italian composer and pianist. He studied with his father Luigi, organist of Iglesias Cathedral, and with Luigi Allione, and revealed his creative

bent at an early age, composing waltzes and mazurkas while still a child. In 1904 he moved to Milan, where he studied harmony and counterpoint with Carlo Gatti and, at the conservatory, with Luigi Mapelli and Amintore Galli. He completed his studies in London with Guy Weitz and in Paris, where he settled in 1907, with d'Indy at the Schola Cantorum. In Paris he established himself in the world of the *café-chantant* as a composer of dances and *mélodies* which he himself performed on the piano as a soloist, in chamber groups, or accompanying famous singers such as Harry Fragson and Félix Mayol. He was on friendly terms with well-known literary and musical figures such as D'Annunzio, Puccini, Cortot and Caruso, who expressed a high opinion of his music.

Silesu was a very prolific composer (his output amounts to around 600 works), writing for piano, orchestra and chamber ensembles. He worked in a variety of genres, from *mélodie* for voice and piano to opera and operetta. His serious work has affinities with Romantic trends and recalls Franck; at the same time it shows an attempt to take on board contemporary developments in French music. Silesu was also interested in Sardinian traditional music, the character of which he expressed in various compositions.

BARBARA MARIA ELTRUDIS

Silja, Anja (*b* Berlin, 17 April 1940). German soprano. She studied with her grandfather, Egon van Rijn, making her début in 1955 as Rosina at Brunswick, where her roles included Micaëla, Zerbinetta and Leonora (*Il trovatore*). In 1959 she sang the Queen of Night at the Aix-en-Provence Festival. In 1960 Wieland Wagner engaged her for Bayreuth as Senta; during the next seven years (as Elsa, Elisabeth, Eva, Freia and Venus) she became the most controversial singing actress at postwar Bayreuth. Her close association with Wieland Wagner continued at Brussels, Cologne, Stuttgart and Frankfurt, where she sang Isolde, Brünnhilde, Leonore, Lulu, Marie (*Wozzeck*), Renata (*The Fiery Angel*), Kát'a, Desdemona, Salome and Electra. She made her London début at Sadler's Wells (1963) with the Frankfurt Opera in *Fidelio*, which she also sang at her Covent Garden début in 1967; other Covent Garden roles included Cassandra (*Les Troyens*) and Marie. She made her American début as Salome in San Francisco (1968). At the Metropolitan (1972) she sang Leonore and Salome. Engaged at the Hamburg Staatsoper from 1974 to 1984, she created Luise (von Einem's *Kabale und Liebe*) in Vienna (1976). She sang Regan (Reimann's *Lear*) at San Francisco (1985), Emilia Marty (*The Makropulos Affair*) at Boston (1986), Lady Macbeth (1987) and Grete (*Der ferne Klang*) at Brussels (1988). At Glyndebourne she has sung the Kostelnička in *Jenůfa* (1989, returning in 2000) and Emilia Marty (1995), both of which were recorded on video. Silja is a performer of great magnetism, whose wholehearted stage portrayals are sung in a voice of arresting and individual timbre. She married the conductor Christoph von Dohnányi.

HAROLD ROSENTHAL/ALAN BLYTH

Sillet (Fr.). *See* NUT (i).

Sills, Beverly [Silverman, Belle] (*b* Brooklyn, NY, 25 May 1929). American soprano. Her first singing appearance was at the age of three on commercial radio. When she was 11 she began serious vocal studies with Estelle Liebling and she made her operatic début as Frasquita with the Philadelphia Civic Grand Opera Company in 1947. For a few years she worked with touring opera companies, gave lieder recitals in the Midwest, and sang with the San Francisco Opera. In 1955 she joined the New York City Opera and became the company's diva; but her full stature was not recognized until 1966 when she sang Cleopatra in Handel's *Giulio Cesare*. Her sensational success in this florid role (which she recorded) led to a series of bel canto revivals at the City Opera, including Donizetti's trio of Tudor queens, *Maria Stuarda*, *Anna Bolena* and Elizabeth in *Roberto Devereux*. Appearances in major European opera houses quickly followed, including the Queen of Night at Vienna (1967), Rossini's *Le siège de Corinthe* at La Scala (1969) and *Lucia di Lammermoor* at Covent Garden (1970). Her

Beverly Sills in the title role of Donizetti's 'Maria Stuarda'

Metropolitan Opera début, as Pamira in a new production of *Le siège de Corinthe*, was in 1975. She was general director of the New York City Opera from 1979 to 1989, and became chairman of the board of Lincoln Center for the Performing Arts in 1993.

Although a singer of secure and often brilliant technical accomplishment, Sills lacked the dramatic weight of a Callas or the sheer tonal beauty of Caballé and Sutherland, her principal rivals in this repertory. As a consequence the lighter, less dramatically commanding bel canto roles such as Lucia and Elvira (*I puritani*) seemed more suited to her voice and temperament. An excellent actress with an ingratiating and warm stage personality, she perhaps found her most congenial part in Massenet's Manon, of which she made a delightful recording.

Silva, Adelaide Pereira da (*b* Rio Clara, São Paulo, 5 July 1928). Brazilian pianist and composer. She studied the piano first with Nair de Souza and Hans Bruch and later with Dinorá de Carvalho, harmony and counterpoint with Oswaldo Lacerda and composition with Camargo Guarnieri. Although most of her career has been dedicated to performing and teaching, she has also been active in developing research into Brazilian folk music, at the Museu do Folclore in São Paulo. Some of her compositions, which are mainly instrumental and choral, have been published by Ricordi Brasileira (São Paulo), and a catalogue of her works was produced by the Brazilian Ministry of Foreign Affairs in 1977.

IRATI ANTONIO

Silva (Santisteban), Alfonso (de) (*b* Callao, 22 Dec 1903; *d* Lima, 7 May 1937). Peruvian composer. He studied the violin at the National Academy with Santé Lo Priore and Nello Cecchi and took piano lessons from Gerdes and José María Valle-Riestra. Mostly self-taught as a composer, he wrote lieder and short Romantic pieces from 1918 onwards. In 1921 he was awarded a grant to study at the Real Conservatorio de Música in Madrid with Del Campo, but he gave up his studies. The compositions he presented in concerts were well received, and in 1922 he travelled to Berlin and then Paris. However, in 1924 he returned penniless to Lima. After a concert of his pieces the following year, he returned to Europe, but promised government support did not materialize. One of Silva's rare high moments came when Viñes performed his Prelude no.1 (1928). In frustration he returned to Peru in 1931 and gave himself over to a bohemian existence and succumbed to alcohol.

Although exceptionally gifted, Silva did not manage to develop his full potential. The greater part of his work was written before he was 18. His eloquent songs, with their rich harmonic structure and concision, are particularly noteworthy. His most often performed composition for piano, *Poemas ingenuos*, was modelled on descriptive pieces by Schumann. The suite *Instantes* and *Canción amarilla*, both well orchestrated, show, like his *Preludio* for piano, a change in style towards an Impressionistic language and colour that is closer to Ravel. *Instantes* is considered the most important orchestral work of the 1921–46 period in Peruvian music.

J. CARLOS ESTENSSORO

Silva, Andreas de. *See* DE SILVA, ANDREAS.

Silva, António José da (*b* Rio de Janeiro, 8 March 1705; *d* Lisbon, 18 Oct 1739). Portuguese playwright of Brazilian birth. After his Jewish parents were arrested by the Inquisition in 1712 he was taken by relatives to Lisbon, where he grew up. Despite constant surveillance by the clergy he completed his studies at Coimbra University and became a respected lawyer, as well as engaging in literary and theatrical activities. In 1732 he obtained permission to present operas with life-size puppets at the Teatro dos Bonecos in the Bairro Alto during carnival. He produced seven operas based on his own plays in the five years to 1737, when, on the orders of the Inquisition, he was arrested and tried for sacrilegious libel. He was burnt at the stake in Lisbon's infamous auto-da-fé of 1739.

Da Silva's satirical style points to his familiarity with the writings of Cervantes and Molière. The two operas for which music is extant (in *P-VV*), *Guerras do alecrim e manjerona* (attributed to António Teixeira) and *As variedades de Proteu*, both dating from 1737, are akin to the German Singspiel, with spoken dialogue. Although da Silva's works were officially banned in Portugal (though performed there frequently in private), Ventura's newly established opera house in Rio de Janeiro produced his musical plays with great success after 1767.

MARY TÉREY-SMITH

Silva, Francisco da Costa e. *See* COSTA (i), (7).

Silva, Francisco Manuel da (*b* Rio de Janeiro, 21 Feb 1795; *d* Rio de Janeiro, 18 Dec 1865). Brazilian composer and conductor. He received his first music instruction from José Mauricio Nunes Garcia and sang in the choir of the royal chapel at Rio de Janeiro in 1809. Later he had lessons in counterpoint and composition from Sigismund Neukomm, who was in Rio from 1816 to 1821. As a singer at first and a cellist later, da Silva belonged to the orchestra of the royal (imperial after independence) chapel and chamber, directed by Marcos Portugal. With the abdication of Emperor Dom Pedro I (7 April 1831) the orchestra was dismissed. As a liberal da Silva wrote a hymn during the same year in commemoration of the abdication. This *Hino ao 7 de Abril* gained such popularity that it was adopted officially as the Brazilian national anthem (without lyrics) when the Republic was proclaimed in 1889. Under the reign of Dom Pedro II, da Silva became the most dynamic organizer of Rio's musical life. In 1833 he founded the Sociedade Beneficência Musical, whose goal was not only to promote musical activities but also to provide social services to its musician members. In 1834 he was appointed the regular conductor of the recently founded Sociedade Filarmônica, then composer of the imperial chamber (1841) and master composer of the imperial chapel (1842), whose orchestra he reorganized in 1843. Da Silva's most durable achievement was the foundation of the Rio de Janeiro Conservatory, officially created in 1847 and inaugurated a year later. He also participated in the creation of the Imperial Academy of Music and National Opera (1857), which promoted opera performance in Portuguese and the writing of operas by native composers.

WORKS

GERARD BÉHAGUE

Silva, Jesús Bermúdez. *See* BERMÚDEZ SILVA, JESÚS.

Silva, João Cordeiro da (*fl* 1756–1808). Portuguese composer. He may have studied in Naples but on 21 November 1756 he was admitted to the Irmandade de S Cecília, the musicians' union of Lisbon. In 1763 he was already organist and composer of the Real Capela da Ajuda, and the following year he started to receive a yearly salary of 240,000 réis from the royal theatres. He was praised in a letter from the director of the royal theatres to Jommelli dating from 1767, which also indicates that by then he was responsible for all operatic productions at the Lisbon court, including the adaptation of Jommelli's own operas for local conditions. In his own compositions he attempted to follow Jommelli's style as closely as possible. He may have replaced João de Sousa Carvalho after his retirement as music master to the princes. In 1808 he was earning 170,000 réis as first *mestre* to the future King João VI but

was considered too old to follow the royal family to Brazil. None of his dramatic works, which were all written for the Lisbon court, has received a modern revival.

WORKS
all first performed in Lisbon
dg – *dramma giocoso*
dm – *dramma per musica*

MANUEL CARLOS DE BRITO

Silva, José da Costa e. *See* COSTA (i), (16).

Silva, José de Santa Rita Marques e [Marques, José] (*b* Vila Viçosa, *c*1778; *d* Lisbon, 5 Feb 1837). Portuguese composer. After studying with Galão in Vila Viçosa, in 1802 he went to Lisbon where he became a Paulist friar and organist of the Paulists' church. He also took lessons in counterpoint from Baldi, on whose recommendation he was appointed organist of the royal chapel of Bemposta (Lisbon) in 1808. In about 1810 he briefly visited Rio de Janeiro, but returned to Bemposta, and after Baldi's death in 1816 succeeded him as *mestre de capela*. In 1819 he attempted to succeed Leal as *mestre de música* in the *seminário* (choir school) of Lisbon Cathedral, but the personal enmity of the school's inspector cost him a long delay and resulted in only a part-time appointment beginning 6 October 1820. In recompense he was allowed to hold the Bemposta chapel post concurrently until 1834, when as a partisan of the defeated Dom Miguel I he was excluded from further royal employment. During his last three years he composed for festivals celebrated privately by the Conde de Redondo and contributed piano pieces to the short-lived Lisbon music periodical, *Semanário filarmonico*. Although of an irascible temper, he was the teacher of the best musical talents in mid-19th-century Lisbon. His many religious compositions are fluent, brilliant in style and immediately effective, but lack depth.

WORKS
some duplication in MSS

8 masses; 5 Credos; Mag; 15 Matinas; 13 pss; 4 Misereres; 5 TeD; 4 hymns; 12 motets; Trezena de Santo António; Novena de Nossa Senhora da Conceição; mostly 4vv, org: all *P-La*

ROBERT STEVENSON

Silva, Luigi (*b* Milan, 13 Nov 1903; *d* New York, 29 Nov 1961). Italian cellist, naturalized American. He studied the cello with Arturo Bonucci at the Liceo Musicale in Bologna and composition with Respighi in Rome. After playing in theatre orchestras in Rome he was cellist of the Quartetto di Roma from 1930 to 1939, during which time he also taught at the Florence Conservatory. In 1933 he won the Boccherini Prize for young Italian concert artists. After emigrating to America in 1939 (he became an American citizen in 1945), Silva made his New York début on 5 April 1941 in a joint recital with Leopold Mannes; he, Mannes and the violinist Vittorio Brero formed the Mannes Trio in 1949. Silva was chairman of the cello and chamber music departments at the Eastman School of Music (1941–9) and taught at the Mannes College (1949–61), the Juilliard School (1953–61), the Yale School of Music (1951–8) and the Hartt School (1956–61). He transcribed for cello works by Paganini, Boccherini and other Italian composers, and edited Bach's suites for unaccompanied cello.

GENE BIRINGER

Silva, Manuel Nunes da (*b* Lisbon; *d* Lisbon, shortly before 24 July 1704). Portuguese theorist. He studied with João Álvares Frouvo and became a priest. In 1685, when his *Arte minima* was published, he was *mestre de capela* of S Maria Madalena, Lisbon, the church in which he was baptized, and was also teaching at the S Catarina choir school attached to the cathedral; when the second edition appeared in 1704 he still held these posts. From 1685 to 1704 he taught at the Lisbon college of the Ordem de Cristo, of which order he was a member; he was simultaneously *mestre de capela* of the Lisbon church of the order, Nossa Senhora da Conceição. He is known for his *Arte minima, que com semibreve prolaçam tratta em tempo breve, os modos de maxima, & longa sciencia da musica* (Lisbon, 1685, 3/1725). The five adjectives in the title are all puns on note values. Like António Fernandes in his *Arte de musica* (1626), Silva began with a section on polyphony (which had circulated in manuscript among his many pupils for 'a long time' before publication) and one of 44 pages on counterpoint; in the latter he cited Philippe Rogier and Géry Ghersem as his authorities for various disputed procedures. Plainchant is treated in the 52 pages of the third part. The work concludes with a 136-page alphabetically indexed 'Trattado das Explanaçoens' embracing the following topics: 'The excellences of music and how it should be used', 'Who invented and developed music', 'Musical definitions and distinctions', 'Signs, deductions, notes [of the hexachord], properties and mutations', 'Clefs, divisions and genera', 'Intervals', 'Modes', 'Figured music', 'Mensural music' and 'The many forms of music'. Coloration, which was still in use in 17th-century Spain and Portugal, remains a live problem throughout the treatise. Silva called the blackening of notes in ternary metre 'Himiolia'. Bowing to the authority of his teacher Frouvo he classed the 4th as a consonance. His other musical authorities range from Johannes de Muris, Francisco Tovar and Cerone to

Lorente. His ecclesiastical authorities include not only the Bishop of Faro, Jerónimo Osório (1506–80), but two other 'Portuguese', Popes Damasus I (*c*305–84) and John XXI (*c*1210–77), both of whom he credited with musical innovations. Despite such excessive patriotism he soon won sufficient esteem throughout the Iberian peninsula to be quoted as an authority along with Cerone in Jorge de Guzmán's *Curiosidades del cantollano* (Madrid, 1709).

ROBERT STEVENSON

Silva, Óscar da (*b* Oporto, 21 April 1870; *d* Leça da Palmeira, 6 March 1958). Portuguese composer and pianist. He studied in Oporto and Lisbon before leaving for Germany in 1892 to continue his piano studies. He was a pupil of Julius Ruthardt and Carl Reinecke at the Leipzig Conservatory, and of Clara Schumann in Frankfurt. Shortly afterwards, he embarked on a brilliant solo career, giving performances, of his own works especially, in various European cities. On returning to Portugal, he accepted a teaching position at the Oporto Conservatory. His opera, *Dona Mécia*, on a libretto by Júlio Dantas, was given its first performance at the Coliseum in Lisbon. Meanwhile, he continued his international career as a pianist in the USA, Africa and Brazil. He considered Brazil a second home, and lived there for 24 years, returning to Portugal only in 1951, at the invitation of the government, to compile and publish his works. Piano music dominates his output. His works for the instrument are often arranged in cycles: these include sets of character pieces (*Imagens*, *Dolorosas*, *Páginas portuguesas*), as well as bagatelles, waltzes and preludes. His musical language is essentially Romantic, combining the influences of Schumann, Chopin and Liszt with the spirit of 19th-century salon music. Some of his music dating from 1930 onwards shows greater harmonic daring, but he never became a modernist.

WORKS
(*selective list*)

Op: Dona Mécia, 1901

CRISTINA FERNANDES

Silva, Tristão da [Sylva, Tristan de, Tristano de] (*b* Tarazona; *fl* 1450–85). Spanish poet, theorist and musician active in Portugal. He worked at the court of Afonso V (reigned 1438–81), to whom he may have given musical instruction. His *Amables de musica* (lost), written by royal commission, seems to have included a theoretical component as well as songs. His theoretical views partly diverged from those of his friend Bartolomeus Ramis de Pareia, who discusses them in *Musica practica* (1482). Five of Silva's poems survive in Garcia de Resende's *Cancioneiro geral* (Lisbon, 1516/*R*).

ALBERT T. LUPER/MANUEL PEDRO FERREIRA

Silva Leite, António da. *See* LEITE, ANTÓNIO DA SILVA.

Silvani, Francesco [Valsini, Frencasco] (*b* Venice, *c*1660; *d* 1728–44). Italian librettist. He was an abbot; little else is known about his life. He issued his first two works (*Ottone il grande*, 1682, music by P. Biego and *Marzio Coriolano*, 1683, music by G.A. Perti), which are discussed in the *Mercure galant* of March 1683, under the anagram 'Frencasco Valsini'. Between 1691 and 1716 he produced librettos under his own name for various Venetian theatres almost every year. The title-pages of his librettos document that he served Ferdinando Carlo, Duke of Mantua, from 1699 to 1705. The duke granted Silvani his patent after Silvani wrote *L'oracolo in sogno* for a production in Mantua in June 1699, but it is not known how much time Silvani spent there. He was usually on hand for the Venetian productions of his works. He reached the height of his career in the years 1708–14 when he wrote for the Teatro Grimani a S Giovanni Grisostomo, the most important theatre in Venice.

Silvani's identification with reform librettists, such as Zeno, Pariati and Frigimelica Roberti, stems from his clearly motivated plots, elevated diction, and extensive passages of recitative. He occasionally borrowed from earlier literary works. *Armida abbandonata* (1707, music by Ruggieri) and *Armida al campo* (1708, music by Boniventi) are based on Tasso's *Gerusalemme liberata*, and *La pace generosa* (1700, music by M'A. Ziani) is indebted to Seneca's *Troades* ('The Trojan Women'). Two works are based on French neo-classical dramas: *I veri amici* (1712, music by A. Paulati) on Pierre Corneille's *Héraclius empereur d'Orient*, and *La costanza combattuta in amore* (1716, music by G. Porta) on Nicolas Pradon's *Statira*. For autumn productions he often wrote pastorals, suited to the nobles' return from *villeggiatura*. His carnival works, which are heroic, usually have historical characters, although the plots are not always historically founded. He reacted strongly to charges of plagiarism. In the preface to *L'innocenza giustificata* (1698, music by Vinaccesi), he declared it to be his policy to place his name on the title-pages of only those works that were entirely his own in invention, disposition and elocution. He pointed to *Il principe selvaggio* (1695, music by M.A. Gasparini) as a work that he wrote with

the advice and assistance of others; hence it does not bear his name on the title-page.

Silvani was fond of long, abstract titles; later productions often shortened the original title to a character's name. The high literary esteem Silvani's work enjoyed is clear from the publication after his death of 24 librettos in a collected edition, *Opere drammatiche del signor Abate Francesco Silvani* (Venice, 1744).

HARRIS S. SAUNDERS

Silvani, Giuseppe Antonio (*b* Bologna, 21 Jan 1672; *d* Bologna, 1727/8). Italian music publisher and composer. Son of the Bolognese music publisher Marino Silvani, he and his brother Matteo took over the business after their father's death in 1711. He became the sole owner probably in 1712, and certainly by 1716. Continuing his father's work he published compositions and treatises by Bolognese and Modenese musicians, including G.P. Colonna, Berardi, Arcangelo Corelli, Domenico Gabrielli, Bononcini and Attilio Ariosti, while extending his well-organised catalogue to include the works of younger Emilian composers such as Aldrovandini, Pistocchi, P.F. Tosi and Mazzaferrata. However, the publishing house of Silvani found itself in serious financial difficulties in 1723 and had to be mortgaged; evidently the firm was liquidated by 1727. The date of Silvani's death is reported in the index of the *Defonti della celebre Accademia de'Filarmonici di Bologna* as 1728. However, an index of the firm's printed works dating from 1727 mentions the heirs of G. Silvani, so his death probably occurred shortly before that date.

Silvani received his musical education from G.P. Colonna and in 1693 was admitted to the Accademia Filarmonica as a tenor. In 1697 he was *maestro di cappella* at the church of the Confraternita de' Poveri and from 1702 until his death he held the same post at S Stefano. Although most of his works, which are exclusively sacred except for two short secular cantatas, are in strict counterpoint for one or two choirs, he published several collections of well-crafted concerted music for voices and instruments in the Bolognese late Baroque style. Of his four known oratorios only the librettos are extant.

ANNE SCHNOEBELEN/MARC VANSCHEEUWIJCK

Silvani, Marino (*d* Bologna, 1711). Italian music publisher and editor. He began his career as a seller of books and music, trading 'at the sign of the violin'. He occasionally used the presses of the Bolognese printer GIACOMO MONTI, particularly for the anthologies of Bolognese music that he edited (*Sacri concerti*, 1668; *Nuova raccolta di motetti sacri*, 1670; *Canzonette per camera a voce sola*, 1670; *Scielta delle suonate a due violini, con il basso continuo*, 1680), and for several other publications in 1683–4. From at least 1665 until his death he also did his own printing. His music publications include both sacred and instrumental music by G.B. Bassani, Cazzati, Aldrovandini, Cherici, G.P. Colonna, his son Giuseppe Antonio Silvani, Corelli, Jacchini and Manfredini. He published at least three lists of his printed works in 1698–9, 1704 [?1701] and 1709 [?1707]. After his death his heirs continued the firm, publishing a reprint of Corelli's op.5 and G.A. Silvani's op.7 (both in 1711). Later the firm took the name of G.A. Silvani; its typographical mark was a basket of fruit and musical instruments, or a violin with the motto 'UTRElevet MIserum FAtum SOLitosque LAbores'.

ANNE SCHNOEBELEN

Silver [Silva], **Horace (Ward Martin Tabares)** (*b* Norwalk, CT, 2 Sept 1928). American jazz pianist, bandleader and composer. As a child he was exposed to Cape Verdean folk music performed by his father, who was of Portuguese descent. He began studying the saxophone and the piano in high school, when his influences were blues singers such as Memphis Slim and boogie-woogie and bop pianists, especially Bud Powell and Thelonious Monk. In 1950 Stan Getz made a guest appearance in Hartford, Connecticut, with Silver's trio, and subsequently engaged the group to tour regularly with him. Silver remained with Getz for a year, during which time three of his compositions, *Penny*, *Potter's Luck* (written for Tommy Potter) and *Split Kick*, were recorded by the band for the Roost label.

By 1951 Silver had developed sufficient confidence to move to New York, where he performed with such established professionals as Coleman Hawkins, Lester Young, Oscar Pettiford and Art Blakey. In 1952 he was engaged by Lou Donaldson for a recording session with Blue Note; this led to his own first recordings as a leader and to an exclusive relationship with Blue Note for the next 28 years. From 1953 to 1955 he played in a cooperative band called the Jazz Messengers which he led with Blakey. By 1956, however, he was performing and recording solely as the leader of his own quintet, while Blakey continued as leader of the Jazz Messengers.

Silver's music was a major force in modern jazz on at least four counts. He was the first important pioneer of the style known as hard bop, which combined elements of rhythm-and-blues and gospel music with jazz, influencing pianists such as Bobby Timmons, Les McCann and Ramsey Lewis. Second, the instrumentation of his quintet (trumpet, tenor saxophone, piano, double bass and drums) served as a model for small jazz groups from the mid-1950s until the late 1960s. Further, Silver's ensembles provided an important training ground for young players, many of whom (such as Donald Byrd, Art Farmer, Blue Mitchell, Woody Shaw, Benny Golson and Joe Henderson) later led similar groups of their own. Finally, Silver refined the art of composing and arranging for his chosen instrumentation to a level of craftsmanship as yet unsurpassed in jazz. He is a prolific composer, and one of very few jazz musicians to record almost exclusively original material; his work consistently combines simplicity and profundity in a rhythmically infectious style which, despite its sophistication, sounds completely natural. Several of his compositions have become jazz standards.

From the mid-1960s Silver wrote lyrics as well as music for a series of three quintet recordings, *The United States of Mind*, and recorded a number of albums featuring the quintet with ensembles of brass, woodwind, percussion, voices and strings. His quintet continued to tour regularly in the 1980s, performing a wide range of material from his impressive and influential library of original works.

BILL DOBBINS

Silver, John (*b* c1606; *d* Winchester, in or before June 1666). English organist and composer. He was a chorister at Winchester Cathedral up to 1624 and briefly a lay clerk there (1626) before becoming organist of Dulwich College (1627–31). In 1638 he was made Master of the Choristers at Winchester ('aetat 32') at the same time as Christopher GIbbons became organist. After the Restoration Silver succeeded Gibbons as organist (1661); he was dead by June 1666. His son, also John (*b* ?Whitchurch, Hants., bap. ? 4 March 1631/2; *d* Wimborne, Dorset, bur. Nov 1694), was a chorister at Winchester from 1640, lay clerk from 1661 and organist of Wimborne Minster from 1664 until his death. The elder rather than the younger is more likely to have composed the Service in F and five fragmentary anthems attributed to Silver at Wimborne (two, also incomplete, are at *GB-GL*, *LF*, *Ob* and *US-BEm*).

BETTY MATTHEWS/IAN SPINK

Silver, Sheila (Jane) (*b* Seattle, 3 Oct 1946). American composer. She studied composition in Paris and Stuttgart with Karkoschka and Ligeti, and at Brandeis University with Arthur Berger, Shapero and Shifrin. She has received numerous awards, prizes and residencies including the Prix de Paris, Prix de Rome, Koussevitzky and Rockefeller Foundation fellowships and a Composer Award from the American Academy and Institute of Arts and Letters. Silver cites the music of Debussy, Bartók and Stravinsky as major influences. One critic has described her output as comprising 'impressive transcultural works in which elements of, say, Buddhist chanting are worked into Western-style textures'. Other sources for her melodically rich music include classical Greek, Roman and Indian mythology, American jazz and Jewish chant. Her allegorical opera, *The Thief of Love*, for which she also wrote the libretto, is based on a 17th-century Bengali tale adapted to a contemporary perspective, the modern-day professional woman in search of the perfect man. *To the Spirit Unconquered*, a piano trio, is in Silver's words 'about the ability of the human spirit to transcend the most devastating of circumstances, to survive, and to bear witness', inspired, in part, by Primo Levi's writings on the Holocaust. She became a professor of composition at

SUNY, at Stony Brook, in 1979. Her works have been recorded on CRI, Mode and Leonarda.

CYNTHIA GREEN LIBBY

Silverstein, Joseph (*b* Detroit, 21 March 1932). American violinist and conductor. He studied at the Curtis Institute in Philadelphia (1945–50), first with V. Reynolds, then with Zimbalist, and worked also with Gingold and Mischakoff. He joined the Boston SO in 1955 (he was its youngest member); he became leader in 1962, assistant conductor in 1971, and also led the orchestra's various chamber ensembles. Silverstein came to international attention in 1959 in the Concours Musical Reine Elisabeth, Brussels. The next year he won the Naumburg Foundation Award and made his New York début in 1961. He gave many solo performances with the Boston SO and with it recorded the violin concertos of Bartók and Stravinsky under Erich Leinsdorf. He is chairman of the faculty of the Tanglewood Music Center and since 1972 has held posts as associate professor of music, first at Yale University and later at Boston University. He became music director of the Worcester SO in 1980, was principal guest conductor of the Baltimore SO, 1981–3, and was appointed artistic director of the Utah SO in 1983. In 1984 he resigned his positions with the Boston SO. He has also appeared widely as a guest conductor, and in 1987 was appointed music director of the Chautauqua SO.

Silverstein is one of the most accomplished and versatile American violinists of his generation. His playing is distinguished by fine-grained resonant tone, flawless intonation and impressive technique. His temperament is controlled, his musicianship exemplary. Among his specialities are programmes for unaccompanied violin. He plays a violin made by J.B. Guadagnini in 1773, formerly owned by both Campoli and Grumiaux, and a 1742 Guarneri, the 'ex-Camilla Urso'.

BORIS SCHWARZ/R

Silvester II. *See* GERBERT D'AURILLAC.

Silvestre. French family of violin makers. Pierre Silvestre (*b* Sommervillers, 9 Aug 1801; *d* Lyons, 1859) was a pupil of Blaise at Mirecourt before moving to Paris to work with Lupot and the elder Gand. He left Gand in 1829 to open his own workshop at Lyons. His brother Hippolyte Silvestre (*b* Saint Nicolas-de-Port, 14 Dec 1808; *d* Sommervillers, 3 Dec 1879) worked for Blaise and in Paris with J.-B. Vuillaume before joining him at Lyons in 1831. The brothers made and labelled their instruments jointly, though Pierre is regarded as the finer artist of the two. Their instruments, modelled after Stradivari and Guarneri, compare in workmanship and tone with the best of their French contemporaries. They are easily recognized by their dark red varnish, usually with simulated wear. Hippolyte retired in 1848 and Pierre worked on alone until his death. Hippolyte then returned to the bench for a few years, passing the business in 1865 to his nephew.

Hippolyte Chrétien (*b* Sommervillers, 1 April 1845; *d* Neuilly-Plaisance, April 1913), known as Hippolyte Chrétien Silvestre, was the son of a sister of Pierre and Hippolyte. He was apprenticed at Mirecourt, but then learnt from and succeeded his uncle in business in 1865, at the age of 20. His instruments have considerable merit. In 1884 he transferred to a workshop in Paris, where a number of fine new instruments were made by him and under his direction. In 1900 the firm became Silvestre & Maucotel, and later Maucotel & Deschamp. (*VannesE*)

CHARLES BEARE

Silvestri, Constantin (*b* Bucharest, 13 May 1913; *d* London, 23 Feb 1969). British conductor of Romanian birth. He first appeared in public as a pianist at the age of ten and later studied the piano and composition at the Bucharest Conservatory. He began his adult career as a pianist, but changed to conducting after a successful début with the Bucharest RSO in 1930. Five years later he began a long association with the Romanian Opera, and from 1945 he combined its musical direction with that of the Enescu PO. He taught conducting at the conservatory from 1948, and became well known as a guest conductor in Moscow and other centres in eastern Europe.

In 1956 Silvestri left Romania for Paris and made his British début the following year with the LPO. In 1961 he was appointed music director of the Bournemouth SO. He settled in Bournemouth and was naturalized in 1967.

An outstanding orchestral trainer, Silvestri steadily developed the Bournemouth SO's standards and reputation in the face of recurring financial problems. He brought the orchestra to a wider public with concerts at the Edinburgh Festival in 1963 and a European tour in 1965. His Covent Garden début was in 1963 with Musorgsky's *Khovanshchina*, and his wide range of sympathies extended to many works by British composers. Among his recordings is an outstanding reading of Elgar's *In the South*. He composed some music for string orchestra, two string quartets, two violin sonatas and other chamber works.

NOËL GOODWIN

Silvestris, Florido de [Sylvestris, Floridus de] (*b* Barbarano, nr Vicenza, early 17th century; *d* Rome, after 1673). Italian anthologist and editor of music, composer, singer and dramatist. He was a priest, who from about 1647 until at least 1654 was a bass in the choir of Santo Spirito in Sassia, Rome. In 1664 he held a similar position at S Giacomo degli Incurabili, Rome (the church in which he is buried). A manuscript inscription, 'Floridus de Sylvestris à Barbr. [?]civ.s. [?]Bracc.ni. Dulcia cum flore hic Barbara Sylva Canit', on the title-page of the copy of the alto

partbook of Francesco Pasquali's *Madrigali, libro terzo* (1627, in *I-Bc*) may be of biographical significance; Pasquali's book includes a madrigal, *Fere barbare*, for solo bass. Silvestris seems to have been an accomplished singer. The solo motet *Aggrediamur iter vitae* in one of his anthologies (RISM 1659[1]), written for him by an unknown composer, contains virtuoso passage-work and requires a vocal range of over two octaves (*D* to *f*′).

Silvestris is noted mainly as the compiler of 22 anthologies of music printed in Bracciano and Rome between 1643 and 1672. His earliest publications, however, consist mainly of editions of the music of Bernardino Lupacchino and G.M. Tasso, Arcadelt and Metallo undertaken at the suggestion of the bookseller G.D. Franzini. The anthologies contain, for the most part, music written by composers who worked in or near Rome in the mid-17th century, including Carissimi, Virgilio Mazzocchi, Savioni, Benevoli and Abbatini. Silvestris was himself an able composer, and most of his anthologies include at least one of his own pieces. He worked in the styles and the smaller forms current in mid-17th-century Rome. For example, the motet for solo soprano *Non superabit* (RISM 1663[1]) is in the form of a rondo cantata; though it contains attractive melodic ideas it is essentially a display piece and makes some use of contrasting dynamics. Allacci listed six plays (five comedies and a tragedy) by Silvestris, published between 1638 and 1667. On the title-pages of the earliest of these he styled himself 'Accademico Disunito, detto l'Incapace'.

JOHN WHENHAM

Silvestrino, Francesco ['Chechin'] (*fl c*1540–50). Italian composer. He may have been the viola player M. Chechin, to whom Antonfrancesco Doni referred in his *Dialogo della musica* (1544). He must have achieved some status by 1545, when his name appeared on the title-page of Willaert's *Canzoni villanesche alla napolitana* (ed. in RRMR, xxx, 1978), to which he contributed three compositions. The only one retained in subsequent editions was *O Dio se vede*, a literal arrangement of a three-part *villanesca* by Nola. Like Willaert, who may have been his mentor, Silvestrino's madrigalesque arrangements of *villanesche* have the borrowed tune transposed to the lower 5th and placed in the tenor part. (D.G. Cardamone: *The 'Canzone villanesca alla napolitana' and Related Forms, 1537 to 1570*, Ann Arbor, 1981)

DONNA G. CARDAMONE

Sil′vestrov, Valentyn Vasil′yovych (*b* Kiev, 30 Sept 1937). Ukrainian composer. Sil′vestrov began music studies at the age of 15, at first privately and then at the Stetsenko Adults' Evening Music School. In 1955 he left the school with a Gold Medal and entered the Kiev Institute of Construction Engineering. He then studied composition with Lyatoshyns′ky and harmony and counterpoint with Revuts′ky at the Kiev Conservatory (1958–64). His debut as composer occurred in December 1961 during a plenum of younger Ukrainian composers, where his Piano Quintet (1961), a work in which diatonicism and chromaticism flirt boldly with atonality, created a significant impression. With *Triada* for piano (1961) and the Trio for flute, trumpet, and celesta (1962) Sil′vestrov further explored this particular world, in which influences are neutralized and assimilated into aphoristic statements of unromantic but highly expressive mercurial gestures. His first fully mature compositions, *Mystery* for alto flute and six percussion groups (written for Severino Gazzelloni), *Spectre* (1965) for orchestra, and soon afterwards the massive Third Symphony *Eschatophony*, commissioned by the Koussevitzky Foundation and first performed in Darmstadt under Maderna in 1968, provide the first demonstration of a conflict and dialogue between 'cultural' (precisely notated) and 'mysterious' (improvisational) structures. The result is a rich and eloquent musical language that introduced the incantatory and the magical as aesthetic conditions. The culmination of this first period in Sil′vestrov's stylistic development (and the beginning of his second) was the monumental *Drama* (1969–71), a three-movement work that is virtually a clinical study of an artistic crisis, or more specifically, the avant-garde crisis. Its first movement is a violin sonata, its second a cello sonata and its third a piano trio. Highly theatrical and full of conscious archaisms, *Drama* attempts to bring together the various stages of historical development into a single work. More a parody than a collage, *Drama* is characterized by an ironic but also affectionate self-awareness; here, the dialectic between the 'cultural' and 'mysterious' is at its most intense.

The year 1973 saw the creation of a remarkable and unusual cycle of works written in 'olden style'. In them, Sil′vestrov begins to rediscover diatonicism, but of an

almost minimalistic (non-functional) kind. *Music for Children*, *Three Pieces in Olden Style*, *Two Pieces in Olden Style*, and *Two Pieces for Children in Olden Style* were followed by a Cantata for soprano and chamber orchestra. The style reached maturity with the String Quartet composed in 1974. As Laryssa Bondarenko observed, Sil′vestrov continued in these pieces to move away from singleness of style, while at the same time consciously confining himself to traditional methods, albeit in an allegorical manner. Employing the genres and stylistic norms of the 17th to 19th centuries, these pieces exhibit the paradox of an intimate personal expression contained within fixed forms. The decades between 1974 and 1995 were very productive. It was during this period that the mystical and tragic tendencies found their most concrete expression in a series of works that further identified the 'allegorical manner' as Sil′vestrov's terrain (one which is distinctly different from the polystylistic exuberance, for example, of Alfred Schnittke). In many ways, the Fifth Symphony represents the fulfilment of his middle style. It is the work where all former experimentations find a resting place, and the resultant eloquence of the musical language encompasses all the resources of contemporary thinking. In this symphony Sil′vestrov fully explores for the first time the domain of the coda. It becomes almost a 'post-symphony', a coda to the history of the genre, in that it does not partake of dialectical development but explores what seems like the 'afterlife' of a work. In this symphony, and the works that followed into the late 90s, Sil′vestrov often explored the concept of memory as a dramatic device. One is, in effect, experiencing the future of an event long gone.

VIRKO BALEY

Silvia. *See* EGERIA.

Silyanovsky, Trifon (*b* Sofia, 16 Dec 1923). Bulgarian composer and pianist. The son of a professor of law, he graduated from the law faculty of Sofia University as well as attending the State Music Academy where he studied composition with Pancho Vladigerov and the piano with Dimiter Nenov. He also studied history of art with Hans Sedelmaier in Vienna (1941–3) before winning, in 1948, the first Bulgarian Singers' and Instrumentalists' Competition, an event that led to a number of recordings for Bulgarian radio. During the next few years he was subject to political persecution: he spent time in a concentration camp (1949–51), was periodically jailed thereafter and was exiled from Sofia. He worked as a labourer, played the piano in restaurants and gave private lessons of Latin and ancient Greek in order to survive. Only in 1959 was he permitted to work as a répétiteur for Sofia Opera. In 1973 he co-founded, with the director Plamen Kartalov, the Blagoyevgrad Chamber Opera of which he served as musical director until 1982. He then taught score reading at Plovdiv Conservatory (1982–91) before being appointed, at the fall of communism, to the staff of the State Music Academy in Sofia. He was made professor extraordinary in 1997. His work was condemned as 'formalistic' and, as such, was known only to the Bulgarian intellectual and artistic elite among whom Silyanovsky was highly esteemed not only as a musician but as a philosopher, essayist, theologian, polyglot and as a scholar of uniquely encyclopedic erudition. His music reflects his philosophical and ethical ideals as well as the hardships of his life. His professionally crafted scores are distinguished by an individual style, rigorous structural clarity, dissonant harmony, dense textures and complex polyphony. Thematic material is often related to Orthodox chant.

ANDA PALIEVA

Simaku, Thoma (*b* Kavajë, 18 April 1958). Albanian composer. He studied composition with Harapi at the Tirana Conservatory (1978–82) and with David Blake at York University (1991–6), where he was awarded the DPhil in composition. In 1996 he was Bernstein Fellow in Composition at Tanglewood, where he studied with Bernard Rands. Simaku's style has evolved from the obligatory folk idiom of pre-1990 Albania to one that assimilates modernist techniques, combining free chromaticism with a highly expressive lyricism. In 2000 he was awarded an Arts and Humanities Board Fellowship in Creative and Performing Arts by the University of York.

JUNE EMERSON

Simandron. *See* SĒMANTRON.

Simándy, József (*b* Budapest, 18 Sept 1916). Hungarian tenor. He studied with Emilia Posszert, joining the Hungarian State Opera House chorus in 1940. He made his début at the Szeged National Theatre in 1946 as Don José. The following year he returned to the Budapest Opera, and was its leading heroic tenor until 1984. Between 1956 and 1960 he was a regular performer in Munich. Although he undertook a wide range of lyric and spinto tenor roles, Simándy was, in dramatic and vocal character, best suited to heroic roles, notably Radames, Otello and Lohengrin. His recordings include the title roles in Erkel's *Bánk bán* and *Hunyadi László*.

PÉTER P. VÁRNAI

Šimbracký [Schimbracki, Schimrag, Schimrack, Schimrak], **Ján** [Johannes] (*d* Spišské Podhradie, 1657). Slovak composer and organist. In 1630 he bought a house in Spišské Podhradie and from 1637 until his death he was a member of the town's municipal council. His compositions were copied and performed in many places in Slovakia; one of them, *Gott stehet in der Gemeine Gottes*, was used as incidental music to a play by Peter Eisenberg, *Ein zwiefacher poetischer Act*, performed in Prešov in 1651.

The main source of Šimbracký works are two manuscripts in tablature (*SK-L* 3 A and 4 A, olim 13 992 and 13 994) in the hand of THOMAS GOSLER, town clerk of Kežmarok and a composer in his own right. Šimbracký's extant works number 54; 42 survive in tablature scores and 12 in an incomplete set of partbooks. His settings of Latin and German sacred texts show him to be a master of the older Franco-Flemish polyphony as well as of modern polychoral techniques. In *cori spezzati* works he employed contrasts between differently composed choirs and alternated contrapuntal and chordal passages; a prominent role is played by antiphonal exchanges of homophonic declamations. The motets exemplify contrasts of metre, timbre and dynamics, and the sacred concertos more sophisticated contrasts of solo and tutti (refrain) passages as well as alternations of *a cappella* and instrumentally accompanied writing. Šimbracký's style is balanced between the ancient church modes and the major-minor system. His melodies make use of a wide range of Baroque figures, but chromaticism appears only sparingly.

JANKA PETŐCZOVÁ-MATÚŠOVÁ

Simeonov, Konstantin Arsen'yevich (*b* Kaznakovo, Tverskaya province, 7/20 June 1910; *d* Kiev, 3 Jan 1987). Russian conductor. He studied conducting at the Leningrad Conservatory until 1936 under Aleksandr Gauk and Il'ya Musin. He was a singer (1918–28), then conductor (1928–31) of the People's Choral Academy in Leningrad. After being active as a symphonic conductor from 1930 to 1960, he was chief conductor of the Kiev Opera and Ballet Theatre from 1961 until 1967, when he moved to the Leningrad Opera and Ballet Theatre; in 1974 he returned to the Kiev post. He won the 1964 All-Union Conductors' Competition in Moscow, and the same year was one of the conductors with the Bol'shoy Opera company in its autumn season at La Scala, Milan. He conducted Tchaikovsky's *The Queen of Spades* during this visit and was highly praised for the balance of voices and orchestra, and for his evocation of dramatic atmosphere. His opera performances in the USSR were distinguished by emotional power and dramatic tension and he excelled in choral scenes such as those of Musorgsky's *Khovanshchina* and Shostakovich's *Katerina Izmaylova*. He was also admired for his performances of operas by Dzerzhinsky, Lysenko, Mayboroda and Paliashvili, among others.

I.M. YAMPOL'SKY

Similar motion. In PART-WRITING, the simultaneous melodic movement of two or more parts in the same direction.

Simile (It.: 'like', 'similar'). A word used in musical scores to mean 'play as before', particularly if an intricate phrasing and articulation is repeated many times and the necessary slurs and dots would clutter the page.

Simile aria [metaphor aria]. An aria in an opera, oratorio or cantata in which the text makes a comparison between the singer's situation or thoughts and some natural phenomenon or activity in the world at large, and the music provides appropriate illustration. Its literary origins are found in the elaborate metaphorical style of Giambattista Marino (1569–1625), whose influence on 17th-century Italian literature extended to the opera libretto; aria texts using conceits broadly similar to those favoured by Metastasio are common in the 17th century. Arias of this kind offered composers an opportunity to introduce a wide variety of imagery. An example from Handel is Caesar's aria 'Va tacito e nascosto' in *Giulio Cesare* (1724), where a solo horn alludes to the hunter who must go cautiously in pursuit of his prey and the text makes a comparison with the intriguer who conceals his real intentions. In Bach's cantata *Was mir behagt* BWV208 (1716), the accompaniment to 'Schafe können sicher weiden' suggests a pastoral background, while the text compares the security enjoyed by sheep under a watchful shepherd with the satisfaction of living under a wise ruler. In Gay's *The Beggar's Opera* (1728) the beggar claims to have 'introduc'd the similes that are in all your celebrated *Operas*', and the texts include several parodies of the type, e.g. 'I'm like a skiff on the Ocean tost'. The convention was increasingly criticized during the 18th century and had nearly died out by the end of it. A late example is 'Come scoglio' in Mozart's *Così fan tutte* (1790), which parodies the convention, in that Fiordiligi compares her resolution – which the audience knows will prove weak – to a rock unaffected by the battering it receives from a stormy sea.

See also ARIA §4(i).

JACK WESTRUP

Simionato, Giulietta (*b* Forlì, 12 May or 15 Dec 1910). Italian mezzo-soprano. She studied at Rovigo with Locatello and Palumbo. She made her début in 1935 in the première of Pizzetti's *Orsèolo* at Florence and first sang at La Scala in 1939 as Beppe (*L'amico Fritz*). During the next few years she sang Cherubino, Rosina, Hänsel, Dorabella and Mignon. From 1946 she appeared regularly at La Scala, where her repertory included Charlotte (*Werther*), Jane Seymour (*Anna Bolena*), Cenerentola, Isabella (*L'italiana in Algeri*), Carmen, Asteria (*Nerone*) and Léonor. She made her British début as Cherubino at the 1947 Edinburgh Festival; she first sang at Covent Garden in 1953 as Adalgisa, Amneris and Azucena. In 1954 she sang Romeo (*I Capuleti e i Montecchi*) in Palermo and made her American début at Chicago. She sang at Salzburg (1957–63) as Mistress Quickly, Eboli, Orpheus and Azucena and at the Metropolitan from 1959 to 1963. In 1962 she sang Valentine at La Scala. She retired in 1966. Simionato's agile mezzo was secure throughout its wide range, with a personal and seductive timbre in its lower register. Among her recordings are notable accounts of Amneris and Azucena. She had an imposing stage presence, vivacious in comedy, dignified and moving in tragedy.

HAROLD ROSENTHAL/ALAN BLYTH

Simiot, Jacques François (*b* Dôle, *c*1769; *d* Lyons, 28 Aug 1844). French woodwind instrument maker active in Lyons from about 1803 to 1844. He specialized in clarinets and bassoons but also made piccolos, flutes, alto clarinets, bassoons and bass horns. In 1812 his daughter Émilie married Jean Baptiste Tabard (1779–1845), whom

he probably trained as a maker since flutes and clarinets have been reported with a stamp of Simiot and Tabard.

Simiot was one of the earliest French makers to improve the Classical-period clarinet and bassoon. In a published letter of December 1829, addressed to F.-J. Fétis in the *Revue musicale*, he claimed to have made a 12-key clarinet in 1803. In 1808 he published the earliest fingering chart for the seven-key clarinet; it was accompanied by an explanation of his improvements to the clarinet, including additional sixth and seventh keys, a double hole for the left-hand ring finger, a protruding tube in the thumb-hole, a register key re-sited on the dorsal side to avoid water, and a tuning slide between the barrel and mouthpiece. Later improvements included the use of brass key mountings, a hinged key for *f*/*c*″, and a thumb rest. In 1827 his 19-key clarinet and alto clarinet were approved by the Académie des Beaux-Arts.

In 1808 Simiot advertised his first improvements to the bassoon: a tuning-slide on the wing joint and keys for B′ and C♯. By 1817 he had developed a metal U-tube to replace the butt cork, keys for C♯ and F♯ and a tuning-slide, and by 1823 a tuning-slide operated by a rack and pinion and a water key.

Among Simiot's apprentices was Pierre Piatet (*c*1796–1868), who produced woodwinds with Benoit in Lyons from 1836 to 1855. Simiot was succeeded in 1844 by Brelet and the firm continued as Simiot & Brelet until 1874. Extant instruments include: a seven-key clarinet in C (Musée d'art et d'histoire, Nice, 1875); a 19-key clarinet in B♭ with *corps de rechange* in A (Edinburgh University Collection, 115); and a 13-key alto clarinet (Bate Collection, Oxford, 493).

ALBERT R. RICE

Šimkus, Stasis (*b* Motiskai, nr Kaunas, 23 Jan/4 Feb 1887; *d* Kaunas, 15 Oct 1942). Lithuanian composer, conductor and teacher. He studied the organ at the Warsaw Institute of Music until 1908, whereupon he entered the St Petersburg Conservatory, studying with Lyadov, Steinberg and Vītols (1908–14). He lived in the US for a while (1915–20), during which time he was active as a conductor. After further study at the Leipzig Conservatory (1921–2) he returned to Lithuania, where he continued to conduct and also taught and collected folksongs. Among the most prominent of his students was Jonas Švedas. Šimkus's works include the opera *The Village at the Plantation* (1916), the symphonic poem *Neman* (1930), cantatas, songs, piano works and folksong arrangements.

□

Simmes [Simms], **William** (*fl* 1607–16). English composer. A William Simmes matriculated at Exeter College, Oxford, on 15 October 1585, and another on 3 March 1607. Either or neither may be identifiable with this composer, who was in the service of the Earl of Dorset in 1608. His music circulated in sources associated with London and East Anglia.

Simmes contributed a three-section anthem to Myriell's manuscript anthology *Tristitiae remedium* (*GB-Lbl*); two other anthems by him survive (*Lbl*, *Ob* and *Och*). Seven five-part fantasias for viols are attributed to him (*Och*), of which the most successful are the fourth and seventh (ed. R. Morey, *William Simmes: Seven Phantazias*, Albany, CA, 1991).

NORMAN JOSEPHS/ANDREW ASHBEE

Simmons, Calvin (*b* San Francisco, 27 April 1950; *d* nr Lake Placid, NY, 21 Aug 1982). American conductor. His musical training began in gospel music with his mother, and at the San Francisco Boys' Choir from the age of nine, where he took conducting lessons. From 1968 to 1970 he studied conducting with Max Rudolph at the Cincinnati Conservatory of Music, and followed him to the Curtis Institute of Music (1970–72). While at the Curtis Institute he also studied the piano with Rudolf Serkin. He was engaged, initially on an occasional basis, by Kurt Herbert Adler as répétiteur and assistant conductor at the San Francisco Opera from 1968 to 1975. He made his début there in 1972 with *Hänsel und Gretel*. Three years later he made his British début at Glyndebourne. During a term as assistant conductor of the Los Angeles PO he also served as music director of the Young Musicians Foundation Debut Orchestra (1975–8), and of the Ojai Festival (1977). Simmons made his Metropolitan Opera and New York PO débuts in 1978, and two years later first appeared at the New York City Opera. In opera he proved a decisive leader, highly sympathetic to singers. He became music director of the Oakland SO in 1979 and in less than three years brought about an extraordinary renaissance in the orchestra and its musical community. He died in a canoeing accident.

CHARLES BARBER, JOSÉ BOWEN

Simmons, William Benjamin Dearborn (*b* Cambridge, MA, 27 April 1823; *d* Cambridge, 31 Oct 1876). American organ builder. He was apprenticed to Thomas Appleton, and began his own business in 1845 in partnership with Thomas McIntyre, a former pipemaker with Appleton. This partnership lasted until 1851, after which Simmons continued on his own until 1856, when another partnership was formed with George Fisher. By this time the firm had become quite successful, and had opened a sizable factory with steam machinery. Between 1858 and 1860, a period during which several larger organs were built, Simmons had as a partner the organist John Henry Willcox (1827–75).

Simmons's best work was characterized by innovation and tonal creativity. He was one of the first in America to employ a full-compass Swell division, to advocate the use of tempered tuning, and to use steam-powered machinery in his factory. In the late 1850s Germanic influences appeared in his tonal work, perhaps the result of Willcox's influence. Important instruments were built for Dover

Hall, Boston (1855), Harvard University (1859) and St Paul's Cathedral, Louisville, Kentucky (1860).

BARBARA OWEN

Simms, William. *See* SIMMES, WILLIAM.

Simon [Symon]. Name held by at least three musicians in 15th-century France.

(1) Simon [Symon] **le Breton** (*d* Cambrai, 12 Nov 1473). French composer. He was a singer at the Burgundian court chapel by January 1431 (when he was named in a motet by Binchois) and remained there until 1464. In the 1460s he was listed as a member of the confraternity of St Jacques-sur-Coudenberghe at Brussels as 'her Simon Britonis mynsheeren zanghere'. He retired to Cambrai Cathedral, where he had been a canon since 10 October 1435 'vigore nominationis ducis Burgundiae' (*F-CA* 1046, f.70*a*). He was buried there in the chapel of St Stephen, as was Dufay a year later. Several of his possessions passed into the hands of Dufay, who described Simon in his will as 'dominus meus et confrater'.

The three-voice rondeau *Nul ne s'y frotte* (ed. K. Jeppesen, *Der kopenhagener Chansonnier*, Copenhagen, 1927, 2/1965) is ascribed in *I-PEc* G20 to 'Magister Symon'; identification with the Simon at the Burgundian court is suggested by the title which is also the motto of Antoine, the senior bastard son of Philip the Good. The Flemish song *Vie sach oit* (ed. in Lenaerts), ascribed in *I-Fn* 176 to 'Simonet', is in a remarkably similar style. Robert Morton's lighthearted quodlibet *Il sera pour vous/L'homme armé* refers to him as 'Maistre Symon' and as 'Symonet le Breton'; it may well have been written at Simon's retirement from the Burgundian court chapel at the end of May 1464. He might conceivably also be the author of no.98 of *Cent nouvelles nouvelles*, which is ascribed in the first printed edition to 'Le breton', though the earlier Glasgow manuscript ascribes it to 'L'acteur'.

(2) Symon Britonis [Brytonis] (*fl* 1482–3). Recorded at 's-Hertogenbosch as 'onsen bovensenger' ten years after the death of his namesake at the Burgundian court, he is a possible though unlikely contestant for some of the documents or pieces mentioned under (1) Simon le Breton.

(3) Simon [Symon] **de Insula** (*fl c*1450–60). French or ?English composer of a four-voice mass cycle (without Kyrie) in *I-TRmp* 88, ff.304*v*–311 (nos.428–31). Based on the isomelically treated antiphon *O admirabile* [*beati Gregorii*] (see PalMus, xii, 1922/*R*, p.219), the cycle has matching head-motifs, extensive duo sections and the *Wechselklänge* that Besseler described as characteristic of English music. So there is some dispute as to whether 'Insula' in this case means Lille, as one would expect, or England (see *MGG1*, Gülke). However, if the name can be interpreted that freely it is possible that Simon de Insula is to be identified with (1) Simon le Breton who, as a chaplain to the Burgundian court, spent much of his working life in Lille; but the musical style of the mass cycle contradicts such an identification.

DAVID FALLOWS

Simon, Abbey (*b* New York, 8 Jan 1922). American pianist. He was awarded a scholarship to the Curtis Institute, Philadelphia, by its principal, Josef Hofmann, and studied there with David Saperton, Dora Zaslavsky and Harold Bauer (1932–40). He won the Walter W. Naumburg Award in 1940, which led to his New York recital début soon afterwards. He played in Europe for the first time in 1949 and went on tour in the Middle East, East Asia, Australia, New Zealand, South Africa and South America, in due course being awarded the Harriet Cohen Medal and the Elizabeth Sprague Coolidge Award. He has held teaching positions at Indiana University (1960–74), the Julliard School (from 1977) and the University of Houston (from 1977). Simon's recordings include the complete piano music of Chopin and Ravel, all the Rachmaninoff concertos and solo works by Schumann, Brahms and Beethoven. His pianism, well suited to such repertory, is noted for its sensitivity and elegance.

JESSICA DUCHEN

Simon, Alicja [Alice] (*b* Warsaw, 13 Nov 1879; *d* Łódź, 23 May 1957). Polish musicologist. She studied music in Warsaw, Berlin and Zürich, and musicology with Kretzschmar in Berlin (1904–9), where she also studied philosophy, psychology and history of art. In 1914 she took the doctorate at Zürich with a dissertation on Polish elements in German Classical music. After working in Berlin (1920–23) and Geneva (1923–4), she became head of the music division of the National Library in Washington (1924–8). From 1929 to 1939 she was the curator of the music department of the State Art Collection in Warsaw, and during World War II she was engaged in clandestine teaching. From 1945 until her death she was reader and, from 1954, full professor of musicology at the University of Łódź. She actively promoted Polish music abroad and, especially between 1924 and 1939, gave many lectures of a popular nature. As a musicologist, she dealt mainly with the relations between western (mainly German) music and Polish music.

ZYGMUNT M. SZWEYKOWSKI

Simon, Anton (Yul'yevich) (*b* Paris, 5 Aug 1850; *d* Moscow, 19 Jan/1 Feb 1916). Russian composer and conductor of French birth. He studied with Marmontel, Matthais and Duprato at the Paris Conservatoire, but in 1871 went to Moscow, where he was appointed to the directorship of the Théâtre Bouffe. From 1891 he taught the piano at the music school of the Moscow Philharmonic Society, and in 1897 was appointed superintendent of the Moscow Imperial Theatre orchestra and director of music at the Aleksandrovsky Institute. Simon wrote three operas (all performed in Moscow), three ballets, orchestral works, chamber music, choral pieces and about 100 songs.

WORKS
(*selective list*)

Stage: Rolla (op, A.M. Nevsky), op.40, Moscow, 17/29 April 1892; Pesn' torzhestvuyushchey lyubvi [Song of Love Triumphant] (op, N. Vilde, after I.S. Turgenev), op.46, Moscow, 2/14 Dec 1897; Zvyozdï [The Stars] (ballet, 5), Moscow, 1898; Rïbaki [The Fishers] (op, Vilde), op.51, Moscow, 23 Feb/7 March 1899; Ozhivlyonnïye tsvetï [Living Flowers] (ballet, 1), op.58, *c*1900–10; Esmeralda (mimo-drama, 4, after V. Hugo), Moscow, 1902

Choral: Mass, op.22; 3 Choruses, female vv, op.33

Orch: Ov., op.13; Pf Conc., op.19; Suite, op.29; Cl Conc., op.30; Danses des bayadères, op.34; Ov. on 3 Little Russian themes, op.35; La revue de la nuit, sym. poem, op.36; Fantasia, vc, orch, op.42; La pécheresse, sym. poem, op.44; Triumphal ov. on 3 Russian themes, op.54 [for the unveiling of the Alexander II monument in Moscow]

JENNIFER SPENCER

Simon, Artur (*b* Wesermünde, nr Bremerhaven, 6 May 1938). German ethnomusicologist. He studied musicology and ethnology at the University of Hamburg, receiving the doctorate in 1971 with a dissertation on Egyptian folk music. In 1972 he was appointed director of the ethnomusicology department of the Museum für Völkerkunde, Berlin (formerly the Phonogramm-Archiv). From 1984 he was also professor of musicology at the Hochschule der Künste, Berlin. He has conducted field research in Egypt, the Sudan, Nigeria, Cameroon, Western New Guinea and Northern Sumatra. His areas of interest include methodology, organology, film and trance music and dance. In addition to publishing on these topics, he has also made several ethnomusicological and ethnographical films. He has served as editor of the record and audio-visual series 'Museum Collection Berlin'.

LINDA FUJIE

Simon, Geoffrey (Philip) (*b* Adelaide, 3 July 1946). Australian conductor. He studied at the University of Melbourne, the Juilliard School, New York (1968–9), and Indiana University (1969–72), and later took lessons in conducting from Karajan, Kempe, Markevich and Hans Swarowsky. He was assistant conductor of the South Melbourne SO (1966–8) and musical director of the Bloomington SO (1969–72) before moving to England in 1973. He made his UK début with the Bournemouth SO in 1975, his London début (with the Australian Sinfonia, which he directed from 1975 to 1978) in 1976 and his début with a major London orchestra, the LSO, in 1978. From 1978 to 1982 he was professor of music at the University of Wisconsin in Milwaukee, occupying a similar post at the North Texas State University in Denton from 1982 to 1984. Simon was music director of the Albany SO, New York, from 1986 to 1989, and of the Sacramento SO from 1992 to 1996. Meanwhile, he had founded his own record label, Cala Records (1991), for which he has made an impressive series of recordings with the LPO and the Philharmonia, including music by John Downey and colourful readings of works by Saint-Saëns, Debussy and Ravel. As a guest conductor Simon has appeared with leading orchestras around the world.

RICHARD WIGMORE

Simon, Johann Caspar (*b* Schnellbach, nr Schmalkalden, Thuringia, 10 Jan 1701; *d* Leipzig, 22 Nov 1776). German composer and organist. He attended the Lateinschule in Schmalkalden University of Jena from 1723 to 1727. He may have been a pupil there of Johann Nicolaus Bach, J.S. Bach's cousin. For the next four years he was *Praeceptor* of the Lateinschule in Langenburg, and both organist and priest at the Stadtkirche there. In August 1731 he was appointed organist of the Georgskirche, Nördlingen, and the town's *director musices*; in 1743 he was made *Praeceptor* of the Lateinschule. Through the death of a brother-in-law in 1750 he inherited a drapery business. He gave up his musical activities in Nördlingen and spent the rest of his life in Leipzig. He distinguished

himself in his second career, and as honorary *Commerzienrath* advised the head of state in business matters.

Although Adlung and other contemporaries esteemed him highly as a composer, Simon was modest in offering 'beginners and country schoolmasters' his short preludes and fugues and other keyboard works as alternatives to an 'old French menuet or courante on a barrel organ'. With two or three exceptions the fugue subjects show little distinction and there are occasional mistakes in the part-writing. On the other hand, he handled the prevailing three-part texture smoothly and sometimes rounded off a prelude and fugue by alluding to opening toccata-like material. At Nördlingen Simon wrote the words and music for well over 200 church cantatas (at least three and a half annual cycles). Only the third cycle is extant; the texts are based on New Testament readings for the day and the settings require only modest forces. A central aria–recitative–aria grouping is framed by an opening chorus and a concluding chorale, sometimes with an instrumental sonata to begin.

WORKS

CANTATAS

Simon-Leibbrandtsche Hochzeitscarmen (Nördlingen, 1733)
Die Freude im Herrn (Nördlingen, 1734)
Das allerschönste Jesus-Bild in geistreichen Cantaten für die gewöhnlichen Sonn- und Festtags-evangelia (Oettingen and Nördlingen, 1737–8), *c*250 cantatas, *D-NLk* (3rd cycle only)
Wedding cantata (Leipzig, 1755)

HUGH J. McLEAN

Simon, Lucy (*b* New York, 5 May 1940). American composer and performer. She began her professional singing career at the age of 16 with her sister Carly in the Simon Sisters. She released two solo albums, *Lucy Simon* (1975) and *Stolen Time* (1977), and received a Grammy Award for her Sesame Street album of children's songs, *In Harmony* (1980). Her first Broadway musical, *The Secret Garden* (1991), won her a Tony nomination. With book and lyrics by Marsha Norman, sets by Heidi Landsman and direction by Susan H. Schulman, this was the first Broadway musical to be created and directed entirely by women. Based on the novel by Frances Hodgson Burnett, Norman's libretto is enhanced by Simon's eclectic score. Numbers such as the operatic *Lily's Eyes* contrast with the folk-like *Wick* and *Hold On*. When combined with numbers like Archibald's lyrical *A Bit of Earth*, Mary's innocent *The Girl I Mean to Be* and the ethereal music of the ghosts, the score captures and accentuates the various levels of narrative in the musical. Simon's lush romantic score never exceeds its limits: the sense of directness acquired from her popular music career has influenced her musical theatre writing by ensuring its forthrightness and directness.

WILLIAM A. EVERETT

Simon, P. *See* SYMON, P.

Simon, Paul (*b* Newark, NJ, 13 Oct 1941). American popular singer and songwriter, member of the duo Simon and Garfunkel. After an early chart success in 1957 with Art Garfunkel he worked in the Brill Building, recording demonstration tapes and occasionally releasing his own songs under pseudonyms. With Garfunkel he recorded the album *Wednesday Morning 3 A.M.* (Col., 1964) but, after it found a limited audience, departed to England where he performed in folk music clubs and recorded a solo album, *The Paul Simon Songbook* (Col., 1965). A re-released version of the song *The Sound of Silence*, from the album *Wednesday Morning 3 A.M.*, became a hit, and during the duo's following success Simon's style displayed a self-conscious literary bent in the lyrics, and accomplished folk-style melodies with carefully worked out harmonies. Later he incorporated more diverse musical influences, tempering the early self-consciousness with the development of a wry persona and a sophisticated narrative sense.

Upon the duo's demise in 1970, Simon intensified the eclecticism of his work. His eponymous solo album (Col., 1972) contained the reggae song *Mother and Child Reunion*, and revealed a growing tendency toward lyrical angst. His next two albums, *There Goes Rhymin' Simon* (Col., 1973) and *Still Crazy After All These Years* (Col., 1975), display his increasing fascination with African-American gospel music (*Loves Me Like a Rock* and *Gone At Last*), and with complex harmonic progressions (*Still Crazy After All These Years*). Following the less successful *One Trick Pony* (Warners, 1980) and *Hearts and Bones* (Warners, 1983), he recorded *Graceland* (Warners, 1986) with South African *mbaqanga* musicians, Louisiana zydeco musicians, and the Chicano band from East Los Angeles, Los Lobos. The album rejuvenated his career and sparked heated controversy about whether he had violated the UNESCO cultural boycott on South Africa. He has subsequently continued his cross-cultural collaborative projects, releasing *Rhythm of the Saints* (Warners) in 1990, featuring a wide range of Brazilian and African percussive styles, and *Songs of the Capeman* (Warners) in 1997, a Broadway musical using salsa and doo-wop.

DAVID BRACKETT

Simon, Pierre (*b* Mirecourt, 1 Dec 1808; *d* Neuilly-sur-Marne, 12 Dec 1881). French bowmaker. One of the most important 19th-century bowmakers, he served his apprenticeship in Mirecourt and moved to Paris in about 1835. There, over many years, he produced bows for J.-B. Vuillaume and Gand Frères. In 1848 he took over the business and premises of Dominique Peccatte at 18 rue d'Angevilliers. By 1851 he was in partnership with Joseph

Henry at 179 rue St Honoré; that year their bows won a silver medal at the Great Exhibition in London.

Simon was perhaps the most fluent maker of the Peccatte school. His work is elegant: most sought after today are those bows with heads that resemble Peccatte's hatchet-head bows. Unique to Simon with this model is a rather pronounced curve to the back of the head. The sticks are usually round; the frogs have fairly deep, squared throats and the buttons, in three-piece form, have collars with a single cut. Viola bows are very rarely seen while the cello bows, often quite light, sometimes are made from a spectacular, veined pernambuco. His brand SIMON, PARIS is usually found on the brand facet, but is occasionally located under the frog or under the wrapping. Most of the bows which Simon made for Vuillaume have heads of very different design: fairly large, rounded and slightly bell-shaped, and almost always elegant.

PAUL CHILDS

Simon, Prosper-Charles (*b* Bordeaux, 27 Dec 1788; *d* Paris, 31 May 1866). French organist and violinist. He was active in Bordeaux early in his career. As a boy he received some musical instruction from Franz Beck, and organ lessons from a Benedictine, Father Placide. He held organists' posts at the churches of Ste Croix (1802–6) and St Seurin (1807–8 and 1811–25). In addition he led the Orchestre de Concert of Bordeaux, founded in 1814. He was elected a member of the Société Philomatique du Muséum d'Instruction Publique in 1811. He moved to Paris in 1825; the performance of his *Te Deum* there (22 October) attracted some attention. In the following year he was elected organist of the church of Notre-Dame des Victoires. From 1827 he taught the organ and harmony at the Maison Royale of St Denis. In October 1840 he was made organist of the basilica of St Denis, where Cavaillé-Coll's first organ had been installed; these duties were supplemented by government work as inspector of French cathedral and parish organs. He was elected to the Institut Historique de France in 1847 and to the Order of St Silvester in 1854 and became a Chevalier of the Légion d'Honneur in 1858.

Simon's talent for organ improvisation was widely praised and respected, particularly in connection with the instrument at St Denis: he was nicknamed 'the Rossini of the organ'. Reviews of his playing (quoted in *FétisB* supplement and Dufourcq) praise his originality and feeling for timbre. Simon wrote the second part of a *Nouveau manuel complet de l'organiste* (Paris, 1863/*R*); the first volume, by Georges Schmitt, had appeared in 1855.

DAVID CHARLTON

Simon, Simon (*b* Les-Vaux-de-Cernay, nr Rambouillet, ?*c*1735; *d* ?Versailles, after 1788). French harpsichordist and composer. An announcement in *L'avant coureur* of 6 August 1761 describing him as 'still very young' casts doubt upon the birthdate of 'vers 1720' given by Fétis. Accounts of his life derive mainly from what appear to be the personal recollections of La Borde. At the age of seven, he was sent to study with an uncle named Butet, organist of an abbey near Caen, but 'the mediocrity of the master's talents spread to the progress of the pupil'. When he was 13 he came by chance to the notice of the Marquise de la Mézangère, the 'strongest' pupil of François Couperin *le grand*; she took him in at her Paris *hôtel* and gave him harpsichord lessons while the violinist Saint-Saire, another protégé, taught him *musique*. This must have occurred by 1754, when he is recorded as a witness to a Paris wedding (Brossard). He made rapid progress, soon acquiring an 'infinity' of pupils whose demands on his time did not, however, prevent him from studying composition with Dauvergne. He wrote *petits motets* and harpsichord pieces which were performed in private concerts (*L'avant coureur*, 17 August 1761, pp.525–6). The harpsichord pieces, later gathered into op.1 (1761), gained him the esteem of Le Tourneur, *maître de clavecin des enfants de France*, who presented him with one of his pupils as a wife and the reversion of his royal post. Appointments as harpsichord teacher to the dauphine, the queen and the Countess of Artois followed. Although he had already assumed Le Tourneur's functions on the latter's retirement to Nantes, he did not succeed to the title until the beginning of 1770. He still retained these titles in 1788, as well as those of harpsichord master to the dukes of Angoulême and Du Berry (from 1784) and Madame Elizabeth (from 1787).

The long *Avertissement* to op.1 shows the clarity of thought and concern for detail of an accomplished teacher, particularly in matters of tempo, touch and articulation, and illustrates generalizations with specific pieces. Simon is one of the more interesting of the French harpsichord composers after 1750. His suites hover on the threshold of the sonata: 'Instead of publishing *suites* for solo harpsichord in a single key in the usual way (which would have caused me to fall into a kind of uniformity and dryness better avoided), I thought I ought to compose some with violin accompaniment'.

Five of the suites consist of or contain three-movement groups; of these, three have the middle piece in a contrasting key and three have accompaniments. Simon said that he had tried to include both French and Italian styles in his collection. In opp.2 and 3 all thought of the suite is abandoned for a wholesale capitulation to Italianism and (especially in op.3) the *galant* style – probably at the behest of Madame Adélaïde, for whom they were written. The music is uneven in quality: in op.1 the dark, passionate ostinatos of 'La La Corée' (in E♭ minor) and the driving rhythm of 'La De Croisoeuil' (with violin accompaniment) alternate with earnest, clumsy juvenilia. Like so many of his colleagues, Simon was often unable to sustain harmonic tension or direction, to prolong cadential progressions or to use sequences for propulsion instead of for ballast, with the result that, when his music is not startling, it is apt to be static or aimless. Much of the harpsichord writing is thick and heavy, depending on mechanical arpeggio or scale formulae for motivic material.

Simon is not to be confused with a Simon, violist at the Opéra, who composed six symphonies in 1748, nor with a Simon, author of considerable vocal music from 1757 to 1771.

DAVID FULLER/BRUCE GUSTAFSON

Simon, Stephen (Anthony) (*b* New York, 3 May 1937). American conductor. He studied the piano with Joel Rosen (1952–6) and graduated from the Yale University School of Music while continuing piano studies with Ellsworth Grumman (1956–60). His New York début was in May 1962, when he conducted Bach's B minor Mass at Philharmonic Hall. He studied choral conducting with Hugh Ross and Julius Herford, 1962–4, and was appointed music director of the Westchester Orchestral Society in 1963. From 1964 to 1965 he worked with Josef Krips, and made his European début in 1965 with the Lamoureux Orchestra in Paris. He then embarked on recording all Mozart's piano concertos with Lili Kraus. In 1970 he worked with Susskind at the St Louis SO and was appointed musical director of the New York Handel Society (1970–74) and the Handel Festival at the Kennedy Center (1977). Simon's alert, buoyant direction of little-known Handel works became a feature of New York and Washington concert life. In 1990 and 1991 he conducted at the Handel Festival in Halle. His recordings include *Judas Maccabaeus*, *Orlando* and *Ariodante*.

RICHARD BERNAS

Simon and Garfunkel. American popular vocal duo. PAUL SIMON (*b* Newark, NJ, 13 Oct 1941; guitar and vocals) and Art Garfunkel (*b* New York, 5 Nov 1941; vocals) initially recorded as Tom and Jerry while still in high school, and enjoyed a minor hit with Simon's song *Hey Schoolgirl* (1957). They reformed as Simon and Garfunkel in 1964 to record *Wednesday Morning, 3 A.M.* and, although the album made little impression, one of its songs, *The Sound of Silence*, was re-released in late 1965 with electric guitars, electric bass and drums added. When the song rose to number one on the US singles charts, Simon and Garfunkel quickly recorded *Sounds of Silence*, an album featuring Simon's songs accompanied by a rock band. The next three albums, *Parsley, Sage, Rosemary, and Thyme* (1966), *Bookends* (1968) and *Bridge Over Troubled Water* (1970), found Simon's songs exploring new directions musically (psychedelia, jazz and Andean folk music) and lyrically (whimsical humour, social satire and extended narratives). With their smooth two-part harmonies and literary lyrics, they became the most successful group to emerge from the urban folk revival of the early 1960s. The performing style featured Simon's light baritone in solo lines, joined frequently by Garfunkel's ethereal tenor, with songs occasionally performed solo by either of the pair. The title song from their last album, *Bridge Over Troubled Water*, featured Garfunkel throughout in one of Simon's best arching melodies, and revealed Simon's interest in African-American gospel music. Both the single and the album were their best-selling work and won six Grammy awards. They have recorded and performed together sporadically since 1970, for example with *My Little Town* in 1975 and the *Concert in Central Park* in 1981, but have largely pursued solo projects.

DAVID BRACKETT

Simon à Scto Bartholomaeo [Simon]. Monastic name of VÁCLAV KALOUS.

Simon d'Authie [Autie] (*b* ?1180–90; *d* Amiens, after 1235). French trouvère. His name appears in documents as canon at Amiens Cathedral from 1223 and as dean of the chapter in 1228. A skilful lawyer, he acted for the abbey of St Vaast, Arras, from 1222 to 1226 in a suit against lay assessors, and again in 1232 in an action involving the projected erection of a reliquary altar by the chapter of Arras Cathedral. Gilles Le Vinier, whose name is also recorded in the documents, is a partner of Simon in the jeu-parti *Maistre Simon, d'un esample nouvel*, whereas Adam de Givenchi, likewise concerned, is a judge in one of the two jeux-partis (*Symon, le quel emploie* and *Symon, or me faites*) between Simon d'Authie and Hue le Maronnier. Of the 11 other works attributable to Simon, six may be the work of other trouvères.

Bone amour qui m'agree consists entirely of hexasyllabic lines, an uncommon structure; *Quant la sesons comence* places one octosyllabic line among ten hexasyllabic. Also unusual is the use in *Li nouviaus tens qui fait paroir* of a melody with the structure *ABB′CDEFG* in the setting of an isometric strophe consisting of two *pedes* and a cauda. Most strophes contain more than eight lines each, although *Tant ai amours servie et honoree*, set to a non-repetitive melody, consists of only six. *Fols est qui a ensient*, *Tant ai amours* and *Nouvele amours ou j'ai mis mon penser* present analytical problems since the internal intervallic relationships differ in the various readings of these works. *Tant ai amours* is also noteworthy in that several readings have a range of a 12th. No melodies survive in mensural notation; most are irregularly constructed, of variable floridity, and not particularly appropriate for modal interpretation.

THEODORE KARP

Simon de Insula. *See* SIMON, (3).

Simon de Quercu. *See* QUERCU, SIMON DE.

Simoneau, Léopold (*b* Saint-Flavien, Quebec, 3 May 1916). Canadian tenor. He studied in Montreal with Salvator Issaurel, and made his début there in 1941 as Hadji in *Lakmé* with the Variétés Lyriques. After successful appearances in *Così fan tutte* and *Die Zauberflöte*, he studied in New York with Paul Althouse. He made his Opéra-Comique début in 1949, in *Mireille*, and remained in Paris for five seasons. His reputation as a Mozart specialist, elegantly lyrical in style, was first established at the Aix-en-Provence and (from 1951) Glyndebourne festivals, where he sang Idamantes and Don Ottavio. He sang in Mozart operas at La Scala (1953), in London with the Vienna Staatsoper (1954), at the Teatro Colón, at the Salzburg Festival (1956) and with the Metropolitan (début 1963 as Don Ottavio). He made admired recordings of all his major Mozart roles. Simoneau was Tom in the French première of *The Rake's Progress*, at the Opéra-Comique in 1953. Other roles included Gluck's Orpheus and Bizet's Nadir, both of which he recorded. In 1946 he married the soprano Pierrette Alarie with whom he often appeared. He played a leading part in forming the first statutory subsidized opera company in North America, the Opéra du Québec (1971), of which he was initially artistic director. He has taught in Quebec, San Francisco, Banff and Victoria, British Columbia, where he founded Canada Opera Piccola in 1982; he was director of the company until 1988. His translation of Hahn's *Du chant* was published in Portland, Oregon, in 1990.

GILLES POTVIN

Simone di Ugolino de' Prodenzani. *See* PRUDENZANI, SIMONE.

Simonelli, Matteo (*b* Rome, after 1618; *d* Rome, 20 Sept 1696). Italian composer, singer and organist. He spent his life in Rome. In 1633 he sang treble in the Cappella Giulia at S Pietro under Virgilio Mazzocchi and later continued his studies with Vincenzo Giovannoni, *maestro di cappella* of S Lorenzo in Damaso, where he also became organist. In 1660 he became *maestro di cappella* of S Giovanni dei Fiorentini, a post he held until 1679, and he seems occasionally to have worked at S Luigi dei Francesi. From 1650 there are records of his singing tenor at oratorios; he continued to take part in oratorios at S Marcello as singer and organist until 1694. It was as a countertenor that he was admitted on 15 December 1662 to the Cappella Sistina, where he sang for exactly 25 years, and on his death he was buried in the tomb of the papal singers in S Maria in Vallicella (Chiesa Nuova). Among his pupils were Corelli and G.M. Casini. He published little, but his compositions earned him the title of 'the Palestrina of the 17th century' (Adami). He primarily continued the *a cappella* ideal of the Cappella Sistina and wrote a mass for 17 voices typical of Roman polychoral music. But he also wrote a *Stabat mater* for five voices, two violins and organ, which exceptionally is in the style of the *seconda pratica*. His contrapuntal compositions, which are in the majority, do, however, show elements of newer style in the shaping of the melodic lines and the handling of harmony and rhythm.

JOHN HARPER

Simonetti, Achille (*b* Turin, 12 June 1857; *d* London, 19 Nov 1928). Italian violinist and composer. He was first taught the violin by Francesco Bianchi; later he studied with Eugenio Cavallini at the Milan Conservatory (1872–3). He returned to Turin for further violin instruction with Giuseppe Gamba and for composition lessons with Carlo Pedrotti, and continued his studies in Genoa with Sivori, whose clearcut style and bravura temperament decisively influenced his playing. He was engaged briefly as solo violinist at the Théâtre Bellecour in Lyons (1880), then went to Paris to study the violin with Charles Dancla and composition with Massenet at the Conservatoire and to play in the Concerts Pasdeloup (1881–3). He spent the winter seasons 1883–7 in Nice, where he led a quartet that included the young Alfredo d'Ambrosio. In 1887 he went to England to tour with the singer Marie Rôze and the pianist Benno Schönberger; from 1891 he lived in London. He played in the London Trio with Amina Goodwin and W.E. Whitehouse from 1901 to 1912, and subsequently was violin professor at the Irish Royal Academy of Music (1912–19).

Frequent appearances in London and elsewhere in England, as well as throughout Europe, earned Simonetti the reputation of an outstanding soloist and chamber music player. He was among the first violinists to perform the Brahms Violin Concerto, for which he wrote his own cadenzas. Walter Starkie wrote of him in 1929: 'Few violinists were better musicians than Simonetti; not only did he draw a beautiful tone from his Bergonzi violin, but there was a noble sense of style in everything he played'. His graceful salon pieces for the violin are no longer in print, though one of them, *Madrigale*, achieved worldwide popularity; his more ambitious works include two string

quartets and two violin sonatas, the second of which was described by Cobbett as 'a delightful work in lyric vein'. For further information see *Cobbett's Cyclopedic Survey of Chamber Music* (London, 1929–30, rev. 2/1963/*R* by C. Mason).

ALBERT MELL

Simonetti, Leonardo (*b* late 16th century; *d* after 1630). Italian castrato singer and editor. He was a boy soprano in the service of the Graz court in about 1596, remaining there until 9 January 1609, when he resigned. In his later years at Graz he was a pupil of Matthia Ferrabosco. Nothing is then heard of him until 4 January 1613, when he was elected a soprano singer at S Marco, Venice, with a salary of 55 ducats; the minute registering this appointment mentions the fact that he had been singing in the basilica for about a year, presumably on probation. His salary was increased to 70 ducats in 1615 and to 80 in 1626. His name then disappears from the register of S Marco, though he was still in its service in June 1630 when he dedicated his third anthology of sacred music to Alessandro Grandi (i). It seems probable, in view of the fact that his appointment was not renewed at the customary time, that he died in the plague of 1631.

Simonetti merits a place in musical history as the compiler of three anthologies of Venetian music, two of which are outstanding. His *Ghirlanda sacra*, the finest collection of the time of solo motets in the modern style, drew on the work of practically every worthwhile composer in the Veneto, including Monteverdi, Grandi and Cavalli. These motets were written for virtuosos of the first rank and demonstrate the emotional nature of one aspect of Counter-Reformation church music. Other aspects are displayed in the anthology of 1630, which includes the first Baroque concertato mass; it is by Grandi and is for soloists, chorus and instrumental ensemble.

DENIS ARNOLD/R

Simonffy, Kálmán (*b* Tápiószele, ? 5 Oct 1831; *d* Budapest, 15 Dec 1888). Hungarian composer. His title of nobility was 'marosvásárhelyi'. He was a lieutenant in the Hungarian War of Liberation, and after a short period of hiding lived in Nagyabony and later in Cegléd, where he organized and conducted a choral society. A self-taught composer, he began to attract attention in the mid-1850s with his songs, particularly the cycles *Vadrózsa* ('Wild Rose', 1853) to a text of Kálmán Tóth, *Hegyháti dalok* ('Songs of Hegyhát') and *Cipruslombok* ('Cypress Leaves'). By the 1860s he had become the most popular song composer in Hungary. Simonffy also held a number of government posts in the 1860s and 70s. As a member of parliament (1872–5) he played an important part in the founding of a national academy of music. For several years he was the vice-chairman of the Hungarian Singers' Association, and for a long time he was a land registration supervisor. Towards the end of his life he suffered from attacks of depression, and he was mentally deranged by the time of his death.

Simonffy's songs, to poems by Tóth, Sándor Petőfi, Mihály Vörösmarty and others, are rich and many-faceted in their melodic invention and unquestionably represent the peak of 19th-century Hungarian popular song. Many of them were spread by choral societies and gypsy bands to the widest strata of society and came to be thought of as folksongs. Simonffy himself travelled through the countryside (with Károly Fátyol's band) and abroad in 1860 and 1862–4. He was also the author of numerous essays on Hungarian music, including a portrait of János Pecsenyánszky and a series of polemical articles taking issue with Liszt.

BIBLIOGRAPHY

Simoni, Gjon (*b* Shkodra, 8 Feb 1936; *d* Tirana, 2 July 1999). Albanian composer. He worked as a music teacher in Kukësi (1954–6) and a night-club pianist in Durrës (1958–63) before becoming one of the first students (1962–6) at the newly founded Tirana Conservatory, where his teachers included Kozma Lara, Zadeja and Harapi. After graduation he was a musical director in Gjirokastra (1966–70) and head of music production at Albanian Radio (1970–80) before taking up the chair of theory and composition at the conservatory (1980–89). He was appointed dean there in 1992. He died after a car accident.

Though not a prolific composer, Simoni was admired above all as an inventive orchestrator, writing intimate music of exquisite taste. In his Violin Concerto (1987–8) the subtle harmonic and timbral enrichment of essentially pentatonic, folklike thematic material achieves a striking breadth of gesture, while the *Sinfoni i vogël* ('Little Symphony', 1989–90) provides a fine example of his sustained musical invention.

GEORGE LEOTSAKOS

Simonishvili, Varlam (*b* Shemokmedi, nr Ozurgeti, 1884; *d* Ozurgeti, 23 March 1950). Georgian traditional singer (bass) from Guria (western Georgia). He studied folk and church songs with Anton Dumbadze and taught church singing at the Ozurgeti Theological College and in several villages of Guria. His ensemble (trio) together with Samuel Chavleishvili and Avtandil Makharadze was considered to be one of the best in Guria. His first recording was made in Kutaisi in 1908 when he recorded 15 songs. Between 1910 and the 1930s he led several choirs with appearances throughout Georgia as well as in Moscow and Leningrad (St Petersburg) in 1934 and 1936, and including the studio recording of 20 songs. His versions of many Gurian traditional songs such as *Adila-Alipasha* (a song about Alipasha), the table song *Chven mshvidoba* ('Peace to us') and *Naduri* (a harvest song), remain very popular in Georgia. His singing style was based on a deep knowledge of the harmonic and melodic variability of traditional songs and of virtuoso singing technique: his style has influenced many subsequent Gurian singers.

JOSEPH JORDANIA

Simon le Breton. *See* SIMON, (1).

Simonov, Yury Ivanovich (*b* Saratov, 4 March 1941). Russian conductor. The son of opera singers, he showed a talent for conducting from an early age, and while studying the violin at a local music school made his début at the age of 12 conducting the school orchestra's performance of Mozart's Symphony no.40. He entered the Leningrad Conservatory in 1956 and graduated as a viola student of Kramarov in 1965 and a conducting student of Rabinovich in 1968 having conducted several productions at the conservatory's opera studio. Appointed principal conductor of the Kislovodsk PO (1967–9) he became the youngest Soviet conductor to direct a leading orchestra. After winning the 1968 conducting competition at the Accademia di S Cecilia, Rome, he was appointed assistant conductor (under Mravinsky) of the Leningrad PO, 1968–9; he first appeared at the Bol'shoy Theatre, conducting *Aida*, in 1969 and was then appointed conductor and, from 1970 to 1985, principal conductor. Simonov has toured with the Bol'shoy Opera and Ballet to Europe, the USA (he conducted *War and Peace* during the Bol'shoy's visit to the Metropolitan Opera in 1975) and Japan, and also with the Bol'shoy Theatre Chamber Orchestra, which he formed in 1979. That year he reintroduced Wagner (*Das Rheingold*) to the Bol'shoy; his British opera début was in 1982 with *Yevgeny Onegin* at Covent Garden, followed by *La traviata* there in 1986 and *The Queen of Spades* at the Opéra Bastille in 1993; from 1995 to 1998 he conducted the *Ring* cycle at the Budapest Opera.

From 1985 to 1989 he was simultaneously chief conductor of the Maliy SO in Moscow and the USSR Small State SO, in 1991 he became principal guest conductor of the Buenos Aires PO and in 1994 music director of the Belgian National Orchestra. He has appeared with all the leading Russian orchestras, the leading London orchestras (since 1982) and major US orchestras (since 1989), and in Japan, Hong Kong and throughout Europe. He has been a champion of Soviet music and the works of young Soviet composers, and his première performances include Shchedrin's ballet *Anna Karenina* (1972). In 1975 he was appointed to teach an orchestral class at the Moscow Conservatory, becoming professor in 1985.

I.M. YAMPOL'SKY/VICTOR LEDIN

Simons, Julie. *See* CANDEILLE, JULIE.

Simons, Netty (*b* New York, 26 Oct 1913; *d* New York, 1 April 1994). American composer. Originally trained as a pianist, she later studied at New York University with Percy Grainger and privately (1938–41) with Stefan Wolpe; she regarded Wolpe as her most influential teacher. From 1965 to 1971 she was active in producing new music radio broadcasts. Her early compositions are characterized by extreme economy of means and imaginative interplay of tone colour. By 1960 she had become more experimental, often including aleatory elements; later she frequently used graphic notation (*Buckeye has Wings*, *Design Groups I* and *II*, *Silver Thaw*). Many of her compositions may be performed as theatre pieces, employing dancers and actors as well as (or instead of) musicians. Her musical materials have been donated to New York Public Library, Lincoln Center.

CHRISTINE AMMER

Simonsen, Rudolph (Hermann) (*b* Copenhagen, 30 April 1889; *d* Copenhagen, 28 March 1947). Danish composer and pianist. He took a law degree at the University of Copenhagen (1912) while training as a pianist and composer. As a student at the Copenhagen Conservatory (1907–9) he was taught theory by Malling and the piano by Agnes Adler; he continued the piano with Teresa Carreno and Anders Rachlew. He made his début as a

pianist in 1911 and for some years concentrated on chamber music and accompanying. In 1916 he was appointed teacher at the Copenhagen Conservatory, of which he became director when Nielsen died in 1931. His compositions display his admiration for Nielsen, particularly the four symphonies, which are nevertheless independent and substantial contributions to the Danish orchestral repertory of the period. Simonsen's idealistic musical vision, with a wide cultural background, also found expression in comprehensive educational activities concerned with music, and in his published writings on music.

NIELS MARTIN JENSEN

Simple interval. An INTERVAL of an octave or less (as opposed to a COMPOUND INTERVAL).

Simple time. Any musical metre whose main beats are divisible by two. It can occur in duple time (e.g. 2/2, 2/4), triple time (3/4, 3/8), quadruple time (4/2, 4/4) and so on. *See* COMPOUND TIME.

Simplex (Lat.: 'simple', 'uncompounded'). Term used in medieval theory to denote principally (1) monophonic, as in 13th-century use of the phrase 'simplices conductus'.

(2) Simple (i.e. not composite), as in 'simplex organum' and 'simplex cantus' (*Musica enchiriadis*, 9th century), implying lines of parallel organum which are not doubled at the octave (*see* ORGANUM).

(3) Unligatured, of note forms especially in rhythmic modal theory and in notation *cum littera*, as distinct from 'ligata'. *See* NOTATION, §III, 1–2; MOTET, §I; RHYTHMIC MODES.

(4) Prime, unlengthened, of durational values ('longa simplex', 'brevis simplex', 'pausatio simplex') as distinct from 'duplex' (*see* NOTATION, §III, 3).

IAN D. BENT

Simplification system. A method of constructing organ-chests whereby pipes are placed chromatically as near as possible to their notes on the keyboard and the number of pipes is reduced by applying the principle of difference and addition tones. The system is associated with the Abbé GEORG JOSEPH VOGLER, who travelled through Europe 'simplifying' organs in Salzburg, Munich, Berlin and elsewhere by replacing their bulky reeds with free reeds and their costly Mixtures and 32′ stops with low Mutations. Most ranks were halved. None of these ideas was new, of course, but Vogler's personal magnetism, though smacking of charlatanry to the enlightened, was effective. Both the contemporary interest in the theory of overtones, etc. (which noted that 16′ + 10⅔′ ranks gave a soft 32′ tone), and the popular need for economy in organs helped his schemes, but his influence on the new big firms of central Europe – Walcker, Moser, Sauer – should not be overestimated.

PETER WILLIAMS

Simpson, Adrienne (Marie) (*b* Wellington, New Zealand, 26 Nov 1943). New Zealand musicologist. She studied music history at Victoria University of Wellington (MA 1965) and King's College, London, under Thurston Dart (MMus 1966). Research into lute music led to her becoming editor of the *Lute Society Journal* during 1971–2 and a close association with Gerald Abraham encouraged an interest in 19th-century Czech music. On returning to New Zealand in 1983 she became founder-editor of *Early Music New Zealand* (1985–8) and undertook work on the history of opera there, which has led to three books. She was president of the New Zealand Opera Society from 1988 to 1990 and is an advisor to *Australasian Music Research*. She broadcasts regularly for the BBC and Radio New Zealand. Simpson has shown, in her writings, criticism and broadcasts, an innate ability to communicate with a wide musical audience.

PETER WALLS

Simpson [Sympson], **Christopher** (*b* ?Egton, N. Yorks., *c*1602–6; *d* ?Holborn, London, between 5 May and 29 July 1669). English theorist, composer and viol player. He was the eldest son of Christopher Simpson of Westonby and his wife Dorothie; they, like him, were Roman Catholics and known recusants, who in 1604 were 'suspected to be secretly marryed'. His father, a cordwainer and leader of a company of actors based at

Egton, acquired a smallholding (Hunt House) on the moors some 6 km south of Egton, which the younger Christopher inherited. Simpson has been tentatively identified with 'Christopher Simpson alias Sampson' from Upsall in Yorkshire, who studied at the Catholic college of Saint Omer in the early 1620s, was ordained in Rome on 26 August 1629, entered the Society of Jesus at Watten in 1634, returned to England by 1639 as a priest attached to the residence of St John, Durham, and rose to become superior of the Jesuit mission in Northumbria (Urquhart, 1992). There are problems with this identification, however, and a report to Rome, from the English provincial George Gray, that the Jesuit priest died on 3 March 1674 is not easily explained.

During the Civil War Simpson served on the Royalist side in the campaigns of 1643–4 under the Earl (later Duke) of Newcastle as quartermaster to the troop of horse commanded by Newcastle's son Lord Henry Cavendish. In the dedication to the duke of his *Compendium of Practical Musik* (London, 1667), Simpson mentioned pieces 'formerly composed for your Grace's recreation', and at least one of his 22 three-part airs appears to have been written at Welbeck, the duke's Nottinghamshire seat (see Hulse, 1994). At some time between 1645 and 1649 he went to live at Scampton, Lincolnshire, at the house of Sir Robert Bolles, who became his friend and patron, 'affording me a cheerful Maintenance, when the Iniquity of the Times had reduced me (with many others in that common calamity) to a condition of needing it' (dedication of *Chelys .../The Division-viol*, 1665). It was Sir Robert's son John (*b* 1641) who was 'the chief occasion' for the writing of *The Division-Violist* (London, 1659). A Latin ode by James Alban Gibbes, in praise of John Bolles's brilliant viol playing in Rome in 1661, praises Simpson also as a teacher comparable to Chiron, 'whom roving fame made known to the world through the accomplishment of the Thessalian youth'. Another pupil was Sir John St Barbe, a nephew of John Bolles's wife Elizabeth, who was ten when *The Principles of Practical Musick* (London, 1665), a work partly framed for his 'particular Instruction', was published. John Bolles succeeded to the baronetcy in 1663; Simpson was a witness to Sir Robert's will, by which he received £5. He continued to enjoy Sir John's close friendship, staying at his house 'by Turn-stile in Holborne'; here, it appears from Wood's notes, he died (although in his almanac Wood had been uncertain whether he died in London or at Scampton). In his will (made on 5 May and proved on 29 July 1669) Simpson left his music books to Sir John; Hunt House passed to his nephew. Matthew Locke, a fellow Catholic, commemorated him in 1672 as 'a Person whose memory is precious among good and knowing Men, for his exemplary life and excellent skill'; John Jenkins had called him his 'very precious friend'. His portrait, painted by John Carwarden, hangs in the Faculty of Music at Oxford (see fig.1); an engraving after this, with Simpson's coat of arms, was made by William Faithorne for *The Division-Violist*, and a second Faithorne portrait appears (in different versions) in the 1667 and 1678 editions of the *Compendium*.

Simpson was the most important English writer on music of his time. *The Division-Violist* (fig.2), to which Jenkins, Coleman and Locke contributed laudatory verses, was sufficiently successful for a second, revised edition to be made in 1665 (most copies of this second edition

1. Christopher Simpson: portrait by John Carwarden, c1650 (Faculty of Music, Oxford)

represent a second state, dated 1667) with parallel Latin and English texts 'to make it useful at Home as well as abroad', entitled (in Latin) *Chelys* and (in English) *The Division-Viol*. Sir Roger L'Estrange, who licensed the second edition, called it 'one of the best Tutors in the world' for the instrument and 'a work of exceeding use in all sorts of Musick whatsoever'. Its three sections are 'Of the Viol it self, with Instructions how to Play upon it'; 'Use of the Concords, or a Compendium of Descant' and 'The Method of ordering Division to a Ground'. The same practical and human approach distinguishes *A Compendium of Practical Musick* praised by Locke in 1667 as 'new, plain and rational; omitting nothing necessary, nor adding any thing superfluous', by L'Estrange in 1678 as 'the Clearest, the most Useful, and Regular Method of Introduction to Musick that is yet Extant' and by Purcell in 1694 as 'the most Ingenious Book I e'er met with upon this Subject'. The first part, a revision of the *Principles* of 1665, treats of the rudiments of pitch and time; the other four parts deal with intervals, concords, cadences and chord progressions, with dissonance treatment and theoretical aspects of the scale, with counterpoint, imitation, and the forms of vocal and instrumental music, and with canonic writing. Editions of Playford's *Brief Introduction* from 1655 to 1679 incorporated Campion's *A New Way of Making Fowre Parts in Counter-point* 'with Additional Annotations thereon, by that Excellent and profound Master of Musick, Mr Christopher Simpson', though these had not been intended by Simpson for publication.

Simpson's instrumental compositions range from the 'Short and Easie Ayres Designed for Learners' (in *The Principles of Practical Musick*) to works which display the prowess of the fully fledged division violist. His

2. Page from Christopher Simpson's 'The Division-Violist' (London, 1659)

written sets of divisions for one or two viols upon a ground bass are models of skill and invention; in such pieces, he wrote, 'excellency of the Hand' may be as well shown as in extemporized divisions, 'and the Musick perhaps better, though less to be admired, as being more studied'. His most challenging and elaborate pieces are a set of 12 fantasias (*The Monthes*), to which Jenkins referred in 1659 in these lines:

> And those thy well composed Months o' th' Yeere;
> Which Months thy pregnant Muse hath richly drest,
> And to each Month hath made a Musick-Feast,

and a companion set of four suites of fantasia, air and galliard, *The Seasons*, probably inspired by Jenkins's brilliant fantasia-suites for the same consort. These fantasias are of a type described by the composer in *The Division-Violist* as 'beginning with some *Fuge*; then falling into *Points of Division*; answering One Another ... and sometimes, All joyning Together in *Division*; But commonly, Ending in Grave, and Harmonious *Musick*'. The airs and galliards contain three (or, in the case of *Winter*, five) increasingly brilliant varied repeats of each strain.

CHRISTOPHER D.S. FIELD

Simpson, John (*d* London, *c*1749). English music publisher, instrument maker and engraver, established in London. He was employed by John Hare's widow, Elizabeth (*see* HARE family), until her retirement in 1734, when he set up in business for himself, taking over the trade sign from Mrs Hare and probably also her stock and plates. He also had connections for a short time with Thomas Cobb, and when James Oswald arrived in London in 1741 he may have worked for Simpson, who published some of his compositions.

Simpson's early publications were mostly sheet songs, many of which were later gathered into the volume of *Harmonia anglicana* (1744) containing the earliest known appearance of *God Save the King*. This collection was almost immediately reissued with the title changed to *Thesaurus musicus*, and a second volume was added in about 1745. Other notable publications were Henry Carey's *The Musical Century* (3/1744), *The Delightful Pocket Companion* (*c*1745), a reissue of *Calliope* (1746–7), Thomas Arne's *The Musick in the Masque of Comus* (*c*1749) and *Lyric Harmony* (*c*1746–8), and Gluck's *Six Sonatas for Two Violins & a Thorough Bass* (1746).

After his death Simpson was succeeded by his widow Ann, with Maurice Whitaker as manager, and the business continued in her name until she married John Cox in 1751. At Cox's retirement in 1764 many of Simpson's plates were acquired by ROBERT BREMNER, Henry Thorowgood, the THOMPSON family and JOHN WALSH (ii). The business passed into the hands of James Simpson, son of John and Ann, who about 1767 took his own son, John, into the firm, which continued until about 1795. They were mainly active as violin and flute makers (or at least dealers), but published a small quantity of music, mostly single sheet songs. They were presumably related to James Simpson jr, who was at Sweeting's Alley from about 1796 to 1799.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES

Simpson, Robert (Wilfred Levick) (*b* Leamington, Warwicks., 2 March 1921; *d* Tralee, Co. Kerry, 21 Nov 1997). English composer and musicologist. His father was Robert Warren Simpson, his mother, Helena Hendrika Govaars, who came from Dutch stock. He was educated at Westminster City School, and his earliest musical experiences were gained through playing the cornet in brass bands. A lifelong pacifist, he worked with an ARP mobile surgical unit during the blitz of World War II. His parents intended him to become a doctor, but he gave up medicine after two years, and instead from 1942 to 1946 studied harmony and counterpoint as a private pupil of Howells. For several years he was a freelance lecturer and writer, contributing to *Music Review* and *Music Survey*. The distinctive character of his writing and broadcasting came from an ability to communicate complex musical processes to the layman; similarly the complex musical ideas of his compositions always remain aurally attractive. In 1947 he founded the Exploratory Concerts Society, which questioned received opinion by promoting neglected masterpieces and underrated composers. In 1951 he was awarded the DMus at the University of Durham, submitting for it the work that became the First Symphony (he had written and destroyed four previous symphonies, one of which used serial techniques).

Sir Steuart Wilson, musical director of the BBC, took notice – especially of the Exploratory Concerts Society – and in 1951 he invited Simpson to join the BBC music division. Much of his life was spent with the corporation, and for much of that time he was joined by Deryck Cooke and Hans Keller. His innovatory series *The Innocent Ear* introduced many radio listeners to the unfashionable but excellent through his formula of talking about the music and playing it, but concealing the composer's name until the end. During these years composition was a spare-time activity; but following dissatisfaction with the cultural policies of the BBC he resigned in 1980 after which he devoted most of his time to composition, a pursuit he felt more valuable than analytical essay writing. After many years of living at Chearsley, Buckinghamshire, in 1986 Simpson moved to Ireland, where the idyllic nature of his surroundings encouraged him to a calmer outlook, as well as involving him with Irish broadcasting and performances. He was a Fellow of the Royal Astronomical Society, and moved his personal astronomical telescope from Buckinghamshire to the hill above his new home overlooking the Atlantic.

Simpson first came to prominence as a scholar; his special interest in Bach (an interest that resulted in a frequent use of fugue in his own works), the Viennese classics, Bruckner, Nielsen and Sibelius gave him considerable knowledge of composition which deeply affected his whole outlook. His books on Bruckner (1960 and 1967) and Nielsen (1952 and 1965) did much to further the music of those two composers, which had until then been largely neglected outside their native countries: for this work he was awarded the Carl Nielsen Gold Medal (Denmark) in 1956 and the Medal of Honour of the Bruckner Society of America in 1962. But he was essentially an artist first and a theorist second, and one of his aims was to recapture in his own music the momentum to be found in the Viennese classics, a handling of muscular rhythm that he felt had largely been lost among contemporary composers. 'Energy' was a word that constantly appeared in his discussions and its presence is unmistakable in all his compositions. Indeed, it is the title of one, and it reflects an optimistic (or, as he once put it, 'ferociously anti-pessimistic') outlook. In a similar fashion Simpson found himself in sympathy with Nielsen's remark

Robert Simpson

that music is nothing unless it has a 'current' – a current which he took to mean an expressive life force. Simpson was a pacifist humanitarian (he was a patron of Musicians against Nuclear Arms) and while this may have made him pessimistic about the future of humanity, it resulted in life-affirming, communicative music. ('We all know how a tree can split a rock', he once said.) This caused him to pursue the idea of growth in his music – the same kind of growth found in the symphonic processes of Beethoven and Sibelius but expressed in his own individual language. Though traces of the influence of – and sometimes deliberate, if brief, quotations from – Haydn, Bruckner and Nielsen may be found in Simpson's music, it is never merely imitative. He had no interest in trends or fashions, once remarking that it was listening to serial music by Schoenberg in his early years that told him exactly what he did *not* want to do. His music is neither atonal, nor for the most part functionally tonal; instead it seeks to release the energy locked within basic intervals and resonances.

The heart of Simpson's output is to be found in his 11 symphonies and 16 string quartets, which spanned his composing life; he had a particular interest in the string quartet medium. His earliest published pieces were, however, two works for piano: the earlier of these, the Sonata of 1946, already proclaims the composer's interest in classical procedures and in the construction of large-scale music which is organic and of tonal consistency. The second, the Variations and Finale on a Theme of Haydn (1948), demonstrates an interest in momentum by exploring the ways in which lines, rhythms and harmonies in a tonal work create a sense of motion when played in both forward and reverse directions; the theme and each variation are palindromic. These two early works point the way ahead: palindromes are found in several later works (the Ninth String Quartet is a massive re-exploration of the same Haydn theme), and several large-scale works (notably the Ninth Symphony) explore momentum by being based on a single pulse throughout, alterations in note-values being used to create a sense of tempo change. Simpson's fascination with momentum led to a deep appreciation of Sibelius's handling of rhythm, in particular the use of imperceptible changes from one type of motion to another, as in the first movement of the Fifth symphony. Examples of this in Simpson include the First String Quartet and the finale of the Third Symphony. His ideas on the symphony are cogently laid out in the prefaces he supplied as editor of the two-volume study *The Symphony*.

Simpson's scholarly and compositional skills came together in a number of works, chief among which are the String Quartets nos.4–6: the starting-point for these was a BBC television talk on Beethoven's Third 'Rasumovsky' Quartet. Realising that verbal analysis could not lead to the essence of the piece, and that there was much to be learned about Beethoven's methods of large-scale construction and handling of momentum by following his procedures, Simpson made his quartets studies of the 'Rasumovskys'. A similarly close interest in Beethoven informs other works: the first movement of the Third Symphony is a fine example, as are numerous one-in-a-bar scherzos. In addition to this fascination with sonata-style tonal tensions is Simpson's admiration for Beethoven's variations, which led to his own sets of variations (and not only in works so titled).

A change in Simpson's approach to the basic building blocks of composition occurred in the late 1970s. Despite traces of the process in some earlier works, from the Eighth String Quartet onwards Simpson began to organize his music around the resonances provided by intervals, treating a perfect 5th, for example, as if it was a completely novel sound, and seeing what would happen if it was combined with some other interval. Increasingly, too, doublings, which in music before the 20th century had frequently been at the octave, were made at other intervals from the fundamental end of the harmonic series; thus the Seventh Symphony and the organ piece *Eppur si muove* have much doubling of chords and lines at the fifth. The process is expanded in the Sonata for violin and piano (1984) by concentrating on notes higher up the harmonic series: here the basic building blocks are the major and minor 3rd melodic lines, often being paralleled at the major 3rd, the piano making a considerable feature of doubling chords at that interval. Moreover, a chord consisting of just a minor third (e.g. G♮-B♭) will often be doubled at the major third above (B♮-D♮), so that the natural open string sonority, G♮-D♮, is filled in with both the major and minor 3rd. Such a chord is intervallically symmetrical, and this principle was further investigated in the mirror inversions of the Ninth String Quartet (*Variations and Fugue on a Theme of Haydn*) and the Symphony no.10 (1988).

A concern that the players in a string quartet should be regarded as individuals, rather than as four people providing the same kind of music at different pitches, always informed Simpson's writing for strings. The same care for tailoring his music to the individual instruments is found in his music for brass band. Simpson's early experience as a brass player led to a handful of works that have enjoyed considerable acclaim. But it is above all

his symphonies and quartets for which he will best be remembered and that warrant the description of him as 'an avant-garde radical', one with which he concurred.

LIONEL PIKE

Simpson, Thomas (bap. Milton-next-Sittingbourne [now Milton Regis], Kent, 1 April 1582; *d* ?Copenhagen, before 20 June 1628). English composer, string player and music editor. Nothing is known for certain of his activities before 1608, when he is listed as a musician at the court of the Elector Palatine at Heidelberg, though an apparently autograph bass part of 19 'songes' dedicated to Sir Norton Knatchbull of Mersham, Kent, probably dates from before he left England. Also, his wife came from Lorraine, so he may have spent some time at the court in Nancy. He was still at Heidelberg in 1610, when he published his first collection, though by 1615 he had moved to the court of Count Ernst III of Holstein-Schaumburg at Bückeburg, near Hanover. He was still there when he published his third collection in 1621, and probably left the following year, when Count Ernst died. He was employed as a 'fiolist' at the Danish court from 7 May 1622 to 4 March 1625, and was dead by 20 June 1628, when the city bailiff of Copenhagen was asked to collect a debt from his heirs.

Nearly all of Simpson's surviving music comes from the three collections he published between 1610 and 1621. The first, *Opusculum neuwer Pavanen*, is in five parts and consists of 12 pavan–galliard pairs followed by three courante–volta pairs. Seven of the pavans (three by John Dowland, two by John Farmer, and one each by Richard Reade and Thomas Tomkins) come from the English repertory, and were arranged by Simpson himself, perhaps from lute or keyboard settings; he followed German practice by drawing material from them for his own delightful galliards. A fine pavan of his own, *Sachevil's dolorosi*, is probably an elegy for Thomas Sackville, Earl of Dorset (*d* 1608). *Opusculum neuwer Pavanen* is a fairly conservative collection, similar to those by Holborne and Dowland, with restrained writing equally suitable for consorts of viols or violins, though some of the pieces use the modern part layout in which the tenor-range *quintus* part is replaced by a second soprano.

The second collection, *Opus newer Paduanen*, is also in five parts, though it is much more up-to-date (which suggests that the reported edition of 1611 is a ghost). All the pieces are apparently by Simpson himself, and they use the two-soprano layout, often deployed in virtuosic, violinistic dialogues. There is also a much greater range of styles and forms, including pavans and galliards in the English style, an italianate ricercare and canzona, and pieces entitled 'ballet' or 'mascarada' that imitate dances from the English masque or the French *ballet de cour*. The collection ends with a fine set of variations initially inspired by Richard Alison's *Quadro Pavin* from Thomas

Morley's *The First Booke of Consort Lessons* (London, 1599; ed. S. Beck, New York, 1959, no.1).

In *Taffel-Consort* the process of modernization is carried a stage further: all 50 pieces are laid out in the four-part 'string quartet' scoring with a figured continuo part, and there are pieces in D major and even A major, keys well suited to the open strings of the violin but outside the traditional hexachord system. Some are by English composers, including Dowland, Robert Bateman, Alexander Chesham, Alfonso Ferrabosco II, Edward Johnson, Robert Johnson and Joseph Shirley, and were presumably arranged by Simpson himself. The pieces by local composers – Nicolaus Bleyer, Christoph or Christian Engelmann, Johann Grabbe, Johann Grosche or Krosch, Christoph or Christian Töpfer, Maurice Webster and Simpson himself – were probably specially written for a particular ensemble at the Bückeburg court. There is a similar range of styles and forms as in *Opus newer Paduanen*, but with fewer pavans and galliards. Simpson's activities as an arranger and editor have tended to divert attention from his merits as a composer. At their best, his dances have irresistible tunes, lively part-writing and logical, forward-looking harmony, while his contrapuntal pieces, especially the beautiful ricercare on the English folksong 'Bonny sweet Robin' (*Taffel-Consort*, no. 29), show that he was capable of deeper things.

WORKS

Opusculum [30] neuwer Pavanen, Galliarden, Couranten unnd Volten, a 5, 1610[22]; ed. H. Mönkemeyer, *Monumenta musicae ad usum practicum*, vii (Celle, 1987)

Opus [22] newer Paduanen, Galliarden, Intraden, Canzonen, Ricercaren, a 5 (Frankfurt, 1611, lost; Hamburg, 2/1617); ed. H. Mönkemeyer, *Monumenta musicae ad usum practicum*, viii (Celle, 1987)

PETER HOLMAN

Simrock. German firm of music publishers. Nicolaus Simrock (*b* Mainz, 23 Aug 1751; *d* Bonn, 12 June 1832) founded the firm in Bonn in 1793; Heinrich [Henri] Simrock founded a branch in Paris in 1802 and in 1812 Peter Joseph Simrock (*b* Bonn, 18 Aug 1792; *d* Cologne, 13 Dec 1868) founded a branch in Cologne, taking over the firm from his father Nicolaus Simrock in 1832. He was followed in 1868 by his son Friedrich August [Fritz] Simrock (*b* Bonn, 2 Jan 1837; *d* Ouchy, 20 Aug 1901), who moved the firm to Berlin in 1870. From 1901 to 1910 one of Fritz Simrock's nephews, Johann Baptist [Hans] Simrock (*b* Cologne, 17 April 1861; *d* Berlin, 26 July 1910) directed the firm and established a subsidiary in Leipzig (1904) as well as agencies in London, New York and Paris. In 1907 the firm acquired the Bartolf Senff publishing house of Leipzig. Richard Chrzescinski was manager from 1910 to 1920; he was succeeded by Fritz Auckenthaler Simrock (*b* 17 Nov 1893; *d* Basle, 19 April 1973), a nephew of Fritz Simrock who took over the publisher Eos in 1925. The firm was sold to the Anton J. Benjamin-Verlag of Leipzig in 1929 but retained its original name; from 1938 to 1951 it belonged to the group of Sikorski music publishing houses, Leipzig. The firm was then returned to the Schauer family (the heirs of the former owners, Benjamin), who manage it in Hamburg and London within the Benjamin–Rahter–Simrock publishing organization. In 1980 the ownership of the group passed to Irene Retford, a descendant of Benjamin.

Title-page of Brahms's Violin Sonata in D minor op.108 (Berlin: Simrock, 1889)

By 1780 Nicolaus Simrock, a horn player in the electoral orchestra in Bonn, was dealing in printed music and musical instruments. Through his friendship with the young Beethoven he published the Kreutzer Sonata op.47 (1805) and the Variations for flute and piano op.107. When Haydn visited Bonn in 1790, Simrock met him and the firm subsequently published *Sechs leichte Trios* op.21 (1796), the London symphonies nos.7, 9 and 10 (1801) and a collection of 37 symphonies under the title *Symphonies à grand orchestre* (1810). Simrock published

compositions by Carl Maria von Weber from 1808 and encouraged the reprinting of works by Bach (*Das wohltemperirte Clavier*, 1800; solo violin sonatas, 1802; *Magnificat*, 1811; Mass in B minor, 1833, with Nägeli of Zürich) and Handel (Psalm c, 1821; *Messiah*, 1823; *Alexander's Feast*, 1825; *Israel in Egypt*, 1826); he was also interested in promoting German folksong. Under Peter Joseph Simrock works by Mendelssohn (*Lieder ohne Worte, St Paul, Elijah*), Hiller and Schumann (Symphony no.3) were acquired for the firm. The collection *Classische Kirchenwerke alter Meister für Männerchor* (1845), edited by J.J. Maier and including works by Josquin, Lassus and Palestrina, was published during this period. From 1860 Simrock published most of Brahms's opp.16–122 (see illustration) and, at Brahms's suggestion, pieces by Dvořák, including *Klänge aus Mähren* op.32 (1877) and *Slavische Tänze* op.46 (1878), most works by Bruch from 1869 to 1890 and some by the younger Johann Strauss. Simrock's successors acquired music by Leon Kirchner and Reger, Pfitzner, Graener and Dohnányi. The firm publishes compositions by Wellesz, Dietrich Manicke, Theodor Blumer and others, as well as editions of earlier works.

RUDOLF ELVERS

Sims, Ezra (*b* Birmingham, AL, 16 Jan 1928). American composer. He studied at the Birmingham Conservatory (1945–8), with Quincy Porter at Yale University (BMus 1952), and with Kirchner and Milhaud at Mills College (MA 1956). In 1958 he joined the staff of the Loeb Music Library at Harvard University as a computer programmer. In 1960 he studied at the Berkshire Music Center. He spent the years 1962–3 in Japan on a Guggenheim Fellowship, composing at the electronic music studios of NHK. From 1965 to 1974 he returned to the Loeb Library, and taught theory briefly at the New England Conservatory (1967–8). Between 1968 and 1978 he was music director of the New England Dinosaur Dance Theatre, whose new music ensemble, the Dinosaur Annex, has given premières of many of his works. He has received commissions from the Koussevitzky Foundation and Boston Musica Viva and, in 1985, an award from the American Academy of Arts and Letters.

Sims's output is divided roughly evenly between tape and instrumental music. His tape music uses both collage and *musique concrète*; most of his later works in this area use a mixture which he calls 'combine tape'. About 1960 Sims began working with microtones and developed an equal-tempered scale based on a 72-note division of the octave, from which 18 pitches are drawn to form an asymmetrical mode. Eight of the pitches correspond roughly to natural harmonics (the 8th to the 15th); the other ten are chromatic. Sims has used the scale for most of his non-tape music after 1971, both strictly (as in much of his computer-generated music) and with microtonal adjustments that approximate mean-tone or just intonation. He has written vocal music in traditional tunings (Chamber Cantata on Chinese Poems) and based on his own scale (*Elegie – nach Rilke*). Sims contributed articles on microtones and related topics to the second edition of *The Harvard Dictionary of Music* (1964).

He was increasingly sought after from the late 1980s for lectures on his technique and concerts devoted to his music in Austria and Germany. In 1992–3 he was guest lecturer in the Richter Herf Institut für Musikalische Grundlagenforschung at the Mozarteum in Salzburg.

WORKS
(*selective list*)

WORKS BASED ON SIMS'S 18-NOTE SCALE

5 or more insts: Octet for Str, 1964; 'Str Qt no.2', ww, str, 1974; Longfellow Sparrow, 5 fl, 5 cl, 3 tpt, 5 trbn, 1976; Yr Obedt Servt, 4 cl, hn, trbn, vn, vc, 1977, rev. chbr orch, 1981; Midorigaoka, 2 vn, 2 va, vc, 1979; Sextet, cl, a sax, hn, vn, va, vc, 1981; Phenomena, fl, cl, vn, va, vc, 1981; Pictures for an Institution, chbr orch, 1983; Night unto Night, 3 fl, 2 ob, 2 cl, 2 bn, 3 hn, 2 tubas, 1984; Qnt, cl, 2 vn, va, vc (1987); Night Piece: In girum imus nocte et consumiur igni, fl, cl, va, vc, tape, 1989; Concerto Piece, solo va, fl, cl, vc, small orch, 1990; Stanzas, fl, 3 cl, va, vc, 1995

1–4 insts: Ob Qt, 1971–5; 20 Years After, cl, vn, 1978; And, as I was saying ..., va, 1979; All Done from Memory, vn, 1980; Ruminations, 1980; Two for One, vn, va, 1980; Solo after Sextet, sax, 1981; Qt, fl, vn, va, vc, 1982; This Way to the Egress, vn, va, vc, 1983; Str Qt no.4, 1984; Flight, fl, tape, 1989; Duo, fl, vc, 1994; Duo, va, vc, 1996; Duo '97, cl, va, 1997

Vocal: In memoriam Alice Hawthorne (E. Gorey), T, Bar, nar, 4 cl, hn, 2 mar, 1967; Elegie – nach Rilke, S, fl, cl, vn, va, vc, 1976; Come Away (Campion, Fletcher, Hardy, Whitman), Mez, a fl, cl, hn, trbn, va, db, 1978; The Conversions, 2 S, 2 A, 2 T, 2 B, 1985; If I told him (G. Stein), Mez, vc, 1996

OTHER WORKS

Inst: Sonatine, pf, 1957; Str Qt no.1, 1959; Sonate concertanti, nos.1–5, ob, va, vc, db, nos.6–10, str qt, 1961; Str Qt no.3, 1962; Slow Hiccups, 2 insts, 1975

Vocal: Chamber Cantata on Chinese Poems, T, chbr ens, 1954; Cantata III, S, perc, 1963; several other songs and choral works

Dance music, all tape: McDowell's Fault (The Tenth Sunday After Trinity) (T. Armour), 1968; A Frank Ov., 4 Dented Interludes, and Coda (J. Waring), 1969; Clément Wenceslaus Lothaire Nepomucene, Prince Metternich (1773–1859) (Armour), 1970; Real Toads (C. Keuter), 1970; Where the Wild Things are (Armour), 1973; Collage XIII (J. Plum), 1977; over 10 other works

Many incidental scores, other tape works

Principal publishers: Composers Facsimile Edition, Merion

STEVEN LEDBETTER

Simsimiyya [semsemiyya, sumsumiyya]. Bowl or box lyre with five strings, found in Egypt (from the Suez area to Sinai), Saudi Arabia (the Red Sea coast) and South Yemen (where it has six strings). This instrument is smaller than

the *ṭanbūra*. In South Yemen the *simsimiyya* lyre has a circular soundbox, with two arms, less widely spread than in the ṬANBŪRA, standing almost parallel. The strings tied on the yoke are held not by rings of material, as in the *ṭanbūra*, but by pegs, as in the *beganna*.

In Saudi Arabian popular usage, a petrol can may serve for the soundbox (*see* SAUDI ARABIA, §III). The Egyptian *simsimiyya* seems to adapt to the shape of the *ṭanbūra*, but rectangular models also exist – those on the Red Sea coast formerly called *ṭanbūra* and more particularly in the Egyptian port of Qusseir, where it is played by sailors.

The tuning of the *simsimiyya* is similar to that of the North Yemeni *ṭanbūra*: *d″–c′–b♭′–a′–g′*. Some strings have lost their original names, which have been replaced by a recent vocabulary borrowed from scholarly music. According to Shiloah (1972), the progression from high to low is *sharār* ('the spark'); *ḥusaynī* (name of a *maqām* in A); *watar* ('the string'); *dūka* ('second degree'); and *būma*.

The Egyptian *simsimiyya* has lately undergone structural modifications. The strings are attached to the yoke by buttons which fit like pegs, allowing meticulous measurement and the reproduction of the neutral 3rd; further, to reinforce the instrument, a kind of bow has been added on some models to support the yoke.

CHRISTIAN POCHÉ

Šín, Otakar (*b* Rokytno, nr Nové Město na Moravě, Moravia, 23 April 1881; *d* Prague, 21 Jan 1943). Czech theoretician and composer. While working at a brewery he studied organ and composition at the Prague Conservatory under Josef Klička and Karel Stecker (1900–05). After the war he began teaching at the conservatory and was appointed to the permanent staff in 1920; from 1922 to 1924 he was also administrative director. His compositions, which include published piano pieces and chamber music, were influenced mainly by Novák and Suk, and the study of these two composers helped Šín clarify his theories on contemporary harmony. Later he evolved a system of functional harmony to analyse such music. His harmony and counterpoint manuals became standard textbooks and ran into several editions.

JOHN TYRRELL

Sinatra, Frank [Francis Albert] (*b* Hoboken, NJ, 12 Dec 1915; *d* Los Angeles, 14 May 1998). American popular singer and film actor. His parents were Italian immigrants from whom he inherited an inborn predilection for the bel canto style of singing. Though untrained as a singer and unable to read music, he immediately attracted attention while singing on New York radio programmes and was engaged as a big-band vocalist with Harry James in 1939. This was followed by a three-year engagement with Tommy Dorsey (1940–42), during which time he became a celebrity among young people on a scale matched only by Benny Goodman before him. After leaving Dorsey he was constantly in demand as a solo attraction, singing as many as 100 songs daily on a tight touring and recording schedule. Inevitably this overexposure began to tell on Sinatra's voice and popularity, and from 1947 his career entered a noticeable decline. He continued to issue recordings for Columbia, generally in a ballad vein with lush arrangements by Axel Stordahl, but failed to match his former success. Furthermore, his flamboyant life style was causing him personal difficulties. By 1952 he was without film or recording contracts and lacked a manager.

The following year Sinatra re-established himself in the public eye through a non-singing role in the film *From Here to Eternity*, revealing a hitherto unexpected talent for dramatic film acting which earned him an Academy Award. At the same time he signed a new recording contract with Capitol Records which placed him in a more congenial, jazz-orientated context. There followed a long series of best-selling recordings, such as *Come Fly with Me* (1957), that used backup arrangements by Billy May, Gordon Jenkins, and most notably Nelson Riddle, whose expert handling of big band and strings drew out the many facets of Sinatra's musical personality to excellent advantage. Throughout his career Sinatra was assiduous in performance in crediting the composers and arrangers of his repertory. From the late 1950s Sinatra projected an image as a 'swinger' rather than a balladeer, though he continued to excel in ballad performances as well. Once again he began to dominate the popularity polls for male vocalists, this time, however, without the allure of a matinée idol but solely for the excellence of his singing. His album *Come Dance with Me!* (1959), with arrangements by Billy May, gained Sinatra his first Grammy award. He appeared in 58 films, both in musicals such as *Guys and Dolls* (1955), *High Society* (1956) and *Can-Can* (1960) and in non-singing roles, particularly *The Man with the Golden Arm* (1955), *The Manchurian Candidate* (1962) and *Von Ryan's Express* (1965).

The years around 1960 probably represented the crest of his popularity. In 1961 Sinatra formed Reprise Records and released *Ring-a-Ding-Ding*; many of his following albums drew strongly upon jazz arrangers and performers, including Count Basie and Duke Ellington. His films at this time presented a more lighthearted playboy image with the 'rat pack', a social group that included Sammy Davis jnr and Dean Martin. With them he appeared in

four films, including *Ocean's Eleven* (1960) and *Robin and the Seven Hoods* (1964), in which he introduced 'My Kind of Town'. In 1971 he announced his retirement, but this proved impossible for a man so quintessentially a public performer, and from 1973 he resumed his career with national and international tours, television spectaculars, and recordings. In 1980 his recording of the title song to the film *New York, New York* became a chart success, and in 1985 he received the Presidential Medal of Freedom. He finished making regular recordings in the mid-1980s, but continued to appear in concert, including touring with Sammy Davis jr and Liza Minnelli (1989), and Shirley Maclaine (1992). His last public performance was at the Palm Desert Marriott Ballroom, Palm Desert, California (25 February 1995). He died in 1998 after a period of protracted illness.

In the course of his long career Sinatra's name became virtually a byword for the American popular singer, and his singing represents a consummation of this long-standing tradition not likely to be equalled. Possessed of complete confidence in his talent, despite his lack of musical training, he set out to devise a singing style different from that of Bing Crosby, then the outstanding figure among popular singers. From Tommy Dorsey he adopted certain key aspects of jazz phrasing, particularly regarding breathing; later he expressed a debt to the jazz style of Billie Holiday and the narrative style of Mabel Mercer. But the crucial innovations in Sinatra's approach were based (unwittingly) on the Italian bel canto tradition, particularly his legato attack (known to his detractors as 'mooing'), his handling of portamento and rubato, and his sensitive modulation of vowel sounds. Like Crosby, he made full use of the microphone, but with a new awareness of its potential as an 'instrument' for achieving a wide range of dynamics and for magnifying the expressive effects of singing at medium volume. His lightness of breath and 'forward' vocal production permitted an extraordinarily clear enunciation and allowed him to concentrate on shading and nuance. Unlike jazz singers, he seldom departed radically from the given material, but then always with excellent taste and to expressive purpose. Though Sinatra spawned countless imitators – few popular singers outside the rock tradition entirely escaped his influence – none was able to match the tone of almost autobiographical sincerity in his singing, a quality which contributed to his success with the song *My Way*, which he first recorded in 1969. This style was the result of a unique fusion of a turbulent and controversial public career and an intuitive penetration and projection of the meaning of a song and its lyric.

HENRY PLEASANTS/R

Sinclair, George Robertson (*b* Croydon, 28 Oct 1863; *d* Birmingham, 7 Feb 1917). English organist and conductor. He was educated at St Michael's College, Tenbury, and at the Royal Irish Academy of Music in Dublin. In 1879 he became assistant organist of Gloucester Cathedral and organist and choirmaster of St Mary de Crypt in Gloucester. In 1880 he was appointed organist and choirmaster of Truro Cathedral. From 1889 until his death he was organist of Hereford Cathedral. His conducting of the Three Choirs festivals from 1891 to 1912 in the years in which they were held at Hereford brought him into contact with eminent English musicians of the time. He was conductor of various local societies, both choral and orchestral, and of the Birmingham Festival Choral Society (1899–1917). In 1895 he was made an honorary member of the RAM and received an honorary music doctorate from the Archbishop of Canterbury. In 1904 he was made an honorary FRCO. Sinclair's impetuous character, his skilful organ pedalling and the barking of his dog are immortalized in the 11th of Elgar's 'Enigma' Variations. Sinclair was also the dedicatee of Elgar's *Te Deum and Benedictus* (1897) and *A Christmas Greeting* (1907). A biographical tablet is erected to his memory in Hereford Cathedral.

J.A. FULLER MAITLAND/CHRISTOPHER KENT

Sinclair, John (*b* nr Edinburgh, 9 Dec 1791; *d* Margate, 23 Sept 1857). Scottish tenor. Having studied music as a child, he joined Campbell of Shawfield's regiment as a clarinettist. He also taught singing in Aberdeen, saving enough money to buy his discharge from the regiment. His first, anonymous, stage appearance was as Captain Cheerly in Shield's *Lock and Key* at the Haymarket Theatre, 7 September 1810. He was then engaged at Covent Garden, where he appeared on 20 September 1811 as Don Carlos in Sheridan and Linley's *The Duenna*. He remained there for several seasons, creating the tenor roles in Bishop's *Guy Mannering* and *The Slave* (1816), among other works. In April 1819 Sinclair studied in Paris with Pellegrini, and subsequently in Milan, with Banderali. He also had some instruction from Rossini in Naples in 1821. In 1822 he sang, mostly in Rossini's operas, in Pisa, Bologna, Modena and Florence. In 1823 he was engaged for Venice, and Rossini wrote the part of Idreno in *Semiramide* for him. After singing at Genoa, he returned to England and reappeared at Covent Garden on 19 November 1823 as Prince Orlando in Dibdin's *The Cabinet*, meeting an enthusiastic audience but critical reviews. In 1828–9 he was engaged at the Adelphi, in 1829–30 at Drury Lane. He visited the USA in 1830, and then retired from the stage, becoming director of the Tivoli Gardens, Margate. Sinclair composed a number of songs. In Italy, where he sometimes appeared as Saint-Clair or St-Clair, his technique was said to be remarkable, especially in runs.

Sindhèn. *See* PESINDHÈN.

Sinding, Christian (August) (*b* Kongsberg, 11 Jan 1856; *d* Oslo, 3 Dec 1941). Norwegian composer. He trained for a career as a violinist, taking lessons during his school years with Gudbrand Bøhn and also studying music theory with L.M. Lindeman. In 1874 he went to the Leipzig Conservatory, where he was a pupil of Schradieck (violin) and Jadassohn (theory and composition). He stayed in Leipzig for four years, during which time his talent for composition became increasingly evident, and he abandoned his violin studies. His association with German culture remained close throughout his life: he spent some 40 years in the country. In addition, he was in the USA for a year (1920–21), teaching theory and composition at the Eastman School. He received from the Norwegian government regular grants from 1880, an annual bursary from 1910 and from 1924 Henrik Wergeland's house 'Grotten'. In 1921 he was given a national award for his contributions to music.

Sinding, the most important Norwegian Romantic composer after Grieg, was a prolific composer who enjoyed wide fame during his life, although afterwards his reputation declined, partly because of a general reaction against Romanticism and partly because his standing was somewhat exaggerated by contemporaries. He was most strongly influenced by Wagner, Liszt and Strauss; from them he quickly built an individual style which altered little with the years. As Grinde has noted, his harmony owes more to Liszt than to Wagner; it is rich, with frequent and sometimes abrupt modulations, and a good many chromatic progressions, but there is no real tendency to destroy tonality. He was most radical in his use of cyclic thematic form, but this was no longer a novelty in his time. The independence and originality of his style are associated with an aggressive freshness and virility, which can at times seem bombastic, but in his best works are supported by the impetus of a fertile musical ability; most of his finest works are among his earlier ones.

Christian Sinding

Wagner's influence on Sinding is clear in the latter's opera, *Der heilige Berg*, which was performed in Dessau (1914) and Oslo (1931, concert version), but has dropped from the repertory. The best of his four symphonies is the first, a work of dense sound, with long crescendos culminating in violent explosions; like most of his larger works it is formed on classical patterns. Of his concertos, that for piano in C♯ minor is the most important; in particular, the Andante is one of his finest achievements (the outer movements are spoilt by their thickness). Another major work is the rugged, fresh and forceful Piano Quintet op.5, which first brought him international renown. The String Quartet op.70, the Serenade op.92 for two violins and piano, and the Two Romances op.79 for violin and piano also merit attention. Sinding wrote around 250 songs and is considered one of Norway's foremost contributors to the genre, his best examples being the two *Symra* collections opp.28 and 75 and the *Sange* op.18, which include the celebrated 'Der skreg en fugl' ('A bird cried'). Apart from *Frühlingsrauschen* ('Rustle of Spring', from op.32) and the Variations op.2, few of his works have taken a permanent place in the literature, although the Sonata op.91 and the *Fatum* variations op.94 are also notable compositions.

WORKS

OPERA AND CHORAL

Ops: Der heilige Berg (D. Duncker), op.111, 1912, Dessau, 1914, unpubd; Titandros (O. Sinding), inc.

Choral: Carmen nuptiale (Catullus), vv, orch, 1880; Til molde, op.16 (B.M. Bjørnson), Bar, vv, pf (1889); [4] Sange, op.47, female vv, pf (1900); Kantate ved abeljubilæet 1902 (Bjørnson), solo vv, vv, orch, 1902; Mannamaal (R. Andvard), op.67, male vv, orch (1904); Kantate ved hundreaarsfesten i det kongelige selskab for norges vel (Bjørnson), op.102, solo vv, vv, orch, 1909; 2 Lieder (O. Bierbaum), op.104, lv, male vv, pf (1910); 4 Lieder, op.108, male vv, pf (1911); Jubilæumskantate 1914 (N.C. Vogt), op.117, solo vv, vv, orch, 1914

Sinet. *See* SENNET.

Sinfonia (i) (It.: 'symphony'). A term used from the late Renaissance to designate pieces in various forms for a variety of performing media, usually instrumental ensemble. It derives from the Greek *syn* ('together') and *phōnē* ('sounding'), and thence from the Latin symphonia. Some modern writers have tended to use the word to refer only to operatic overtures in Italian Baroque style, particularly those in three movements by Alessandro Scarlatti and his successors which are considered to be the immediate precursors of the modern SYMPHONY. In fact, however, the term 'sinfonia' has been applied over a longer period to a wider range of musical forms than this restricted usage allows; and it has often been revived for a work shorter, more italianate or less earnest than 'symphony' is sometimes taken to imply (e.g. Britten's *Sinfonia da requiem* op.20, 1940, Berio's *Sinfonia*, 1968–9).

1. To 1700. 2. After 1700.

1. TO 1700. As instrumental music, the sinfonia seems first to have been considered analogous to the ensemble canzona (*see* CANZONA, §3). Banchieri's *Ecclesiastiche sinfonie* (1607) could also have been called 'canzoni francesi', according to their composer, and the sinfonias of such composers as Salamone Rossi (*Sinfonie e gagliarde*, 1607, 1608, 1622 etc.), Antonio Troilo (*Sinfonie, scherzi … et fantasie*, 1608), Viadana (*Sinfonie musicali*, 1610) and G.G. Kapsperger (*Libro primo di sinfonie*, 1615) are all independent ensemble pieces of a preludial nature, many closely approximating to the sectional, intermittently contrapuntal style of the contemporary canzona. Some independent keyboard preludes designed to set the key of motets or mass sections were published under the heading 'sinfonia' or 'symphonia', as in Pietro Lappi's *Sacrae melodiae* (1614) and Alessandro Grandi's *Motetti a una et due voci* (1621). As early as 1608 (in Cesario Gussago's *Sonate a quattro*) sinfonias for ensemble were considered introductory pieces, but it was particularly after 1650 that they began to appear at the beginnings of groups of dances. Thus in G.M. Bononcini's *Sinfonia, allemande, correnti, e sarabande* op.5 (1671) four-section sinfonias precede each group of three dance movements. In the last quarter of the 17th century the term 'sinfonia' or one of its equivalents was used interchangeably with the equally ambiguous 'sonata'. Thus each of the 'sinfonie' promised on the title-page of Giuseppe Colombi's *La lira armonica* (1673) is called 'sonata' in the table of contents, and such collections as G.B. Bassani's *Sinfonie a due, e tre* (1683), Giovanni Bononcini's *Sinfonie* (1685 and 1686) and *Sinfonie da chiesa a quattro* (1687) and Torelli's *Sinfonie a' 2. 3. e 4. istromenti* (1687; see illustration) contain works all but indistinguishable from ensemble sonatas. But Bukofzer (*Music in the Baroque Era*, New York, 1947) found that the sinfonias in Torelli's *Sinfonie a tre e concerti a quattro* op.5 (1692) are distinct from the concertos by virtue of their more contrapuntal style.

In early 17th-century vocal music the word 'sinfonia' usually headed an instrumental piece that was not part of the strophic structure of an aria or madrigal (as distinguished from a ritornello). Thus, each 'sinfonia' in the madrigal 'Nel volto ha Fili ascose' in Banchieri's *Il virtuoso ritrovo* (1626) is based on a new idea, while a single 'ritornello' is repeated between each of the five stanzas of the canzonetta 'Fili, Fili, ove l'asconde' in the same collection. Performance of sinfonias in vocal music seems, in some cases, to have been considered optional in

Title-page of the violino primo part of Torelli's 'Sinfonie a' 2. 3. e 4. istromenti' op.3 (Bologna: Micheletti, 1687)

accordance with available performing forces. In 1617 Pietro Pace (or his printer) stressed that the sinfonias attached to some of his *Madrigali a quattro et a cinque voci* were obligatory ('quelli delle Sinfonie non si possano cantare senza sonarli, ma gli altri si'). Cavalli took a somewhat different view in the *avvertimento* to his *Musiche sacre concernenti messa, e salmi concertati* (1656), remarking of the 'sinfonie' that they were optional ('si possono anco tralasciare ad arbitrio'). Sinfonias as preludes, interludes or postludes to arias, ariosos and ensembles in 17th-century opera were common too, and usually, as in the Banchieri madrigals, not repeated (although ritornellos are occasionally marked 'sinfonia di ritornello' and some composers were inconsistent in their use of the term 'ritornello'). From the 16th century, the term 'sinfonia' or one of its equivalents was applied to instrumental music used to introduce dramatic works or cover the sound of changing scenery (as in the *intermedi* by Malvezzi, Marenzio and others to *La pellegrina*, whose publication in 1591 marked the first appearance of the word 'sinfonia' in print). Many early 17th-century overtures were little more than fanfares, such as the toccata that precedes Monteverdi's *Orfeo*. Sinfonias virtually indistinguishable from the contemporary canzona introduce each of the three acts of Stefano Landi's *Il Sant'Alessio* (1631/2), and the canzona type of sinfonia persisted as the most common overture into the mid-17th century, particularly in Venice. Cavalli's *Giasone* (1649), for example, was prefaced by a sinfonia in two distinct sections, a slow duple-metre introduction followed by a section in a livelier triple metre. Such sinfonias have been considered the immediate source of the FRENCH OVERTURE style. In general, the appearance of the term 'sinfonia' in an opera or oratorio score of the 17th century implied nothing more specific than it did in instrumental music of the time.

2. AFTER 1700. The use of the term became gradually specialized in the early 18th century to refer mainly to an operatic overture in three movements (fast–slow–fast/dance) scored for an orchestra of strings, oboes and horns, and very commonly in the key of D (for its open-string resonance). During the course of the century the term was increasingly used to designate the concert symphony, while 'ouvertura' referred to specifically operatic introductions. Until the end of the century overtures were commonly used as symphonies in formal concerts, often without reference to their operatic origin. Few concert symphonies were used as overtures, however, owing to their greater length and complexity, and to their lower level of excitement.

The purposes of the sinfonia or overture – to generate anticipation and hush the audience – obviously tended towards brief forms. Classical trends in general were moving in the opposite direction, towards expansion, and opera composers reacted first by joining movements or partial movements and then by eliminating the slow movement, at the same time trimming what remained to a fast-moving formula. One of the most interesting transitional solutions was the 'da capo sinfonia', typically an allegro exposition followed by an andante in a new key, leading by a 'D.C.' sign back to the original allegro. In this return, however, at a point in the transition marked by a special sign (the *segno* of the modern 'D.S.') the composer redirected the modulation back to the tonic and transposed the rest to act as a normal reprise (see Rinaldo di Capua's *La zingara*, 1753).

At the next stage of curtailment, the dropping of the andante, the remaining structure became the later familiar exposition and reprise form (sonata without development); one-movement overtures of this design and many other streamlined patterns became more and more popular from the mid-18th century onwards. The need for speed in both composition and performance encouraged the use of simplified textures, frequent repetition and obvious signals such as the standardized *forte* with violin tremolo that heralds the transition and the strategic use of pedal points to emphasize important divisions (ideas that occur in more restrained versions in the concert symphony). The operatic background also influenced thematic formation in the direction of dramatic contrast of subsidiary phrases (loud–soft, staccato–legato, chordal–melodic, tutti–small group) rather than the earlier motivic play or varied repetition. The energetic atmosphere probably also accounts for the frequent use of beats activated by quick rhythmic ornamentations such as acciaccaturas, turns and snaps (semiquaver or two demisemiquavers plus dotted quaver).

Despite constantly recurring clichés, however, in the magic context of an operatic performance the sinfonia creates a mood of sparkling expectation. Some highly effective features of the 18th-century sinfonia survive in crystallized form in many Rossini overtures, including the breathless final acceleration, the noisy orchestral crescendo and the hammering cadences that stimulate audience applause.

Sinfonia concertante. *See* SYMPHONIE CONCERTANTE.

Sinfonia da camera (It.). *See* CHAMBER SYMPHONY.

Sinfonietta. An orchestral piece on a smaller scale, or of more modest aims, than a symphony. The word is not genuine Italian and has been little used by Italian composers. It was apparently coined by Joachim Raff, whose Sinfonietta in F for ten wind instruments, op.188, was published in 1874. Since the early 20th century the term has been in common use: some of the more significant examples are those by Reger, op.90 (1905); Prokofiev, op.5 (1909), revised as op.48 (1929); Villa-Lobos (1916, 1947); Janáček (1926); Weingartner, op.83 (1932); Britten, op.1 (1932); Piston (1941); Poulenc (1947); Hindemith (1950); Berkeley, op.34 (1950); Krenek, 'La brasileira' op.131 (1952); Milhaud, op.363 (1957); Peter Maxwell Davies, *Sinfonietta accademica* (1987); Penderecki (1992). Some sinfoniettas are for strings alone, or for a small chamber orchestra with single woodwind; others are for a moderate, or even (like Reger's and Janáček's) a large orchestra. Nováček's (1905) is for eight woodwind only; Martinů's (*Sinfonietta giocosa*, 1940, and *Sinfonietta La jolla*, 1950) are for piano and chamber orchestra. Alun Hoddinott has composed a series, of which no.4 was written in 1971. In length sinfoniettas vary from about 10 to 30 minutes. They often include movements of a popular, nationalistic or pictorial character. The essence of the term is to disclaim the depth and importance of a fully fledged symphony. There are several terms of similar or overlapping sense: *sinfonia da camera*, *symphoniette*, *kleine Symphonie*, *Kammersymphonie* and so on.

The word is occasionally used in the name of a performing group, such as the London Sinfonietta.

NICHOLAS TEMPERLEY

Singapore, Republic of. Island state situated between peninsular Malaysia and the archipelago of Indonesia. Founded in 1819, it served as an important port of call for the British Empire in South-east Asia, gaining independence on 9 August 1965. The country has approximately three million people, who are largely descendants of immigrants from the Malay peninsula, Indonesia, China, South Asia and Sri Lanka. The ethnic make-up consists mainly of Chinese (77·4%), Malay (14·2%), Indian (7·1%) and Eurasian (0·4%), with other peoples, including Arabs, Japanese, Jews, Armenians and Europeans, making up the remainder. With a largely Asian population in a post-colonial setting, Singapore boasts a mixture of cultural attributes, reflected in its diverse musical culture.

The musical palette of Singapore is largely marked by music of the three major ethnic groups (Chinese, Malay and Indian), as well as Euro-American classical music and popular music in Mandarin and English. In the late 1980s, musicals by Singaporean composers had tremendous success in the country, followed by the advent of locally composed, produced and performed rock music in the 1990s.

1. CHINESE. In Singapore the Chinese community comprises various dialect groups, including Fujian, Chaozhou, Guangdong, Hainan and Kejia. Operas of the various dialects are performed indoors by numerous amateur opera groups and outdoors on make-shift stages along the streets by professional troupes; the latter, otherwise known as *wayang*, are usually performed in conjunction with temple celebrations. A popular entertainment during the month of the hungry ghosts (the seventh month of the lunar calendar) is the contemporary urban genre known as *getai* ('song-stage'), which usually features popular Mandarin, Fujian and English songs, with comic skits that often highlight local socio-cultural and political issues. Chinese orchestral music received national recognition in Singapore when the country's first national Chinese orchestra was inaugurated in 1996. Among other Chinese musical forms practised in Singapore are the Fujian vocal genre, *nanyin* (or *nanguan*), the Fujian *liyuan* ('pear garden') opera and the hand-and-string puppet theatres.

2. MALAYS. The *kompang* and *hadrah* are single-sided, hand-held frame drums, usually played at traditional Malay weddings and official functions. Said to be of Arabic origin, the music is characterized by interlocking rhythmic patterns with vocal accompaniment that usually has religious connotations. *Dikir barat* is a secular vocal genre, performed by a vocal ensemble with instruments such as the *kompang*, *bonang* (double-row gong-chime) and gong. It comprises stock melodies in a verse-refrain form, accompanied by lively hand-clapping and upper-body movements. Other genres practised by Malays in Singapore include the *ghazal*, a vocal genre usually accompanied by GAMBUS (pear-shaped lute), *tabla*, frame drum, accordion and a violin, and *kuda kepang*, the horse-trance dance. Ensembles of ANGKLUNG, tuned bamboo rattles, and Javanese GAMELAN are also played. The Singapore Malay Orchestra, formed in 1991, combines Western orchestral instruments with gamelan instruments such as the *saron* (metallophone) and *bonang* (gong-chime) and in its repertory includes genres from jazz to *dondang sayang*, a vocal repartee genre based on Malay poetry. (*See also* MALAYSIA, §I, 1(v).)

3. INDIANS. The majority of Indians in Singapore speak Tamil, while other large groups include the Malayalis, Punjabis, Sindhis, Bengalis and Gujaratis. Temple music from the Carnatic tradition, featuring the *nāgasvaram* (oboe) and *távil* (double-headed barrel drum), is performed to announce daily prayer times and during festivals such as *Thaipusam* and *Thīmithi*. Other genres include the *bhajana* (Sanskrit *bhajan*), film music and Hindustani and Carnatic classical music. The Sikh community is known for its *bhangra* music and dance, a genre said to have originated in Punjab and performed during Sikh weddings, harvest and other joyous occasions. Traditional *bhangra* is usually accompanied by the *thundhi* and *ḍhol* (drums), while the pop *bhangra*, popular in several clubs in Singapore, features electric keyboard, drum and guitar. The Singapore Indian Orchestra is reputed to be the first large Indian music ensemble outside India and is supported by the Singapore Indian Fine Arts Society, which conducts courses on Indian instruments and dance.

4. EURASIANS AND PERANAKANS. Eurasians make up one of the four major ethnic groups in Singapore and are descendants of European settlers (such as the Portuguese,

British and Dutch) who married Asian women during colonial times. The Eurasian Association dance troupe specializes in European folk dances and performs the *branyo*, which is apparently exclusive to Eurasians in the Malaysia-Singapore region. Kristang, a Malaccan-Portuguese creole language, is also being revived through publications of stories, poems and songs.

The Peranakans are descendants of early Chinese immigrants to Malacca who married local Malay women and whose musical culture reflects their dual cultural heritage. Religious and festive celebrations such as weddings and funerals feature Chinese music played on the *sarunai* (oboe), while music for entertainment is characterized largely by *joget* and *ronggeng* dances and *dondang sayang*, the vocal genre based on *pantun*, the Malay poetic form, and accompanied by *rebana* (frame drums), violin and gong.

5. EUROPEAN ART MUSIC. The Singapore Symphony Orchestra, Singapore Symphony Chorus and Singapore Lyric Theatre are a few of the many music organizations in Singapore that present Euro-American art music. Singaporean composers such as Leong Yoon Pin, Phoon Yew Tien and Joyce Koh have championed Western 20th-century compositional styles and assimilated local musical idioms into them. The Singapore Lyric Theatre has successfully presented many well-known Western operas to critical acclaim and continues to provide performing opportunities for Asian musicians and vocalists.

6. POPULAR MUSIC. Since its independence, Singapore has strived to establish a national identity through music. *Xinyao*, a Mandarin vocal genre accompanied by guitars, began in the early 1980s among teenage students. The year 1988 saw the production of the first local musical that led to many others revolving around the local socio-cultural settings. The composer Dick Lee is particularly known for his advocacy of Asian and Singaporean heritage in his songs and musicals. The bi-annual 'Sing Singapore' national music project was launched in 1988 to encourage the composition and performance of songs about Singapore in the four major languages.

Many English pop music groups proliferated in the 1960s, modelled after Western bands and further encouraged by the marketing of the first locally produced vinyl recordings. In the 1980s and 90s, rock music was re-endorsed at public functions after having been banned in the 1970s because of its perceived association with drugs. There have been numerous experiments with alternative music, known locally as 'Indie' music. Singaporean pop music (Singapop) is gaining recognition overseas, broadcast in Britain and the Asia-Pacific region.

Since independence, as part of the country's nation-building, Singapore has been negotiating its musical identity. National festivals and concerts featuring local and foreign traditions provide a performance context for artistes and serve as a discursive platform musically to construct and affirm a Singaporean identity.

TONG SOON LEE

Singende Säge (Ger.). *See* SAW, MUSICAL.

Singer, George (*b* Prague, 6 Aug 1908; *d* Tel-Aviv, 30 Sept 1980). Israeli conductor, composer and pianist of Czech birth. At the Prague Music Academy (1924–6) he studied the piano with Franz Langer and Ervin Schulhoff, and composition with Zemlinsky, winning a piano competition there in 1925. His début as an opera conductor was in 1926 at the Neues Deutsches Theater, Prague, with Kienzl's *Der Evangelimann*. He conducted there until 1930, when he went to Hamburg to conduct the Staatsoper. In 1934 he returned to Prague, where he gave the first radio performance of the concert version of Dvořák's first opera, *Alfred*. In 1939 he settled in Palestine and in December that year he first conducted the Palestine SO; he later became permanent guest conductor of this orchestra, and also of the Israel Broadcasting SO, the Israel Chamber Orchestra and the Haifa SO. He was among the founders in 1940 of the Popular Opera in Israel, and was its permanent conductor until 1945. On the establishment of the Israel National Opera in 1947 he became its permanent guest conductor. He began touring widely in Europe and elsewhere from 1947, and in 1965 he visited the USSR for concerts in Leningrad and Kharkiv. His début in the USA was in 1968 with the New York City Opera in *La bohème*. He appeared with the New Philharmonia Orchestra in London in 1976. From 1958 he several times conducted the Rubinstein Festival in Israel. Among the opera premières he conducted were Avidom's *Alexandra the Hasmonean* (1959, Israel National Opera), Karel Salmon's *Vows* and Yehuda Wohl's *The Fence*. He gave the premières of several Israeli orchestral works, such as Avidom's Symphony no.4; Ben Haim's *To the Chief Musician* for orchestra, Symphony no.2 and *The Sweet Psalmist of Israel*; Boskovich's Oboe Concerto; and Gelbrun's Rilke Songs for soprano and orchestra and Symphonic Prologue. Among his compositions were a Sinfonietta for orchestra (1950), two suites for orchestra (1957, 1960), a piano concertino (1965) and vocal and piano music.

WILLIAM Y. ELIAS

Singer, Malcolm (John) (*b* London, 13 July 1953). English composer. He was a junior exhibitioner at the RAM before studying at Magdalene College, Cambridge (1971–4), then with Donatoni (1973), Boulanger (1974–7) and Ligeti (1975–6), all of whom influenced his style significantly. His initial interest in serialism turned towards a minimalism based on polyrhythms, heterophony and pitch-centred tonality, as in *A Singer's Complaint*, winner of a Chandos Prize at Musica Nova and composed in 1979 for Jane Manning, who later sang in the première of the more serious cantata *York* (1991) on a Jewish subject. While professor at the Yehudi Menuhin School (1977–96), Singer received a Harkness Fellowship (1980–82) to work at the Center for Computer Research in Music and Acoustics, Stanford, University of California. His most significant works in chamber and choral media, recognized with international awards and many BBC commissions and broadcasts, combine avant-garde experimentation with a telling melodic gift. Striking individuality is to be found in the choral works, such as the Hebrew psalms setting for the BBC Singers and the Zemel Choir (Britain's foremost mixed Jewish choir, of which Singer was musical director from 1983 to 1993); in these works resonant sonorities akin to Pärt or Tavener are enhanced by striking synagogal soundscapes. In 1990 Singer was appointed professor of communication skills at the Guildhall School of Music and Drama, and, in 1993, professor of composition; in 1998 he became director of music at the Yehudi Menuhin School.

WORKS
(*selective list*)

Orch: Vn Conc., 1974; Time Must Have a Stop, pf, orch, 1976; Making Music, nar, orch, 1983; Canford Canticle, chbr orch, 1991

Choral: Fugue, 4 speaking vv, 1974; Kyrie and Agnus Dei, SATB, 1977; And death shall have no dominion, SATB, 1987; Kaddish, SATB, 1990; H.D.'s Song, children's choir, school orch, 1991; Songs of Ascent, SATB, 1994; Ps c and Ps cxvii, SSAATTBB, 1995; A Hopeful Place, children's choir, str octet, orch, 1996

MALCOLM MILLER

Singer, Peter (Alcantara) [Josef Anton] (*b* Häselgehr, 18 July 1810; *d* Salzburg, 25 Jan 1882). Austrian composer, music theorist, organist, choirmaster and instrument maker. He was musically mainly self-taught; at the age or 9 he learnt to play the piano and organ, as well as the violin, harp, flute, clarinet and horn. When he was 11 he took lessons in harmony and basso continuo from P. Mauritius Gasteiger in Reutte. He attended the Gymnasium in Hall (1824–30), and took some organ and piano lessons from the organist Ignaz Heinz. He entered the Franciscan monastery of Salzburg in 1830 under the name of Peter von Alcantara, and was ordained in 1834. From 1837 to 1840 he was organist and choirmaster in Bolzano and Innsbruck, and he spent the rest of his life in the Franciscan monastery in Salzburg.

Singer became famous for the building of his 'Pansymphonikon' in 1845; this was a keyboard instrument with

sets of reeds, two manuals and 42 registers which imitated an entire orchestra. He wrote contemplative works, a treatise on choral singing entitled *Cantus choralis in provincia tirolensi fratrum reformatorum consuetus* (Salzburg, 1862), and an important book on music theory, *Metaphysische Blicke in die Tonwelt nebst einem dadurch veranlassten neuen System der Tonwissenschaft* (Munich, 1847). Drawing on the works of J.-P. Rameau and A. Reicha, Singer developed a theory of music which was very progressive for its time, relating all music functionally to the tonic triad (the 'primal harmony') and its upper dominant 7th and lower dominant 6th ('auxiliary harmonies'). Singer gave his system theological and philosophical support by presenting the triad as analogous to the Trinity; all other sounds and melodies are its creations or emanations.

A prolific composer, Singer wrote 102 masses, 141 motets, 15 litanies of the Blessed Virgin, 7 settings of the *Te Deum*, 14 responsories to St Anthony, 78 settings of the *Tantum ergo*, and many German devotional hymns as well as several organ sketches. Free treatment of the texts, variable form, folklike melodies, a sequential technique and rich harmonies are found in his works; his use of the organ in a piano-like style is especially significant.

WOLFGANG MARIA HOFFMANN

Singer-songwriter. A term used since the late 1950s to describe those mainly American and British singing composer-performers, often with roots in folk, country and blues, whose music and lyrics are considered inseparable from their performances.

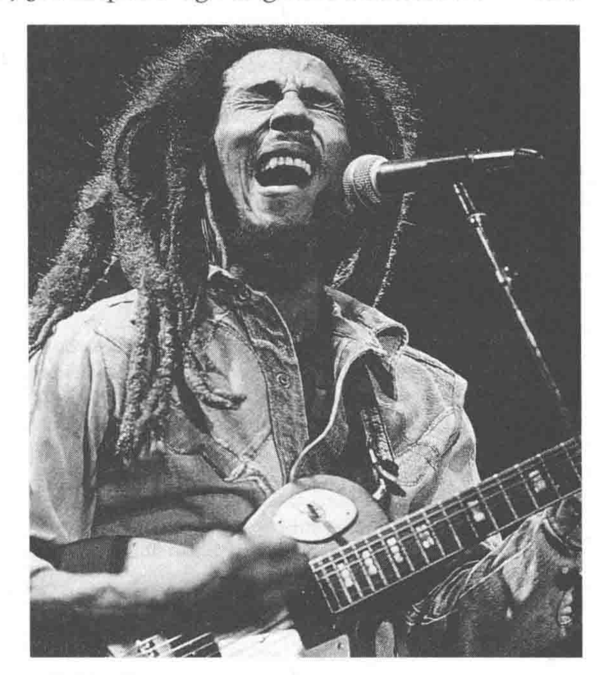
1. Characteristics. 2. Folk and blues origins. 3. Expanding the genre: rock music. 4. The late 20th century.

1. CHARACTERISTICS. Singer-songwriters are generally socially aware performers, the themes of their work often involving a sense of introspection, alienation or loss (real or imaginary): this is shared by both the singer and the listener, the sense of intimacy magnified by the microphone. In their performances and on many of their recordings there is an almost symbiotic relationship between the singers and their instruments, usually guitar or piano, at which the songs have generally been composed. The playing is usually fairly simple and always underpins the text; quirks of technique sometimes trigger a new direction for the lyrics. Remnants of the compositional process can survive in the performance itself: the initial empty bars or anacrustic beginning to the text, for example, give thinking time as well as asserting the pitch.

Singer-songwriters have been described variously as folk poets (Beltz on Chuck Berry), auteurs (Laing on Buddy Holly), poet-composers (Mellers on female singers) and even bards (Bok), indicating the supreme importance of the words, with both the sung lines and their instrumental accompaniment providing support. Although many singer-songwriters have published poems as literature (Bob Dylan, Lou Reed and Leonard Cohen), the genre is both an aural and oral one with its roots in ancient oral traditions. The songs have the legitimacy of a poet reading his or her own verse, to which is added the authority of a musician singing an own composition. The direct connection between performer and audience can produce a cultural commonality or authenticity which has made some songs extraordinarily representative of their time: Joan Baez and the anti-war movement in the USA, Joni Mitchell and *Woodstock*, Ray Davies and London of the 1960s. Since Lennon and McCartney the term singer-songwriter has also been used of certain singers who generally wrote only the music (Elton John) or the lyrics (Morrisey). It tends not to be applied to singers for whom the song is a supporting element of a wider agenda, even though the singer may have written both words and music, as in the case of David Bowie.

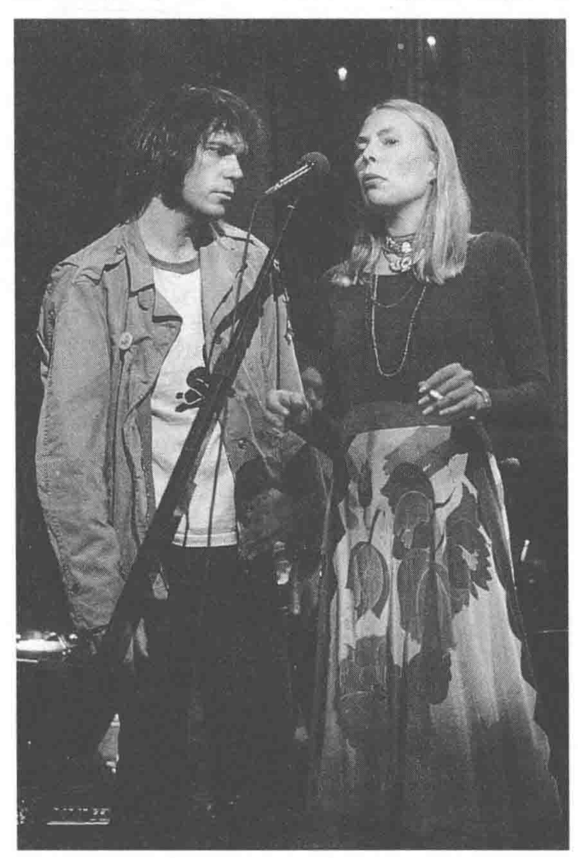
2. FOLK AND BLUES ORIGINS. Many folk and country singers, and almost all blues singers, are singer-songwriters by definition. As such they have been the main sources of renewal in these musics, aided by the post-World War II folk revival and the commercial exploitation of country music and the blues. It is possible to trace a line from Hank Williams and Woody Guthrie through to the present day in which social and political topics emerge as mainstream concerns among the musicians and a wider record-buying public. Hank Williams sang of women and alcohol, Woody Guthrie of social and political reality as seen from the road, both projecting their own experiences into song. Pete Seeger, from a family background in folk music and a seminal position in the American folk revival, fell foul of the Un-American Activities Committee. The influence of all these musicians can be found in the work of the most significant singer-songwriter to emerge in the early 1960s, BOB DYLAN.

From his 1962 self-titled début recording onwards, using just guitar and harmonica accompaniment, he has reflected New York folk and blues influences. The eponymous title track of his album *The Times they are A-Changin'* cannot be separated from its performance, and none of the cover versions of this or any of his other songs achieve the immediacy of direct contact with the singer-songwriter. Subsequently few guitar-playing singer-songwriters have been able to escape comparisons with Dylan. Joan Baez, an exact contemporary, influence and sometime partner, sang protest anthems in the 1960s and more intimate confessional songs in the 1970s, thereafter reducing her output as her involvement with global peace organizations increased. Country Joe Macdonald's anarchic urban folk style maintained its vigour through the 1970s and 80s, while Phil Ochs, unjustifiably overshadowed by Dylan, stayed a trenchantly political acoustic composer-performer until his suicide in 1976. Bruce Springsteen, most clearly influenced by Dylan on the album *Nebraska* (1982) on which he sings rubato over discreet strummed or arpeggiated guitar chords with occasional harmonica, has evolved towards heavier rock anthems such as *Born in the USA*. In this, a seemingly anti-American song celebrates American patriotism. Harry Chapin created a body of politically aware narratives before his untimely death in 1981, and the influence of Guthrie and Dylan emerged again in the songs of Michelle Shocked of the late 1980s and 90s.



Reggae too has yielded important singer-songwriters with socio-political agendas, such as Jimmy Cliff, Bob Marley (fig.1) and Peter Tosh.

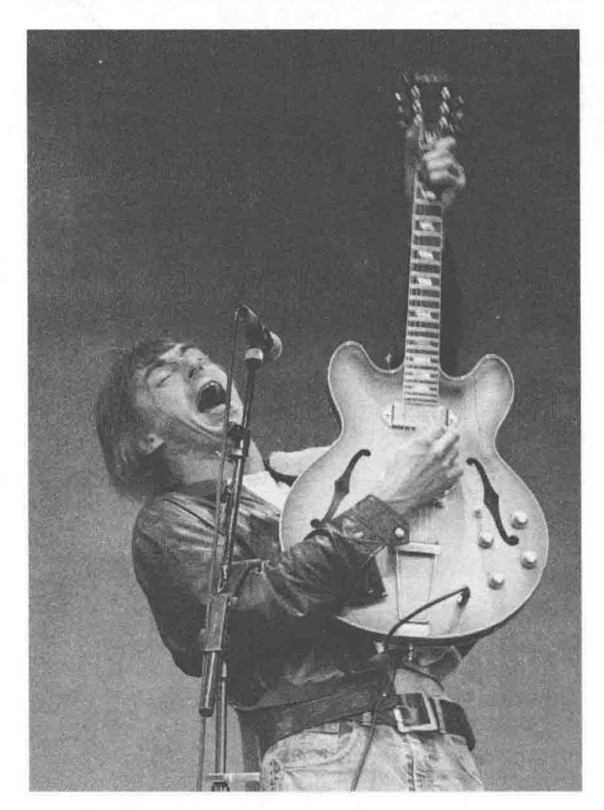
From country music singer-songwriters the ballad style of Johnny Cash was commercially successful in the late 1950s (*Cry Cry Cry* and *I walk the line*), and John Denver, Kris Kristofferson and Dolly Parton have brought such ballads into the mainstream, as has the English Roger Whittaker. Many country-influenced singer-songwriters of the 1950s and 60s were also successful in rock and roll: Carl Perkins, Buddy Holly and Roy Orbison are such examples. Gram Parsons's southern background influenced his country rock albums with the Flying Burrito Brothers and as a solo artist, and Canadian Neil Young's country-influenced early songs include *After the Goldrush* (1970) and *Harvest* (1972), the latter including symphonic orchestral arrangements.



Rhythm and blues and soul also produced significant singer-songwriters, with Chuck Berry's guitar-driven happy rock, Marvin Gaye's mainstream soul ballads, and Smokey Robinson's ballads for Motown. The songs of Sam Cooke and Al Green display the influence of gospel, while James Brown covered almost every style. The keyboard player and vocalist Stevie Wonder was much influenced by Ray Charles, and his collection *Songs in the Key of Life* (1976) was one of the most significant of the decade. Before her semi-retirement from performing, Laura Nyro's blend of white soul, gospel and rhythm and blues harnessed to her three-octave range offered new possibilities in this area.

Both blues and country music have influenced a number of virtuosic guitarists in writing their own songs, especially Ry Cooder, Don Hendry, Eric Clapton and Mark Knopfler. British and Irish folk music has produced its own singer-songwriters: Donovan, Christy Moore, Richard Thompson, Nick Drake and Al Stewart all achieving mainstream success.

3. Expanding the genre: rock music. Most of the singer-songwriters who emerged in the 1960s continued to make records into the post-60s rock era, when the term also came to be used more generally of any composer-performers who wrote their own material. The poetic agenda tended to become broader and less melancholic, sometimes embracing the more conventional concerns of Tin Pan Alley songwriters of previous generations, but still demonstrating a legitimacy based on individual control of the whole creative process. Instrumental accompaniment became more sophisticated from the writers themselves, who would often orchestrate their recordings playing some or all of their own instruments. The process was begun by the Beatles, especially Lennon and McCartney, whose songs drew on a range of influences from rhythm and blues to Tin Pan Alley standards. Ray Davies's tunefully poetic songs for the Kinks in the late 1960s celebrated the romance of the ordinary in *Waterloo Sunset* and *Sunny Afternoon*. Paul Simon began with acoustic ballads in the 1970s, taking from African and Mexican music in the following decades. Joni Mitchell's wide and varied vocal range and skilled playing on both the piano and the guitar allowed her a wider harmonic and melodic vocabulary, already apparent on the 1970 collection *Ladies of the Canyon*, which includes the song *Woodstock*, the quintessential late-1960s expression of peace and protest (fig.2). Subsequent work took her into more mainstream music and jazz, notably through her album *Mingus* (1979). Her contemporaries include Carole King who, like Mitchell, began her career writing songs for others, and on whose 1970 album *Tapestry* she reveals a close affinity with the piano.



1. Bob Marley

2. Joni Mitchell and Neil Young

In the later 1970s and 80s Rickie Lee-Jones's narrative songs were often compared, despite their bleakness, to those of Joni Mitchell; Janis Ian expressed a similar melancholy, moving from folk towards jazz before her temporary retirement in 1981. Randy Newman, a classically trained pianist, uses musical parody and pastiche to support his often ironic view of American Society, and from a similar background Dory Previn also used the language of Tin Pan Alley to express astringent personal themes. Billy Joel's more mainstream pop songs (*Mr Piano Man*) show a versatility derived from having complete control of his resources and sometimes verge on an easy-listening style. Joan Armatrading's music, perhaps once influenced by Mitchell, covers a wide range of genres from folk to reggae, jazz and soul, her vocal delivery ranging from the intimate to the explosive. Tracy Chapman, whose vocal style is reminiscent of Armatrading's, writes more radically social and political texts: *Behind the Wall*, on her self-titled 1988 début album is a passionate unaccompanied solo on the subject of domestic violence. Politics are at the heart of Billy Bragg's social commentary, and more than a passing influence on the white soul songs of Paul Weller (fig.3). The 1980s and 90s also saw the more experimental work of Nick Cave, Lou Reed and Polly Jean Harvey (fig.4), as well as sophisticated extrapolations from folk-rock by Suzanne Vega.

4. THE LATE 20TH CENTURY. The last three decades of the 20th century saw the emergence and continuing success of Van Morrison, Leonard Cohen, Tom Waits and Elvis Costello. Perhaps more than any others these four represent the essence of the genre. The eponymous title track of Morrison's first solo record *Astral Weeks* is a dialogue with an imaginary woman/listener. As music it barely exists: Morrison's guitar alternates throughout its seven-minute length between tonic and subdominant while the singer declaims his text in a series of repeated phrases using only a small number of notes, occasionally reduced to incoherence. To engage with the piece the listener is forced to become the addressee of Morrison's rhetoric and enter the singer's world without ever fully comprehending what the song might be about. There are echoes of Dylan's recitative-like delivery punctuated by basic root-position chords throughout the album, with surreal flutes and violins giving the songs a magical and romantic quality which pervades many of Morrison's subsequent albums. Cohen has a similarly powerful effect, his lugubrious baritone drawing the listener in. His songs describe the awfulness of human relationships, sex, religion and death, sparingly spiked with a melancholic humour, as on the depressive *Songs from a Room*. While his droning delivery can become tedious, at its minimal best he can produce a unique union of poetry, music and self, as in the moving *Queen Victoria*, a home recording from 1972.

3. Paul Weller

4. Polly Jean Harvey

Cohen was an accomplished poet and novelist before he took to performing, and critics have detected various

literary references in his work. Morrison, too, drew on Joyce and Yeats, while Elvis Costello soon outgrew his early comparison with Dylan and has applied his versatile imagination to almost every aspect of late 20th-century pop music. From the 1977 collection *My Aim is True*, musically looking back to American rock and roll and doo-wop, to the later albums including *Punch the Clock* (1983) and *Mighty Like a Rose* (1991) he has ranged over social and romantic issues, flirting with pastiche in his efforts to set his free-ranging lyrics in a familiar musical context. Tom Waits, in elevating the bar-ballad to an art-form, marries magical texts with a harmonic vocabulary drawing on jazz, which he delivers in a powerful bass. Both Costello and Waits have had many of their songs sung by others, but like Dylan before them, echoes of their distinctive voices are always present.

The genre continues to reinvent itself. Phil Collins's *Both Sides* (1993), on which he played all the instrument lines himself by multi-tracking, is a good example of a confessional album using modern technology as the equivalent of an accompanying instrument. Sting's albums, especially the partly autobiographical *The Soul Cages* (1991), have extended the medium, though his use of virtuosic instrumentalists tends to have a depersonalizing effect. All generations have produced composer-performers who stretch the definition of the term: Frank Zappa's rambling creations, Laurie Anderson's machine-driven political songs, Kate Bush's virtuosic excursions into fantasy, Elvis Costello's collaborations with the Brodsky Quartet and Fretwork, Peter Gabriel's ventures into world music. What gives them coherence is the creative connection between music, text and listener, and which is mediated by a single singer.

JOHN POTTER

Singher, Martial (Jean-Paul) (*b* Oloron Sainte Marie, Pyrénées-Atlantiques, 14 Aug 1904; *d* Santa Barbara, CA, 9 March 1990). American baritone of French birth. He studied at the Ecole Normale Supérieure, Saint Cloud (1925–7), and the Paris Conservatoire (1927–30), where he won *premiers prix* in both opera and *opéra-comique* singing. In November 1930 he made his opera début in Amsterdam as Orestes in *Iphigénie en Tauride* under Monteux. He first sang at the Paris Opéra a month later, as Athanaël in *Thaïs*, and remained a principal baritone of that company until he went to the Metropolitan Opera in 1943 as Dapertutto in *Les contes d'Hoffmann*. He continued as a member of the Metropolitan until 1959 singing both Pelléas and Golaud, the Count in *Le nozze di Figaro*, all four baritone roles in *Les contes d'Hoffmann*, Lescaut in *Manon* and Mercutio in *Roméo et Juliette*, among other roles. Early in his Paris career his repertory included Wagner baritone parts (the Dutchman, Telramund and Gunther), much Verdi and Hamlet, Scarpia and Rossini's Figaro. He was the first to sing Ravel's song cycle *Don Quichotte à Dulcinée* (which he recorded). After he retired from the stage he was head of the voice department at the Curtis Institute in Philadelphia, then of the voice and opera departments at the Music Academy of the West, Santa Barbara, California (1962–81). Among his pupils were James King, Gramm, Reardon, Louis Quilico, Altmeyer and Blegen. The lean, clearly focussed, rather dry timbre of his voice was not one of great natural beauty, but he was a fastidious musician and an elegant interpreter, particularly of the French operatic and song literature. (*GV*, L. Riemens; R. Vegeto)

PETER G. DAVIS

Singhiozzando (It.: 'sobbing'). A direction asking for a sobbing effect, especially in vocal and string music, where it can be obtained by a strongly marked portamento.

Singier, Jean-Marc (*b* Paris, 14 March 1954). French composer. After the Ecole Normale, Paris, he studied with Donatoni in Siena and Rome and attended seminars by Ligeti, Stroe and Ferneyhough, as well as courses at IRCAM. He also studied African drumming in Dakar, a vital influence on his own percussion works. He won the Maurice Ravel Prize in 1985 and was in residence at the Villa Medici in Rome, 1986–88. In 1989 he became a teacher of analysis at the Auxerre Conservatoire.

The obsessive titles of many of Singier's works are a reflection of the fanciful invention and wit that characterize his music. His works are mosaics of brittle, sparkling textures, written for heterogeneous combinations of instruments, though he also possesses an undeniable lyrical gift and a clear sense of form.

JEREMY DRAKE

Singing. Singing is a fundamental mode of musical expression. It is especially suited to the expression of specific ideas, since it is almost always linked to a text; even without words, the voice is capable of personal and identifiale utterances. It is arguably the most subtle and flexible of musical instruments, and therein lies much of the fascination of the art of singing.

Because it imparts to words a heightened expression that they do not have when merely spoken, or even declaimed in a dramatic manner without musical pitch, singing (or incantation) played a vital role in many early forms of religious ritual, and in the early theatre. Even outside religion, singing has long been held to have moral and cultural value. Aristotle quoted the bard Musaeus, 'Song is man's sweetest joy', and went on to warn against using musical instruments, such as the aulos, which interfere with or prevent the act of singing. Athenaeus (*Deipnosophistae*, 2nd century) reported that 'it is no disgrace to confess that one knows nothing, but it is deemed a disgrace among them to decline to sing'. In the history of Western civilization, and of other civilizations, an ability to sing well has repeatedly been viewed as a mark of culture and humanity.

1. Vocal production. 2. Early history. 3. 17th and 18th centuries. 4. 19th century. 5. 20th century. 6. Performing practice. 7. Popular singing.

1. VOCAL PRODUCTION. The historical study of the voice is difficult and frustrating. As opposed to the study of instruments, there are no models to examine, and little information can be gleaned from visual depictions of singers. The development of recorded sound helps enormously from the end of the 19th century, but also reveals how little can be gauged from written descriptions. Nevertheless, it is possible to draw some conclusions about the ideals of vocal production from a study of theoretical treatises, vocal tutors and descriptions of singers throughout history.

Two qualities always required in a singer were good (some authors say perfect) intonation and clear enunciation. Tinctoris (*De inventione et usu musicae*, *c*1481) listed the qualifications of a good singer as accurate rhythm, a good sense of pitch, enunciation and a good voice ('ars mensura, modus, pronunciatio, et vox bona'). Giulio Caccini's list (*Le nuove musiche*, 1601/2; fig.1) does not markedly differ; he calls for 'the tuning of the voice in all the notes', 'a command of breath', enunciation ('unless the words [are] understood' the singer cannot 'move the understanding') and expression ('to delight and move the affections of the mind'). In the 20th century, Sergius Kagen (*On Studying Singing*, 1950) still calls for 'a keen musical ear', 'natural singing voice' (Tinctoris's 'vox bona') and proper pronunciation and expression of the text. None of these qualities, however, explains how the voice is produced, and around 1800 a major change took place affecting both singers and composers.

Vocal production entails the use of the vocal registers, otherwise known as head voice (VOCE DI TESTA, often equated with FALSETTO) and chest voice (VOCE DI PETTO). James Nares (*A Treatise on Singing*, *c*1780) clearly states the situation of the singer who has moved beyond the beginning stages:

I should have observed that, after the Scholar has gained a good Intonation and some Management of his voice, the Master should make him acquainted with the Compass of his Voice, shewing him where his Voce di petto ends and where to cultivate the falsetto, or Voce di testa, and instruct him how they should be joined, so as to be imperceptible, without which the pleasing variety will be lost.

As Nares implies, singers in the 18th century were taught to blend the registers so as to eliminate the break but also to maintain the 'variety' of the distinct sounds. Earlier tutors sometimes encouraged singers to choose to perform in one or the other. Caccini, for example, identifies two registers as the 'natural' and the 'falsetto' and counsels singers to avoid the latter by performing arias in keys suitable to their natural voice. Bénigne de Bacilly (*Remarques curieuses sur l'art de bien chanter*, 1668) defines the same two registers and allows that both have their adherents:

Some people are proud of their high voices, and others of their low tone, taking the view that a high voice is little more than a screech. Those who have natural voices scorn the falsetto as being artificial and shrill, while on the other hand falsetto singers are usually of the opinion that the beauty of a song is more evident when performed by the shimmering brilliance of their vocal type than when done by a natural tenor, which, although it ordinarily has better intonation, does not have the brilliance of the falsetto.

With the extended range of vocal music at the end of the 17th century and throughout the 18th, singers had to learn (as Nares states) to use both registers and to unite them. Pietro Francesco Tosi (*Opinioni de' cantori antichi e moderni*, 1723), perhaps the first author to address this issue, clearly states the relation of this necessary technique to range:

A diligent Master, knowing that a [male] *Soprano* [castrato], without the *Falsetto*, is constrained to sing within the narrow Compass of a few Notes, ought not only to endeavour to help him to it, but also to leave no Means untried, so to unite the feigned and the natural Voice, that they may not be distinguished; for if they do not perfectly unite, the Voice will be of divers Registers, and must consequently lose its Beauty.

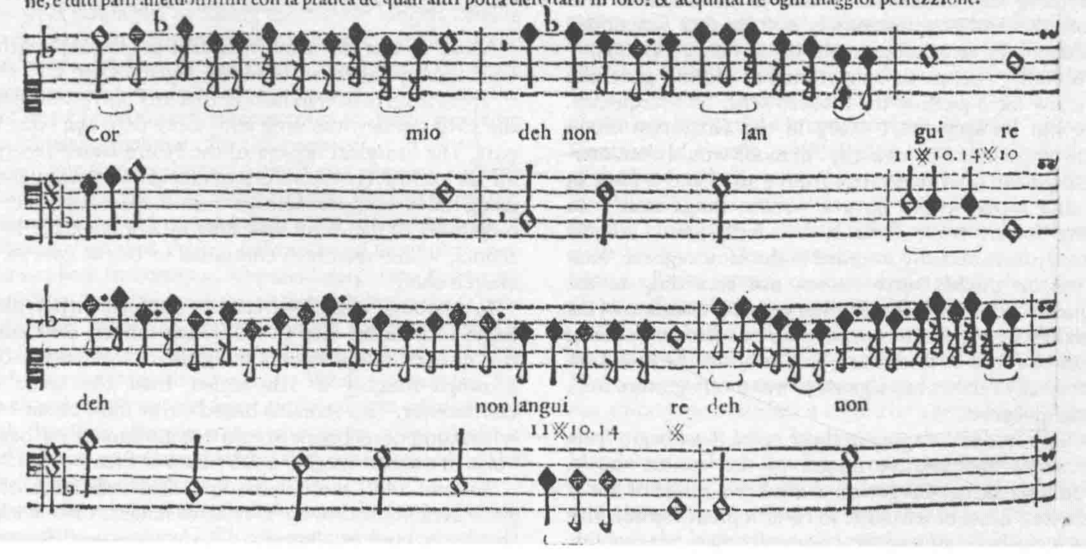
The end of the 18th century and the beginning of the 19th witnessed a marked change in production, when singers began to carry the full weight of the chest voice into the highest registers. One of the most significant effects of this change was to make the high voice much more powerful than was possible when using head voice or falsetto on the same notes. The Irish tenor Michael Kelly was among the first singers to produce this sound, as a contemporary description of his voice attests: 'His compass was extraordinary. In vigorous passages he never cheated the ear with feeble wailings of falsetto, but sprung upon the ascending fifth [from *d'* to *a'*] with a sustained energy that electrified the audience'. This change in vocal production reversed the previously taught relationship of dynamic to range.

In 1739, for example, Johann Mattheson (*Der vollkommene Capellmeister*) referred to a Latin 'rule which has already served for two hundred years, that each singing voice, the higher it goes should be produced increasingly temperately and lightly: however in the low notes, according to the same rule, the voice should be strengthened, filled out, and invigorated'. He is probably quoting from Conrad von Zabern, whose Latin treatise on singing (*De modo bene cantandi choralem cantum*,

dalla mia moglie passata lo lascierò giudicare à chiunque ne'suoi tempi l'vdi cantare, come altresi lascio nel giudizio altrui potendosi vdire, in quanta squisitezza sia fatto dall'altra mia viuente, che se vero è che l'esperienza sia maestra di tutte le cose posso con qualche sicurezza affermare, e dire non si potere vsare miglior mezzo per insegnarlo, ne miglior forma per descriuerlo, che come si è espresso, e l'uno, e l'altro. Il qùal trillo e gruppo per essere scala necessaria, à molte cose, che si descriuono, e sono effetti di quella grazia, che più si ricerca per ben cantare, e come sopra è detto, scritte in vna maniera, ò in altra fanno il contrario effetto di quello, che fa di mestieri, mostrerò non solo, come si possono vsare, ma etiamdio tutti essi effetti descritti in due maniere con l'istesso valor delle note, acciò tuttauia venghiamo in cognizione, come sopra è replicato più volte, che da questi scritti insieme con la pratica si possono imparare tutte le squisitezze di questa arte.

2 Trillo

Ribattuta di gola



2 Cascata scempia

2 Cascata doppia

Cascata per ricorre il fiato

Altra cascata simile

Poiche per le note soprascritte in due maniere veggiamo hauer più graia il numero secondo, che il numero primo, acciò adunque ne possiamo far migliore esperienza, saranno qui appie descritte alcune di esse con le parole sotto, & insieme il Basso per lo Chitarone, e tutti passi affetuosissimi con la pratica de'quali altri potrà esercitarsi in loro: & acquistarne ogni maggior perfezzione.

1. Part of the preface to Caccini's 'Le nuove musiche' (Florence: Marescotti, 1601/2) in which he describes the style of vocal ornamentation most suitable for monody

1474) had been published in Germany. Zabern is certainly clear on the principle of volume as it relates to range:

Another fault which is more obvious than the others is singing notes with an unstintingly full and powerful voice . . . When this shouting is done by individuals with resonant and trumpet-like voices it disturbs and confuses the singing of the entire choir, just as if the voices of cattle were heard among the singers . . . In order to recognize this error completely it must be realized that whoever wishes to sing well and clearly must employ his voice in three ways: resonantly and trumpet-like for low notes, moderately in the middle range and more delicately for the high notes – the more so the higher the chant ascends . . . Therefore, let him who wishes to sing flawlessly never again presume to sing with a full and strong voice in the upper register, for this disfigures the chant, pointlessly weighs down and fatigues the singer, makes him hoarse and consequently useless for singing . . . But on the other hand, when one sings with a delicate tone in the upper register the voice then corresponds to the high-pitched sound of the small pipes of the organ, as well as the upper range of the monochord.

Little more than 50 years after Mattheson had cited this principle as having existed for over 200 years, it was overthrown. In 1791, William Jackson (*Observations on the Present State of Music in London*) complained that 'instead of developing their voices so as to be soft at the top and full at the bottom, singers were achieving the opposite effect' (*FiskeETM*, 1973, p.270), and in 1810 Domenico Corri (*The Singer's Preceptor*) may have been the first author to instruct that the voice should increase in volume as it ascended and decrease when descending (p.52). With this change, the ground was laid for the development of the dramatic soprano, the HELDENTENOR and other weighty voices, and of a new repertory that privileged power over brilliance or flexibility. One cannot, however, simply define vocal production in one way before 1800 and in another after; issues of voice range, genre and nationality all contributed to a more complex picture.

2. EARLY HISTORY. Before the 17th century, two main considerations make the topic hard to study. First, the names given to voices in the surviving music normally denoted their function rather than their range or timbre. Thus, for example, 'tenor' was the voice-line that stood at the core of the polyphony, sometimes borrowed from chant but almost always the line in relation to which everything else happened. Similarly, 'contratenor' was before the 16th century simply a voice that functioned broadly in the same range as the tenor, hence its name.

Secondly, written or named pitches did not generally have any fixed pitch in the modern sense of a frequency. This can be seen most easily in the Gregorian chant repertory, where a piece in the 7th mode would characteristically have a written range from *g* to *a'* and a piece in the 2nd mode would have a written range nearly an octave lower, from *A* to *b*, but both would almost certainly have actually sounded in the same register. That is, written pitches were chosen not according to the frequency but to give the simplest possible notation of the modality: key signatures other than one flat do not exist before the mid-14th century; and even in the mid-16th century any further key signature was a rare gesture for a special purpose.

So any study of singing in those years must begin from the ranges and relative ranges of the written music. Broadly speaking, Gregorian chant has a range of about a 9th, and must be assumed to be at a pitch comfortable for a large body of singers – normally men, presumably with the choirboys (documented from the 11th century) singing an octave higher; women seem never to have sung alongside men in church, though in nunneries they plainly sang at a pitch that was suitable for them. Exactly what pitch was considered comfortable or suitable in these cases must have depended on techniques and ideals of vocal production, concerning which the available information is mostly anecdotal and hard to interpret with confidence. Chaucer's famous description of the Prioress, whose singing was 'Entuned in hir nose ful semely', was intended as light humour and can hardly be used for historical reconstruction.

With the rise of extended monophonic works, starting with the sequence of the late 9th century, there is a marked increase in vocal range. From the time of Notker, sequences often exceed a 12th in range. In the 14th century the monophonic lais of Guillaume de Machaut routinely cover two full octaves: they can last up to 20 minutes, and their very rare modern performances demand extremes of vocal flexibility and stamina. That is perhaps the right context for understanding the description by Hieronymus de Moravia (late 13th century) who mentions *vox pectoris*, *vox gutturis* and *vox capitis* – chest voice, throat voice and head voice.

The earliest two-voice polyphony most often had a *vox principalis*, often a Gregorian chant, and a *vox organalis*, which was more florid and had a wider range, but in essentially the same register. That remains the case even in the late 12th century, with the two-voice organa normally credited to Leoninus: here the *vox organalis* can be exceedingly florid, evidently intended for virtuoso display. Any evaluation of its vocal technique must consider that virtuoso element and a similar manifestation of vocal floridity coupled with intricate rhythms found in much Italian polyphonic song of the 14th century. It is hard to resist thinking that brilliance and lightness of touch characterized the best singing in these repertories. That is in fact spelt out in the Trecento song *Oselletto salvaço* of Jacopo da Bologna:

Per gridar forte non si canta bene
Ma con soave et dolce melodia
Si fa bel canto et ciò vuol maestria.

(You do not sing well by shouting loudly, but with sweet and elegant melody fine song is made, and that needs skill.)

More or less the same was said at greater length by Conrad von Zabern in 1474 (see Dyer, 1978).

There is no reason to believe that any polyphony before the 15th century was sung with more than one voice to a part. The liturgical organa of the Notre Dame repertory all set exclusively the solo sections of the chants, simply using three or four soloists rather than just one; the remainder of the chant was sung monophonically by the *schola*, whose members continued to be the core of any church choir.

In the course of the 14th century the voices in polyphony begin to polarize into two different ranges: increasingly the 'discantus' (and occasionally also a 'triplum') stood in a range roughly a 5th higher than the tenor and contratenor. This remains broadly true until about 1450, when composers began to cultivate additionally a 'bassus' voice in a range roughly a 5th below the tenor.

Around 1440 there is the first clear indication of the pitch area implied by these relative ranges. Two works in the Trent codices, Battre's *Gaude virgo* and Bourgois' *Gloria*, specifically denote sections to be performed by 'pueri' alongside other sections marked 'mutate voces'

(changed voices: presumably adult men). The relative ranges of the Battre piece are, for the 'mutate voces', tenor *d–d′*, contratenor *d–e′*, discantus *c′–c″*; for the 'pueri', tenor *a–b′*, contratenor *c′–c″*, discantus *d′–d″*. Here the discantus lines of the 'mutate voces' sections go as high as those of the 'pueri' sections; thus it seems clear that the discantus must have been sung in a high men's range that could also be sung by boys. If it is legitimate to project that information back to the 14th century, it would suggest that the tenor and contratenor lines were in a range of roughly a 10th from tenor *c* and the discantus a similar range from about *g*. Certainly there is documentation from the early 16th century that in Italy the master of the choirboys sang along with the boys in unison. That in its turn would mean that the 'bassus' lines introduced in the middle of the 15th century were approximately at the pitch of the modern bass.

This conclusion is obviously surprising and remains in dispute, because it implies that polyphony before about 1450 avoided the baritone and bass registers that now seem the most common 'natural' voices of grown men. But such arguments are hard to bring any further without firmer information about vocal production and ideals of sound.

A further hint about these matters comes from the chapel statutes of the court of Burgundy codified in 1469 (Fallows, 1981). These state that in performing four-voice polyphony there must be at least six men on the top line, three on the tenor, two on the contratenor (which was then still normally in the same range as the tenor) and three on the bassus. The surprise here is the six on the top line. By good luck the payment lists of the Burgundian court choir in that year contain enough information for it to be certain that there was nobody under 20 years old, so they were not choirboys. It therefore seems almost certain that these were grown men singing in a falsetto register but with an extremely light tone.

Already by the late 15th century there are clear statements of specialization in particular ranges: Tinctoris (*De inventione et usu musicae*, *c*1481) describes the different voices and names particularly distinguished exponents, including Ockeghem as a bass. In 1481 Siena Cathedral despaired at losing their tenor singer, despite having two contratenors evidently used to singing in the same range, because 'senza tenore non si può cantare'. These were the years in which singers such as Jean Cordier and Giles Crepin travelled from court to court, receiving ever-increasing payment for their services.

The church polyphony of the years around 1500 is remarkable for its wide voice ranges. Josquin's masses, for example, seem to expect each voice to have a range of almost two octaves. Again, lightness and flexibility seem to be implied. By contrast, 80 years later, in the Palestrina generation, voice ranges appear to have diminished: only rarely does Palestrina expect a single voice to exceed a 10th; and Nicola Vicentino's *L'antica musica* (1555) firmly recommends those ranges. While the reasons for this change have not yet been explored, it is plausible to think that one element was a change in vocal ideals: a need for a more focussed sound that concentrated on the best notes in the voice.

Some hint of the change can be seen in the distinction between the quiet *voce da camera* and louder *voce da chiesa*, first found in a letter of 1491 (Fallows, 1985, p.64) and most clearly spelt out in a letter of 1568, in which the singer Carlo Durante is reported as saying that he cannot sing with *voce da camera* because he has recently been singing regularly in church but that when his voice is rested he hopes to be able to sing in the chamber ('et come la voce sara riposata si crede gli servirà per camera'). It looks very much as though the techniques and ideals of singing in church changed substantially in the 16th century whereas chamber music retained the older style.

3. 17TH AND 18TH CENTURIES. The history of singing in the 17th and 18th centuries is characterized by several trends: the rise of the professional opera star, inaugurating a continuous succession of nationally and internationally famous singers; the wide popularity of the castrato and the soprano; the formation and dissemination of the Italian style of singing, along with a concurrent tendency towards national differences; and the cultivation of vocal ornamentation to a peak of artifice. All these trends were supported by specialist teachers of singing, working either independently or in institutions such as the Neapolitan conservatories and the Venetian *ospedali*. Just as previously the authors of singing treatises tended to be tenors, they now tended to be Italian castratos, and the most important of these treatises, by Tosi and later Giambattista Mancini (*Pensieri, e riflessioni pratiche sopra il canto figurato*, 1774), must therefore be used with caution when applied to other voices and other countries.

For example, the joining of the head and chest registers over the break, so important to both Tosi and Mancini, was apparently not as valued in France or Germany. J.J. Quantz (*Versuch einer Anweisung die Flöte traversiere zu spielen*, 1752) writes, 'Joining the chest voice to the falsetto is as unknown to [German singers] as it is to the French'. Apparently French and German singers continued the older tradition of singing in one register as much as possible, using transposition (as suggested by Caccini) to facilitate this where necessary. Where the compositional range demanded vocal expansion beyond one register, the natural break was probably accepted, as it was in many voices well into the 19th century.

Raguenet (*Paralèle des italiens et des françois, en ce qui regarde la musique et les opéra*, 1702; Eng. trans., 1709) states that one essential difference between French and Italian opera was the variety of ranges in the French; he especially praises the deep French bass as opposed to the 'feign'd Basses among the *Italians*, which have neither Depth nor Strength'. He speaks of the resultant 'agreeable Contrast' in French music arising from the 'Opposition' of the bass with the treble parts, something that is lacking in Italian music – 'the Voices of their Singers, who are, for the most part, *Castrati*, being perfectly like those of their Women'. The partiality of the French to the low bass, or BASSE NOBLE, continued past the 18th century as an identifying feature (*see* BASS (ii)).

Tosi mentions a distinction between the treble voices of castratos and women when he states, 'Among the Women, one hears sometimes a *Soprano* entirely *di Petto*, but among the Male Sex it would be a great Rarity, should they preserve it after having past the Age of Puberty'. Handel wrote for a number of renowned sopranos, and a comparison of the surviving descriptions of their voices with the music they sang confirms that Handel was careful to place the highest notes in weak, unaccented positions, a practice that tends to confirm the use of the head voice and a lesser dynamic in the upper register. There is,

however, at least one exception to this practice in the music Handel wrote for Anna Maria Strada (such as in the role of Alcina), where the high notes are frequently accented in both word and rhythm (Harris, 1988–9). Strada may have been one of these women who was able to sing completely *di petto*. Nevertheless, the definitive change in vocal production towards a strong and resonant upper register did not occur until after 1800.

4. 19TH CENTURY. The first half of the 19th century was a period of significant change in the history of Western singing, especially in opera. Newer categories of voice such as the *tenore robusto*, *tenore di forza*, Heldentenor, 'Verdi baritone', 'Falcon soprano', 'dramatic soprano' and *lirico spinto* reflect a taste for weightier timbres, more brilliant upper registers, more sonorous low notes and increased volume in general. Although the new taste for greater volume and more dramatic expression extended to all voices, its impact is most clearly apparent in the careers of several 19th-century tenors, including Adolphe Nourrit, Enrico Tamberlik, Jean de Reszke and most notably Gilbert Duprez, who became famous (and in some circles infamous) for his use of the VOIX SOMBRÉE and for his clarion high *c″*.

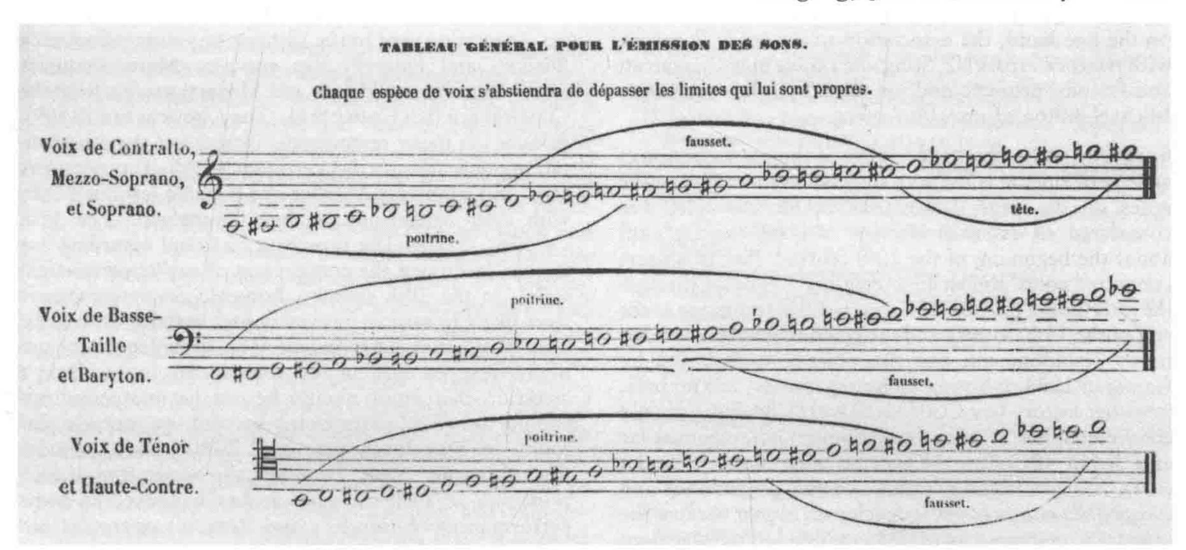
The development of the high, powerful tenor voice spelt the end of the reign of the castrato, a tradition that had already waned at the beginning of the century with the substitution of the female MUSICO for the castrato in heroic male roles such as Rossini's Tancredi. The soprano voice was also extended upward in range and power, leading to the separate development of the dramatic mezzo-soprano, a range closely associated with the parallel development of the baritone. Both are particularly well served in Verdi's operas, to the extent that the dramatic baritone is generally referred to as the 'Verdi baritone' (*see* MEZZO-SOPRANO and BARITONE (i)).

Wagner sought dramatic tenor voices of unusual strength and endurance. Although he never used the term 'Heldentenor', now closely associated with the Wagnerian tenor type, he adamantly distinguished what he wanted from the French dramatic tenor of his day. The Heldentenor differs from the French and Italian tenor (TENORE ROBUSTO) in having a smaller range and a sound closer to that of a baritone. Not surprisingly, many of the most famous dramatic tenors, including in the 19th century Jean de Reszke and in the 20th Placido Domingo, began their careers as baritones.

One of the distinct changes resulting from the cultivation of the heavier voice was the increase in vibrato. At first considered an ornament in the expression of passion, vibrato was not generally considered acceptable as a constant part of vocal production before the end of the 19th century. A particularly clear early injunction against it was given by Christoph Bernhard (*Von der Singe-Kunst, oder Maniera*, *c*1649):

> *Fermo*, or the maintenance of a steady voice, is required on all notes, except where a *trillo* or *ardire* is applied. It is regarded as a refinement mainly because the *tremulo* [sic] is a defect . . . Elderly singers feature the *tremulo*, but not as an artifice. Rather it creeps in by itself, as they no longer are able to hold their voices steady. If anyone would demand further evidence of the undesirability of the *tremulo*, let him listen to such an old man employing it while singing alone. Then he will be able to judge why the *tremulo* is not used by the most polished singers, except in *ardire*.

In the 18th century, too, Tosi warned singers to learn to hold notes without vocal 'trembling', for those who do not 'will become subject to a Flutt'ring in the Manner of all those that sing in a very bad Taste'. In the 19th century 'vibrato' is written as a special instruction at certain points in scores of Donizetti, Halévy, Meyerbeer and others. Although it continued to be criticized, many Italian singers seem to have begun using an audible vibrato on every sustained note by the middle of the century.



The significant changes in vocal production in the first half of the 19th century, including the use of the chest voice and increased volume in the upper register, together with the increasingly continual use of vibrato, were not universally welcome. Rossini is said to have exclaimed, 'Alas for us, we have lost our bel canto', and it is right around this time that the phrase, 'beautiful singing', took on a specific meaning. Associated with legato production, light tone in the upper register, and agile and flexible delivery, it was contrasted with the weightier, speech-inflected (Sprechgesang) style. While for its adherents the term became both a nostalgic symbol for a declining tradition and a battle cry for its revival, for its detractors it was simply pejorative: Wagner, for example, derided the bel canto model that was concerned only with 'whether that G or A♭ will come out roundly' (Prose Works, Eng. trans., 1894, iii, 202).

Another development of this period was the increasingly 'scientific' approach to singing and vocal production. The most important and influential publication was the *Traité complet de l'art du chant* (1840) by Manuel Garcia, baritone and singing teacher. Garcia's invention of the laryngoscope in 1855 furthered the increasing interest in the physiological properties of the voice. His teaching method was based upon a thorough understanding of the workings of the 'instrument' (larynx, throat, palate, tongue etc.), and his work became a model for numerous books on singing after 1850.

The trends in concert and operatic singing in the 19th century, towards a new sense of grandeur, in terms of the size of the halls and the size and volume of the orchestra as well as in the production of the voice (all of which developments were closely related), were offset by the largely contemporary rise of the solo song with piano accompaniment that called for an almost unprecedented intimacy. Although increased intimacy was also evident in operatic characterization, it was especially manifest in a new class of singer who specialized in recitals and oratorio, such as the baritone Julius Stockhausen for whom Brahms wrote his *Magelone* songs and the baritone part in the *German Requiem*.

The change in vocal production in the 19th century and the consideration of the voice as an instrument affected all repertories. Singers of songs could and sometimes did have smaller voices than their operatic counterparts, but this was not essential and, indeed, much of the song repertory called for strength and endurance in the upper register, such as Schubert's 'Suleika' songs. The primary effect was to draw a clear distinction between operatically trained and 'popular' singers, a distinction that had not existed in the 18th century, when the English tenor John Beard could move easily among Italian opera, English oratorio, popular ballad opera and English song.

5. 20TH CENTURY. The most important development for singing in the 20th century was the invention and expansion of electronically altered and amplified sound as well as the vast proliferation of recorded sound. Techniques of electronic amplification, including the microphone, have, especially in popular singing, altered

2. *'Tableau général pour l'émission des sons' from Manuel García's 'Traité complet de l'art du chant' (Paris, 1840), i, p.27*

vocal production, further dividing the 'classical' and 'popular' singer. Without the need to project the voice naturally over robust (and often amplified) accompaniments in vast halls, popular singers, such as Billie Holiday and Frank Sinatra, did not need to power their voices physically (through diaphragmatic support, use of chest voice and breath control), but could make previously inaudible intimate vocal nuances, such as whispers or murmurs, audible in live performance. Subsequently expanded vocal experimentation in various rock music genres led to the inclusion of screams, growls and the like and the manifestation of the male falsettist (Michael Jackson and many predecessors) who specializes in intense and distorted sound in the upper registers (see §7 below).

Experimentation with sound was not limited to popular singing. The technique of Sprechstimme, a highly stylized mode of vocal expression halfway between singing and speaking, was associated particularly with the so-called Second Viennese School in such works as Schoenberg's *Pierrot lunaire* (1912). Composers of both choral and solo music also explored a range of special vocal effects, including choral recitation, BOCCA CHIUSA, glissando and controlled shouting. Since 1950, electronic amplification and alteration have also been increasingly used by classical composers. In Crumb's *Ancient Voices of Children* (1970), for example, a soprano sings (or shouts) into an open piano and the sympathetic vibrations of the undamped strings are then amplified through a contact microphone. Singers such as Bethany Beardslee, Jane Manning and Cathy Berberian have specialized in singing avant-garde music and in developing the new techniques that this entails.

Perhaps the most radical innovation in 20th-century singing is, paradoxically, allied to the movement towards historically accurate performances of early music. Although at first more focussed on performing practice (e.g. in matters of ornamentation) and on the use of period instruments and correct ways of playing them, the rediscovery of the pre-1800 singing style has transformed and reinvigorated contemporary understanding and appreciation of early music. The countertenor voice, which had remained in constant use in England since the Renaissance but had been forgotten elsewhere, was rediscovered by an international audience in the 1950s, chiefly through the career of Alfred Deller. Since then singers of all ranges, such as the soprano Emma Kirkby, the mezzo-soprano Lorraine Hunt Lieberson, the countertenor Andreas Scholl and the bass David Thomas, have become specialists in the performance of a wide repertory of early music. Interesting points of contact exist between the early music movement and the avant garde, including a similar singing style that emphasizes a pointed tone with little or no vibrato (*see* BASS (ii), COUNTERTENOR, MEZZO-SOPRANO and SOPRANO).

Recording technology, although it does not necessarily alter the production of sound, has had a great effect on both popular and classical singing. It provides recorded documentation of specific singers, yielding more information than any verbal account has ever been able to convey, and further permits composers to supervise recorded documentation of their intentions, allowing a more precise transmission than is possible in a written score. Ironically, at least in the performance of classical music, the technology that made it possible to capture and disseminate the remarkable variety of singers' styles has tended to encourage stylistic norms and led to an increased internationalization and homogenization of sound production and performing practice. In popular music, individuality, sometimes reaching to the extremes, has been more welcome.

The various 20th-century singing styles – classical, popular, avant-garde, early music – manifest certain resemblances that help to define this period. First, experimentation with new sounds has been a dominant trend in all forms of new music, whether classical or popular; secondly, a retreat from the 19th-century sensation of pulling the chest voice into the upper register (with a subsequent reduction in vibrato) has been a factor not only in popular folk singing but also in both early and contemporary music performance; thirdly, a renewed preference for extremely high voices can be seen in the dominance of the soprano in avant-garde music, the falsettist in popular music and the countertenor in early music (and the virtual disappearance of the contralto); and, fourthly, the dramatic rise in so-called crossover projects has led to various kinds of transference, such as,

on the one hand, the association of the tenor Pavarotti with the rock artists U2, Sting and others in his 'Pavarotti and Friends' projects, and, on the other, the rock singer Michael Bolton's forays into opera.

6. PERFORMING PRACTICE. One of the most important aspects of singing is the way singers have interpreted the notes on the page. PORTAMENTO, for example, was considered an essential element of good singing until about the beginning of the 20th century: that is, singers connected notes 'almost imperceptibly' by gliding through the intervening pitches. The abuse of this technique at the end of the 19th century and the beginning of the 20th led to its abandonment, but the practice encouraged by Garcia in 1894 of hitting each note 'purely' has no basis in earlier history (*see* COUP DE GLOTTE). Singers not only connected notes, but approached initial notes from as far as a 3rd or 4th below the notated pitch (CERCAR DELLA NOTA). A consistent notation for the portamento and *cercar della nota* was never developed, in part because the practice was so normative that notation would have been redundant. Thus our record of this practice is largely limited to written treatises on singing and descriptions of voices, but early recordings also document its regular use (Crutchfield, 1983).

Also unnotated are such important ornaments as the MESSA DI VOCE, or a crescendo and diminuendo on a single sustained note. Caccini (1601/2) considered this practice 'the foundation of passion', the 18th-century castrato Farinelli was particularly renowned for his exquisite *messa di voce*, and Garcia (*Traité*, 2/1847) recommended the singing of scales with a *messa di voce* on every note (in order to unite the registers and develop volume). A gradual increase or decrease of volume over phrases was also recommended by tutors; Bernhard (*c*1649) writes, 'Care must be taken not to shift too abruptly from the *piano* to the *forte*, but rather to let the voice wax and wane gradually'. So-called terrace dynamics, popular in the mid-century performances of Baroque music, are not supported by contemporary sources. Not only the treatises, but also scores from at least the early 17th century, indicate the use of crescendo and decrescendo rather than abrupt dynamic change.

Rhythm and metre have also been treated flexibly. Girolamo Frescobaldi (in the preface to his *Toccate*, 1615) speaks of performing instrumental pieces like madrigals, 'taking it now slowly, now quickly, and even held in the air, to match the expressive effect'. Bacilly (*Remarques curieuses*, 1668) encourages singers to slow down in order to add embellishments, and Tosi (1723) describes 'stealing the Time' in order to avoid 'a mechanical Method of going on with the Bass'. In the 19th century singers made liberal use of rubato, as the earliest recordings document. Rhythmic freedom was always of paramount importance in recitative and declamatory singing.

Ornamentation, in terms of the addition or alteration of the notes, is somewhat easier to document as composers and singers from the end of the 16th century to the present have left examples of their practice (*see* ORNAMENTS and IMPROVISATION). Caccini (1601/2) not only described the most important ornaments but published arias from his *Il rapimento di Cefalo* as they had been sung and ornamented by the bass Melchior Palontrotti, the tenor Francesco Rasi and the tenor-composer Jacopo Peri. Handel ornamented some arias in his own hand, and ornamentation used by the 18th-century singers Francesca Bordoni and Farinelli also survives. Many examples (including some by Haydn and Mozart) survive from the Classical era (see Crutchfield, 'The Classical Era', 1989). Rossini left many manuscripts illustrating the ornamentation of his arias, as did Verdi; such 19th-century singers as Cinti-Damoreau, Viardot and Kemble left notebooks with their ornamentation (see Crutchfield, 'The 19th Century', 1989). The invention of sound recording has further facilitated the comparison of earlier ornamental styles. In the 20th century, however, fewer composers were likely to assume or even desire rhythmic or melodic improvisation in performance. This is evident in the use of pre-recorded tape but also, for example, in Stravinsky's assertion that music should be not be interpreted but should rather be objectively executed, an attitude that found its way for a time into 20th-century attitudes towards earlier music. However, the application of such principles to earlier music, as has happened in some performances of Handel's and Rossini's operas, is not only inappropriate but often damaging.

7. POPULAR SINGING. The earliest known references to what might be called popular singing in the West are the work songs referred to in the works of Homer, which are assumed to have been sung in a 'natural' speech-related way that can still be heard in certain European folksongs. Medieval literature contains references to oral music which depended on singing that was untrained and inspirational, and which was identified with the singers who created and performed it rather than composers. From the 17th century onwards the growing commercialization of popular entertainment saw an increasing variety of popular singing styles ranging from speech-related folk singing to more stylized varieties derived from classical singing, which diverged significantly from popular varieties in the early 19th century with the evolution of the more efficient low-larynx technique and its associated breath control.

In the USA a multi-faceted popular oral tradition, with European folksong and African-American blues as major influences, was the earliest popular singing to interact with technology, first in the form of recordings in the early years of the 20th century and then by the use of amplification from the 1920s onwards. Early black American jazz singers such as Louis Armstrong and Bessie Smith were a crucial influence on white singers such as Bing Crosby, who used the microphone to take an intimate, speech-related style to large audiences, broadening the popular base of jazz-influenced singing from a black minority interest to something that caught the imagination of millions of people. Speech uses a higher larynx-position than classical singing, which modifies speech patterns as part of the projection process. Microphones enable singers to dispense with the mechanisms of projection and retain the nuances of speech, thereby seeming to create a feeling of a one-to-one relationship with their listeners: hence the misleading term 'crooning', which was applied to certain microphonic singers in the 1930s and 40s.

The speech-song of Armstrong and the early Crosby became more singer-like and sophisticated with their successors, culminating (after a digression into the virtuosity of bebop) in the work of Frank Sinatra, who even described his own singing as 'bel canto'. Sinatra sang with speech-related word shaping, but used efficient

breath control and was concerned with tone-colour (and, especially in his later recordings, with vibrato) in a similar way to classical singers. Postwar rock and roll, vocally a synthesis of country music and rhythm and blues, was very much a reaction to this ultra-sophistication, Elvis Presley in particular representing the visceral ebullience of a youthful return to speech-related singing in which the voice was the servant of textual rhetoric. Rock and roll's rather limited musical potential was given new life by the Beatles and others during the 1960s. The Beatles' early catholic taste embraced black American music and musicals as well as conventional rock and roll. Their second album, *With the Beatles* (1963), included Paul McCartney singing 'Till there was you', a ballad from the musical *The Music Man*, which extended the range of speech-related singing to music that was originally conceived for the sub-classical singing of previous generations. The punk phenomenon of the mid-1970s was in part a reaction to the all-embracing stylistic and commercial tentacles of rock. Before they, too, were subsumed into the mainstream, punk singers briefly outraged the establishment with their aggressive recitatives performed in a kind of heightened speech. The real revolution in the late 1970s came once again from the African-American community, when New York black youths began to have some commercial success with rap. Rap is heightened rhymed speech; many variants have developed under the general term 'hip-hop'. Ironically, the declamatory style has theoretical echoes of the 'classical' dramatic rhetoric of ancient Greece.

Classical singing has a rigid classification of voice-types. Pop singers tend to be loosely categorized according to genre (folk, soul, rock, rap and so on). The evolution of rock has generally seen a narrowing of vocal ranges, with men singing in the upper part of the voice and women in the lower (Kate Bush is an exceptional high soprano, Tom Waits a rare bass), the overlap of tessitura between the sexes perhaps signifying a certain ambiguity towards gender in the late 20th century. There is little formal pedagogy associated with pop singing, which is able to use any rhetorical means to deliver its message, unencumbered by a systematized technique (a contrast vividly demonstrated by the duetting of Freddie Mercury and Montserrat Caballé on the 1988 album *Barcelona*). Popular singing is potentially the most democratic means of music-making (anyone who can speak can sing) and has always shown a rich diversity of styles (from bebop to doo-wop, techno to hip-hop). It is increasingly enhanced by technology: the sound system on which commercial pop music depends has evolved from simple amplification to a creative tool which can modify tone-colour and create simultaneous harmonies, but the major stylistic changes of the 20th century were connected with the need for popular singing not to stray too far from its primary purpose: to express a text in a speech-like way that is relevant to all.

OWEN JANDER/ELLEN T. HARRIS (1, 3–6), DAVID FALLOWS (2), JOHN POTTER (7)

Singing arc. A monophonic electronic keyboard instrument developed in London in 1899 by the English physicist and wireless pioneer William Du Bois Duddell (*b* London, 1872; *d* ?London, 4 Nov 1917). It was inspired by the (unwanted) high-pitched whistling produced by the electric arc-lamps used at that time for street lighting. *See* ELECTRONIC INSTRUMENTS, §III, 1(i).

Singing birds. A term applied to mechanical instruments that imitate birdsong. *See* BIRD INSTRUMENTS, MECHANICAL INSTRUMENT, MUSICAL BOX and MUSICAL CLOCK.

Singing in tongues. A non-rational form of prayer in which one individual, a group within a congregation or an entire congregation use the technique of 'speaking in tongues' as the basis for improvised singing. Speaking in tongues (i.e. praying in languages foreign both to the listener and to the person praying) was known in biblical times: as a type of meditation it was highly valued by the apostle Paul for private prayer (*1 Corinthians* xiv.4, 39), but was regulated for liturgical use (*1 Corinthians* xiv.27). The languages or 'tongues' used need not be actual languages, but may merely be syllables strung together. In a linguistic analysis Samarin described speaking in tongues as a normal phenomenon which has nothing to do with schizophrenia or other pathological states, but can be seen as a form of communication and is regarded as a 'symbol of the sacred'.

Although singing in tongues has received less attention from scholars than has its spoken counterpart, it has been used for some time in the ritual of various Christian sects. In the USA during the first part of the 19th century many members of Shaker groups improvised (or received in visions) songs in tongues, which were then learnt by other members of the sect and eventually written down. Since the early 20th century singing in tongues has become an accepted form of prayer in a number of Pentecostal churches, particularly among black congregations in many parts of Europe, North and Latin America. It can occur as an unaccompanied solo (male or female); as an accompanied solo, duet or trio (the accompaniment can include both instruments and congregational part-singing); as a three- and four-part chorale; or (rarely) as contrapuntal improvisation by the whole congregation. Some congregations seem more prone to singing in tongues than others, but reasons for this have not yet been advanced. A preference for the minor mode is shown in some groups; harmony, when used, often consists of simple triads and 7ths.

Singing schools. In 18th-century America, instructional sessions devoted to teaching singing and note-reading. *See* PSALMODY (ii), §II and SHAPE-NOTE HYMNODY.

Single. A seven-inch vinyl phonographic disc with a playing speed of 45 r.p.m., later a short-playing tape or CD. In the 1950s the vinyl single became the most important medium for popular music; along with the vinyl LP, it replaced the shellac 78 r.p.m. ten-inch which was the standard up until the late 1940s. Cheaper to manufacture and easier to distribute, in the 1950s it became the format for jukeboxes, the retail business and radio play, and the singles charts in both the USA and the UK became something of a style barometer. Because of cheaper distribution it was also possible for small independent labels to gain a market share and introduce new talent, true both in the 1950s with the rise of labels such as Sun and Stax, and also in the late 1970s, when the UK market was briefly flooded by new wave material from small independent labels such as Stiff. By the late 1950s and early 60s million-selling singles by artists such as Elvis Presley and the Beatles were common on both sides of the Atlantic. Certain labels, most notably Tamla Motown, concentrated almost exclusively on the singles charts. By around 1967 the pop market showed signs of division, with a number of rock acts and labels choosing to consolidate their position in the more lucrative album market. Whereas before, artists such as the Rolling Stones could be described as catering for both LP and singles markets, it was now common to talk of the hard rock act Led Zeppelin as album-based and of the Osmonds as singles-based.

As late as 1978, singles were still selling in impressive numbers, for example Wings's *Mull of Kintyre* was the first single to sell over two million copies in the UK, but by the 1980s sales were in decline. Global sales of the vinyl single dropped by a third from 550 million in 1980 to 375 million in 1988. Other formats such as the cassette single were usurping vinyl, and in 1990 Roxette's *Listen to your heart* became the first single to reach number one in the US pop charts without appearing on vinyl. By the mid-1990s sales of singles had recovered somewhat with the popularity of the CD single, which usually played for between 20 and 30 minutes. In 1997 *Candle In The Wind*, Elton John's tribute to the late Diana, Princess of Wales,

overtook Bing Crosby's *White Christmas* as the highest-selling single of all time with global sales in excess of 30 million.

DAVID BUCKLEY

Singleton, Alvin (Elliot) (*b* Brooklyn, NY, 28 Dec 1940). American composer. He studied composition and music education at New York University (BM 1967); composition with Mel Powell and Wyner at Yale University (MMA 1971) and with Petrassi at the Accademia di S Cecilia in Rome on a Fulbright fellowship (1971–2). His honours include the Darmstadt Kranischsteiner Musikpreis (for *Be Natural*, 1974), an NEA grant (1981) and commissions from Austrian Radio, the Atlanta SO, the Houston SO and the Florida, Cleveland and Philadelphia orchestras among others. Singleton's works have been performed at numerous festivals worldwide, including ISCM festivals in Brussels (1981) and Graz (1982), the Berkshire Festival and the 1996 Olympic games (*Umoja – Each One of us Counts*). In 1973 he settled in Graz, where he worked as a freelance composer. In 1985 he received a three-year appointment as composer-in-residence with the Atlanta SO. His compositional style has been influenced by jazz, his American roots and contemporary European musical practices. His harmonic language is based on triads; works such as *Again* (1979), written for the London Sinfonietta, and *A Yellow Rose Petal* (1982) make extensive use of triadic harmonies punctuated by outbursts of dissonances. In other works (for example, *Such a Nice Lady*, 1979) that emphasis is reversed.

STEPHEN MONTAGUE

Singleton, Zutty [Arthur James] (*b* Bunkie, LA, 14 May 1898; *d* New York, 14 July 1975). American jazz drummer. He played the drums in several important New Orleans bands, such as those of Papa Celestin and Luis Russell, and from 1921 to 1923 worked in Fate Marable's riverboat groups. By 1927 he had moved to Chicago, where his recordings with Louis Armstrong in 1928 (notably *Muggles*, OK) and in a trio with Jelly Roll Morton and Barney Bigard in 1929 (for example, *My Little Dixie Home/That's like it ought to be*, Vic.) made Singleton well known in the jazz world. His style was sufficiently flexible and progressive to keep him active during the swing period of the 1930s, sometimes as the leader of his own group and at other times accompanying performers such as Sidney Bechet and Roy Eldridge. In later years he worked mainly freelance in New York, either leading his own dixieland bands or working with traditional and mainstream musicians. He toured Europe in 1951–3, and held a long residency at Ryan's in New York from 1963 until he was incapacitated in 1970 by a stroke.

Singleton's career and musical development closely resemble those of Baby Dodds, with whom he is often, and sometimes unfavourably, compared. Unlike Dodds, however, he incorporated the innovations of 1920s Chicago drummers into his playing, thereby forming a link from the New Orleans style to later swing drummers, notably Sid Catlett. He was among the first drummers to use the sock cymbals (a forerunner of the hi-hat) and wire brushes, both of which appear on his recordings with Armstrong (1928); and he was particularly innovative on his recordings with Morton and Victoria Spivey (for example, *Funny Feathers*, 1929, OK), where he may be heard playing rim shots, ride patterns on the top cymbal, unchoked cymbal crashes and offbeat accents on the bass drum, all of which later became familiar features of jazz drumming. Although Singleton played solo choruses at least from the mid-1920s, and was famous for his imaginative breaks and fills (see Wettling), he is known primarily as an expert and highly musical accompanist, as is attested by the many important musicians of several generations who sought him out for recording sessions.

J. BRADFORD ROBINSON

Singoni, Giovanni Battista. *See* ZINGONI, GIOVANNI BATTISTA.

Singspiel (Ger.: 'sung play'). An opera, usually comic and in German with spoken dialogue.

1. Origins. 2. Germany. 3. Vienna.

1. Origins. The German Singspiel, in the normal sense of that term, was developed from a variety of predecessors. Apart from medieval mysteries and church plays, important sources of the Singspiel are to be found in secular plays of all kinds. The tragedies and comedies of the travelling troupes frequently contained a number of songs (often with many verses, and sung to a popular melody) as well as instrumental music – dances, marches, flourishes for royal entrances, battles, hunting scenes. The songs were usually given to the principal comic character (Jean Potage, Jack Pudding, Pickelhäring, later Hans Wurst), whose part was in the early days often taken by the only actor fluent in the language of the country where the performance was taking place. The *commedia dell'arte* exercised a twofold influence, through the visits of Italian companies to theatrical centres in Austria and southern Germany in particular, and through the mediation of the Comédie-Italienne in Paris which, in the localized form of the Théâtres de la Foire in the early 18th century, also exerted a marked influence, especially on the Viennese theatre.

Baroque opera at the great Austrian and German courts set a standard of magnificence that the popular companies were unable to emulate, though their adaptations and parodies brought at least something of the splendours of the opera to the people. Occasionally, broadly comic musical entertainments and intermezzos were put on at the Viennese court that have close similarities to the world of Hanswurst in the Kärntnertortheater. Other forms of court entertainment, including pastorales and ballets, both mounted and danced, left a mark. The dramatic performances put on by religious orders are also of great importance in the rise of the Singspiel. In particular the Jesuits staged musico-dramatic performances of a magnificence to rival or even surpass the grandeur and lavishness of the court operas. In Vienna the use of German songs, parody and even mixed-language verse, as well as extensive musical sequences, helped to break down the barriers between the various art forms and prepare the ground for the plays with music of the comedians in the Kärntnertortheater who, from the beginning of the second decade of the 18th century, represent the oldest unbroken popular theatre tradition in the German lands. Theirs are the earliest works that deserve to be labelled 'Singspiel' in its usual sense.

Where German was normally or often the language of operatic performances (Hamburg, Brunswick etc., but not Vienna or Munich), the musical style was seldom markedly different from that of the Italian operas written for Austro-German houses, or the French models that to a more limited extent exerted an influence in Germany. But the use of the vernacular was certainly an encouragement to the German Singspiel writers, and the music of the peasant and servant scenes frequently has a frankly popular touch that assured its success and its survival – the melodies of many of the songs in collections such as Sperontes's *Singende Muse an der Pleisse* (Leipzig, 1736–47) had their origins in more sophisticated musical forms, mainly of French origin, but they also included music by Bach, Handel, Telemann, Keiser, Vivaldi and others. In turn Sperontes's collections were plundered by actor-dramatists such as Kurz-Bernardon in Vienna. On the whole, however, operatic works by German composers had little success or influence in Austria. Handel and Graun were hardly known in Vienna, and later Hiller's Singspiele were seldom performed there, or were given as spoken dramas. Indeed, of the north German Singspiel composers only Benda (primarily with his melodramas) had any success in the Austrian capital.

2. Germany. Contrary to generally held opinion, the north and central German Singspiel of the mid-18th century arose only after a lusty and prolific Viennese genre had become firmly established. This was some time after Baroque opera had disappeared from the repertory of all but the most reactionary of German theatres. Writing in the fourth edition of his *Critische Dichtkunst* (1751), Gottsched prematurely congratulated the Germans on their taste and good sense in abandoning opera; the brief and dismissive sections on operetta and the intermezzo give no sign of awareness of the gravity of the new danger to what he considered good taste: the emergent Singspiel.

The main sources of the north German Singspiel were the French *comédie mêlée d'ariettes*, an offshoot of the Comédie-Italienne given with great success at the Foires St Germain and St Laurent after the banishment of the Italian comedians from Paris in 1697, and precursor of the true *opéra comique*; and the English ballad opera. The popularity of the Gay-Pepusch *Beggar's Opera* and its successors in London in the late 1720s and early 1730s did not go unnoticed in Germany; C.W. von Borck, Prussian envoy in London, translated Coffey's *The Devil to Pay* (performed in Berlin in 1743, probably with the original English tunes). The era of the German Singspiel proper opened with Standfuss's setting of C.F. Weisse's translation of *The Devil to Pay*, which under the title *Der Teufel ist los, oder Die verwandelten Weiber* was performed by G.H. Koch's company at Leipzig in 1752. Despite its success (not least in sparking off a battle of pamphlets – Gottsched and his adherents objected to what they considered its coarse and tasteless nature), its sequel, *Der lustige Schuster* (based on Coffey's *The Merry Cobbler*), was not given until 1759, in Lübeck; Standfuss's third and last Singspiel, *Jochem Tröbs*, was given at Hamburg on 17 September 1759. It is not without significance that both these last works were first performed in north German ports with close trading links with Britain: in the 18th century Hamburg was the principal point of entry for English cultural influences in Germany (Borck also translated Shakespeare's *Julius Caesar*).

Once the Hamburg operatic venture had foundered in 1738, the only German-language Singspiel venture with a permanent home was the Hanswurst company at the Kärtnertortheater in Vienna. For the rest, operatic performances of a popular nature and in the vernacular were given by wandering troupes. This helps account for the short-breathed and usually simple nature of the early German language Singspiele: most of the casts were actors and actresses who could also sing, as opposed to fully trained musicians, and the expense of maintaining even a moderate-sized orchestra and a repertory of large-scale works was beyond the reach of almost all the companies. But several troupes in the third quarter of the 18th century gave notable performances of Singspiele; Anton Seyler's performed at Weimar and Gotha for some years, with Anton Schweitzer and later (in Dresden) C.G. Neefe as musical directors and composers; and from the late 1770s G.F.W. Grossmann directed what was probably the most important opera troupe in Germany, with Neefe as Kapellmeister. Yet, for all they achieved, these companies

only briefly enjoyed the settled conditions of a semi-permanent home, and the establishment of a tradition of sustained excellence of ensemble was impossible.

The most important figures in the rise of the German Singspiel are the dramatist and poet C.F. Weisse (1726–1804) and the composer J.A. Hiller (1728–1804). All but four of Hiller's 14 Singspiele are settings of Weisse librettos, and his first attempts were adaptations of the two Coffey-Standfuss works, for which Weisse had arranged the texts. In most of his Singspiel texts Weisse leant on French originals (mainly by Favart), though in *Der Ärndtekranz* (1771) he wrote an original German libretto. The principal features of Hiller's Singspiele are typical of the new genre (though it should be noted that Singspiele are not always comic; the Gotter-Benda *Walder* of 1776 is an example of the 'ernsthafte Operette'). The story tends to be about lower-middle-class people or artisans, and is frequently pastoral (or at least rural) in vein, as well as comic. A firmly satirical attitude may be taken towards the upper classes or foreigners who threaten the simple idyllic life of the principals. Romantic interest nearly always plays a prominent part. The action is carried forward in spoken dialogue, normally in prose, with music reserved for introductions and emotional highpoints; dances, marches and narrative songs are frequent; recitatives occur only occasionally, normally in addition to the dialogue rather than in place of it; the vocal numbers tend to be fairly simple and often strophic songs, though there are some ambitious arias, usually but by no means invariably for upper-class characters; choruses and extended ensembles are infrequent in early Singspiele, though straightforward vaudeville finales are often found; marches, recruiting songs and other military touches reflect the Seven Years War through which Germany had recently passed.

The high quality of books and music kept the Weisse-Hiller *Lottchen am Hofe* (1767), *Die Liebe auf dem Lande* (1768) and *Die Jagd* (1770) in the repertory for several decades, and many of the songs soon achieved the lasting popularity of what were shortly to be called 'folksongs'. Despite their excellent qualities (high spirits, melodic charm, pathos, pleasing instrumentation) there is something rather monotonous about them, especially by comparison with the livelier Viennese Singspiele. Georg Benda however achieved in his theatre scores a remarkable range and depth of musical characterization, variety of effect, humour and occasional elegiac power and elegance that make Mozart's profound admiration for his melodramas entirely understandable. The best of the Singspiel scores of his contemporaries – André, Neefe, Reichardt, Wolf and Zumsteeg – would also repay occasional revival.

Two composers of more serious operas in German – works called 'Singspiel' at the time although outside the central, comic tradition – should be mentioned here. Ignaz Holzbauer wrote most of his operas to Italian texts, though as early as 1746, while still in Vienna, he set a German farce by Weiskern. His most important stage work is *Günther von Schwarzburg* (1777, Mannheim), to a libretto by Anton Klein on a German historical subject. The scoring is imaginative and the expressive accompanied recitatives were greatly admired; Mozart was struck by the fire and spirit of the music when he heard it in the autumn of that year. The case of Anton Schweitzer is very different, in that his 20 or so stage works were virtually all written to German texts. Historically the most important of these are *Alceste* (1773, Weimar) and *Rosemunde* (1780, Mannheim), both to librettos by Wieland; their partnership represented a then rare collaboration between a major German poet and composer, though musically and dramatically Schweitzer did not depart far from Neapolitan *opera seria* practice.

The attempts of major literary figures to raise the tone of the Singspiel by the provision of superior texts had only limited success; neither Wieland nor Goethe added to his reputation or to the permanent repertory of the Singspiel with his contributions (in Goethe's case particularly numerous) to the genre, and Reichardt with his Liederspiele likewise hardly achieved the hoped-for union of a libretto of high quality with music of popular appeal and distinction.

By the early 19th century the borderline between the Singspiel and opera with dialogue is far from distinct. Whereas Weber subtitled *Abu Hassan* 'Singspiel', *Der Freischütz* is a '(romantic) opera' and *Oberon* a 'romantic fairy-opera', notwithstanding very similar proportions between sung and spoken elements in the three works. In general it is probably fair to say that the term Singspiel in Germany as well as in Austria was frequently avoided by those wishing to make exalted claims for their works. There are inevitably many exceptions, yet on the whole a Singspiel made less exacting demands on the performers than did an opera; at least in the early days of the modern German Singspiel, the travelling companies could cope more readily with the demands of the play with songs.

A further designation that is frequently used for referring to a kind of 19th-century German Singspiel is 'Spieloper', a term used not so much by author and composer themselves as by more recent commentators (e.g. Lüthge, 1924). Thus Nicolai's *Die lustigen Weiber von Windsor*, as well as Lortzing's stage works, for which he himself was both librettist and composer, are often referred to as *Spielopern*, whereas Lortzing simply called them comic operas (preferring this appellation to the original 'Singspiel' for his adaptation in 1830 of the Weisse-Hiller *Die Jagd*). Among other notable early 19th-century German Singspiel composers are Himmel (especially for *Fanchon das Leyermädchen*, 1804, to a libretto by Kotzebue), E.T.A. Hoffmann (with several Singspiele, though his best-known and most important stage work, *Undine*, is a magic opera), Reichardt (most of whose once-popular Singspiele were in fact written before the end of the 18th century) and Conradin Kreutzer – though he, like Spohr, might be thought to invite consideration as a composer of operas with spoken dialogue, rather than as a master of the simpler and less exacting Singspiel.

3. VIENNA. Although the term Singspiel was rather seldom used by Viennese librettists and composers in subtitling their own works, there can be no doubt that the works themselves are most clearly described by this term. The combination of music and comedy was already firmly established by the court operas and the Jesuit dramatists and composers long before the popular Singspiel tradition had begun. It grew directly from these two Viennese theatrical forms, but also from the 17th-century tradition whereby strolling players used music as an added attraction in their works.

It was long held that music played no part, or at most a very restricted part, in the performances of Hanswurst-Stranitzky's company that took over the Kärntnertortheater in Vienna in 1710, but numerous songs, dances and

even complete ballets were performed by this company. The texts survive of some 16 Haupt- und Staatsaktionen (plays about historical or mythical characters, with a liberal larding of coarse comic scenes) by J.A. Stranitzky, in which an average of a dozen or 15 'arias' were sung. After Stranitzky's death in 1726, the musical components of the Viennese popular comedies were extended yet further. H. Rademin's *Runtzvanscad, Koenig deren Menschenfressern* of 1732 includes four choruses, five duets and two dozen arias; and after 1744, with the establishment in the company of Joseph Felix von Kurz (whose guest appearances in central and southern Germany enriched the northern repertory), music began to play a still more important part. Even if the total of musical numbers in a typical Kurz work is lower than in *Runtzvanscad*, there was sometimes a remarkable preponderance of ensembles. The nine musical numbers of *Das zerstöhrte Versprechen des Bernardons* (probably from the late 1740s or early 1750s) comprise three quintets, a quartet, a trio, two duets and a mere two arias. By comparison, Kurz's libretto for Haydn's *Der neue krumme Teufel* (probably printed in 1758) includes as many as 32 arias and only one duet, one trio, one extended solo number and three choruses among its 38 numbers.

The earliest surviving music definitely composed for the Viennese popular theatre dates from the mid- or late 1750s (the so-called *Teutsche Comedie Arien*; all ed. in DTÖ, lxiv and cxxi); the composer of some of the numbers may well be Haydn, whose puppet opera *Die Feuersbrunst* (*Das abgebrannte Haus*), probably dating from 1776–7, was rediscovered in the late 1950s. Among other composers named on librettos or in contemporary account books as writing music for the popular theatre are Holzbauer (*Arlekin, ein Nebenbuhler seines Herrn*, 1746), and the otherwise unknown Eder, Fauner and Ziegler.

The most important period of the Viennese Singspiel began in 1778, with Joseph II's institution of the 'German National-Singspiel', which was intended to encourage native poets and composers to produce works in the vernacular for the benefit and improvement of lovers of German rather than Italian or French art. Despite the emperor's good intentions and the competence of J.H.F. Müller, the National-Singspiel's first director (he went to Germany in search of good new artists), the encouragement of the best native talent failed to produce the hoped-for results. Year after year, the principal public successes in the court theatre were translations of foreign originals rather than German-language plays, and the same happened with the opera. Two companies, those of Johann Böhm and J.C. Wäser, performed operatic works in the Kärntnertortheater in spring and summer 1776. Böhm's repertory consisted entirely of French operettas, badly translated and poorly performed, which had no public success; and Wäser too failed to please, though he gave a number of original German Singspiele. It was against this background that Joseph II went ahead with his plan to establish a German Singspiel company in Vienna, and many of the works it later performed were revivals from the Böhm and Wäser guest seasons.

The work chosen to open the National-Singspiel venture, Ignaz Umlauf's one-act opera *Die Bergknappen* to a libretto by Weidmann, was first heard on 17 February 1778 and received 30 performances in four years; the second new Singspiel, *Diesmal hat der Mann den Willen!*, was also by a native composer, Ordonez (born in Vienna, despite his Spanish name); but thereafter translations once again preponderated. Seven of the 15 works given in the opening season were original German works, yet only Ulbrich's *Frühling und Liebe* and Benda's by no means new *Medea*, apart from *Die Bergknappen*, were to attain ten or more performances, compared with four of French or Italian provenance that averaged some 25 performances each. In later seasons the discrepancy was more clearly marked, the only native successes to rival the most popular importations being Umlauf's *Die schöne Schusterin oder Die pücefarbenen Schuhe* and *Das Irrlicht*, Gluck's *Die Pilgrime von Mekka* (itself a translation from its French original), and Mozart's *Die Entführung aus dem Serail* (with around 40 performances by the final night of the venture, it was the most successful work written for the National-Singspiel; in absolute terms Gluck's *Pilgrime* and Grétry's *Zemire und Azor*, with 56 performances each, were the most often heard). The company closed its doors on 4 March 1783, though a second extended season ran from autumn 1785 until 4 February 1788, including among its few native successes Dittersdorf's *Der Apotheker und der Doktor* (*Doktor und Apotheker*, to a libretto by Stephanie), which was first heard on 11 July 1786. The comment that its success eclipsed Mozart's *Le nozze di Figaro* (first performed on 1 May 1786) is at best based on unjust comparison: circumstances and criteria differed considerably between the German company that gave Dittersdorf's work and the Italian company that gave Mozart's.

The final closure of the National-Singspiel in February 1788 left Vienna without any theatre specifically catering for vernacular opera. Karl Marinelli, the director of the theatre in the Leopoldstadt suburb, seized the opportunity. In Wenzel Müller he already had a highly gifted young composer who had shown his abilities in Singspiel; with Ferdinand Kauer and other competent musicians to assist him, the Leopoldstadt ensemble was soon able to mount a series of very popular, unexactingly tuneful Singspiele, the best of which held their place in the repertories of Austrian and many German theatres for several decades, and ran up some 200 and more performances in the Leopoldstadt alone. Martín y Soler, Schenk and Gluck (*Die Pilgrime*) were the most successful of the 'court' opera composers whose works were taken into the Leopoldstadt repertory (Gassmann, Salieri and Dittersdorf were less successful in this respect), though none of them could rival the best of Müller's own works in popularity. The return to Vienna of Emanuel Schikaneder in summer 1789, when he took over the direction of the Freihaus-Theater auf der Wieden, soon provided Marinelli with a dangerous rival in Singspiel, though Schikaneder did not have house composers quite of the quality or resilience of Marinelli's. Nevertheless Schikaneder's series of 'Anton' Singspiele (with music mainly by the singers Schack and Gerl) enjoyed great popularity, and the performances he gave of works by Mozart, Süssmayr, Seyfried, Henneberg, Winter, Wranitzky and others (and composite works, such as *Der Stein der Weisen*, rediscovered in 1997) added greatly to his reputation at least until megalomania clouded his judgment and led to ever more lavish stagings of third-rate new works, or revivals of old favourites.

Apart from Mozart, the best of the Viennese Singspiel composers of any pretension was Dittersdorf. Although his indebtedness to Gluck and Mozart is obvious, he was

experienced in the Italian idiom, and he also showed himself prepared, as was Hiller (whose Singspiele were seldom performed in Vienna), to include solo numbers ranging from simple songs to full-scale coloratura arias. Dittersdorf's greatest successes – *Der Apotheker und der Doktor*, *Der Betrug durch Aberglauben*, *Die Liebe im Narrenhause*, *Hieronymus Knicker* and *Das rothe Käppchen* – were Singspiele, all from 1786–90, though he sometimes favoured the description 'komische Oper'. All contain thoroughly attractive melodies, skilful scoring (with quite rich use of wind instruments) and lively, well varied ensembles. By any standard other than comparison with Mozart, his feeling for musical characterization and humour is exceptional, and the ensembles (for example the two act finales in *Der Apotheker und der Doktor*) are both extensive and well developed. If he was content to accept the large proportion of non-dramatic arias and songs provided by his librettists, these numbers are undoubtedly neat and pleasing; and in this respect he was more adept than Mozart at providing the public with what it wanted.

Among the other successful exponents of the Viennese Singspiel at the end of the 18th century and the beginning of the 19th a few stand out: Johann Schenk, whose *Der Dorfbarbier* (1796) was one of the most successful of all stage works for two or three decades, Peter Winter with *Das unterbrochene Opferfest* (1796), Joseph Weigl with *Die Schweizerfamilie* (1809) and Gyrowetz with *Der Augenarzt* (1811); Schubert's Singspiele however have neither in the composer's lifetime nor since enjoyed the success that the beauty of their music merits. Beethoven's only operatic work, *Fidelio* (1805, rev. 1806 and 1814), hovers uncomfortably between the light, unpretentious world of the Singspiel and the melodramatic world of the 'rescue opera' for quite half its length, and for all its positive virtues and importance in the later history of opera its influence was not wholly beneficial (Weber's dramatic arias often contain exactingly unvocal writing of a kind that can be traced back to *Fidelio*).

The supreme example of the Viennese Singspiel is the Schikaneder-Mozart *Die Zauberflöte* (1791), though it was not mere pride or pretension that led librettist and composer to subtitle it 'eine grosse Oper' or 'deutsche Oper' rather than 'Singspiel'. Despite the extensive scenes of spoken dialogue, most of the musical numbers are of a size and complexity that left the world of the average Singspiel far behind (the same is not true of settings of Schikaneder's later librettos, for singularly few of which was he content to use the modest subtitle of Singspiel). The enormous and lasting success of *Die Zauberflöte* (223 performances in the Theater auf der Wieden alone before Schikaneder moved to his new Theater an der Wien in 1801) led Schikaneder to try ever more desperately and vainly to emulate it; scores from Süssmayr, Mederitsch and Winter, Wölfl, Henneberg and Seyfried all enjoyed at best ephemeral success while failing signally to add anything original to the recipe that had worked so superbly in *Die Zauberflöte*.

Whereas most of the Singspiele given at the court theatres in Vienna from around 1800 tended to reduce the number of solo arias and songs and increase the number of ensembles, the emphasis in the popular suburban theatres continued to lie in the solo song – initially *buffo* or sentimental lieder, later the satirical *couplet* perfected by Nestroy and his composers. Early in his career Wenzel Müller had occasionally written act finales of a length to rival those of *Die Zauberflöte*; but in his later works, he and Ferdinand Kauer and the other principal composers for the Theater in der Leopoldstadt tended to limit the number of concerted pieces and place the musical interest firmly in simple solo songs with the occasional more challenging aria. This tendency does not exclude simple choruses and other numbers for more than one singer, but it is rather rare to find even duets that are more than mere alternating solo strophes. The term *Posse* (or *Posse mit Gesang*) is sometimes attached to such works (*see* POSSE), especially those of a farcical kind. The twilight of the Viennese popular Singspiel extends from Müller's later scores of the period after his return from Prague in 1813, until the late years of Adolf Müller, the principal purveyor of scores to the Theater an der Wien and the Theater in der Leopoldstadt from 1828 until the late 1870s. The advent of the Viennese operetta in the 1860s, following the vogue of the French vaudeville and the more recent arrival of Offenbach's Parisian operettas on the Viennese stages, may be held finally to end the era of the Viennese Singspiel.

PETER BRANSCOMBE (text) THOMAS BAUMAN (bibliography)

Sinigaglia, Leone (*b* Turin, 14 Aug 1868; *d* Turin, 16 May 1944). Italian composer. After studying under Giovanni Bolzoni at the Liceo Musicale, Turin, he went to Vienna in 1894 and became a pupil of Eusebius Mandyczewski. He met Brahms, Goldmark and Mahler, and became a close friend of Dvořák, who gave him private lessons in orchestration at Prague and Vysoká (1900–01) and awakened his interest in folk music. In 1901 Sinigaglia returned to Turin, and from 1902 devoted much energy to the collection and study of Piedmontese folksongs (*c*500 in all), many of which he arranged for voice and piano or for other media. He died suddenly when on the point of being arrested as a Jew.

Most of Sinigaglia's music written before he moved to Vienna remains unpublished; but the sombrely meditative Romanza op.3 for horn and strings and the vivacious Scherzo op.8 for string quartet reveal a fluent, amiable, essentially conservative talent, receptive to the influences of Mendelssohn and other early Romantics. His growing awareness, during his Viennese period, of Brahms is reflected in some of his mature music, for instance in parts of the Violin Concerto. But the example of Dvořák proved more decisive: the fresh, melodious *Rapsodia piemontese*, written in Prague, is particularly indebted to the Czech composer, whose influence persists (despite the different regional accent) in two highly successful works using genuine folk melodies, the *Danze piemontesi* and the *Piemonte* suite, both often heard in Italy. Sinigaglia's folksong arrangements as such are always tasteful and imaginative, with judicious variations in the accompaniments from verse to verse. In his original compositions, however (except in the two above-mentioned works and the *Serenata sopra temi popolari*), he preferred to absorb folk influences without recourse to direct quotations. Nor do all his post-1902 works have Piedmontese overtones: the popular *Baruffe chiozzotte* overture, for instance, comes nearer to Wolf-Ferrari in its sparkling, neo-Rossinian exuberance. After World War I Sinigaglia composed little and showed almost no inclination to update his style (though he took an open-minded interest in at least some modern composers, from Debussy to Dallapiccola): Dvořákian characteristics remain discernible, notably in the agreeable Cello Sonata; and in the late Violin Sonata such characteristics are sometimes modified by an affectingly nostalgic chromaticism that recalls Strauss at his most mellow.

WORKS
(*selective list*)

ORCHESTRAL

Early pieces incl. Elegia eroica (Marcia funebre), 1890

Romanza e umoresca, op.16, vc, orch, 1898, arr. vc, pf (1901); Vn Conc., op.20, 1900; Adagio tragico, op.21, str/str qt; Rapsodia piemontese, op.26, vn, orch/pf, 1900; Romanza, op.29, vn, orch, 1899; Serenata (sopra temi popolari), op.30; Danze piemontesi, op.31, 1903, many arrs.; Le baruffe chiozzotte, ov., op.32, 1907–8; 2 Characterstücke, op.35, str/str qt (1910)

Piemonte, suite, op.36, 1909; Lamento in memoria di un giovane artista (Natale Canti), op.38, 1910–11; Le ricordanze, op.39; Rondò, op.42, vn, orch (1934); Suite di valzer, op.43; Suite, op.45, fl, str

CHAMBER AND SOLO INSTRUMENTAL

Romanza, op.3, hn, str qt, 1889; Scherzo, op.8, str qt, 1892; 12 variazioni sopra un tema di Schubert, op.19, ob/cl, pf (1898), arr. ob, str; Variazioni sopra un tema di Brahms, op.22, str qt, 1901; Str Qt, op.27, 1902; 2 pezzi, op.28, hn, pf, 1903; Trio-Serenata (Serenade), op.33, str trio, 1906; Sonata, op.41, vc, pf, 1923; Sonata, op.44, vn, pf (1936); Wind Qnt, op.46, 1937 or later

Various early pieces, most unpubd; few small pf pieces; other pieces for str qt; vn, pf; etc.

VOCAL

Original works: many songs for lv, pf, most pubd in sets, 4 orchd; small choral pieces; other works incl. 3 Duetti, female vv, pf (1896)

Folksong arrs.: *c*130, most for lv, pf, but some (mostly alternative versions) for lv, orch; lv, ens; lv, str qt; chorus; children's chorus; etc.; 36 pubd in 6 sets as Vecchie canzoni popolari del Piemonte, op.40 (Leipzig, 1914–27, 2/1957); also 24 vecchie canzoni popolari del Piemonte, ed. L. Rognoni (Milan, 1956)

JOHN C.G. WATERHOUSE

Sinisalo, Helmer-Rayner (*b* Zlatoust, Ural' region, 14 June 1920; *d* Petrozavodsk, 2 Aug 1989). Karelian composer. He studied the flute at the Petrozavodsk Music College (1935–9) but suffered political persecution as the son of an enemy of the people (his father Nestor Sinisalo was shot in 1937). He also studied composition with Peyko and Voloshinov in the Moscow and Leningrad conservatories respectively (1952–5). During his student years and for a while thereafter he played the flute in the Karelian Radio SO (1936–41 and 1944–56). He was also the artistic director and conductor of the Kantele national ensemble of song and dance (1950–52), as well as a teacher at the Petrozavodsk Music College (1948–57). He gradually moved away from performing and in 1956 became head of the Karelian composers' organization, of which he had been a member since the age of 19. He remained in this post until his death. As a composer and as a public figure who made a great contribution towards the development of a Karelian national school of professional music he received many awards, honorary titles and prizes.

Although he began composing miniatures during his student years, his real début as a composer was with his Flute Concerto (1940). His historical importance stems from his composition in 1949 of the first Karelian symphony – *Bogatïri lesa* ('The Warrior Heroes of the Forest') – and the ballet *Sampo*. The origins of the ballet can be traced to the choreographic poem *Pobeda* ('Victory') and the one-act ballet *Kyullikki*, both written during World War II and subsequently lost. *Sampo*, written on themes taken from the *Kalevala* was first performed in Petrozavodsk on 27 March 1959. Numerous performances followed in Moscow (as part of a festival of Karelian art and literature held in August 1959), across the Soviet Union, and at an international festival in Helsinki (1962). Of Sinisalo's later ballets, the one that most closely resembles the earlier ballet in the dramatic sense is *Kizhskaya legenda* 'A Kizhi Legend' of 1973.

Epic, lyrical-pastoral and dance influences predominate in Sinisalo's music. In his miniatures these factors generally operate alone, while in large-scale works they are interwoven into a multi-faceted whole. Sinisalo's language was partly moulded by his feeling for 19th-century Russian music and that of Sibelius. His style equally developed from his studies of Finnish, Karelian, Russian and Vepsian folksong. He rarely quoted actual folk melody; rather, he conveyed their characteristic colouring.

WORKS
(*selective list*)

Dramatic: Sampo (ballet, I. Smirnov, after Kalevala), 1959, Petrozavodsk, 27 March 1959; Ya pomnyu chudnoye mgnoven'ye [I Remember the Wondrous Moment] (ballet, Smirnov), 1962 [after I. Glinka]; Sil'neye lyubvi [Stronger than Love] (ballet, Smirnov), 1965; Vozrast zhenshchinï [The Age of Women] (operetta, Ye. Shatunovsky), 1967, collab. A. Golland; Kizhskaya legenda [A Kizhi Legend] (ballet, Smirnov), 1973

Orch: Fl Conc., 1940; Karel'skiye kartinki [Karelian Pictures], suite, kantele orch, 1945, arr. orch (1967); Bogatïri lesa [The Warrior Heroes of the Forest], sym., 1949; Variatsii na finskuyu temu [Variations on a Finnish Theme], 1954; Detskaya syuita [Children's Suite], 1955; Pf Conc., 1958; Sampo, suite (1963) [from ballet]; Kizhskaya legenda [A Kizhi Legend], suite (1981) [from ballet]

Chbr and solo inst: Str Qt, 1942; 24 Preludes, pf, 1943; Pf Sonata, 1945; Karel'skaya syuita [Karelian Suite], str qt, 1946; 3 miniatyurï, fl, pf, 1950; 3 miniatyurï, ob, pf, 1950; 3 kontsertnïye p'yesi' [3 Conc. Pieces], cl, pf, 1974; 2 kontsertnïye p'yesi' [2 Conc. Pieces], bn, pf, 1974; Karel'skaya svadebnaya [Karelian Wedding Song], hp (1982)

Songs, romances, choral works, folksong arrs.

OL'GA ALEKSANDROVNA BOCHKARYOVA

Sink, Kuldar (*b* Tallinn, 14 Sept 1942; *d* Kõrve, 29 Jan 1995). Estonian composer and flautist. He graduated from the Tallinn Music School, where he studied music theory (diploma 1960), the flute (diploma 1961) and composition (with Veljo Tormis); he continued his composition studies at the Leningrad Conservatory. A composer with a particular sensitivity to sound, his early works show the influence of Debussy and Messiaen. In the mid-1960s, after a short neo-classical period (which produced works such as the Flute Concertino, 1960), he began to incorporate serial writing, cluster and field techniques, and aleatory events into his music. His style, while avant-garde in comparison to many other Estonian composers of that time, is less strict than Pärt's in its use of structural constraints and generally less dramatic. Finding new impulses in the folk traditions of central Asia, from 1977 onwards Sink's music gained a timeless quality and a freely improvisatory manner. His most important work, *Sünni ja surma laulud* ('The Songs of Birth and Death'), a setting of five poems by Federico García Lorca (1985–7), is an extensive cycle based on Arabian *maqāms*. His late compositions, mostly simple choral works, make use of a variety of sources from Gregorian chant to Estonian folksong.

MERIKE VAITMAA

Sink-a-pace. *See* CINQUE PAS.

Sinopoli, Giuseppe (*b* Venice, 2 Nov 1946). Italian conductor and composer. He combined medical studies at Padua with composition at the Venice Conservatory, where he became professor of contemporary and electronic music in 1972. Further studies with Bruno Maderna and Franco Donatoni were combined with conducting under Hans Swarowsky in Vienna. In 1975 he formed the Bruno Maderna Ensemble to perform contemporary music, and that year made his conducting début at the Royan Festival. His opera début was with *Aida* at Venice in 1978. For a time he made his name primarily as a composer, receiving commissions from various festivals in France, Germany and the Netherlands, and writing vocal and orchestral works and some chamber and electro-acoustic music. The influence of Donatoni was prominent, as well as a structural rigour characteristic of the Darmstadt school of the 1950s, but used in such a way as to allow the emergence of quasi-expressionist elements through a seductive tonal hedonism. His two-act opera *Lou Salomé*, depicting an associate of Nietzsche and Rilke, had its first performance in 1981 at the Staatsoper in Munich, conducted by the composer. After this Sinopoli put aside composition to concentrate on conducting.

His conducting career developed rapidly in the 1980s, taking him to the New York PO in 1983; he made his Covent Garden début the same year with *Manon Lescaut*, having previously appeared with the London Sinfonietta. He was chief conductor of the S Cecilia Academy Orchestra in Rome, 1983–7, and in 1985 first conducted at the New York Metropolitan (*Tosca*) and Bayreuth (*Tannhäuser*). Having conducted the Vienna Staatsoper production of *Manon Lescaut* in Japan in 1986, he inaugurated the Suntory Hall, Tokyo, the next year with concert performances of *Madama Butterfly* with the Philharmonia Orchestra from London, of which he became principal conductor in 1984, and was music director from 1987 to 1995. He returned frequently to Japan, taking the Bayreuth Festival company there in 1989 for *Tannhäuser* and other works.

Sinopoli was appointed general music director at the Deutsche Oper, Berlin, in 1990, beginning with a production of *Salome*, but because of controversy over his terms of contract (signed a decade earlier) he did not take up the post. He moved instead to the Dresden Staatskapelle as principal conductor in 1991. Among several opera recordings, *Manon Lescaut*, *La forza del destino* and *Salome* have received international awards. His symphonic recordings include Mahler and Schumann symphonies; for the recording of Schumann's Symphony no.2 (with the Vienna PO) Sinopoli wrote his own notes advocating that concern for the composer's psychopathology was an essential aspect of interpretation.

Giuseppe Sinopoli, 1989

Sinopoli has frequently attracted adverse opinion: orchestral players are apt to resent the lengthy verbal analyses to which they are sometimes subjected during rehearsal, and his interpretations have, on occasion, been criticized for corpulent tempos, unbalanced and muddled textures as well as rhythmic indulgence at the expense of the music's metrical framework. However, at his best, he has been admired for his continued searching after the music's logic and for the wealth of instrumental detail and shading his performances can reveal, as in his 1997 Bayreuth *Parsifal* and his recording of *Die Frau ohne Schatten*.

Siouxsie and the Banshees. English punk rock band. Its principal members were Siouxsie Sioux [Susan Ballion] (*b* Bromley, 27 May 1957; vocals), Budgie [Peter Clark] (*b* 21 Aug 1957; drums) and Steve Severin (*b* 25 Sept 1955; bass). Ballion was a member of the clique which supported the Sex Pistols in their early London club appearances, and in 1977 she became the first female punk performer by improvising a version of the Lord's Prayer at the Marquee Club, Soho. Siouxsie and the Banshees soon established themselves as stylish and uncompromising performers (their commitment to what designer Vivienne Westwood called 'confrontation dressing' included wearing swastika armbands), and made their recording début in 1978 with *Hong Kong Garden*. The group's first album, *The Scream* (Polydor, 1978), showed the influence of Nico (the former singer with the Velvet Underground) but in turn Siouxsie Sioux's own raven's wing hairstyle, vampire-film-inspired make-up and on-stage hauteur influenced the 'positive punk' and 'goth' musical subcultures.

Despite the demise of punk rock, they continued to tour and record throughout the 1980s, maintaining an enthusiastic following throughout Europe. Their most commercially successful recordings included versions of Lennon and McCartney's *Dear Prudence* and Dylan's *This wheel's on fire*. During the 1990s Siouxsie Sioux and Budgie continued to perform as the Creatures and in 1996 they formally dissolved the Banshees.

DAVE LAING

Sipilä, Eero (Aukusti) (*b* Hailuoto, 27 July 1918; *d* Kajaani, 18 May 1972). Finnish composer. After studies at the Helsinki Church Music Institute (graduation 1943) and at the Sibelius Academy (organ diploma 1945) he was appointed senior teacher at the Kajaani training college (1945–72). He produced his first composition only in 1952, and his output remained small; he achieved a moderately individual style through the use of some novel techniques. Several of the solo songs have a sophisticated musical humour.

HANNU ILARI LAMPILA

Siqueira, José (de Lima) (*b* Conceição, Paraíba, 24 June 1907; *d* Rio de Janeiro, 22 April 1985). Brazilian composer and conductor. A bandmaster's son, he entered the National Music Institute in Rio de Janeiro in 1926, and there he studied theory, composition and conducting with Paulo Silva and Francisco Braga. In 1935 he was appointed to teach harmony at the institute, and he was made a regular member of the staff in 1938. His intensive activity as an orchestral conductor began in the late 1930s. In 1940 he founded the Brazil SO, which he directed for eight years, and he was responsible for the foundation of the Sociedade Artística Internacional (1946) – through which many European and American conductors were able to tour Brazil – the Rio de Janeiro SO (1949) and the Clube do Disco (1951) for promoting recordings. He toured the USA and Canada in 1944, conducting concerts of his music in Philadelphia, Detroit and Montreal, and in 1954 he went for further study to Europe, notably with Messiaen, Aubin, Bigot and Chailley in Paris. With his wife, the soprano Alice Ribeiro, he visited several European countries to conduct concerts of Brazilian works. In 1960 the Ordem dos Músicos do Brasil, a professional musicians' union, was created under his leadership. In 1979 and 1981 he visited the Soviet Union where he conducted several orchestras. He was a member of the Brazilian Academy of Music.

Siqueira began to compose about 1933, following a neo-classical style, but in 1943 he turned to musical nationalism and established himself as one of the foremost Brazilian proponents of that trend. He made field studies in north-east Brazil, particularly of the Afro-Brazilian music of the Bahia area. His output shows a predilection for programmatic orchestral music; the *4 poemas indígenas*, the *5 danças brasileiras* and the the *O canto do Tabajara* are most direct in their use of folklore. During the 1950s, however, Siqueira developed a more sophisticated style based on traits in the folk and popular music of his native state. He devised his own 'Brazilian trimodal' and 'Brazilian pentatonic' systems, essentially adoptions of the modes of north-eastern folk music (such as pentatonic scales or the C major scale with sharpened 4th and flattened 7th) together with their characteristic harmonies and rhythms; the concertos for cello and violin were written within these systems. His three-act comic opera *A compadecida* (1959), produced in 1961, uses folksong themes to characterize the main roles. At the same time he produced works based on Afro-Brazilian ritual music, such as *Xangô*, the *Cavalo dos deuses*, the *Encantamento da magia negra* and *Candomblé*, a 'fetishistic oratorio' in 13 parts; *Adoração aos orixás* takes thematic material from Afro-Bahian cult songs.

GERARD BÉHAGUE

Siren (Fr. *sirène*; Ger. *Sirene*; It. *sirena*). A metal or cardboard disc with one or more rings of equally spaced perforations, which, when rotated in the path of a stream of air (by the air itself, by hand, or by a motor) interrupts it periodically to produce a note, the pitch of which depends on the number of perforations and the speed of rotation. The siren's principal characteristics are its loud and penetrating quality (its loudness increases with the pitch) and the initial and final glissando caused by the acceleration of the disc to maximum speed when the motive power is applied and the corresponding deceleration when it is cut off.

The earliest sirens were devised at the end of the 18th century by Thomas Johann Seebeck and John Robison; improved models that produced a louder sound were developed in France in 1819 by Baron Charles Cagniard de la Tour and in Germany around 1850 by Friedrich Wilhelm Opelt. Polyphonic sirens, with concentric rings of perforations, were constructed by, among others, Opelt, Heinrich Wilhelm Dove and Hermann von Helmholtz (see illustration); these normally produced a major triad. In 1872 Rudolph Koenig devised the 'wave siren'

Experimental double (polyphonic) siren designed by Helmholtz, ?mid-1850s: each section has four rings of perforations (9, 12, 15 and 16 holes in the upper disc, 8, 10, 12 and 18 in the lower); the four studs at 'i' permit the opening and closing of the channel of air to each ring

which has no perforations but in which the disc has a toothed or waveform-shaped rim.

Until the development of reliable electronic oscillators in the middle of the 20th century the siren was primarily used for accurate frequency measurements and acoustic demonstrations. During the 20th century more powerful sirens operated by compressed air (now usually replaced by electronic equivalents) have been used chiefly as signalling devices in ships and factories, on emergency vehicles and to give warnings of danger; sometimes, as with foghorns, these are klaxons [claxons] with a fixed pitch rather than true sirens. Mouth-blown sirens, about the size of a whistle and containing a metal disc, include the Acme siren. 'Light sirens', in which a perforated disc is placed between a beam of light and a photoelectric cell, have formed the basis of the sound-generating systems in a number of electronic instruments since about 1916 (*see* ELECTRONIC INSTRUMENTS, §I, 3).

Sirens of various types were included in some theatre orchestras during the early years of the 20th century and in ensembles accompanying silent films and music-hall acts. They were also used by a number of early 20th-century composers, including Varèse (especially *Ionisation*, 1929–31), Milhaud, Satie (*Parade*, 1916–17), Hindemith, Max Brand (*Maschinist Hopkins*, 1929), Weill (*Marie Galante*, 1934) and Prokofiev (*Cantata for the 20th Anniversary of the October Revolution*, 1936–7); a klaxon is used in Shostakovich's Symphony no.2 'Oktyabryu' (1927) and Bliss's ballet *Miracle in the Gorbals* (1944). Since 1950 sirens and klaxons have been used by, among others, Cage, Françaix, Shchedrin, Xenakis (88 mouth sirens in *Terrêtektorh*, 1966), Kagel (a genuine Cagniard de la Tour siren in *Der Schall*, 1968), Schnittke (Symphony no.1, 1972), Penderecki (at least two works), Del Tredici, Rautavaara, Peter Maxwell Davies, Yuasa, Alexander Goehr, Lucier, Robin Holloway, Henze, Goebbels and Henry Brant.

Industrial and marine sirens and klaxons have been the primary sound sources in several environmental presentations, starting with the series of performances in the USSR between 1918 and 1923 under the title Concert of Factory Sirens and Steam Whistles, which included Arseny Avraamov's *Simfoniya gudkov* [Symphony of Factory Sirens] (1922); more recently they have been used in *Triton* (1976–7) by Davide Mosconi, *Maritime Rites* (1980) by Alvin Curran, and in *Toot 'n Blink Chicago* (1982) by Charlie Morrow. Since 1983 the biennial Sound Symposium festival in St John's, Newfoundland, has established a tradition of *Harbour Symphonies* performed on ships' klaxons.

HUGH DAVIES

Sirène, La. *See* LA SIRÈNE.

Sirens (Gk. *seirēnes*; Lat. *sirenes*, *sirenae*). Mythological creatures, usually thought to number three. They are first mentioned in the *Odyssey* (xii.39ff, 158ff); when Odysseus's ship approaches their island near Scylla and Charybdis, he has himself lashed to the mast and his crewmen's ears stopped up with wax in order to escape the hypnotic, fatal power of the Sirens' song, which Homer describes as high-pitched and clear-toned (*liguros*, 43, 183). Hellenistic genealogies make one or other of the Muses the mother of the Sirens (Apollodorus, i.3.4; cf i.7.10); older accounts assign their parentage to elemental or chthonic powers. Their many names (e.g. Thelxiepeia, Aglaophōnos, Ligeia) invariably refer to the beauty or the incantatory nature of the words or melody of their song. Originally they were represented as birds with women's heads; by the 5th century BCE they had become winged women with feathered legs and claws for feet (Apollodorus, *Epitome*, vii.18–19).

These anthropomorphic Sirens were often depicted with a kithara (see illustration) or aulos. Hellenic writers connected them with music and also with the underworld: Sophocles (Nauck, frag.777) said that they sang the melodies of Hades; Euripides (*Helen*, 168ff) referred to them as playing the aulos, the syrinx or the phorminx, and associated them with Persephone. In an encounter with the Argonauts, the power of the Sirens is defeated by Orpheus, who sings an even more alluring song (Apollonius Rhodius, *Argonauts*, iv.891–921; Apollodorus,

Siren playing a kithara: gold and silver earring, Greek, 5th century BCE (Metropolitan Museum of Art, New York)

i.9.25), and when the Sirens challenge the MUSES themselves to a contest of song, the Sirens are defeated, lose their wings and jump into the sea (Pausanias, *Description of Greece*, ix.34.3).

On Attic gravestones the Sirens were depicted as mourners and musicians. They are related to the figure of the musician, who through song or piping or harping represents the fascination of death. Celtic mythology contains several accounts of women, magical singers and guides of the souls of the dead, who strikingly resemble the Sirens (see Gresseth), and the singing and playing of the Sirens were eventually taken over into the music of the Christian angels who guided souls to Heaven (but see *Isaiah* xiii.21 and xxxiv.13). Plato's myth of Er (*Republic*, x, 617b–d) depicts eight Sirens stationed on the eight celestial spheres, each singing one note. The ensemble, according to Plato, constitutes a modal complex (*harmonia*).

Cicero (*On the Greatest Good and the Greatest Evil*, v.18.49) dismisses the music of Homer's Sirens as trivial and ineffective. Canonized by Ovid (*Metamorphoses*, v.551ff; *Art of Love*, iii.311–12) and further strengthened by the powerful authority of Isidore of Seville (*Etymologiae*, xi.3.30), the conception of the Siren as bird-woman remained dominant until the 11th or 12th century, when the fish-tailed Siren, ancestress of the Lorelei, became the accepted type in iconography and popular belief.

WARREN ANDERSON/THOMAS J. MATHIESEN

Siret, Nicolas (*b* Troyes, 6 March 1663; *d* Troyes, 22 June 1754). French organist and composer. He was the most important member of a family that supplied four generations of organists in Troyes. He presumably studied with his father, Louis (*b* 13 April 1632; *d* 14 Oct 1704), who was himself the second generation of Sirets to be organist at Troyes Cathedral, and was named his successor at the cathedral in 1689. Like his father, Nicolas acquired the post of organist at St Jean, Troyes (from 1693). He did not marry until he was 45, and the stormy relationship lasted only a year. Almost a decade later, in 1717, he married an organist 24 years his junior, Marie-Françoise Bidelet (1687–1762). She was the organist at Ste Madeleine (since 1712), and also substituted for Nicolas at the cathedral. They had three daughters; one, Marie-Cécile (*b* 1719), was a substitute organist for her mother. There was a male Siret of this generation or the next who was 'musicien à Paris' and published a bassoon concerto there around 1780 (*GerberL*); there are also violin airs (London, *c*1769–75, private collection) and *cotillions*. Though firmly rooted in Troyes, Nicolas maintained important contacts in Paris and was at least occasionally resident there. He dedicated his first book of harpsichord pieces to François Couperin *le grand*, noting, 'the sincere friendship with which you have honoured me for more than 20 years'. He added, 'Every year I leave the countryside to come here [Paris] to admire you, and I never leave without my imagination being full of a thousand beautiful things. What more perfect model could I have taken?'.

Siret's compositional imagination may have been influenced by his friend and mentor, but the style of Couperin's own first book of 1713, with its elaborate ornamentation system and the ordering of tonal groups into two sections, a traditional dance suite followed by character pieces, is not reflected. Rather, Siret's two books (1707–11/*R*, 1719) are cast in old-fashioned suites. They are among the last French publications for harpsichord to adhere so closely to the traditional dance ordering and to have so few character pieces. The preface to his first book is useful in specifying that allemandes, sarabandes and *passacailles* are *lent ou grave*, while the second part of overtures, courantes, gigues, gavottes and minuets are *vif ou leger*. Accordingly his textures are notably thicker for the serious pieces and tend to be two-voiced for the quick ones. The second book reflects its provincial origin with a dedication to the Bishop of Troyes, and is even more old-fashioned, beginning the first of its three suites with an unmeasured prelude. Both books reflect great sensitivity to the harpsichord. Although Siret was primarily an organist, only a single fugue survives for that instrument

(*F-T* MS 2682); it may have been composed by his father. His works are published in D. Herlin, ed.: *Nicolas Siret: Complete Works* (forthcoming).

BRUCE GUSTAFSON

Sirmay, Albert. *See* SZIRMAI, ALBERT.

Sirmen [Syrmen; née Lombardini], **Maddalena** [Madelena] **Laura** (*b* Venice, 9 Dec 1745; *d* Venice, 18 May 1818). Italian composer, violinist and singer. Unusually for a woman composer at that time, there appear to have been no other musicians in her family and she became famous entirely through her own efforts. In 1753 she was admitted to the Ospedale dei Mendicanti in Venice, not as an orphan but as a musician who would be an asset to their all-female choir and orchestra. She must have been an outstanding violinist since in 1760 she was allowed to go to Padua to study with Tartini; as the lessons were delayed, Tartini wrote her a long letter explaining his violin playing methods and the best way to practise. It was copied in Padua before it was sent and by 1770 it was in print in Italy, shortly followed by translations into English (by Charles Burney), German and French. Sirmen was probably taught composition by the *maestro di coro* at the Ospedale, Ferdinando Bertoni, and probably also by Tartini. The dates of her compositions are unknown, but as most of them were in print before 1774 they may have been composed while she was still at the Ospedale.

In 1766, after 13 years at the Ospedale, she wanted to leave. Tartini tried unsuccessfully to find her a husband, but in the next year she married the violinist and composer Lodovico Sirmen (1738–1812). In 1768 the couple started a highly successful European tour, playing in Turin and several times at the Concert Spirituel in Paris, where six of her string quartets were published in 1769. Although the title page says 'Composta Da Lodovico, E Madelena Laura Syrmen', stylistic evidence indicates that they are entirely her own work. In January 1771 Lodovico was settled in Ravenna with their daughter and Maddalena was in London, advertised as 'the celebrated Mrs Lombardini Sirmen'. She had two very successful seasons there as a violinist, playing in various concert series (including the Bach-Abel concerts) and at the theatres, followed by a third when she became a singer. Her six violin concertos were published in 1772–3, followed in 1773 by keyboard arrangements of them by Tommaso Giordani. After London she played or sang in various Italian cities, in Paris, Dresden and as principal woman singing at St Petersburg (1783). In 1785 she appeared again at the Concert Spirituel, playing her own violin concertos, but was criticized for her old-fashioned manner. She then settled in Venice and Ravenna, where she spent the rest of her life.

Sirmen's music was widely known during her lifetime. A violin concerto was played in Stockholm in 1774, and in a letter from Salzburg of 12 April 1778, to his wife and son Wolfgang, Leopold Mozart said: 'After the symphony Count Czernin played a beautifully written concerto by Sirmen'. The string quartets, mostly in two movements, are notable for their interesting inner parts. The first movements of the violin concertos are generally in an embryonic sonata form, the slow movements in binary and the finales in rondo form. Her music was widely published and frequently reprinted by several different publishers in Paris, the Low Countries, Germany and London.

ELSIE ARNOLD

Širola, Božidar (*b* Žakanj, 20 Dec 1889; *d* Zagreb, 10 April 1956). Croatian composer, ethnomusicologist and organologist. He studied mathematics and physics at the University of Zagreb, and later taught these subjects in secondary schools for nearly 30 years; he also studied composition with Ivan Zajc, and in 1916 was included in the so-called historical concert of six young Croatian composers in Zagreb. In 1921 he took the doctorate in musicology at the University of Vienna with a dissertation (supervised by Robert Lach) on Istrian folksong.

A man of great energy, Širola was a prolific composer as well as a lecturer and critic. In the early 1920s he organized the collection of 56 folk instruments left by Franjo Kuhač at the Ethnographic Museum and eventually increased it to 600. With Milovan Gavazzi and Vladimir Tkalčić he organized the recording archive at the museum and made phonographic recordings in the studio and in the field (see *Muzikološki rad*, 1931). His work as an ethnomusicologist was recognized by the Croatian (then Yugoslav) Academy of Sciences, Zagreb, which admitted him as a corresponding member in 1922 and as a full member in 1930. In the mid-1930s he became administrative director of the secondary school of music within the

Zagreb Academy of Music, and later became curator and then director of the Ethnographic Museum. Under the postwar government he was obliged to retire.

Širola is remembered chiefly for three operas and an oratorio commemorating St Cyril and St Methodius, a two-hour work for mixed chorus and soloists a cappella first performed at a festival of the ISCM in Frankfurt (1927). He was often inspired by elements of the folk music of various Croatian regions, as in his comic opera *Citara i bubanj* ('The Cithara and the Drum') which successfully depicts the typical atmosphere of a small Croatian seaside town. His song cycles, however, are perhaps his finest compositions, some being regarded as outstanding examples of Croatian music between the wars.

Širola's book surveying Croatian art music (1922) was the first work of its kind; this and a similar larger volume (1942) have remained valuable sources of information. His finest scientific study is on wind instruments with a beating reed (1937), from the simplest instruments, made of straw, to the *diple* (a chanter without a bag) and including various types of bagpipe, discussing construction, fingering, melodies, distribution and nomenclature. The survey of Croatian folk music (1940) is the most extensive work on the subject.

WORKS
(*selective list*)

DRAMATIC

Ops: Stanac (musical grotesque, 1, after M. Držić), Zagreb, 29 Oct 1915, rev. 1933; Citara i bubanj ili neobični svatovi [The Cithara and the Drum, or An Unusual Wedding] (comic op, 3, V. Develić, after V. Novak), 1929, Zagreb, 22 Nov 1930; Z Griča na Trešnjevku [From Grič to Trešnjevka] (operetta, 3), 1931; Mecena [Maecena] (grotesque satire, 1, A. Kostelić), 1934; Grabancijaš [The Student of Black Arts] (comic op, 1, Deželić, after T. Brezovački), 1935, Zagreb, 3 Oct 1936; Mladi gospodin [The Young Gentleman] (3, Deželić, after A. Šenoa), 1940, unperf.; Kameni svatovi [The Stone Wedding Guests] (folk op, 3, M. Širola, after A. Šenoa), 1954, unperf.; Godišnji odmor [The Holiday] (operetta, 3, Širola), 1955

Ballets: Sjene [The Shadows], 1917; Idilički intermezzo [Idyllic Intermezzo], 1929

Melodramas: Iz Danteova 'Raja' [From Dante's 'Paradiso'], 1912; Putnik [The Traveller] (I. Poljak), 1919; Otmica [The Abduction] (I. Velikanović), 1921; Šuma Striborova [Stribor's Forest] (I. Brlić Mažuranić), 1923; Kameni svatovi (Šenoa), 1935

Incid music for numerous plays, church dramas and marionette shows

ORCHESTRAL

Novela od Stanca [The Story of Stanac], ov., 1912, lost; Sym. BARBARA KRADER/KORALJKA KOS

Siroli, Gregorio. *See* SCIROLI, GREGORIO.

Sirota, Leo [Leiba] **Gregorovich** (*b* Kamenets-Podol′skiy, 22 April/4 May 1885; *d* New York, 24 Feb 1965). Ukrainian pianist. He made his début in Kiev at the age of eight and, having entered the Imperial School of Music in Kiev as a pupil of Chodorovski, made his first tour of Russia at the age of ten. He subsequently studied with Glazunov at the St Petersburg Conservatory, and on graduating worked with Busoni in Vienna; in 1910 he played Busoni's Concerto to great acclaim at the Musikverein with the composer conducting. During World War I Sirota continued to work with Busoni, and also studied philosophy and law at the University of Vienna. At this time he married Augustine, the sister of Jascha Horenstein.

Sirota toured Europe as a soloist and chamber musician, and in 1927 gave a series of two-piano concerts in Russia. Following a tour of Japan in 1929 he became director of the Ueno Imperial Academy in Tokyo, remaining in Japan as a foreign national under conditions of great privation until the end of World War II. His Carnegie Hall début in 1947 created a sensation, and he was invited to become artist-in-residence at the St Louis Institute of Music. During this period he also gave weekly radio broadcasts which included the complete Beethoven sonatas, the major works of Chopin, Schumann and Liszt, as well as a historical survey of piano repertory from Bach to Stravinsky (he had given the première of the Three Movements from *Petrushka*).

As a teacher Sirota attached great importance to all-round cultural development. His own performances could display great virtuosity in such works as Liszt's Sixth Hungarian Rhapsody or his own version of Rosenthal's arrangement of Chopin's 'Minute' Waltz; in large-scale works by Tchaikovsky and Glazunov his intense cantilena and highly personal rubato reflected the style of an earlier era. (See J.K. Allison: 'Leo Sirota: one of life's unsung heroes' in *International Piano Quarterly*, i/4, 1997, pp.50–60.)

CHARLES HOPKINS

Sirventes. A medieval song form. *See* TROUBADOURS, TROUVÈRES.

Sistema (It.). *See* STAFF.

Sistermans, Anton (*b* 's-Hertogenbosch, 5 Aug 1865; *d* The Hague, 18 March 1926). Dutch bass. He sang as a boy chorister in his native town and subsequently studied with Julius Stockhausen in Frankfurt, where he settled as a concert singer. He made his début on 16 December 1889 in Strasbourg as the bass soloist in Verdi's Requiem, and became prominent as a lieder singer throughout Europe and Russia. He was a friend of Brahms and performed many of the composer's songs; in the spring of 1896 he gave the first performance of the *Vier ernste Gesänge* (which were written for him) in Vienna, accompanied by Coenraad Valentijn Bos. On 16 March that same year Sistermans gave the first performance of the orchestral version of Mahler's *Lieder eines fahrenden Gesellen* in Berlin, with Mahler conducting. In 1899 he was invited by Cosima Wagner to sing the roles of Gurnemanz (*Parsifal*) and Veit Pogner (*Die Meistersinger*) at Bayreuth. Sistermans's busy schedule of song recitals between 1895 and 1908 is documented in his correspondence with Pfitzner and Eugen d'Albert (manuscripts in *NL-DHgm*).

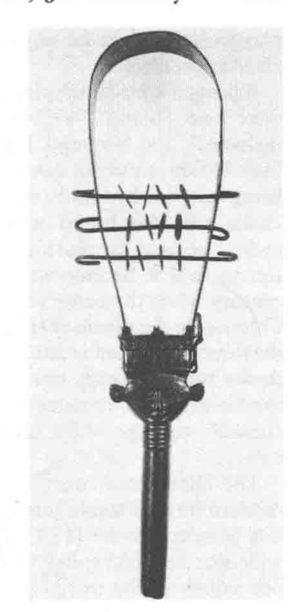
ANK REINDERS

Sistinus, Theodoricus. Latinized name of TRUID AAGESEN.

Sistre (Fr.). *See* SISTRUM.

Sistro [timpano musicale] (It.). A series of small mushroom-shaped bells mounted in a frame on a handle. The compass of the instrument, which is akin to the glockenspiel, ranges from one to three octaves, with the bells mounted diatonically in a single row, or chromatically in two rows. The instrument is said to have been invented by G.B. Ariosti, whose collection of 44 dance-tunes *Modo facile di suonare il sistro, nomato il timpano* (Bologna, 1686) has an illustration of a 12-bell sistro on the title-page; the collection was enlarged and corrected in 1695 by the composer GIUSEPPE TROILI [Paradossi], a virtuoso exponent of the instrument. The sistro is occasionally required in Italian scores, notably Rossini's *Il barbiere di Siviglia* (1816) and Respighi's instrumental Suite no.2 (1901–5). In Italian and Spanish the term also refers to the ancient SISTRO.



JAMES BLADES

Sistrum [crepitaculum, platagē] (Lat., from Gk. *seistron*: 'that which is shaken'; Fr. *sistre*; It., Sp. *sistro*). A sliding rattle in the shape of a spur (classified as an IDIOPHONE). It consists of a 'U'- or lyre-shaped form, often of silver, with a straight, usually wooden, handle protruding from the bottom. The 'U' is traversed by loose-fitting metal rods or wires which jingle when shaken. Frequently small loose discs are fitted on the rods to create additional sound. This is the form it retains when used in the ritual of the Ethiopian Church, where it is known as *ṣanāṣel* or *tsenatsil*. Possibly of sub-Saharan origin, the instrument still appears among certain African tribes.

The sistrum was especially common in Egyptian cult practice, at first in the worship of Ḥatḥor and later in that of Isis. Its function is usually interpreted as having been apotropaic, that is, to ward off undesirable evil spirits. From Egypt it spread to other Near Eastern civilizations, and Hattian sistra were highly developed by the end of the 3rd millennium in Anatolia. There a kind of sistrum became associated with the worship of Cybele, as seems clear from a Roman terracotta.

The Egyptian sistrum had two main forms: the arched sistrum, usually of metal (see illustration), and the sistrum in the form of a *naos* or shrine, mostly of faience. The central feature of both was a head of the goddess Ḥatḥor. Decoration often included a cat (sacred to Bastet) and the uraeus. The ends of the metal rods used for mounting the sounding-plates were sometimes shaped to represent the uraeus or a bird's head. The *naos* sistrum appears to have been indigenous to Egypt. This is the form of a model alabaster instrument inscribed with the titles of King Teti (*c*2345 BCE) in the Metropolitan Museum, New York. Associated with the divine wives of Amun, often royal princesses dedicated to the service of the god, the sistrum

Sistrum: (a) Egyptian women carrying sistra and papyrus branches: detail of a wall-painting at Thebes (Tomb 51), New Kingdom, c1300 BCE; (b) bronze sistrum, Late Period, after 850 BCE (British Museum, London)

gradually assumed primary importance in the temple. With the spread of Isis worship in the Roman world, use of the sistrum was widespread, particularly after Egypt became a Roman province in 30 BCE. The cult was at first frowned upon officially as exotic, luxurious and associated above all with the hated Cleopatra; but it became established with the building of an Isis temple in 38 CE under Caligula. Roman representations of Isis generally showed the sistrum as a chief attribute, and in Egypt a Roman emperor might be portrayed worshipping her or Ḥathor with a sistrum, one arched and the other of the *naos* type, in each hand. The sistrum has been revived for use in modern percussion works, for example, *Double Music* (1941) by John Cage and Lou Harrison.

JAMES W. McKINNON, ROBERT ANDERSON

Sitār (Bengali *setār*; Marathi *satār*). Large, fretted long-necked lute. It is a prominent instrument of the classical music of the northern and central regions of South Asia. Though played by some itinerant rural performers (in Rajasthan) and in modern film and radio orchestras, the *sitār* is found mainly in chamber music as formerly practised at the Muslim and Hindu courts and now on the public concert stage and through urban media.

1. HISTORY. The name *sitār* is an Urdu transcription of *sihtār* ('three-stringed') from Persian, the court language of North India from the 13th century to the 19th. It did not become standard in India until the instrument began to reach its present form in the 18th century, and we must look to other Perso-Turkic names for long-necked lutes – *tanbūr*, *tanbūrah*, to which *sihtār* may first have been an adjective – for early forms of the *sitār*, as well as of the *tambūrā*, which is of fundamentally similar construction.

The history of the Hindustani *sitār* begins with the Muslim Delhi Sultanate (1192–1526). The immigrant Turks and Persians brought their music and instruments with them. In the works of the Indo-Turkish court poet Amir Khusrau (1253–1325) the *tanbūr* is recorded together with other Islamic instruments. The general nature of the *tanbūr* can safely be inferred from surviving Perso-Turkish long-necked lutes. These are slender instruments with an ovoid or pear-shaped wooden shell, frontal or right unilateral pegs (or both) inserted directly into the neck (without a separate pegbox), wooden soundtable and gut or fibre strings. They may have included both the fretted forms (with simple tied gut, like the modern western Central Asian *tanbūr*, *dutār* and *setār*) and unfretted (like the Central Asian *dambura*). A Muslim tradition in South Asia credits the invention of the *sitār* (and often also of the *tablā* and the song form *khayāl*) to Amir Khusrau himself, although these names are not mentioned in his works. The *tanbūr* continues to be mentioned at the courts throughout this period: Sultan Sikandar Lodi, an Afghan (reigned 1489–1517), had 'four boy slaves, skilled in *chang*, *rabāb*, *tanbūr* and *bīṇ*'.

The early Mughal emperors (1526–1707) and their tribesmen not only brought fresh Central Asian influences to India but were also, especially Akbar, Jahangir and Shah Jahan (who ruled consecutively 1556–1658), great patrons of the arts. The long-necked lute is recorded as *tanbūrah* at this time, and in Abul Fazl's contemporary account (*c*1590) of Akbar's chief court musicians four

players (more than for any other instrument) are named, all Muslim.

Among the *tanbūrāh* players at the court of Shah Jahan were one Shauqi ('well-versed in Persian and Hindi melodies') and his pupil Tara Chand, titled Kalavant (a high Hindu musician caste); clearly the instrument was being adopted by Hindu musicians and for Hindu music. Links are also found with the Uzbek *dutār*, in the technique used for plucking and in the early three-string tuning, which became well established in the following century when the name *sitār* became current. Willard (*A Treatise on the Music of Hindustan*, Calcutta, 1834) gives the three-string tuning as two brass strings tuned in unison to the tonic (*khaṙaj*), and the first, of steel, to the 4th; *ma–sa–sa*. This remains the basis of the later more complex tunings which can be seen as expanded *dutār* tuning.

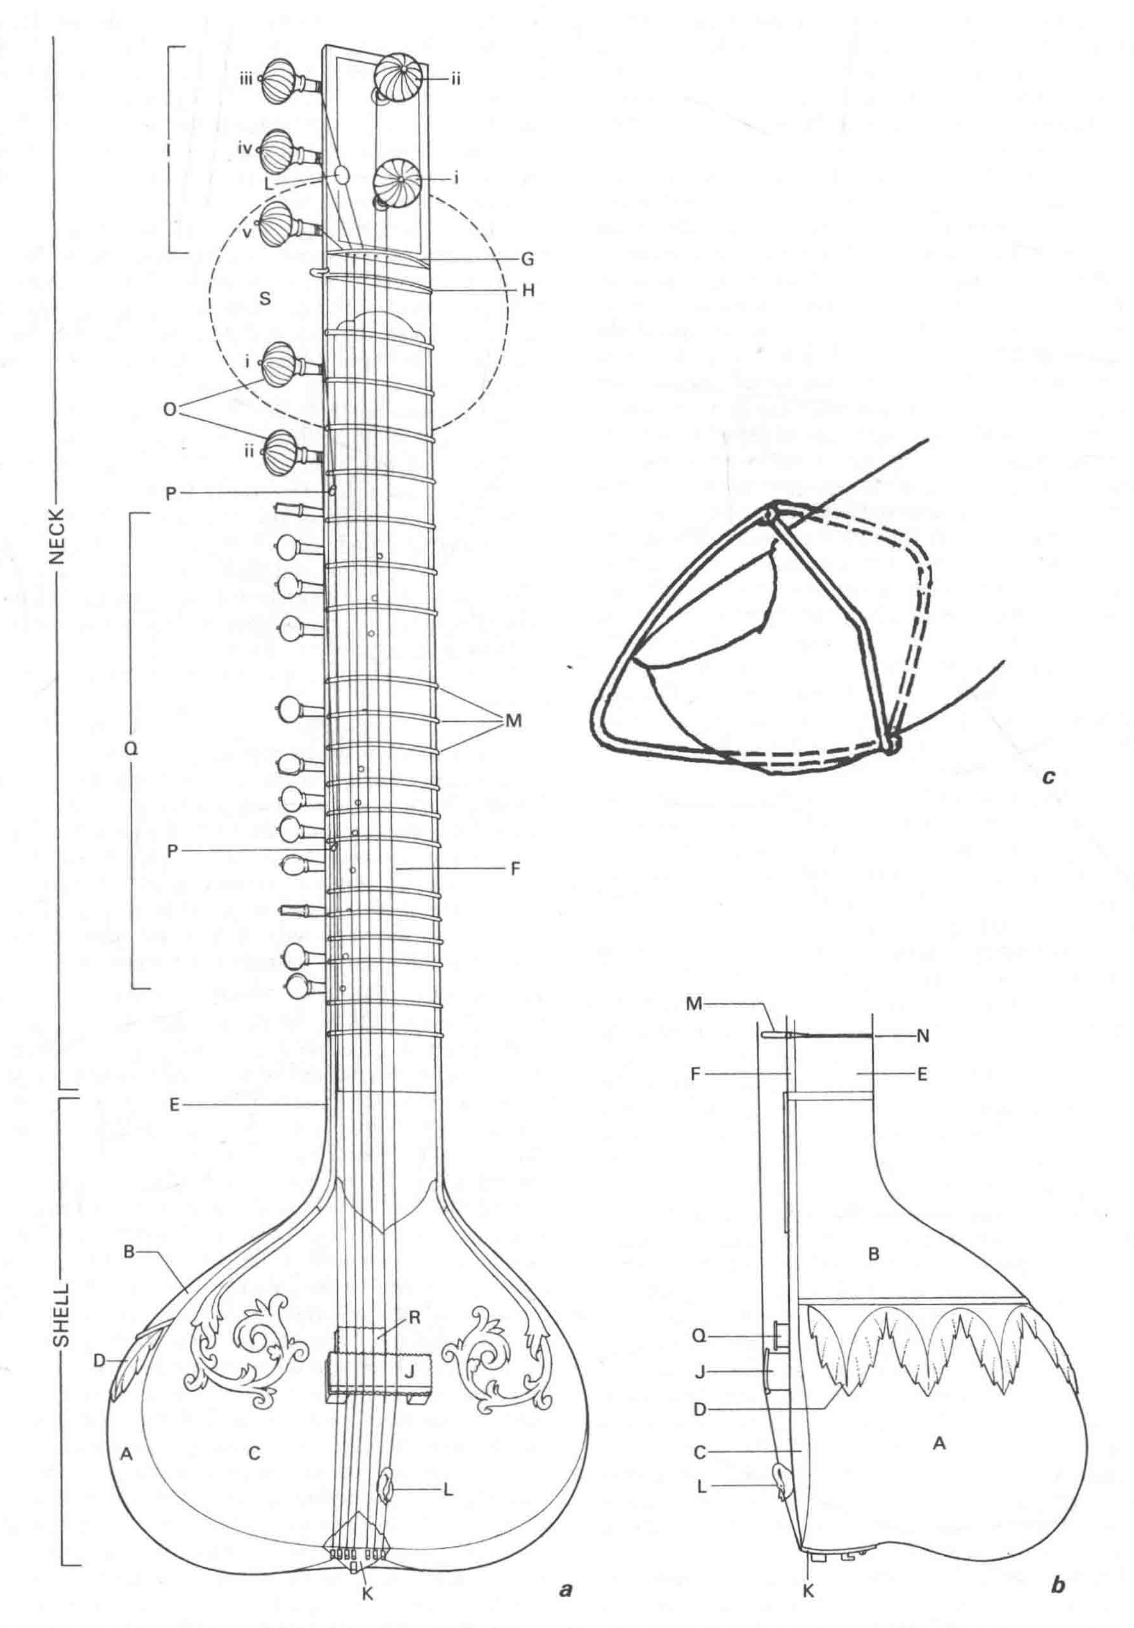
The Hindustani court *sitār* took on the outline of its modern form as a solo instrument of art music during the late Mughal empire (1707–1858). Changes included the widening and thickening of the neck, now always straight, not tapering; the use of gourd for the shell instead of carvel-built ribs; the adoption of heavy metal frets as well as of a rigid nut and string-guider of bone etc. (frequently also simple bindings on non-Indian types); and the fitting of heavy metal strings. The *dutār* pattern of two frontal pegs was retained, leaving space to the left of the main string (which runs along the frets almost centrally) for large-scale string deflection for *mīṇḍ* (portamento).

The name *sitār* became established early in this period, though we hear of 'fretted and unfretted *tambūrā*' up to about 1800, to distinguish the *sitār* from the fretless drone *tambūrā*. It was during the 18th century, however, that the five-string *sitār* (whose pegs are retained in the modern instrument, placed above the nut) came into use. Several tunings are given in later sources, with two strings (variously drone, melody or cross-plucking) added to the earlier three. With the addition of the *cikārī* they form the basis of the modern seven-string tuning. 17 frets were common, with variant degrees provided only for the lower and middle 4ths and lower 7th of the first string.

During the late Mughal period the two main *bāj* (repertories) of *gat* (composition) were established. The Delhi *bāj* is attributed to the 18th-century court musician MASIT KHAN. The descendants of Masit Khan were associated with a large *sitār* with two extra full-gourd resonators, an instrument of the hybrid *bīn-sitār* type, and they claimed descent from Tansen (Akbar's chief court musician). The second is that of the 'eastern' (*pūrab*), or *razākhānī*, *bāj* linked to GHULAM RAZA KHAN (early 19th century) of Lucknow, whose nawabs had by then succeeded the Mughals as the main patrons of Indo-Muslim culture. (*See* INDIA, §III, 6(i).)

Other *sitār* types have been found on the periphery of northern and central South Asia, whose distribution and related features suggest a common development. These include the Karnatak *sitār*, the Kashmiri *setār*, the Afghan *tanbur* and perhaps the Gujarati *sittarae*, which share the pattern of three frontal pegs and a main string in a double course, and are all accompanying or band-*sitārs*.

2. MODERN STRUCTURE AND TUNING. Several types of *sitār* can still be found in manufacture, but the most common in Hindustani concert music is fairly uniform, with two main models, single-gourd and double-gourd (fig.1); other types include the *sūrbahār* (see below) and the rarely found *kachvā sitār*.



(i) Concert sitār. *Tarafdār sitār* means '*sitār* with sympathetic strings', but this type is often simply called *sitār*, this feature having become standard. It is made of wood and a bulging gourd segment (though all-wood *sitārs* are sometimes found) and is based on the 'large *sitār*' of the 19th century, when it was standardized to a length of about 120 cm, excluding the string holder. Other dimensions are more variable. For all but very cheap instruments two types of wood are mostly used. Toonwood (*tun*, *tūn*, *tunnā*) has always been thought best for sound. Teak (*sāgvān*, *sāgūn*, *segūn*) was formerly employed only for cheaper instruments, but with the modern higher pitch and use of thicker strings (especially in Calcutta *sitārs*) it has become increasingly used for its strength, and combinations with a teak neck and toon soundtable are found. The body has two principal parts: the resonator or shell (*khol*), and the neck (*ḍā̃ḍ*, *daṇḍā*, *daṇḍī*: 'stick'), each being composite (fig.1).

The shell has three main sections: a bulging segment (A) of about two-thirds of a gourd (*tumbā*, *tū̃bā*, *tōbā*), carefully chosen for its near symmetry and acoustic properties, cut and cleaned, dried and varnished hard; a piece of thick wood (B), shaped like the half-section of the neck and shoulder of a large round bottle (*gal*, *galā*, Urdu *gul*, *gulū*, *gardan*: 'neck, throat') with an under-shelf around its lower rim on which the gourd is glued; and the soundtable (C; *tablī*), much thicker than in Western lutes, appearing convex but continuing the notional height of the fingerboard in its flat upper-central surface, and carved gently sloping down and away to its outer edge. On many *sitārs* seven carved leaves with seven points (D) project over the gourd from the rim's lower edge.

The neck proper (E) is a long, hollowed piece of wood (its top closing wall, *pagrī*, 'turban', is usually integral), rounded at the back and roughly 90 cm long and 9 cm wide; it terminates at the lower end in a heavy tenon to which the soundtable and shoulder are nailed inside the shell. The fingerboard (F; *paṭrī*: 'plank') is in three pieces: over the peg area; between the string-guider (G) and the nut (H), this piece often bearing the maker's label; and under the frets, this section being concave with narrow flat ledges running down each side.

The peg area, apart from the front, is not a separate piece on the *sitār*, but simply the top of the neck above the string-guider and nut (G and H); its 'sawn-off' shape and arrangement of frontal and right lateral pegs are distinctive features shared by the western Central Asian long-necked lutes with wooden table. The five principal pegs (*khuṭī*, *kīl*, *kīlak*: 'peg'; Bengali also *kān*: 'ear') and their strings (*tār*, derived from Persian: 'metal string') are arranged as shown (I (i)–(v)); the strings, secured through narrow holes in the stems of the pegs, are wound anti-clockwise except for I (ii) which is wound clockwise for spacing from I (i). Modern pegs are thick and round in cross-section, with a bulbous top carved smooth, or in whorls, roses etc. for a better grip. Older *sitārs* have smaller pegs with a two-dimensional 'two-leaf clover' top. The strings are all of metal: the first and fifth are always tempered steel, the second of copper or phosphor bronze, and the others of brass or steel, according to tuning.

From the pegs the strings pass over two blades of bone or similar material set in the fingerboard and often termed

1. *(a) Diagram of a sitār: A gourd, B shoulder, C soundtable, D leaves, E neck proper, F fingerboard, G string-guider, H nut, I peg area with main pegs, J main bridge, K string holder, L fine-tuning beads, M frets, N bindings, O punctuating strings, cikārī, P cikārī posts, Q pegs and holes for sympathetic strings (strings not shown), R small bridge, S second gourd; (b) side view of shell; (c) sitār plectrum (mizrāb)*

'cross-pieces' (*āṙ*, *āṙī*), though their functions are different. The upper may be called the string-guider (G; Urdu *tārdān*, Hindi *tārgahan*: 'string holder'), for it guides the strings, threaded through holes halfway down, to the nut (H; *aṭī*, from *aṭ*: 'check, restraint'), where they are held firmly in little grooves.

From the nut the main strings pass down over the frets to the main bridge (J; *ghoṙā*, *ghuṙī*, *ghuṙac*: 'horse, mare, little horse', respectively). This deep bridge, 7 to 7·5 cm wide, about 3 cm deep and 2 to 3 cm high, consists of antler or bone plate glued on a table-shaped wooden trestle whose two broad legs are set near the centre of the table. The surface of the plate is filed in a parabolic contour (*javārī*), with the node between a third and halfway back. When plucked, the string beats on the bridge in front of the node, producing a bright tone rich in harmonics; a sharper angle of filing (*khulī*: 'open'), as with most *sitār*s, gives a twangy, nasal tone and a looser string, while a more gradual one (*gol*: 'round') gives a more subtle, veiled tone and a tighter string (as in the style of Ustad Vilayat Khan, for example). The *javārī*, which regularly needs renewal, serves three main purposes: it provides a long-lasting tone; it can be adjusted to allow an even timbre along the whole length of the neck (two octaves); and it reduces the tension on the string where it sits in a groove in the back wall of the bridge behind a lateral 'ditch' (the string would otherwise break when pulled sideways for *mīṇḍ*, which can be obtained over an interval up to a 5th). The contour is often different under each string.

The strings pass from the bridge over a protective plate on the table to the inferior string holder (K), sometimes called *tārdān* etc. (see G above), but more often named after its shape: a long narrow triangular bone piece with an upper T-bar (*laṅgot*: 'loin cloth'; or *mogrā*: 'mallet') screwed to the gourd. Fastening devices vary from one or more projecting bone hooks around which the strings are looped in a noose, to a combination of a hook for the sympathetic strings and six or seven projecting teeth on the T-bar, one for each main string. Before being attached the melody strings are threaded through fine-tuning beads (L; *maṅkā*) which lie either on the peg area or, and in the case of the first string always, on the soundtable below the bridge, the latter usually in the form of an animal or bird; these allow minor retuning during performance to be done rapidly.

The frets (M; *pardā*, from Perso-Turkish *pardah*) are of thick curved brass, of round or oval cross-section, the two ends resting on the narrow ledges of the fingerboard and tied with bindings (fig.1*b*, N; *bandhanī*) of gut, nylon or a rough yarn of wild silk. Modern frets are side-tied, the bindings sitting in small grooves near either end of the fret and passing around the back of the neck. The 20 frets give a range of two octaves on the first string. Apart from the tonic (*sa*), fifth (*pa*), held to be immovable (*acal*), and the lower octave, which is chromatically complete, the second and sixth frets of the middle and the second to fourth frets of the upper octave require moving to access all the chromatic (*vikṛt*) notes. Completely chromatic (*acal-ṭhāṭ*) *sitār*s are very rare.

Also from the mid-19th century one or two thin strings began to be added, known today as *cikārī* (Hindi: 'squeaking, gnat'), of 0-gauge steel and tuned variously, but often to the middle tonic (O (i)) and upper tonic (O (ii)). Deriving from the *bīṇ* through the *sūrbahār*, they are best described as punctuating strings, not drones. They pass from their pegs below the nut over two small bone posts (P) set upright in the fingerboard ledge (sometimes carved in the shape of cloves, and so called: *lauṅg*, *lavaṅg*) and down over the main bridge to the string holder. The posts are set approximately a third and two-thirds along the fingerboard; on older *sitār*s each *cikārī* peg is immediately above its post.

Another later 19th-century development on the *sitār* is the dozen or so sympathetic strings (*taraf*, *tarab*: 'side-strings'), also taken from the *sūrbahār*, and ultimately perhaps from the *sāraṅgī*. Their small pegs (Q) project sideways through the neck, and the strings rise up through a line of bone-ringed holes in the concave fingerboard, passing down under the frets to their own small bone bridge (R), also parabolically filed, and under the main bridge to the string holder. Formerly of brass, they are now made of thin steel (0 or 00) and are tuned for sympathetic resonance. Decorative features on the *sitār* mostly hide the joints of the parts and include a long punched strip (Hindi *gōṭ*: 'hem') running around the joints of the resonator and shell, recalling the inlay of Central Asian lutes; a large floral panel covering the front neck-table joint; two inlaid birds on the upper quadrants of the table; and raised wooden vines near the edge of the table in these quadrants. Sometimes the shoulder is heavily carved.

Many *sitār* have a small second gourd resonator (S; *tumbā*) attached at the back of the neck below the nut; the gourd, up to 22 cm in diameter, is capped by a round wooden shoulder, ending in a heavy tubular brass screw inserted in a nut built into the neck. This is detachable, and is not an original feature of the *sitār*; it adds little extra resonance and serves perhaps only a symbolic purpose, manifesting a *bīṇ* lineage for the player.

The *sitār* is always played with a twisted-wire plectrum (Urdu *mizrāb*), worn on the right index finger (fig.1*c*).

(ii) Sūrbahār. This is effectively a bass *sitār*. It was invented about 1820 by the famous *sitār* player Ghulam Muhammad of Lucknow (or, some say, by his teacher, the *bīṇ* player Pyar Khan) as an instrument suitable for playing the older Hindustani style of the *bīṇ*. Its construction is essentially that of the *sitār*, but with the following differences: the overall dimensions are much larger, with a length of 145 cm or more, a neck width of at least 11 cm and the diameter of the soundtable over 40 cm; the gourd-section at the back of the shell is flat-backed and round-sectioned (as is the table), often with a projecting wooden floor-rest on the left side of the gourd; the tied curved metal frets are often vertically flat-sectioned, with small flat plates at either end for support; the pegbox is separate, bent-back and often has a scroll, open at the back and with a bilateral (two left, three right) arrangement of the main pegs. Some *sūrbahār* have also a soundhole on the table, or a second gourd resonator.

It is still mainly performed by *sitār* players, with the same plectrum and technique (though some use that of the *bīṇ*). Its Urdu name means literally 'a springtime of notes', referring to the sympathetic strings, then unusual on long lutes. It is considered to have three 'breaths' (*dam*), in that the dying sound can be revived twice by left-hand portamento (*mīṇḍ*), which in the hands of masters (of which there are but few) can extend to a full octave.

3. TECHNIQUES. The player sits fully on the floor, his left leg tucked flat beneath his right, the shell supported in the hollow of his left foot. The main weight of the *sitār* is in the neck, and the shell must be held down by the right forearm, hanging naturally. The left thumb maintains a steady pressure on the side of the neck, with an angle at the wrist; the knuckles press down over the first string. Some players sit cross-legged with the raised right thigh supporting the neck (requiring less pressure from the right arm); others keep it flat.

The basic plucking style is a continuous through-movement of the right hand from the wrist, all four fingers held loosely together and supported by the thumb, mostly on the first string but often lightly brushing the second string simultaneously. Only the plectrum is used for plucking, with the hand tilted somewhat, generally inwards (*dā*) for a downbeat and outwards (*rā*) for an upbeat. The left hand cups the neck lightly, touching it only at the back with the rigid thumb and on the frets primarily with the gently curved index finger between the pad and the tip; this light grip is maintained throughout performance, the middle finger touching for a descending turn, or the third for a large stretch (but some players ascend with the middle finger and descend with the index, or vary their fingering according to context). The constant use of one finger creates the Indian vocal legato quality, and the distance between frets is too great for much use of positional fingerings.

Full notes on the frets are 'standing notes' (Hindi *kharā sur*), but there are many ornamental techniques, of three main types. The first kind are played along the string: in *ghasīṭ* ('dragging') the finger slides to another fret, lightly for grace-notes (*kaṇ*: 'drops'), up or down (Bengali *bikṣep*, *prakṣep*: 'casting') or slow (*gharṣan*: 'friction' or *ās*: 'expectation') to suggest intermediate tonal-microtonal pitches; a dramatic slide is *chūṭ* ('release'). Hammering with the middle finger is *sparś* ('touch'), or *kaṇ*, and repeated hammering *zamzamā* (Urdu: 'humming'); in *kṛntan* ('cutting') the middle finger plucks off a fret. The second type consists of a sideways pulling (*khīc*) of the string for portamento (*mīṙ*, *mīṇḍ*) up to a 5th or, rarely, a flat 6th, derived from the *vīṇā* but, like the *sūrbahār*, pulling to the left of the neck, free of the strings. The *sitār* is considered to have two *dam* in *mīṇḍ*. *Āndolan* is a slow repeated 'swing', and *garnak* a throbbing fast one. The third kind, a cross-string plucking (*cheṙ*, *cheṙ-chāṙ*), is principally a feature of *jhālā* since the adoption of *cikāri* strings.

□

Sitkovetsky, Dmitry (*b* Baku, 27 Sept 1954). American violinist and conductor of Azerbaijani birth and Ukrainian parentage. Trained at the Moscow Conservatory and the Juilliard School, New York, he represents the third generation of a distinguished family of violinists: his father was YULIAN SITKOVETSKY and his mother the pianist Bella Davidovich. In 1977 Sitkovetsky left the Soviet Union to pursue his studies in the United States; and in 1979 he won first prize at the Fritz Kreisler Competition in Vienna. In 1990 he founded the New European Strings, with whom he has toured Europe and America; and in 1993 he was appointed artistic director of the Seattle Festival. In 1996 he became principal conductor of the Ulster Orchestra. Works dedicated to him include the concerto by John Casken, of which he gave the première at the 1995 Proms in London. His recordings include concertos by Bartók, Elgar, Prokofiev and Shostakovich, as well as sonatas and his own transcriptions for string trio and string orchestra of Bach's Goldberg Variations. He has a duo with the pianist Pavel Gililov and a piano quartet with Michel Dalberto, Kim Kashkashian and David Geringas. Sitkovetsky's violin playing, technically strong, is an interesting amalgam of American and Russian influences, welded together by a commanding personality.

TULLY POTTER

Sitkovetsky, Yulian (*b* Kiev, 7 Nov 1925; *d* Moscow, 23 Feb 1958). Ukrainian violinist, father of DMITRY SITKOVETSKY. He started learning the violin with his father, Grigory, when he was four, then studied with David Bertie at the Central Music School, Kiev. At eight he played for Thibaud and in 1934 performed Mendelssohn's E minor Concerto with the Kiev SO. In April 1939 he played the Tchaikovsky Concerto in Moscow and he then entered Abram Yampol′sky's class at the Central Music School in that city. Evacuated to Perm′ with his fellow students during World War II, Sitkovetsky graduated to the 'Moscow Conservatory in Exile' in 1943; in 1945, back in Moscow, he won a first prize alongside Richter and Rostropovich in the All-Union Young Performers' Competition. In 1947 he, Leonid Kogan and Igor Bezrodny shared first prize at the Prague Festival of Young Musicians. In 1950 Sitkovetsky married the pianist Bella Davidovich, with whom he formed a notable duo. In 1952, he took second prize at the Wieniawski Competition in Poznań and in 1955 he won the Gold Medal and second prize at the Concours Musical Reine Elisabeth in Brussels. The same year he founded the outstanding Tchaikovsky Quartet (with Anton Sharoyev, Rudolf Barshay and Yakov Slobodkin). Taken ill with lung cancer in 1956, he gave his last Moscow concert that year – a performance of Shostakovich's newly revised A minor Concerto which won praise from the composer. Sitkovetsky's recordings, ranging from works for solo violin through sonatas and quartets to concertos by Paganini, Sibelius, Tchaikovsky, Glazunov, Lyapunov and Khachaturian, are exceptional in their musicality and cleanness of execution. In style his playing was more akin to that of Kogan than the more muscular, extrovert David Oistrakh. His tone, though not especially large, was of great beauty and was easily projected because of its concentration and immaculate intonation. He gave the premières of works by Nikolay Rakov, Mark Milman and Albert Lehman.

TULLY POTTER

Sitsky, Larry [Lazarus] (*b* Tianjin, China, 10 Sept 1934). Australian composer, pianist and musicologist. Born to Russian-Jewish parents, he emigrated to Australia with his family in 1951. He studied piano at the NSW Conservatorium of Music, Sydney, where his teachers included Busoni pupil Winifred Burston (1952–8), and in San Francisco with Egon Petri (1959–61). On his return to Australia, he taught at the Queensland Conservatorium (1961–5) and lectured on contemporary composition at the University of Queensland. In 1965 he assumed the position of head of keyboard at the newly founded Canberra School of Music, where he became head of composition in 1978. His numerous honours and awards include the Alfred Hill Prize (1969), the A.H. Maggs Composition Prize (1971, 1981), the Spivakovsky Prize (1981), an Advance Australia Award (1989), a Fulbright Scholarship (1988–9) and an honorary doctorate from the Australian National University (1997). He became a fellow of the Australian Academy of the Humanities in 1998.

Sitsky first came to prominence as a composer at the inaugural Australian Composers' Seminar (Hobart, Tasmania, 1963), where his Woodwind Quartet was loudly jeered. Throughout the 1960s and 70s he was at the forefront of the Australian avant garde, producing a large body of works while remaining active as a concert pianist and teacher. Co-founder with James Penberthy of the Composers' Guild of Australia (1975), he also established the Australian Contemporary Music Ensemble with Keith Humble and Don Banks in 1976, the first ensemble of its kind in Australia. The group's performances and recordings of new Australian works, as well as of compositions by Schoenberg, Webern, Stravinsky and others, did much to promote Australia internationally.

Sitsky's ability as a performer, his creative output and his writing all manifest the same intellectual breadth and musical enterprise; this is particularly evident in his engagement with Busoni as both a pianist and a composer, his interest in 'lost' or unknown repertories and his absorption of a vast array of multi-cultural literature, music and ideas. His compositions owe much to Jewish, Chinese and Armenian folk elements and to the rhapsodic expressiveness of the Russian school of piano playing. While he has derived inspiration from eclectic sources, including mysticism, the occult, symbolist poets and diverse musical sound worlds, he has maintained an almost serial compositional approach for much of his career. Only after rediscovering his cultural roots through visits to Russia (1977, 1988) and China (1983) did his music exhibit greater expressive and structural freedom.

Of special importance to Sitsky's oeuvre are the six operas on librettos by Gwen Harwood, the series of concertos and chamber music written for colleagues (especially the violin concertos for Jan Sedivka) and the series of fantasias for solo piano. Many of these works pay homage to a specific artist, capturing in sonority, colour or instrumental technique the special qualities of the performer or composer to whom they are dedicated. Fascinated by transcription and the freedom of interpretation evident in early sound recordings, he has encouraged performers to respond freely to his notation despite the personalized nature of his writing.

Sitsky's sometimes discordant relations with the 'establishment' have neither hindered his many commissions, nor silenced his criticism of what he perceives as a lack of recognition for music in the nation's historical record. Through his many performances, writings, editorial and recording projects, especially the *Anthology of Australian Music on Disc*, he has attempted to raise public awareness of Australian music, both old and new.

ROBYN HOLMES, PETER CAMPBELL

Sivec, Jože (*b* Ljubljana, 19 Jan 1930). Slovene musicologist. He studied musicology at the Music Academy in Ljubljana with Dragotin Cvetko (1948–53) and German literature at the Faculty of Arts, Ljubljana (1951–6). He gained the PhD in 1967 with a dissertation on opera in Ljubljana. He was an assistant at the Music Academy in Sarajevo (1958–63) since when he has worked at the Faculty of Arts, Ljubljana, becoming professor of musicology there in 1981.

Sivec's main interests are the history of Slovene opera and the music of Slovene composers of the 16th century. He is the author of an exhaustive general history of opera as well as detailed studies of 19th-century opera performances in Ljubljana. He has also prepared editions of music by Striccius, Lagkhner and Prenner.

WRITINGS

Opera in njena reprodukcija v Stanovskem gledališču v Ljubljani od leta 1790 do 1861 [Opera and its performance in the Theatre of the Provincial Estates in Ljubljana, 1790–1861] (diss., U. of Ljubljana, 1967; Ljubljana, 1971 as *Opera v Stanovskem gledališču v Ljubljani od leta 1790 do 1861*)

JURIJ SNOJ

Sivert, Paul. *See* SIEFERT, PAUL.

Šivic, Pavel (*b* Radovljica, Slovenia, 2 Feb 1908; *d* Ljubljana, 31 May 1995). Slovenian composer and pianist. He studied at the Ljubljana Conservatory until 1931 as a composition pupil of Osterc and a piano pupil of Ravnik; his studies were continued in the Prague Conservatory master classes (1933) under Suk, Hába and Kurz. Šivic taught at the Ljubljana Conservatory (1934–9) and at the academy of music (1939–44, 1946–78). As a member of Osterc's school, he was an enthusiastic follower of new compositional trends until the 1960s, returning later to a more conventional idiom. He was also active as a concert pianist, accompanist and writer on music.

ANDREJ RIJAVEC/IVAN KLEMENČIČ

Sivori, Camillo (*b* Genoa, 25 Oct 1815; *d* Genoa, 19 Feb 1894). Italian violinist and composer. A child prodigy, he received his first lessons from Restano, then studied violin with Paganini's former teacher Giacomo Costa, *maestro di cappella* at the cathedral of S Lorenzo, who encouraged Sivori to perform in religious services. Between October 1822 and May 1823 Paganini was in Genoa, and, favourably struck by the young violinist, decided to give him lessons. Their relationship was brief but intense, and Paganini regarded Sivori as the only pupil for whose formation he was responsible ('the only person who can call himself my pupil', he wrote in 1828). He composed various pieces for him (a concertino, *12 cantabili e valtz*, *6 cantabili* and a *sonata con variazioni*), which were performed privately, with Paganni himself accompanying on the guitar. After leaving Genoa he continued to follow Sivori's development, having entrusted him to his disciple Agostino Dellepiane for further study, and before he died, he gave him a violin, a copy of his favourite Guarneri del Gesù, made by Jean-Baptiste Vuillaume.

Sivori quickly set out to emulate Paganini's artistic achievements. He adopted the same unusual playing position, and favoured the same notion of the miraculous, which involved imitation and extravagant and rhetorical elements, often misunderstood by classicists such as Wasielewski and Moser. His virtuoso repertory was based principally on his own compositions and those of Paganini, but unlike his teacher, Sivori also became an exceptional performer of Classical and early Romantic chamber music.

Sivori's first important success was his concert of 27 April 1827 at the Teatro di Corte in Genoa. Immediately after this, he set off on a journey across Europe with Dellepiane. In London he performed alongside Giuditta Pasta at Her Majesty's Theatre and at the Argyll Rooms, while in Paris, where he met Rossini, Cherubini, Baillot and Paer, he played at the Salle des Menus-Plaisirs and the Salle Chantereine with the young Liszt. On returning to Italy he played at the Teatro Re in Milan, and in Turin. Between 1829 and 1839 he studied counterpoint with Giovanni Serra, a renowned Genoese teacher, who introduced him to chamber music (and dedicated his Quartet no.4 to Sivori). In 1834 he made his quartet début in London. From 1836 to 1840 he was leader of the orchestra of the Teatro Carlo Felice in Genoa, where he gave regular recitals, and taught at the Istituto di Musica, taking over from Dellepiane. Between 1839 and 1840 he played all over Italy.

After a triumphant recital in Genoa in 1841, he began his first great European tour; in the course of more than five years he met the most renowned figures in music and gave around 900 concerts. According to a widely practised custom, he was brought together in competition with famous violinists, such as Spohr, Bériot, H.W. Ernst, Ole Bull, Alexandre Artôt, Alard and Henry Vieuxtemps, and always to his credit. The reports which appeared in European periodicals are witness to his extraordinary success. In 1843 he made a great impression in Paris, and the Conservatoire awarded him a special medal. In the same year he travelled to Belgium and then to London, where he was engaged by many musical institutions including the Royal Italian Opera, the Philharmonic

Camillo Sivori: lithograph by V. Degobert

Society and the Hanover Square Rooms. In 1844 he performed Paganini's Second Violin Concerto to great acclaim at the Opéra-Comique, Paris, under Berlioz, and on his return to London he played with Thalberg, Döhler, Joachim and Mendelssohn. A tour of England, Scotland and Ireland followed, and he participated in the first complete performance in London of Beethoven's quartets, and was the soloist for the first performance in England of Mendelssohn's Violin Concerto, at the Philharmonic Society.

Sivori then undertook an adventurous tour of North and South America (1846–50) across 67 cities in the north in the company of Henri Herz, and then on to Cuba, Jamaica, Lima, Valparaiso, Santiago, Rio de Janeiro and Montevideo. On his return to Europe he went again to London where he gave numerous concerts in the spring of 1851, including the first performances of the pieces by Paganini which had recently been published by Schonenberger; he formed a close artistic bond with the double-bass player Bottesini and the cellist Piatti. The highpoint for this Italian trio came the following year, when they gave the inaugural performance of the New Philharmonic Society under Berlioz. After further performances in Europe, Sivori made Paris the centre of his activities, where he had many friends (including Rossini and Léonard). For more than 20 years he was a popular performer at countless concerts in France and scored an exceptional triumph in a contest with Alard (in 1862). He made frequent visits to London and also appeared regularly in Baden-Baden and in the summer residences of the European artistocracy, as well as in the Netherlands, Germany and Russia. It was only in the 1880s that he began to scale down this frenetic activity. In Italy he performed his customary repertory and also appeared

with the Società del Quartetto; in 1869 Genoa named its first auditorium in his honour. He did much to promote contemporary Italian music, and Verdi wanted to engage him for the first performance of his E minor quartet in Paris in 1876.

Although he did not have special physical characteristics (his small hands obliged him to modify some difficult passages), Sivori's style of bowing, use of the G string, simple and double harmonics, dizzying changes of register, double and multiple-stopping and tremolo legato were all technically assured, and the purity of his intonation, and the elegance and singing quality of his tone, were beautiful and expressive. His pupils included Marteau, Rosario Scalero, René Francescatti and the Genoese Agostino Robbio, Giuseppe Bacigalupo and Enrico La Rosa.

A stylish composer, who displayed a lovely melodic vein, Sivori composed around 60 pieces, some published at the time and others kept by his heirs. They include two violin concertos which await modern performance, numerous fantasies on operatic themes in the form of theme and variations where virtuosity and melodiousness are cleverly alternated, descriptive pieces, where the programme has a narrative content (the famous imitations), and shorter, simpler pieces with a broadly melodic element. The *12 études-caprices* op.25 are outstanding pieces in which the great Paganinian model is reconsidered in a personal way.

WORKS

works published unless otherwise stated

VIOLIN AND ORCHESTRA

Vn Conc. no.1, E♭, 1839, unpubd; Vn Conc. no.2, A, ?1841, unpubd; Fantasia on themes from La sonnambula and I puritani, 1853, unpubd

FLAVIO MENARDI NOGUERA

Sivry, Charles de (*b* Paris, 15 Nov 1848; *d* Paris, 15 Jan 1900). French composer. The son of Mme Mauté, who gave piano lessons to Debussy in 1872, Sivry played several string instruments, for which he was largely self-taught, and the timpani. After a turbulent youth he settled into the salon of Nina de Callias, also frequented by Chabrier, Cabaner and the poet Verlaine, who later became his brother-in-law (1870). Before becoming pianist-composer at the Chat noir and finally Théodore Botrel's accompanist, Sivry was the conductor at a number of small theatres, for which he composed several operettas, including *Le rhinocéros en mal d'enfant*, which had a lengthy run in 1874. Fascinated by the Hungarian gypsy orchestras at the Paris Universal Exhibition of 1867, Sivry became an erudite collector of folksongs, which he arranged in a simple but effective manner.

MICHAEL PAKENHAM

Siwiński [Siewiński], **Andrzej** (*fl* early 18th century). Polish composer. He is known only by his works in manuscript at the ecclesiastical seminary in Sandomierz. They are in the concertato motet style with florid vocal parts, and comprise an *Ave regina caelorum* (three voices, strings and organ, dated 17 April 1713), a *Missa pro defunctis* (four voices, two oboes, strings and organ, dated 1726), and four *Mottetae de BVM* (four voices, strings and organ). The 1737 inventory of the Kraków Jesuit chapel mentions *Litaniae* in C minor, now lost, and a Requiem

in C (probably identical with the Sandomierz *Missa pro defunctis*).

MIROSŁAW PERZ

Six, Les. French group of composers: Auric, Durey, Honegger, Milhaud, Poulenc and Tailleferre. The group received its name from an article published by Henri Collet in *Comoedia* (16 January 1920), 'Les cinq russes, les six français et M. Satie', though most of its members had been giving concerts as 'Les nouveaux jeunes' since June 1917, and it was at a song recital given by Jane Bathori in November 1917 that the entire six had first appeared on the same programme. Originally a set of Conservatoire students (Auric, Milhaud and Honegger met as pupils of Gédalge), the group formed itself under the eye of Satie and soon acquired an enthusiastic promoter and spokesman in Cocteau, whose *Le coq et l'arlequin* (1918) sounded forth on the principles for a new music. Collet's analogy with the Russian nationalists was no accident, for Cocteau chauvinistically demanded that French music be freed from foreign, and in particular German, taints. For half a century French musicians had had ambivalent relations with Wagner; *Le coq et l'arlequin* declared an open rebellion. The new music was to take its subject matter and its stimulus from everyday life; it was not to turn its back on machines, whether as instruments or as a source for the imagination; it was also to learn from the music hall, the circus and the jazz band; and its principal qualities were to be dryness, brevity and straightforwardness. This positive programme was tied up with a characteristic cultivation of the image of the *enfant terrible*: snooks were cocked not only at Wagner but at Debussy, Strauss, Stravinsky and Schoenberg; Satie alone received praise.

Aside from their public concerts – at which they presented their own pieces and also new non-French music, including works by Schoenberg and Bartók – Les Six collaborated on two ventures: an *Album des Six*, containing piano pieces by all of them, and *Les mariés de la tour Eiffel*, a playlet-ballet with text and choreography by Cocteau, presented by the Ballets Suédois at the Théâtre des Champs-Elysées on 18 June 1921. *Les mariés* had two speaking voices, representing gramophone machines, who described the mimed drama of a wedding party on the Eiffel Tower, a party strangely interrupted by a cyclist, a hunter in pursuit of an ostrich, a lion and a seaside bather. Five of Les Six provided short dance numbers, but Durey declined; and, indeed, within two or three years the group had lost any cohesion. Honegger had never had any sympathy with Satie; Durey went on to support socialist ideals; Milhaud went on. Auric remained Cocteau's collaborator in his later role as film maker; only Poulenc kept faith with the group's flippancy.

'Les Six': portrait by Jacques-Emile Blanche, 1922 (Musée des Beaux-Arts, Rouen); (clockwise, from bottom left) Germaine Tailleferre, Darius Milhaud, Arthur Honegger, the concert promoter Jean Wiéner, the pianist Marcelle Meyer, Francis Poulenc, Jean Cocteau and Georges Auric (Louis Durey is absent)

PAUL GRIFFITHS

Six-four chord (Ger. *Quartsextakkord*). A three-note chord consisting of a bass note with a 6th and 4th above it. In thoroughbass it is indicated by the figure '6' placed above the figure '4'. In terms of fundamental bass theory a 6-4 chord is the second inversion of a major or minor triad. In any strict harmonic context it is unstable and, unless used in a transitory context (as a 'passing 6-4', Ger. *Durchgangsquartsextakkord*), must be resolved to a consonant triad. Most often this is achieved by the conjunct descent of both upper notes (i.e. 6-4 resolving to

5-3); in such cases the bass note is often the dominant ('dominant 6-4' or 'cadential 6-4') and the 6-4 itself functionally a dominant, such that resolution of the upper notes either completes an IMPERFECT CADENCE or precedes resolution through a PERFECT CADENCE.

Sixt, Johann [Giovanni] **Abraham** [August] (*b* Gräfenhausen, Baden-Württemberg, 3 Jan 1757; *d* Donaueschingen, 30 Jan 1797). German composer and keyboard player. He first studied music under his father, Johann Michael Sixt, an assistant schoolmaster and organist at Gräfenhausen, who taught from textbooks by Kirnberger, Fux and Marpurg, as well as C.P.E. Bach's *Versuch* and Leopold Mozart's *Violinschule*. This grounding may have earned him a place in the Karlsschule, Stuttgart, as a pupil of the court harpsichordist Seemann, the Kapellmeister Poli and the violinist Eligio Celestino. Sixt's first posts as an organist were in either Geislingen or Heilbronn, and in Mömpelgard (now Montbéliard), where he was living when his first works were published at Lyons in about 1780. After working in Stuttgart, he was appointed to the court of Prince Joseph Maria Benedict von Fürstenberg at Donaueschingen in 1784. As harpsichordist to the prince's wife, Sixt accompanied amateur performances of songs and Liederspiele, and stage performances of melodramas by Georg Benda, J.A. Hiller, Dittersdorf and Haydn. His output at the court was hindered by sickness, numerous loans to others and disagreements with the court music director and violinist Wenzel Nördlinger, and he seems to have been regarded with suspicion after visits to Strasbourg, a city sympathetic to the French Revolution. In 1789 Sixt and Nördlinger worked under the Intendant Karl von Hampel, a pupil of Stamitz and Ignaz Holzbauer's son-in-law.

Gerber reported that Sixt was 'supposed to be a good organist' assigning him to the Mozartian school but criticizing his 'bizarre tricks, forever making chromatic progressions and stressing grace-notes'. Sixt's songs were used in Erich Fischer's 'domestic comedies' in the 1920s, and H.J. Moser praised him as 'one of Mozart's most sensitive contemporaries'.

FRIEDRICH BASER

Sixta, Jozef (*b* Jičín, 12 May 1940). Slovak composer. He studied composition and the piano at the Bratislava Conservatory (1955–60) before continuing his composition studies under Alexander Moyzes at the Bratislava Academy of Music and Dramatic Arts (until 1964). In 1971 Sixta received a scholarship to study in Paris under Messiaen and Jolivet. From 1964 to 1976 he taught theory and composition at the Bratislava Conservatory and in 1976 was appointed lecturer in composition at the College of Performing Arts.

At the start of his career Sixta was influenced largely by his teacher Moyzes and the latter's traditional composition method. After graduation (Sixta's diploma work was the First Symphony) he developed an intense interest in modern techniques, especially aleatory music, the achievements of the Polish school (see the String Quartet no.1, *Variácie*, the Nonet and *Asynchrónia*) and the rational organization of pitches. His compositional idea has become the synthesis of a more or less evolutionary approach to musical form and the selective organization of horizontal and vertical components based on intervallic sets. The latter represents a contemporary concern for integration, while his concept of form and the use of theme and development suggests Classical principles; added to this are Renaissance techniques such as canon and imitation, factors which in themselves assume important structural roles in his music. Sixta is interested exclusively in 'absolute music' free of extra-musical associations; typically, he has produced little or no vocal music, text-settings, programme music or interdisciplinary forms.

VLADIMÍR GODÁR

Sixte ajouté (Fr.). *See* ADDED SIXTH CHORD.

Sixteen, The. English choir, often augmented to include the period-instrument Orchestra of the Sixteen and specializing in Renaissance and Baroque music. Founded in 1977 by its director, Harry Christophers (*b* 1953), it has become one of the most versatile and widely recorded groups of its generation. Performing the major large-scale works of Purcell, Handel and Bach throughout the world, it has also established a reputation for championing many lesser-known vocal polyphonic masterpieces from the Tudor period as well as a full representation of Spanish and Portuguese composers from the 16th to the 18th centuries. Its performances of music from the Eton Choirbook won a Gramophone Award in 1992. The Sixteen has recorded an extensive series of works by

Victoria and has made frequent forays into the 20th-century choral repertory, including works by Britten, Poulenc, Stravinsky, Martin and Maxwell Davies.

JONATHAN FREEMAN-ATTWOOD

Sixteen foot. A term used in reference to organ stops, and by extension also to other instruments, to indicate that they are pitched an octave below the EIGHT FOOT or 'normal' pitch now based on *c′* = 256 Hz. At Delft Oude Kerk in 1458, the *16 voeten Blockwerk* ran from *F* not *C*, so the pitch must either have been about a 4th below *c′* = 256 Hz or the *voet* shorter than 1′ = 0·3048 m. Either way, a GREAT ORGAN of Sixteen foot, i.e. based on an open Diapason of 16′ or sub-octave tone, became the ideal in the newly developing church organ, even when the Pedal had its own department.

PETER WILLIAMS

Sixteenth-note. *See* SEMIQUAVER. *See also* NOTE VALUES.

Sixth (Fr. *sixième*; Ger. *Sexte*; It. *sesta*). The INTERVAL between any two notes that are five diatonic scale degrees apart (e.g. C–A, E♭–C, F♯–D); the complement of the 3rd, that is, the interval produced when the 3rd is inverted at the octave. An octave less a minor 3rd is called a major 6th, and an octave less a major 3rd is called a minor 6th. A major 6th that has been increased by a chromatic semitone is called an augmented 6th (e.g. C–A♯, B♭♭–G); a minor 6th from which a chromatic semitone has been subtracted is called a diminished 6th (e.g. C–A♭♭, E♯–C, G♯–E♭).

Medieval theorists usually classified the 6th as an IMPERFECT CONSONANCE; in the early 15th century it became the characteristic interval between the outer parts of fauxbourdon and fauxbourdon-style polyphony. In cadences it has always been of primary importance in that it resolves linearly to the octave. As a melodic interval the 6th was a kind of 'boundary interval' in the Middle Ages (*see* HEXACHORD); in the Renaissance the minor 6th was normally the greatest interval (apart from the octave) that could be sung by leap in a melodic part.

See also ADDED SIXTH CHORD; AUGMENTED SIXTH CHORD; HARMONY, §2; INVERSION; and NEAPOLITAN SIXTH CHORD.

WILLIAM DRABKIN

Sixth chord. A three-note chord consisting of a bass note with a 6th and a 3rd above it. In thoroughbass it is indicated by the figure '6'. In functional harmony a 6th chord is the first inversion of a major or minor triad; by itself it is a consonance, though it may be interpreted as a dissonance in some harmonic contexts (e.g. *a–c′–f′* resolving to *a–c′–e′* in A minor). Consecutive 6th chords are an important characteristic of much music of the first half of the 15th century (*see* FABURDEN).

See also ADDED SIXTH CHORD; AUGMENTED SIXTH CHORD; HARMONY; INVERSION; and NEAPOLITAN SIXTH CHORD.

Sixth flute. A RECORDER with lowest note *d″*, a 6th above the treble instrument.

Sixty-fourth-note. American term for HEMIDEMISEMIQUAVER. *See also* NOTE VALUES.

Sixt z Lerchenfelsu, Jan [Sixt von Lerchenfels, Johann] (*b* Prague, 1550–60; *d* Litoměřice, 3 Nov 1629). Czech composer. He was studying with the Jesuits at Prague in 1575. In 1584 he was a singer in the Kapelle of the Emperor Rudolf II in Prague. From 1594 to 1597 he studied at the Jesuit academy at Olomouc, where in 1596 he obtained the bachelor's degree and in 1597 the doctorate. To mark the latter the singers of the Kapelle published the 12-part *Chorus musicus caesareus … in … D. Joannem Sixtum Boemum Pragensem … emblematice pictus, fictus et decantandus* (Prague, 1597), and two other prints honoured him about this time: Franciscus Mollerus published a *Melicum poema* (Olomouc, 1597), and the Sodalitas Mariana of the university published a musical print, *Nymphae harmoniacae* (Olomouc, 1598). According to these sources he was choirmaster of the Jesuit church at Olomouc. From 1599 to 1602 he was again at the court of Rudolf II, as court chaplain and alto. In 1602 he became archdeacon at Plzeň and in 1605 canon at St Vitus, Prague. From 1608 he was at Vyšehrad, first as canon and then, from 1613, as dean of the chapter. From 1617 until his death he was provost at Litoměřice. In 1623 he was made an imperial counsellor and elevated to the peerage. In 1625 he founded a printing press at Litoměřice, where he published his religious writings and also, in 1626, the volume containing his only known music, *Triumphus et victoria Joannis … Comitis de Tilli*. This publication, which also includes works by Italian composers and acclamatory poems and quotations, celebrated the victory of the imperial army over the Protestants at the Battle of the White Mountain in 1620. The four works of his own in it are a *Te Deum*, a Sanctus, a *Miserere* and a *Magnificat*. The first three are four-part polyphonic works, while the *Magnificat* (ed. in DČHP, cv, 1958) is homophonic and can be performed in either four or eight parts: the forces are a solo voice accompanied by three violas and a four-part chorus with doubling trumpets and organ. Sixt was highly esteemed by his contemporaries as a musician, though it is difficult to assess his powers as a composer on the basis of only four works.

JIŘÍ SEHNAL

Sjaellands Symfoniorkester. Orchestra based in COPENHAGEN. It was founded in 1964 on the basis of the orchestra of the Tivoli concert hall, which dates back to the 1840s.

Sjögren, (Johan Gustaf) Emil (*b* Stockholm, 16 June 1853; *d* Stockholm, 1 March 1918). Swedish composer. He first studied music with L. Ohlson, and from 1869 to 1874 attended the Swedish Royal Academy of Music, where his teachers were Thegerström for the piano, Mankell for the organ and Berens for harmony. He continued his studies in Berlin in 1879–80, with Kiel for composition and Haupt for the organ, and it was during this time abroad that he decided to devote himself to music. In 1881 he was appointed organist at the French Reformed church in Stockholm, and in 1891 organist at the Johanneskyrka, a post he held until his death. He also taught at Anderssons Musikskola from 1886 to 1888. In 1884–5 his extensive travelling in Europe took him to

Berlin, Munich and Vienna, where he studied instrumentation with H.T.O. Grädener, and to Paris, where he was a regular visitor from the 1890s and gave annual concerts from 1901 to 1914.

As a composer, Sjögren proceeded from early, typically Scandinavian works to a style marked by Schumann's influence. Then, during his travels abroad, a number of important currents in European music made their lasting impression upon him: the works of Wagner and Liszt, Italian opera, and French music, including Franck's, with which he made his first close acquaintance in Paris in 1885. His mature writing for the piano was probably stimulated as much by his contact with the music of Saint-Saëns and Fauré as by that of Schumann and Chopin. His friendship with the Danish composer Lange-Müller was undoubtedly an important factor in his development as a composer of lieder; it was this genre that Sjögren cultivated most and many of his songs, of which he wrote about 200, are still in the Swedish repertory. His choice of texts at the outset was unusually cosmopolitan by Swedish standards, and he made frequent use of the contemporary poetry of his native land (C. Fröding, V. von Heidenstam) only after 1900. A large number of his songs, both strophic and through-composed, are *Stimmungslieder*, depicting in music a single, generalized mood for the entire poem. Alongside these settings he wrote songs which were progressive in their harmonic language and technique of declamation, notably the Jacobsen songs op.22 (1887), and the Li-Tai-Po songs (1911), with their personal touch of exoticism; the latter group shows the linear writing and somewhat free treatment of tonality characteristic of much of his later work. For all its broad lyricism, colourful sonorities and harmony, Sjögren's output is often marked by a certain reserve and occasionally penetrated by the sentiment of the salon; but in the variety of its moods and methods of expression, it is virtually unique in Swedish music.

AXEL HELMER

Sjukur, Slamet Abdul (*b* Surabaya, Java, 30 June 1935). Indonesian composer. After piano lessons from the age of nine, he studied at the Indonesian Music Academy in Yogyakarta (1952–6). In 1957, already well-known as a composer, Sjukur co-founded an important musical institute in Surabaya. Between 1962 and 1967 he studied analysis with Messiaen at the Paris Conservatoire and composition with Dutilleux at the Ecole Normale de Musique on a French government scholarship. In Paris he also worked with the Groupe de Recherches Musicales under the leadership of Schaeffer. On his return to Indonesia in 1976, Sjukur taught composition at the Jakarta Arts Institute until 1987, familiarising the younger generation of Indonesian composers with European contemporary music. In the 1970s he was seen as an eccentric personality and was associated by the general public with the strangeness of contemporary music. Sjukur has often used mathematical themes as the basis for his compositions, for example *OM* for string ensemble, commissioned for the 1995 Contemporary Music and Dance Festival. In the late 1990s he became increasingly interested in using the aesthetic concepts of traditional Indonesian music, such as gamelan, in his compositions.

FRANKI RADEN

Ska [bluebeat]. A style of Jamaican popular music and dance. From 1961 to 1965 it was the predominant popular style in Jamaica, and can claim to be its first truly indigenous music. A stylistic amalgam of African-Cuban and New Orleans influences, jazz, quick-time rhythm and blues and Rastafarian rhythms, it primarily originated with the Skatalites, who recorded under a variety of names and provided ska's chief musicians. The group's line-up consisted of piano (Jackie Mittoo), guitars (Ernest Ranglin, Lyn Tait and Jah Jerry), bass (Lloyd Brevett),

drums (Lloyd Knibbs), and a horn section (Lester Sterling, alto saxophone; Tommy McCook, 'Ska' Campbell and Roland Alphonso, tenor saxophones; Karl Bryan, baritone saxophone; 'Dizzy' Johnny Moore and Baba Brooks, trumpets; Don Drummond, trombone). It was popularized by the seminal Clement 'Sir Coxsone' Dodd of Studio One, and 'Duke' Reid of Treasure Isle, and its influence has now flourished worldwide. Using a staccato guitar to accentuate the upbeats of its distinctive double-time shuffle rhythm in simple quadruple metre, ska's chugging melodies and propulsive horn section represented youthful emancipation as Jamaica celebrated its independence.

Ska's many early stars included Jimmy Cliff, Toots and the Maytals, the amusingly salacious Prince Buster, the father of reggae music Joe Higgs and his partner Roy Wilson, Alton Ellis, Carlos Malcolm and his Afro-Jamaican Rhythm, Byron Lee and the Dragonaires, and early Bob Marley and the Wailers. Ska has experienced two revivals in the United Kingdom: in the late 1960s its rhythm patterns were adopted by Judge Dread, then in 1980 the ska-based 'Two Tone' movement united black and white musicians in groups like the Beat, the Specials, Selector and Madness. In the 1990s American pop groups influenced by ska, such as No Doubt, Sublime, the Toasters and Let's Go Bowling, achieved commercial success.

ROGER STEFFENS

Skaggs, Ricky (Lee) (*b* Brushey Creek, KY, 18 July 1954). American country and bluegrass singer-songwriter. His early influences were from his father, a guitarist and gospel singer, and Bill Monroe, the legendary bluegrass exponent. His father bought him a mandolin when he was five, and at the age of seven he appeared on stage at a concert given by Monroe. He had become a professional musician by his mid-teens, playing fiddle, guitar and mandolin, and released his first solo album, *That's It*, in 1975. He had already begun to explore the bluegrass repertory with his band Boone Creek when Emmylou Harris finally persuaded Skaggs to join her Hot Band. His distinctive high tenor harmonies featured on her bluegrass-influenced *Roses in the Snow* (WB, 1980).

At a time when country music was embracing elements of showbusiness Skaggs with Harris led the so-called New Traditionalists in a rediscovery of its heritage. A revival of the Flatt and Scruggs song *Cryin' my heart out over you* (1982) gave Skaggs his first number one hit in the country music charts, the first in a series of honours which lead to his election to the Country Music Hall of Fame as its youngest member. Throughout the 1980s, with a hold over mainstream country music, he combined a career at the Grand Ole Opry with another on the traditional bluegrass circuit. Although his mix of politics and religion came to alienate many admirers, he remains highly respected by fellow musicians, and has worked with such artists as Johnny Cash, Dolly Parton and Jesse Winchester. (B. Allen: 'Ricky Skaggs: Country Rocks, but Bluegrass Rules', *Bluegrass Unlimited*, xxxii/3 (1997), 38–45)

LIZ THOMSON

Skalić, Pavao [Scalichius, Scalitz, Scala, Skala; Paulus] (*b* ?Zagreb, 1534; *d* Danzig, 1575). Croatian writer and music theorist, active in Austria, Germany and Italy. He studied theology and philosophy in Vienna and later moved around Europe, living in Bologna, Rome, Bohemia, Poland, France and Germany, among other places. Both in his life and in his works, he displayed an unusual combination of piercing intellect, encyclopedic knowledge and self-aggrandizing fantasy. His principal work was the *Encyclopaediae, seu orbis disciplinarum, tam sacrarum quam prophanarum, Epistemon* (Basle, 1559), the first modern European publication to apply the word 'encyclopedia' in its modern sense. All Skalić's accessible texts on music are included in it, including the *Discursus harmonicus*, which deals in a conservative fashion with Pythagorean and Neoplatonic ideas on Harmony and music. Among his other writings was the *Dialogus de lyra* (Cologne, 1570; possibly lost), mentioned by Walther and Gerber, and in Peter Lichtenthal's *Dizionario e bibliografia della musica* (Milan, 1826/*R*).

LOVRO ŽUPANOVIĆ

Skalkottas, Nikos [Nikolaos] (*b* Halkis, Evia, 21 March 1904; *d* Athens, 20 Sept 1949). Greek composer.

1. Life. 2. Works. 3. Folksong. 4. Instrumental writing.

1. LIFE. His father, Alexis, and uncle, Kostas, were both musicians. When the latter lost his position of musical director of the town band in 1906 as the result of legal and political intrigues, the family moved to Athens with the two-year-old Nikos already showing signs of musicianship. At the age of five he began violin lessons with his father and uncle, and at ten he entered the Athens Conservatory, graduating at the age of 16 with a highly-acclaimed performance of the Beethoven Concerto. A year later, in 1921, he won a scholarship to the Berlin Hochschule für Musik, where he studied the violin with Willy Hess. He also took some composition lessons with Juon and Robert Kahn, but his growing fascination with contemporary music was probably stimulated by Mitropoulos, his friend and fellow-student from Athens, who was studying composition with Busoni. In 1925 Skalkottas decided to give up his promising career as a violinist and become a composer. From 1925 to 1927 he studied with Jarnach, a pupil of Busoni, and he took orchestration lessons from Weill in 1926. But it was his studies with Schoenberg (1927–32) at the Preussische Akademie der Künste which he later recalled had been an inexhaustible wellspring of inspiration for all his subsequent work. During Skalkottas's time there several of his symphonic and chamber works were publically performed.

In his early years in Berlin Skalkottas had earned his living by playing the violin in Berlin's café and cinema orchestras, but in 1928 he began to receive financial support from a wealthy young Greek musical amateur, Manolis Benakis, whom in return he assisted in buying

and selling autograph manuscripts – a task for which the young musician had little practical aptitude. After a disagreement over money Benakis ended his support in 1931. The growing unemployment among Berlin musicians prevented Skalkottas from resuming his work as a freelance violinist. Material problems, and his worries about his ability to survive as a composer, combined with doubts about his own national identity and artistic direction, caused feelings of deep insecurity; these were increased by the ending of his relationship with Matla Temko, a violinist and student at the Berlin Hochschule, with whom he had a daughter. Poverty and debt forced him to leave Berlin in March 1933; he was repatriated to Athens by the Greek Embassy, leaving behind his musical manuscripts, which were later sold by his landlady.

On his return to Athens Skalkottas suffered a temporary nervous breakdown. His intended return to Berlin was prevented by the confiscation of his passport by the Greek authorities, and then by continuing financial worries and increasing political tensions in Europe. His former friends in Athens found his character had permanently changed; his youthful good humour and high spirits had turned into an introverted pessimism: cynical mistrust was masked as polite reticence. He met largely with indifference and hostility from the Athens critics and the leading figures of Greece's musical life, who had not forgotten the uncompromising works that had been heard during Skalkottas's previous visit to Athens in the winter of 1930–31, nor forgiven his withering criticisms of Greece's musical and cultural establishment. In 1934 he began to work as an orchestral violinist in the symphony and opera orchestras of Athens, and later also in Greek Radio SO. He remained in Athens for the rest of his life, through the artistically and politically restrictive years of the Metaxas dictatorship, World War II and the German occupation, during which he was arrested and detained for several weeks on the false suspicion of being a member of the Greek resistance, an experience he endured with stoic fortitude, although it crucially affected his health, and almost certainly led to his early death. Even during the following five years of civil war, Skalkottas remained detached from outward events: during the revolution in Athens in 1944–45, as bombs exploded close to his house, he continued to compose the Concerto for two violins and orchestra, drawing staves on cigarette-paper when his supply of manuscript paper ran out.

Skalkottas had little contact with other artists, composers or writers in Greece, and appeared to accept and even relish the solitude that left him with the time and freedom to compose as he wished. Eventually he married in 1946 and had two children. The day before his second son was born, Skalkottas died of a strangulated hernia, which, with characteristic self-neglect, he had ignored until too late.

During his years of depression (1932–4) Skalkottas wrote little; but from 1935 onwards, often late at night after he had completed his orchestral duties, he composed a large number of 12-note and atonal works, at rapid speed, and with apparently few sketches. He worked in extreme isolation, having no opportunity for further contact with Schoenberg (who later in his book *Style and Idea* declared him to be one of the most talented of his pupils) or with other European composers, and knowing little of further musical developments in contemporary music outside Greece – even after World War II. His mind

Nikos Skalkottas

instead remained fixed on the world of Weimar Berlin, even to the extent of writing German tempo and expression marks in his scores, and occasionally corresponding in German with Temko and other friends from his Berlin years.

Though aesthetically far removed from the folkloristic romanticism of the then fashionable 'national school' of Greek composers such as Petrides and Kalomiris, he nevertheless attempted to meet the taste of what he called (without irony) the 'great Greek public', with tonal ballet suites and symphonic works composed in a deliberately popular style and intended for performance by the Athens State Orchestra. His one great success in Greece was with the *36 Greek Dances* for orchestra, a project he had conceived in Berlin in 1931; the *Dances* were based on Greek folksongs, some of which the composer transcribed from recordings from the Athens archive project of Samuel Baud-Bovy and Melpo Merlier. The few *Greek Dances* which were heard in the composer's lifetime were frequently performed by the 'State' Orchestra, and in the USA (conducted by Mitropoulos). But the atonal music Skalkottas composed in the Athens years remained unknown, undiscussed and unperformed – except in private, with a few close friends – until after his death.

2. WORKS. Throughout his career Skalkottas remained faithful to the neo-classical ideals of *Neue Sachlichkeit* and 'absolute music' proclaimed in Europe in the 1920s. He persistently cultivated classical forms: variants of sonata, rondo, binary, and – particularly in earlier works – ternary form, within the traditional genres of suite, concerto, sonata, duo, trio and quartet, all generally in three movements. His music is characterized by a strong motoric drive, a kind of baroque energy shared by other

contemporary composers such as Hindemith and Honegger. Titles for full-scale works are often reticent (e.g. Suite and Sonatina) and symphonic movements are often cast as stylized suite types (e.g. the March and *Sicilano-Barcarolle* from the First Suite for orchestra, and the Toccata from the Second).

Skalkottas's individual style is already apparent in the high-spirited music composed during his years in Berlin, although the textures are sparser and leaner than in later works. After a few piano pieces in a simple tonal style (the *Greek Suites* of 1924, AK79) and a String Trio and Quartet (now lost) came the extraordinarily mature, polytonal Solo Violin Sonata of 1925. From 1927 onwards, Schoenberg was a crucial technical influence. With the *15 Little Variations* for piano (1927) Skalkottas's language became completely atonal, and he began to use a serial approach similar to that of Schoenberg's *Klavierstücke* op.23, although of the handful of the Berlin works of 1927–31 which have survived, only the First Piano Concerto and the second and third movements of the Octet use 12-note writing with any consistency.

During the unproductive years of his personal crisis (1932–4), he worked mainly on planning and sketching the *Greek Dances*. But the year 1935 saw a prolific stream of works composed, for the first time, in a fully 12-note technique, chief among them the Suite no.1 for orchestra, based on themes sketched out in Berlin in 1929. Two-thirds of Skalkottas's output (49 of his 74 atonal and 12-note works, 62 of which have survived) was written during the years 1935–45. A passionate expressiveness alternates with a more wistful tone, and a sometimes biting sense of humour. Movements are often quite long, e.g. in the Violin Concerto, Second Piano Concerto, and Second Symphonic Suite, and most notably in the Fourth String Quartet, the Third Piano Concerto and the orchestral Overture to an unwritten opera, *Ē epistrophi tou Odysseus* ('The Return of Ulysses') – a 30-minute epic sonata-form movement whose atmospheric opening depicts Ulysses waking up on the beach of the island of the Phaecians at dawn, after his shipwreck the previous night. (The subject of the suffering hero's return and rehabilitation may well have had a poignant meaning for the composer, who did not hear a single modernist work of his publically performed after 1931.)

Most of the large-scale works of 1933–45 are dodecaphonic, but from about 1938, Skalkottas also began to compose several works in a parallel atonal style, e.g. the Sonata no.2 for violin and piano, the *Sonate concertante* for bassoon and piano, the *Variationen über ein griechisches Volksthema* for piano trio, and the concertos for double bass, and for violin and viola. Themes and textures of this idiom (which partly derives from an approach he had already used much earlier in Berlin works such as the First Piano Concerto and Octet) frequently contain most or all the 12 notes of the chromatic scale within a brief space, and material is often transformed by using serial techniques, including retrograde transformation. However, Skalkottas allowed himself more latitude to develop his material spontaneously, with decorations, arpeggios, repetitions of notes and phrases, and deliberately neo-Romantic gestures, moments of tonal or polytonal association, and touches of parody or humour (as in the finale of the *Sonate concertante*).

A number of pieces in this freer atonal style have movements which are strikingly brief. This group includes the Piano Suites nos.2–4, the *10 Musical Sketches*, the cycle of *16 Songs* and the *32 Piano Pieces*. In these shorter movements, baroque types (e.g. passacaglia, chorale, canon) and other monothematic forms are found alongside dance-genres (minuet, gavotte, scherzo, waltz etc.), character pieces (such as nocturne, intermezzo, serenade, partita and capriccio) and miniature variation movements, such as *Variations on a Mountain Theme* from the *32 Piano Pieces*. Some of these, with their musical scene-painting and dramatic effects such as tremulo and glissando, and titles such as *Catastrophe in the Jungle* and *The Young Girl's Morning Serenade*, clearly reflect the composer's nostalgic memories of playing and improvising music for the silent cinema in Berlin in the 1920s.

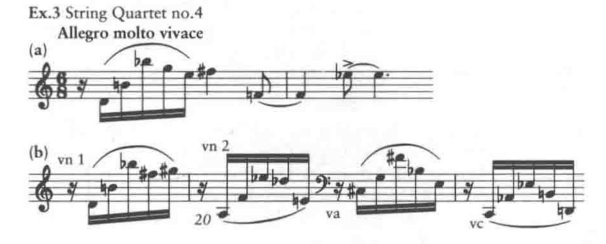
Even in shorter pieces, such as the Rondo for violin and piano, Skalkottas employs large amounts of quite diverse material. In his large-scale works, movements often contain a large number of themes and subsidiary motifs, and many sonata-form movements have a 'development' section consisting largely of entirely new material. At the same time, single motifs are greatly extended, as in ex.1,

Ex.1 *Ulysses* overture

whose ostinato rhythm is heard over large stretches of the main allegro of the *Ulysses* overture. Skalkottas tends to maintain textures more continuously than Schoenberg or Berg, and the periodic structures of his themes are more symmetrical (ex.2).

Yet his approach is no less formally complex than that of the Second Viennese School. Themes and motifs often reappear in a different order, producing mosaic-like fantasia structures such as the Preludio from the First Piano Suite, or the slow movement of the Second Piano Concerto. Material is transformed – sometimes beyond recognition – by serial procedures; for example the recapitulation of the *Overture concertante* in the Second

Ex.2 Symphonic Suite no.1, 1st movt



Suite for orchestra is a strict retrograde of each section of the exposition.

In Skalkottas's 12-note works, diversity is guaranteed by the use of an often large number of different series in each movement, in polyphonic combination and horizontal succession (see ex.2). The First Suite contains 40 series, between three and 12 in each movement. Such series are usually unrelated, except by isolated two- or three-note correspondences. (In ex.2 series 1 and 2 share the E♭–G♭–B♭ triad, and series 2 and 3 share the group D–A–E.) In other works, such as the Violin Concerto, or the *Ulysses* overture, Skalkottas often writes a theme consisting of a succession of many series without any obvious relationship between them, except for fleeting melodic or harmonic correspondences. Prime and retrograde forms are used freely, but transpositions appear rarely and inversions almost never. A flexible means of development is given by the playful permutation of the notes of the series, within – and often between – the two- to five-note groups into which it is often divided. Permutation, and the use of several different series, both procedures originating in Berg's *Lyrische Suite*, create an extreme variety of pitch content, increased still further by many irregularities in the row (such as repetition or omission).

Skalkottas's use of a large number of rows allowed him to imitate melodic motifs with considerable freedom, so that they correspond in contour, rather than in exact detail. Examples of this are at the opening of the First Symphonic Suite for orchestra (c.f. the antecedent and consequent in ex.2), and the Fourth Quartet (c.f. the opening in ex.3*a* with the four variants in ex.3*b*).

This kind of ongoing development, which has parallels in the music of Bartók, is exploited even more flexibly in Skalkottas's works in freer atonal style, whose melodic and harmonic language is often as dense and compressed as in the 12–note works of the same period. For example, in ex.4, 11 of the 12 chromatic notes are heard in the

Ex.3 String Quartet no.4

violin part in the opening two bars, and 8 of the 12 notes are heard in the combined violin and piano parts within the first two beats of the first bar.

Ex.4 Violin Sonata no.2, 1st movt

Textures are often highly contrapuntal (the 17–part opening of the Little Suite for strings is an extreme case) and the constant crossings of parts give an extreme complexity to even the most simple instrumental combinations. As in ex.4, voices are often concealed in chordal writing. Canonic and imitative writing are often used, notably in the extensive fugato sections of the *Ulysses* overture and in the finales of the Piano Trio and the *Variationen über ein griechisches Volksthema*. Rhythmically, Skalkottas's music is strongly influenced by Stravinsky in its use of ostinatos and crossrhythms and continual syncopation against a strong rhythmic pulse. Melodic lines are disjunct yet quasi-vocal as in the instrumental music of Berg. Harmonically Skalkottas follows Schoenberg's principle of avoiding octave-doublings, but the frequent melodic and chordal use of 3rds, 4ths, 7ths, and even triads, sometimes produces the fleeting effect of localized tonality, particularly in some rather lighter-textured works composed after 1939 such as the Concertino for oboe and piano. The influence of jazz-rhythms – filtered through Stravinsky, Krenek and Weill – is apparent in the *Ragtime* from the *10 Musical Sketches*, some of the *32 Piano Pieces* and the two rather skittish quartets for piano and wind, part of a group of works which the composer intended to be performed in a single concert.

Skalkottas's creative energy appears to have slackened after 1944. Orchestral playing and family duties took up more time than before, and compositionally he was occupied largely with writing tonal works, such as the Piano Concertino, Sinfonietta, *Klassikē symphōnia* and several ballet suites, which he hoped would please the public in Athens. Generally effective, workmanlike pieces, their colourful orchestration is rarely matched by the quality of their themes and their development, though the ballet score *Ē thalassa* ('The Sea') is a vivid exception. Skalkottas's main private compositional activity during these final years was the orchestration of the Second Suite for orchestra, left unfinished at his death. The handful of chamber works that he composed during the years 1945–9 have a much simpler, less dissonant melodic and harmonic language, though (except for the Little Suite no.2) they too employ a multi-series 12–note technique.

3. Folksong. For the *36 Greek Dances* Skalkottas drew not only on Greek folk melodies from the Merlier archive recordings, but on folktunes he had found in published collections, and popular songs as well. In spite of his love of Greek folk music (his mother had sung such songs to him as a child) he remained sceptical of the attempts of his Greek contemporaries to integrate it into the modern symphonic style. Although he did employ Greek folk materials freely in several tonal ballets, such as *Ē thalasssa*, he quoted folktunes in only a handful of his atonal and 12–note works, such as the slow movement of the Little Suite no.1 for violin and piano, and the central variation movement of the Concerto for two violins, which is based on a *rembetiko*, a nostalgic popular song by Vasilis Tsitsanis called *Tha pao ekei stin Arapia* ('I'll go to Arabia'). The 'Greek folk theme' which is the subject of the *Variationen* is in fact Skalkottas's own invention. Elsewhere he only occasionally uses the rhythms and metres of Greek folk music (e.g. the 7/4 *Greek Dance* in the *32 Piano Pieces*, and the 7/8 *kalamatianos* dance rhythms in the Rondo of the *10 Musical Sketches* and the finale of the Octet). Although mixed metres (such as 2/4 + 3/4 + 5/8) are found in several other works, e.g. the

Violin Concerto, they are more influenced by the examples of Stravinsky and Bartók than by Greek folk music. Only in one major work did Skalkottas juxtapose and mix folk, atonal and 12-note styles: the incidental music to Christos Evelpides's 1943 fairy-tale drama *Me tou magou ta magia* ('The Spell of May'), a Greek version of the Ondine legend. The Greek village atmosphere is provided by tonal folksongs and dances (some, such as the moving choral song 'Night has Fallen', with disturbingly chromatic ornamentation and harmonies), while the world of the supernatural is musically depicted by 12-note writing that subtly blends and contrasts lyrical fantasy with dissonant confusion.

4. Instrumental writing. Skalkottas wrote generally for large but conventional instrumental forces, although he also showed a particular fondness for wind ensembles (Third Piano Concerto, Concerto for wind and orchestra, Concerto for violin, viola and orchestra, *Klassikē symphōnia*) showing a debt to Stravinsky's *Mavra* and the Piano Concerto, Hindemith's Concertos op.36 and Weill. After a rather pointillist, mosaic-like orchestration of the Berlin years, the Athens works use larger forces and have more sustained instrumental lines. Remarkable sonorities are obtained by exploiting the highest and lowest registers of instrumental groups; in the Double Bass Concerto and *Ulysses* overture, the Impressionistic use of the harp as a continuo instrument gives the orchestral texture the quality of shimmering light. Effects such as the divisi tremulandos and slides in the second movement of the First Suite for orchestra, the gradual build-up of a 12-note chord in successive instrumental entries producing a massive crescendo in the *Romance* of the same Suite, the clusters in the last movement of the Third String Quartet, and the last bars of the *Largo sinfonico* from the Second Suite for orchestra, where 16 tutti pianissimo 12-note chords are heard, are all examples of Skalkottas's imaginative sound-world, which often seems to anticipate postwar trends.

Skalkottas's writing for instruments (solo and orchestral) is often extremely challenging, with its disjunct leaps, extremes of register and difficult double- and triple-stops for the strings. As the specially-composed music examples of his unpublished *Technique of Orchestration* show, Skalkottas expected the highest technical standards. Even a miniature such as the song *To phengari* ('The Moon'), composed for the coloratura soprano Margarita Perras, a friend in Berlin whose voice he knew well, has an almost impossibly high tessitura.

With its generally uncompromising demands on listener and performer alike, and its seemingly conservative formal and thematic aspects, Skalkottas's music has had only limited influence on postwar trends, even in Greece. In spite of the efforts of Iohannes G. Papaioannou, who both collected Skalkottas's manuscripts after the composer's death and promoted performances of his works, and of others such as the conductors Hermann Scherchen and Walter Goehr, the pianist George Hadjinikos, the publisher Alfred Kalmus and the musicologist Hans Keller, public interest in his music, which awakened in the two decades following his death, has since waned. Yet his importance goes beyond his historical position as a link between the Second Viennese, Busoni and Stravinsky schools, the imposing size of his output, or its consistency of approach; it lies rather in his ability to achieve in each work, within self-imposed conventions of form and style, a remarkable originality, range and power of expression.

WORKS

Edition: N. Skalkottas: *Complete Works*, ed. G. Schuller (Newton Center, MA: Margun, 1991–)

the A/K numbering is that of the Skalkottas Archive

JOHN THORNLEY

Skalovski, Todor (*b* Tetovo, 21 Jan 1909). Macedonian composer and conductor. He studied composition with Milojević at the Belgrade Academy of Music and conducting with Markevich and Matačić at the Salzburg Mozarteum. Before World War II he worked as a music teacher and conductor in various Yugoslav towns. After 1945 he became one of the leading figures in the musical life of Macedonia: he was manager of the Macedonian Opera and the Macedonian PO; founder-director of the Radio Choir; and head of music programmes at Skopje radio. He has appeared as a guest conductor in former Yugoslavia and abroad, and is a member of the Macedonian Academy of Sciences and Arts. His work draws on Macedonian folk music; particularly valuable are the notably melodic choral pieces.

STANA DURIĆ-KLAJN

Škampa Quartet. Czech string quartet. It was formed in 1989 at the Prague Academy of Musical Arts by Pavel Fischer (*b* Zlin, 1965), Jana Lukášová (*b* Sušice, 1967), Radím Sedmidubský (*b* Prague, 1964) and Karel Snětina. Its teachers were Milan Škampa and Antonín Kohout of the Smetana Quartet. After further studies with Piero Farulli of the Quartetto Italiano, Walter Levin of the LaSalle Quartet and members of the Amadeus Quartet, the quartet won a prize at the Premio Vittorio Gui in Florence in 1990. The following year it won the Charles Hennen Competition in the Netherlands and in 1992 a special prize from the Czech Chamber Music Society. Jonáš Krejčí became the group's cellist that year and in 1999 he was replaced by Peter Jarůšek (*b* Bratislava, 1976). The Škampa Quartet was resident ensemble at the Wigmore Hall, London, from 1994 to 1999 and has toured widely, playing a repertory ranging from the

Classical era to the late 20th century. The group's full-toned, committed style, based on a secure technique, has brought it wide acclaim.

TULLY POTTER

Skelly, Joseph P(aul) (*b* Ireland, 29 June 1850; *d* New York, 23 June 1895). American composer. He came to New York about 1854. In the 1870s he worked briefly as a plumber before turning to music. He was alcoholic and tubercular and had no fixed abode; as one of the few songwriters whose poverty and intemperance truly conformed to popular stereotypes, he was easily exploited by publishers. Between 1873 and 1895 Skelly produced over 1000 songs. At first he specialized in comic, topical and 'seriocomic' pieces, and was the principal composer for such variety stars as Tony Pastor, Pat Rooney and Gus Williams. After 1880 he turned increasingly to sentimental ballads, setting texts by himself and by George Cooper. His career peaked around 1883, declining when the public began to prefer more elaborate, melodramatic works.

Skelly's songs are modest in scope and harmonically unsophisticated; he was a gifted melodist who drew on simple Irish and Italian idioms in a way that sometimes recalls Stephen Foster. Because Skelly had only one major success, *My Pretty Red Rose* (1877), his importance to popular music is often underestimated; his songs contributed significantly, however, to the evolution of both sentiment and ethnic stereotypes in late 19th-century American culture.

WORKS
(*selective list*)

all for 1v, pf, most published in New York; words by Skelly unless otherwise stated

Irishmen to the Front (W. Scanlon), (1875); I've only been down to the club (1876); My Pretty Red Rose (1877); Far from the Old Home (G. Cooper), (1881); The Old Rustic Bridge by the Mill (1881); One of the Finest (G. Williams), (1882); A boy's best friend is his mother (H. Miller), (1883); Little Ah Sid (?Skelly), (1883); Little darling, dream of me (1883); Strolling on the Brooklyn Bridge (Cooper), (1883); Sweet Dreams of Mother and Home (Cooper), (1885); A Letter from Kathleen (1889); Bring my laddie back to me (1893)

WILLIAM BROOKS

Skempton, Howard (*b* Chester, 31 Oct 1947). English composer. He studied at Ealing Technical College while taking composition lessons with Cardew, first privately (1967–8) and then at Morley College (1968–71), where, with Cardew and Parsons, he founded the Scratch Orchestra in 1969. Since 1971 he has worked as a music editor for several publishers and is active as a performer of his own compositions (as a pianist and, especially, an accordionist) as well as a teacher. In 1991 he was a visiting lecturer in composition at the University of Adelaide.

Skempton was associated from the outset of his career with the English school of experimental music which evolved in the late 1960s out of Satie, Cage, Feldman and others, in which he, in common with Cardew, played a significant part. Webern and La Monte Young, as well as Feldman, were strong formative influences on the development of Skempton's style, which from as early as *A Humming Song* for piano (1967) was characterized by concentration on sonority, economy of means, clarity of texture, low dynamics, slow speeds and non-developmental forms of considerable brevity.

From 1970, a greater metrical clarity began to augment this approach, producing a music which quickly turns from the paradigmatic experimental flatness of *Waltz* for piano (1970) towards the ambiguous rapprochement with tonal motion well exemplified by his next piano piece, *First Prelude* (1971). Constructivist techniques continued to be a feature of Skempton's compositional methods, especially during the 1970s, and this aligned him not only with musical minimalism but also with the work of artists such as Peter Lowe and Jeffrey Steele. The range, both structural and expressive, of his output nevertheless expanded through the 1970s and 80s, exploring traditional tonal procedures and, increasingly, extending the emphasis on melody which was already a feature of *Waltz*. The piano pieces that run like an unbroken thread through his career effectively demonstrate this expansion, leading to a work such as the longer, more sectional and varied *The Durham Strike* (1985); their champions include Michael Finnissy and John Tilbury. The many accordion pieces that the composer has written for himself to play reveal these developments from a different angle, delighting in their different conjunctions of popular idioms and a formal abstraction which derives in considerable part from the restricted nature of the instrument itself. Skempton's diverse chamber output includes several pieces for two drums, most of them written in the mid-1970s for performance by Parsons and the composer.

The more empirical approach to structure that Skempton deployed from the early 1980s, together with a desire to synthesize the various stylistic areas explored over many years composing almost exclusively for solo and duo forces, led to the creation of works for larger forces and of longer duration; no single work until then lasts much more than 15 minutes, however, except for the half-hour cycle of 20 piano pieces for a television series called *Images*. Landmarks in what can also be identified as a response to the wider audience his music has gained during this period include *Lento* for orchestra (1990) and the series of concertos composed during the 1990s. The latter includes a pair of double concertos in which Skempton bestows his characteristic favours on some of the less-favoured members of the Western instrumental pantheon, the hurdy-gurdy in one, the accordion in the other.

KEITH POTTER

Skēnē. In ancient Greek theatre, a building extending behind the length of the platform on which the actors performed. It provided a kind of 'dressing room' for the actors and also functioned as a background to the action. Originally a simple structure, it became more elaborate in the 5th century BCE and eventually acquired projecting wings. Its roof sometimes served as a raised stage for theatrical action at a higher level (*see* THEATRON).

THOMAS J. MATHIESEN

Škerjanc, Lucijan Marija (*b* Graz, 17 Dec 1900; *d* Ljubljana, 27 Feb 1973). Slovenian composer, conductor, pianist and writer on music. He studied in Ljubljana, at the Prague Conservatory (1920–21), and at the Vienna Academy (1922–4) with Marx for composition and Trost for the piano. His education was completed at the Schola Cantorum under d'Indy for composition (1924–7) and at the Basle Conservatory under Weingartner for conducting (1930). From 1922 Škerjanc taught music in Ljubljana and in 1926 he was appointed composition teacher at the conservatory. He moved to the Academy of Music in 1940, remaining there until 1970 and acting as rector from 1945 to 1947. In addition he was conductor of the Musical Centre orchestral society (1925–45), director of the Slovenian PO (1950–56) and a member of the Slovenian Academy of Sciences and Arts from 1949. He composed mostly in a lyrical, marked late Romantic style with Impressionist influences, though he passed through a brief Expressionist phase in the late 1920s and employed 12-note techniques in the late 1950s.

ANDREJ RIJAVEC/IVAN KLEMENČIČ

Škerl, Dane (*b* Ljubljana, 26 Aug 1931). Slovene composer. He studied composition with Škerjanc at the Ljubljana Academy of Music and, after his graduation in 1952, continued his studies in Austria, at the Cologne electronic music studios and elsewhere in the former German Federal Republic. Škerl was then active as a conductor and teacher: he taught at various Ljubljana music schools, directed the Šturm Music School (1954–60) and was on the staff of the Sarajevo Music Academy from 1960 to 1970. Thereafter he taught composition at the Ljubljana Academy until his retirement in 1995. He wrote in a pleasing neo-classical style in the fifties, touching on expressionism and serialism in the sixties and afterwards developing both components in his clear musical language.

Sketch (Fr. *esquisse*; Ger. *Skizze*; It. *schizzo*). A composer's written record of compositional activity not itself intended to have the status of a finished, public work. A sketch may record work in progress on a specific composition or may be made independently of any such project; while typically fragmentary or discontinuous, even consisting of no more than a few notes, a sketch may also represent a more fully worked-out musical idea. Even though a sketch might be sufficiently extensive and fully notated as to be performable, its origin as an essentially private notation distinguishes it from a composer's manuscript of a completed work (*see* AUTOGRAPH), a document typically intended as the basis for subsequent copying and publication. The term 'sketch' usually refers to an idea recorded in musical notation, but may be extended to include verbal remarks or the numerical tables and rows frequently used in the composition of serial works. While some writers (see Benary, *MGG2*) attempt to distinguish, principally on grounds of length and completeness, between 'sketch' (*Skizze*) and 'draft' (*Entwurf*), such distinctions cannot be rigidly maintained; a distinction between sketch and draft, on one hand, and 'fragment', on the other, may be more tenable inasmuch as a fragment may frequently (though not exclusively) refer to all that survives of a formerly complete score, or of a score initially intended to record a complete, finished composition. This last distinction signals the relevance of any presumed compositional intent in categorizing the often overlapping functions of such manuscript sources of music. The term *particella* (It.) or *Particell* (Ger.) is sometimes used for the kind of compressed short score used by some composers (such as Schubert and Wagner) as part of the composition procedure.

The sketching of music in the senses defined above is probably as old as the notation of music itself; but the manuscript evidence, and the consequent scholarly engagement with sketch materials, is concentrated heavily in the 19th and 20th centuries. For music in the period before 1600 it is likely that much initial sketching and drafting was done on erasable tablets (*cartelle*), after which the emergent composition would be transferred to paper. Recent research has identified manuscripts in the hands of Fabri, de Fogliaris, Corteccia, Isaac, Palestrina, Pujol, Rore, Wert and others, which bear evidence of compositional work, including the sketching of polyphonic music in quasi-score format and the use of tablature for instrumental music (see Owens, 1997). The quantity of post-1600 sketch material that survives is not extensive for the Baroque period, but increases considerably thereafter. The quantity of material surviving in the hand of a given composer may depend not merely on the passage of time but largely on individual psychology: Brahms, despite his scholarly interest in earlier music and his possession of an important collection of autographs, habitually destroyed his sketches. By contrast, Beethoven's attachment to his sketches as opposed to autograph manuscripts was so extraordinary that his is undoubtedly the most celebrated corpus of sketches to have survived, and no discussion of the term can afford to skirt their importance.

Beethoven's sketching habits were a subject of curiosity even in his own lifetime, and it is no exaggeration to say that the branch of musicology called 'sketch studies' derives directly from scholarly engagement with the Beethoven sources. Several thousand sketch manuscripts survive, in a variety of physical formats ranging from single leaves or small bound or unbound bundles to professionally made sketchbooks (in so-called 'desk' and 'pocket' book formats), almost all of which were partially or totally dismembered relatively soon after the composer's death. The characteristics of the sketches themselves are also wide-ranging: although Beethoven typically worked using single-line melodic drafts, with occasional indications of supporting harmony, sketches may also consist of passages of harmony, and even, as in the case of the 'score sketches' associated particularly with the late quartets, approach the status of fully notated draft scores. (This last sketch type, sometimes referred to as a *Brouillon* although Beethoven himself seems to have used the term *Concept*, further illustrates the considerable functional overlap, noted above, that exists between types of manuscript evidence of the compositional process.) Even Beethoven's autograph manuscripts are typically less a post-compositional record of the finished work than the site of continuing compositional activity; as such, they may take on the status of very late sketch manuscripts. Many autographs illustrate Beethoven's dependence on a 'cue-staff' as a transitional notation between sketchbook and fully scored work.

The history of scholarly engagement with Beethoven's sketches – which is essentially to say, with composers' sketches – begins in the period 1860–1880, with the bibliographical and biographical labours of Alexander Wheelock Thayer and Ludwig Nohl, and above all with the work of Gustav Nottebohm, whose familiarity with the sources decisively outstripped not only that of any of his contemporaries but of anyone else for the next hundred years. The few early 20th-century figures such as Heinrich Schenker (in his *Erläuterungsausgaben* of the late piano sonatas) and Paul Mies (see Mies, 1925), who attempted to interpret the sketches in relation to finished works, tended to rely heavily if not exclusively on Nottebohm's partial transcriptions. Despite the inauguration, by the Bonn Beethovenhaus in 1952, of a complete edition of the sketchbooks in facsimile and transcription, the real continuation of Nottebohm's work is to be found in that of Alan Tyson, who, along with Douglas Johnson, Joseph Kerman, Richard Kramer, Lewis Lockwood and Robert Winter, began in the late 1960s and the 1970s a sustained period of intensive research into the original structure of the sketchbooks and of Beethoven's working methods. The same decades also saw the flowering of sketch studies in relation to numerous other composers, principally of the 19th century (Wagner, Berlioz, Chopin and Schumann are conspicuous examples), but also including Robert Marshall's work on Bach and Tyson's monumental contribution to the study of Mozart's autograph manuscripts and fragments. Although the 1970s and early 1980s seem in retrospect to have represented a high-water mark for sketch studies, activity in the field has remained strong, with attention being turned to Baroque opera (Rameau), late 19th- and 20th-century composers (Mahler, Wolf, Berg, Webern, Stravinsky, Bartók, Honegger, Dallapiccola, Tippett and Maxwell Davies, among others) and popular music.

Of all these composers it is perhaps Mozart, whose fabled compositional facility had for so long been the stuff of popular legend, whose image has been most substantially modified by the results of sketch research. While Tyson's principal contribution has been the redating of a large number of works, and the reassignment of existing fragments to completed compositions, Ulrich Konrad's edition of the surviving sketches (in the Neue Mozart-Ausgabe) provides imposing evidence for Mozart's famous claim, apropos his 'Haydn' quartets, that composition could be 'una lunga, e laboriosa fatica' (see also Konrad, 1992). Although, as László Somfai has pointed out ('Sketches during the Process of Composition', 1996, p.53), 'the total quantity of surviving Mozart sketches is confusingly small compared to his output and is unevenly distributed chronologically', this has not deterred the formation of working hypotheses concerning what one writer, in another context, has called Mozart's 'standard operating procedure[s]'. Somfai's own major contribution to the field of sketch studies has been in relation to the music of Bartók, though he is also one of those who have tackled what little survives from Haydn's working papers. Schenker had been something of a pioneer here too, with his 1926 facsimile publication of a sketchleaf for the 'Chaos' music from *The Creation*; nor should one overlook Schenker's role, in association with the Haydn scholar Anthony van Hoboken, in the foundation of the Hoboken Photogramm-Archiv at the Österreichische Nationalbibliothek.

The motivations for sketch studies are various. Sketches may yield information about work chronology; and the study of a composer's working methods is broadly an aspect of biography. More controversial is the use of sketches in the completion or 'realization' of unfinished works (the list of such attempts includes Mahler's Tenth and Elgar's Third Symphony, as well as a putative 'tenth' symphony by Beethoven; Act 3 of Berg's *Lulu*; attempts to 'finish' Mozart's Requiem stretch from the late-18th-century efforts of Eybler and Süssmayr to late-20th-century attempts by Franz Beyer, Richard Maunder, Duncan Druce, Robert Levin and others). But the most common motivation has been an interest in the compositional process in relation to specific works: the 'biography' of the composition, as it were, rather than of the composer (though it should be obvious that 'compositional process' denotes a spectrum of activities far too complex to be equated simply with the writing of sketches). While any research along these lines will necessarily be partly dependent upon the survival of a critical mass of material, it also tends to proceed from a particular understanding of the composer as original creative artist and of the musical work as an organic and teleological whole. These factors, the first a matter of fortuity and the other two of ideology, have tended to dictate the choice of composers and works studied; again, Beethoven is crucial.

Although Nottebohm's was to be the seminal work, earlier reproductions of Beethoven's sketches had appeared in publications by Anton Schindler, Ignaz Ritter von Seyfried and Hermann Hirschbach dating from 1832–44; and in 1850 J.C. Lobe incorporated some of these examples into an account of the compositional process published in the first volume of his *Lehrbuch der musikalischen Komposition*. Lobe's account posits four 'Procedures' (*Prozeduren*), the third of which is defined as 'vollständige Skizzirung', while the first two are also presumed to lead to a notational record in the form of more fragmented 'sketches'. While Lobe's incorporation of Beethoven's sketches into his modelling of the compositional process is significant in that his work significantly predates Nottebohm's publications, it would be wrong to assume that his model was based principally upon first-hand observation of Beethoven's working methods. Rather, Lobe's discussion was heavily indebted to that adumbrated by H.C. Koch in the second volume (1787) of his *Versuch einer Anleitung zur Composition*. Koch's scheme, while deriving ultimately from the categories of classical rhetoric as reformulated in 18th-century aesthetics, stemmed more directly from J.G. Sulzer's model of the process of artistic creation in his *Allgemeine Theorie der schönen Künste*, first published in 1771–4. Both Koch and Sulzer recognized the role of the 'sketch' (*Entwurf*) in fixing on paper the sequence of ideas generated in the 'invention' (*Erfindung*) and the subsequent 'plan' (*Anlage*) of the composition, and both stressed that what is recorded in the 'sketch' relates to the overall design. In discussing the spiritual condition of the composer during the composition of the *Anlage*, Koch wrote (trans. from Baker and Christensen, 1995, p.187):

> if the composer has invented . . . the principal phrases of his piece, and if they appear to him as a complete whole, connected and accompanied by their principal harmonic features; . . . then he should lose not a moment to put [this beautiful whole] on paper as quickly as possible so that no idea, indeed, no feature of it is blurred or even obliterated by other ideas perhaps still crowding his fantasy.

In his own account of the creative process, Sulzer (unlike Koch) had devoted a lengthy article to *Entwurf*, observing that 'to sketch a work, one sets down its principal sections without working out any one of these sections, such that one sees nothing except their assemblage into a whole' (ibid, p.64). This emphasis on the whole is also a feature of Lobe's 'vollständige Skizzirung', which has been described as 'the mapping of the total structure from the resources created thus far' (see Bent, 1984, p.41). And these various descriptions of *Entwurf* and *Skizzirung* do in fact accord well with what scholars, borrowing from the terminology developed in relation to Beethoven's sketches, call a 'continuity draft', a notational form in which 'Beethoven can be seen fitting together the more fragmentary ideas made earlier into a coherent whole' (Cooper, 1990, p.105). However, it is clear from Sulzer's account of *Erfindung* that notation of one's ideas was understood as an option also at this primary stage of the creative process, and presumably at any later one too.

A distinction ought to be made between the attempt, with the aid of sketches, to reveal aspects of the compositional process in a given musical work, and the attempt to use the knowledge of that process to inform an analysis of the finished work. In practice, however, the first attempt tends to shade into the second, if only because in the great majority of cases sketch studies are devoted to well-known compositions about which analytical positions have already been staked out. (The fact that the vogue for sketch studies in the late 1960s and the 1970s coincided with the rise to prominence of music analysis of a decidedly 'formalist' methodological persuasion should not be ignored.) Yet in the same year that Allen Forte published a pitch-class set-based analytical study of *The Rite of Spring* drawing heavily on the published sketches, Douglas Johnson argued strongly that sketches are of strictly biographical import and of no relevance to the analysis of finished works. Beethoven's

sketches could merely confirm what could be gleaned from the work alone; or, if they differed significantly from the finished version, they 'could be safely characterized as failed experiments' (Johnson, 1978–9, p.15; but see also Johnson, 1998). The general response to this polemic was that Johnson's position – and especially his definition of what constitutes music analysis – was somewhat extreme, though a more recent detractor of sketch studies has even claimed that sketch analysis involves analysing the 'non-existent' (Griffiths, 1997, p.151). Nonetheless, publishing ventures such as the monograph series Studies in Musical Genesis and Structure, inaugurated by Oxford University Press in 1985, testify not only to a continuing fascination with sketches and other autograph sources antecedent to the definitive text of a work, but to a continuing faith in the potential for studies of the compositional process to enrich understanding of the work itself and to facilitate an engagement with those questions of 'good and bad, good and better' that lie in the domain not of analysis but of criticism (see Kerman, 1982, p.65).

Another writer has suggested that the usefulness of sketches to the analysis of finished compositions is related to 'the compositional system the sketches draw upon', and that 'sketches are most helpful for highly defined theoretical systems' such as common-practice tonality or serial composition (Hall, 1996, pp.4 and 11). But far from defining the relevance of sketches to the finished work, the present and future challenge may be rather to define the role of sketches and sketch studies in the context of a loss of faith in the notion of the organic, 'closed' work itself.

NICHOLAS MARSTON

Skiffle. A hybrid style of popular music that has affinities with jazz and country blues. The term 'skiffle' appears originally to have been applied in the USA during the 1930s to entertainment provided at rent parties, which encompassed blues, barrelhouse, boogie-woogie and other styles of black popular music. This music was revived in the 1950s, mostly by white groups, who learnt the repertory from touring black performers and from recordings. Skiffle bands played in a style loosely based on that of the spasm bands from New Orleans and such groups as the Mound City Blue Blowers led by Red McKenzie. They often included acoustic guitar, harmonica, kazoo, jug, washtub bass and washboard or drums, and the chordal and melodic instruments provided a simple three- or four-chord accompaniment to a vocal part.

While the skiffle revival of the 1950s embraced the USA and Germany, it gained most ground in Great Britain. The earliest recordings by Chris Barber (1951) and Ken Colyer (1954), made with skiffle groups drawn from their jazz bands, exemplified the style of such ensembles, but the best-known recording of the period was *Rock Island Line* (1954, Decca) by Lonnie Donegan with Barber's group. Donegan's work was modelled on that of the blues singer and guitarist Leadbelly. Donegan and his imitators enjoyed considerable popularity until about 1959, when skiffle gave way, both in the USA and Europe, to 'beat' music and to rock and roll.

□

Skillern, Thomas. English engraver and publisher, active in London. On the death of John Walsh the younger in 1766 two of his engravers, Thomas Straight and Thomas Skillern, set up in partnership on their own as engravers and publishers. They may have acquired the business of James Oswald on his death in 1769. The firm of Straight & Skillern lasted until about the end of 1777 and then split into two separate businesses. Straight evidently published and sold music only until about 1783, although his engraving activities continued into the 1790s and included some work on Arnold's Handel edition. Skillern

remained in business until 1802, his plates being subsequently bought by Thomas Preston. Besides books of pleasure-garden songs, country dances and the like, many single sheet songs were issued by both firms, often using only the letters 'Str: & Sk:', 'Str:', 'T.Sk:' or 'Sk:' as an imprint. A different Thomas Skillern, probably a son, set up as a music seller and publisher at a new address around 1802; on being joined by Neville Butler Challoner about 1806 the business became known as Skillern & Challoner (sometimes simply Skillern & Co.), and survived until about 1826. (*Humphries-SmithMP; KidsonBMP*)

PETER WARD JONES

Skilton, Charles Sanford (*b* Northampton, MA, 16 Aug 1868; *d* Lawrence, KS, 12 March 1941). American composer. He was awarded the BA at Yale (1889), taught languages at Siglar's Preparatory School, Newburgh, New York (1889–91) and then went to the Berlin Hochschule für Musik (1891). His teachers, in the USA and Europe, included Woldemar Bargiel, Otis Boise and Dudley Buck (composition) and Harry Rowe Shelley (organ). He taught in Salem and in New Jersey before becoming professor at the University of Kansas in 1903. While working at the Haskell Institute, near the university, he became acquainted with the music of Amerindians (for whose benefit the institute had been established). His enthusiasm for this music soon became apparent in his own works. The opera *Kalopin*, based on an Amerindian story, received the David Bispham Memorial Medal of the American Opera Association of Chicago. He also introduced Amerindian motifs into instrumental works such as the *Suite Primeval* and *American Indian Fantasy*. Skilton belonged to that group of American composers of the first quarter of the 20th century (others were Cadman, Farwell, Gilbert and Nevin) who saw Amerindian music as a vital new source, and who incorporated tribal melodies and folklore into their major works. Though the movement quickly waned, it played an important part in establishing the maturity and independence of American music.

WORKS

Ops: Kalopin (3, V.N. Palmer, after Amerindian legend), 1927, unperf; The Sun Bride (1, L.W. Spencer, after Amerindian legend), 1930, NBC broadcast, 17 April 1930; The Day of Gayomair (prol., 2 scenes, A. Crafton, after F. Gerstäcker), 1936, unperf

Orch: Suite Primeval, 1920 [pt 1 = orchd version of 2 Indian Dances, str qt; incl. Sioux Flute Serenade]; East and West, suite, 1921, lost; Mount Oread, ov., 1928; Legend, *c*1928; Autumn Night, 1930; Ov., E, 1931; Ov., E♭, lost; American Indian Fantasy, vc obbl, orch, 1932 [arr. of org work]

Vocal: Lenore (cant., E.A. Poe), solo vv, chorus, orch (1895); Perviglium veneris (cant.), chorus, orch, 1916; The Witch's Daughter (cant., J.G. Whittier), S, Bar, chorus, orch, 1918; Electra (incid music, Sophocles), female chorus, orch, 1918; The Guardian Angel (orat, A.F. Brown), solo vv, children's chorus, chorus 4 vv, orch (1925); Mass, D, chorus, 1930; From Forest and Stream, female chorus (1930); Ticonderoga (cant., R.L. Stevenson), male chorus, orch, 1932; Mary Rose (incid music, J.M. Barrie), 1933; Communion Service, C, solo vv, chorus, org, orch, 1937; Zoo fantastique (L.W. Spencer), cycle of 6 songs, 1v, pf, *c*1940; The Ballad of Carmilhan (cant., H.W. Longfellow), inc.; *c*30 other choruses; *c*15 other songs

Chbr and solo inst: 2 Indian Dances, str qt, 1915; 3 Indian Sketches, pf (1919); Sonatina, vn, pf, 1923; Sonata, vn, pf, g; American Indian Fantasy, org, 1926; Kickapoo Social Dance, str trio (1928); Meditation 'Afterglow', org (1929); Shawnee Indian Hunting Dance, pf (1929); Str Qt, b, 1938; 5 Miniatures, pf, 1940; 8 other chbr works; 10 other org pieces; 2 other pf pieces; arrs. of his own works

DAVID E. CAMPBELL/MICHAEL MECKNA

Skinner, Ernest M(artin) (*b* Clarion, PA, 15 Jan 1866; *d* Duxbury, MA, 27 Oct 1961). American organ builder. At the age of twenty he was apprenticed to George H. Ryder of Reading, Massachusetts, where he worked for four years before going to the larger George S. Hutchings firm in Boston. He remained there for eleven years, working as a tuner, mechanic, draftsman and eventually factory superintendent. In 1893 he married Mabel Hastings, an artistically-talented woman who remained his companion until her death in 1951.

While at Hutchings's factory, Skinner was encouraged to experiment with action improvements. In 1892 he received his first patent (for a swell pedal action) and in 1893 devised the first electro-pneumatic action to be used in a Hutchings organ; by 1896 an improved version had been successfully employed in several instruments. By 1898 he had developed the first 'pitman' type individual-valve wind-chest. In the same year he visited England and France, where he became acquainted with the work of Willis and Cavaillé-Coll, and upon his return made some high-pressure reed stops based on Willis models which were utilized by Hutchings in his organ for Boston's Symphony Hall.

In 1901 Skinner left Hutchings to begin his own company in Boston. He completed a modest two-manual instrument in the following year, by which time he had obtained several more contracts and had entered into a brief partnership with James Cole. Robert Hope-Jones was briefly associated with Skinner in 1905–6, and shortly thereafter Skinner signed the contract for the first of his many prestigious church instruments, completed in 1910 for the Cathedral of St John the Divine in New York. His 'symphonic' tonal ideal was also coalescing in this early period, during which he developed such 'trademark' stops as the Erzähler (a soft string), Flügel Horn, and French Horn. In 1917 he published a book outlining his philosophies, and also introduced a player organ called the 'Orchestrator'. In 1919 the industrialist Arthur Hudson Marks (1874–1939) purchased a controlling interest in the company and became president, and in 1920 the firm expanded by acquiring the assets of the Steere Organ Co. in Springfield, Massachusetts. G. Donald Harrison (1889–1956), formerly with Willis, entered the firm in 1927, and soon was sharing sales and design responsibilities with Skinner.

In 1931 the organ operation of the Aeolian Co. of New Jersey was acquired, and the firm name changed to Aeolian-Skinner. Under Marks's control, Harrison began to assume greater responsibility, while Skinner's activities were increasingly curtailed. With his son Richmond he purchased the old Methuen Organ Co. factory in Methuen, Massachusetts in 1932 and commenced production in 1933 under the name of Ernest M. Skinner & Son. Much of the work done there was of a minor nature, the most impressive project being the rebuilding of the Washington Cathedral organ in 1938. Without significant

financial backing, Skinner was frequently in debt; he went bankrupt in 1942, and a year later the Methuen factory burnt down. Skinner set up shop again in Reading, Massachusetts, and engaged in some minor repair and rebuilding work assisted by Carl Bassett, to whom he sold his name and a few assets in 1949. Bassett continued to work under the Skinner name until 1970, when it was sold to a small company building 'pitman' chests in New Hampshire.

In its heyday Skinner's original firm was an innovative leader in American organ building, counting among its notable organs those in City College, New York (1906), the Eastman School of Music (1921), the Municipal Auditorium, St Paul (1921), Trinity Church, Boston (1926) and Woolsey Hall, New Haven (1929).

BARBARA OWEN

Skinner, Frank (Chester) (*b* Meredosia, IL, 31 Dec 1897; *d* Los Angeles, 9 Oct 1968). American composer and arranger. A graduate of the Chicago Musical College, he found early employment in vaudeville and went on to perform and arrange for dance bands. This work brought him to New York, where from 1925 to 1935 he arranged about 2000 popular songs for Robbins Publishing. By the time he left Manhattan for Hollywood, he had written two books on arranging for dance bands.

After a short period at MGM, working on musical settings for *The Great Ziegfeld* (1936), Skinner was hired by Universal Studios. Over the course of his 30 years there, he composed music for more than 200 films. Although he continued to work on musicals, he quickly mastered the art of dramatic scores, eventually earning five Academy Award nominations (1938–43). His distinctive approach to scoring horror films, such as *Son of Frankenstein* (1939) and *The Wolf Man* (1941), has been characterized as a 'passion for chromatic lines ... mirrored contours ... [and] restrained, yet ominously Mythical orchestrations' (Marcello). He gained new recognition in the 1950s for his lush romantic scores, including *Magnificent Obsession* (1954) and *Written on the Wind* (1956). Despite many changes in the film industry, his book *Underscore* (1950) has survived as an excellent introduction to film music composition.

WORKS
(*selective list*)

Film scores: Mad about Music, 1938, collab. C. Previn; Destry Rides Again, 1939; Son of Frankenstein, 1939; The House of the Seven Gables, 1940; Back Street, 1941; The Wolf Man, 1941, collab. H.J. Salter, Previn; Arabian Nights, 1942; The Amazing Mrs Holliday, 1943, collab. Salter; Harvey, 1950; Magnificent Obsession, 1954; Written on the Wind, 1956; scores for the Bonzo and Francis series

WRITINGS

PRESTON NEAL JONES

Skinner, James Scott (*b* Banchory Ternan, nr Aberdeen, 5 Aug 1843; *d* Aberdeen, 17 March 1927). Scottish violinist, composer and dancing-teacher. He was the younger son of a violinist, William Skinner ('Dancie'), who also taught dancing. At first he was accompanying cellist to his elder brother Alexander, a violinist, playing by ear. Then in 1855 he became one of a touring band of boy players, Dr Mark's Little Men, a charitable organization for orphan sons of musicians based in Manchester. For almost six years this gave him excellent instruction under the French violinist Charles Rougier (a member of the Hallé Orchestra). Just before his indenture ended he returned to Aberdeenshire to study dancing, mainly Scottish. He began teaching as soon as he had qualified under his 'professor' Scott, whose name he added to his own. Although his dancing won high distinction, his fiddling fame grew so fast that he decided to concentrate on solo playing and composition. He toured throughout Scotland, to London and even to the USA. His portrait by J. Young Hunter (1917) is in Dundee Art Gallery.

Skinner wrote over 700 works for violin, mostly in Scottish style, including certain pastorales which he developed from the slow strathspey form (he called himself 'the Strathspey King'). Some 600 items were published in collections, mostly at his own expense. His music is melodically rich, perhaps less original than that of Neil Gow, but technically denser and more demanding. *The Miller o' Hirn* (Elgin, 1881) is often named as the best collection, *The Laird o' Drumblair* as his finest strathspey and *The Bonnie Lass o' Bon Accord* as his best-known air.

Skjavetić, Julije. *See* SCHIAVETTO, GIULIO.

Sklavos, Georgios (*b* Braila, Romania, 20 Aug 1888; *d* Athens, 19 March 1976). Greek composer. He studied with Marsick at Athens Conservatory, graduating in 1913. From then until 1924 he taught history, harmony and counterpoint at the Athens Conservatory; he was professor there and at the Piraeus Conservatory between 1924 and 1968. Through his work in translating Riemann's history – published by the periodical *Moussika chronika* (Athens, 1933) – he was involved in the earliest attempts to develop a musical terminology in the scholarly

'katharevousa' language. He was also general director of the National Opera, Athens (1946–9) and for many years wrote criticism for reviews, such as *Helleniki dimiourgia*, and newspapers. Principally an opera composer, he belongs to the national school and his music treats folk or Byzantine ideas with colourful orchestration and Romantic harmonies that tend increasingly towards chromaticism and density of texture.

GEORGE LEOTSAKOS

Skočná (Cz.: 'leaping'). A fast Czech dance in duple time. In his manuscript *Thesaurus linguae Bohemicae* (Prague, Národní muzeum) the grammarian Václav Jan Rosa (1620–89) recorded the terms 'skočná píseň' ('leaping song') and 'skočný tanec' ('leaping dance') or 'skočná'; 'skočák' is a later and more colloquial variant. By the time Jungmann defined a *skočná* as a 'Bohemian dance' (1838) it was already well known from collections of folk and social dances and from references in literature (e.g. Šebastián Hněvkovský's poem, 1798, about a godless bagpiper playing a *skočná* on his instrument). Texts to which the *skočná* was sung are generally of a humorous nature (ex.1).

Ex.1 *Skočná* no.400 from K. J. Erben: *Nápěvy prostonárodních písní českých* (Prague, 1862)

The lack of further defining characteristics allowed the term to be used generically for other fast duple-time dances, such as the *vrták* ('turning dance'), *dupák* ('stamping dance'), *obkročák* ('straddling dance'), *třasák* ('shaking dance') and *břitva* ('razor'). From Smetana's stylizations of both a *skočná* and a polka added to his *Bartered Bride* in 1869, it is evident he saw little difference between the two.

In Moravia (late 19th century and 20th century) the term has been used for a competitive male dance, usually in duple time, in which the dancer attempts to jump higher than his rivals, at the same time hitting his heel with his hand.

JOHN TYRRELL

Sköld, (Karl) Yngve (*b* Vallby, Södermanlands län, 29 April 1899; *d* Stockholm, 6 Dec 1992). Swedish composer. He studied the piano with Andersson and counterpoint and composition with Fryklöf at the Swedish Royal Academy of Music (1915–18). In 1919 he passed the organists' examination and then went to the Brno Conservatory for further study (1920–22); back in Stockholm he passed the advanced examination in choir direction and music teaching (1933). He was pianist and organist to the Swedish film industry (1922–38), secretary and treasurer of the Swedish Occidental Association (1936–64) and music librarian to the Society of Swedish Composers (1938–64). His music, distinguished by restraint and technical solidity, is late Romantic, often tinged with national elements; the Symphony no.2 is particularly notable.

ROLF HAGLUND

Skolion (Gk.; Lat. *scolium*). Term applied to several different types of song performed at symposia (*see* SYMPOSIUM). Greek writers differ among themselves in their descriptions of the genre. Two characteristics of performance were common: the guests sang successively, perhaps most often in random order; and following the order of singers, a myrtle branch passed from guest to guest. Plutarch (*Table-Talk*, 615b–c) described the genre,

stating that it was named 'skolion' because of the intricate and twisted character of its path, an etymology based on the similarity among the terms *skólion*, *skolión* and *duskolos*. Among other things, *skolión* means 'winding' or 'obscure', while *duskolos* means 'difficult'. The *skolion* may therefore be seen as 'obscurely constructed', winding its way around the room from couch to couch, or difficult to sing. In some cases *skolia* may have been composed of verses improvised sequentially by each guest, whereas in other cases one guest might begin a traditional song by Simonides or STESICHORUS, hand the myrtle to another guest, who would be expected to continue the song until handing the myrtle to the next guest, and so on. In defining the *skolion*, Proclus (*Useful Knowledge*) adds that *skolia* could be biting or satirical in character and were influenced by Dionysian intoxication, an observation supported by Aristophanes' *Wasps* (1216–62), which offers a glimpse of singing at a symposium. Scholiasts commenting on *Wasps* observe that the songs were called 'skolia' because it was difficult to pick up a piece at some point in the middle without any warning or preparation. The scholiast to Plato's *Gorgias* (451e) states that *skolia* were so called because the drinking companions offered the sprig to each other in turn and those who did not sing were shown to be uncultured.

Athenaeus emphasizes the ancient and simple style of *skolia* and names ALCAEUS, ANACREON and Praxilla as famous exponents. 25 *skolia* are preserved in his *Sophists at Dinner* (xv, 693f–696a), and he suggests that the set could be viewed as representing a single performance. After the first 7 songs, there is a short interruption during which the guests comment on the song and one quotes a parody of it by Anaxandrides; the songs then resume. Athenaeus's arrangement of *skolia* 10–13, which can be combined to form a part of the 'Song of Harmodius', one of the *skolia* specifically mentioned in Aristophanes' *Wasps* (1225) and *Acharnians* (978–80 and 1093), provides a clear example of the way in which the verses of a traditional song could be passed from guest to guest. The text itself employs a constant measure and refrains. The first two lines of the first verse are repeated in the third verse, and the last two lines of the first verse are nearly repeated in the fourth verse. All this suggests a simple repetitive melody that would be easy for a group of symposiasts to pass from one person to the next, perhaps representing the free and convivial manner in which the *skolia* were performed. On the authority of Artemon Kasandreus (from whose collection the *skolia* were perhaps drawn), Athenaeus defines three types: an initial NOMOS sung by all the guests at the symposium; a sequence of verses in which the men would sing one after another; and a series of songs performed by select singers in whatever order occurred. This accords in general with Plutarch's description and with the scholiast to Plato's *Gorgias* where the definitions are ascribed to Dicaearchus's treatise on musical competitions. Athenaeus, however, asserts that 'skolion' does not refer so much to a particular type of composition as to the irregular performance, moving from person to person. The *skolia* presented by Athenaeus would seem to fall primarily in his second category: they are short and simple, with texts ranging over historical incidents, life in general and personal sentiment. None is satirical in the sense suggested by Proclus's definition.

The famous Epitaph of Seikilos, one of the surviving fragments of ancient Greek music (*see* GREECE, §I, 8(i)), has been frequently described since its discovery in 1883 as a *skolion*. Although this piece, inscribed on a tombstone, is short and simple in style, its context hardly suggests a *skolion*. Rather, the piece is an epigram, a short and simple verse commonly placed on grave stones and votive tablets. The scholiast to Plato's *Gorgias* made an explicit association between the epigram and the *skolion*, and the confusion of modern scholarship on this composition is not surprising.

THOMAS J. MATHIESEN

Skoryk [Skorik], **Myroslav Mykhaylovych** (*b* Lwów [now L'viv], 13 July 1938). Ukrainian composer and teacher. Skoryk entered the L'viv Music School in 1945, but in 1947 he and his family were deported to Siberia and were not permitted to return to Ukraine until 1955. He entered the L'viv Conservatory where he studied composition with Lyudkevych and Simovych among others; he then studied with Kabalevsky at the Moscow Conservatory (1960–64). He then joined the staff of the L'viv Conservatory and in 1967 that of the Kiev Conservatory, where he remained until 1988 teaching composers who include Balakauskas, Karabyts and Stankovych. He has occupied posts within the Ukrainian Composers' Union, has won the Shevchenko Prize – in 1985 for his Cello Concerto – and holds the title People's Artist of Ukraine. He is also active as a musicologist and editor of music publications. Unlike many of his countrymen who adopted an avant-garde stance in the 1960s, from around that time Skoryk largely relied on Carpatho-Ukrainian folklore in his works, firstly attracting attention with the *Hutsuls'ky tryptykh* ('Hutsul Triptych') derived from his score for Sergey Paradzhanov's film *Shadows of Forgotten Ancestors*. In subsequent orchestral works (First Violin Concerto and Cello Concerto) he developed a style in which a work is built from short melismas – derived from the synthesis of idiomatic folk rhythms and melodic formulae – which often succeed in asymmetrical phrases expanding by means of troping. In the 1990s he began to utilize various elements of popular music, earlier found in the Fifth Partita for piano 'in modo retro' (1975). Skoryk's works have been performed across Europe and the USA.

VIRKO BALEY

Skovhus, Boje [Bo] (*b* Århus, 22 May 1962). Danish baritone. After studying at the Copenhagen Opera Academy he made his début as Don Giovanni at the Vienna Volksoper in 1988. He became an instant favourite in that city and the role of Giovanni remained central to his repertory, the strong, bright voice being matched by a handsome and athletic stage presence. He first appeared at the Vienna Staatsoper in 1991 and within the next few years became well known in the leading German houses, adding such roles as Wolfram (*Tannhäuser*), Olivier (*Capriccio*), the Count in *Der Wildschütz* and Mozart's Count Almaviva (which he has recorded with Abbado). At Cologne in 1993 he sang the title role in *Billy Budd*, introducing himself to a wider audience that same year in a recording of Britten's *War Requiem*. Copenhagen honoured him with a production of Thomas' *Hamlet* in 1995. He made his Covent Garden début as Guglielmo in 1997 and his Metropolitan Opera début as Eisenstein (*Die Fledermaus*) in 1998. As a lieder singer Skovhus impressed strongly with his first Hugo Wolf recordings, but his command of the gentler emotions and of a true legato has sometimes been found defective. His wide concert repertory includes such works as Zemlinsky's *Lyrische Symphonie* and Berio's arrangements of songs by Mahler.

J.B. STEANE

Skowroneck, Martin (Franz Hermann) (*b* Berlin-Spandau, 21 Dec 1926). German instrument maker. After completing his secondary education in 1947 he studied music in Bremen, qualifying in 1950 as a teacher of the flute and recorder. While a student he had begun to make recorders for his own use because no instruments that satisfied him were available; soon he began to make recorders to order for other players. In 1952 a clavichord which had been badly damaged in the war was sent to him for restoration; while working on it he decided to build a clavichord for his own use, and this first instrument led to orders for historical keyboard instruments. Although he has had no formal training or apprenticeship in the craft of instrument making, he has made an intensive study of all the available historical keyboard instruments, especially the great collection in Berlin, as well as the documentary evidence of the construction techniques and materials used by the great harpsichord builders of the past. From 1953, when he built his first harpsichord, he devoted most of his time to building stringed keyboard instruments on historical lines, while continuing to teach the flute and recorder as a secondary interest.

Skowroneck has concentrated mainly on re-creating harpsichords of Italian design and in the early (Ruckers) and late (Dulcken) Flemish tradition, and instruments of these types have earned him great renown, especially through recordings by Gustav Leonhardt. When he began producing instruments of traditional design in Germany (independently and, in fact, unaware of Hubbard and Dowd's pioneer work in the USA) he initially encountered considerable opposition, not only from established German manufacturers of modern harpsichords, but also from a public which had come to accept the sound of such modern instruments as the tonal norm. It is partly due to the influence of his instruments and those of such like-minded German harpsichord makers as Klaus Ahrend and Rainer Schütze, that German harpsichordists have turned increasingly to reproductions of historical instruments for the performance of early keyboard music.

Since 1991 Skowroneck has added fortepianos to his production of harpsichords, clavichords, recorders and transverse flutes. He has restored several notable historical instruments. He described his view of restoration in a paper delivered at the 1970 Antwerp Colloquium. The application of the experience gained in restoration to theoretical knowledge acquired through historical research, and the relevance of both to the building of new instruments is discussed in his 'Probleme des Cembalobaus', which aroused considerable controversy in German instrument building circles at the time of its appearance.

HOWARD SCHOTT

Skramstad, Hans (*b* Toten, bap. 26 Dec 1797; *d* Bergen, 15 June 1839). Norwegian composer and pianist. Of peasant stock, he had no chance to study music as a child, and was probably mostly self-taught. Nevertheless, in 1819 he performed with the Musical Lyceum society in Christiania (now Oslo). During the years 1822–6 he gave concerts in various Norwegian cities, and in 1824 performed in Copenhagen. From 1826 to 1835 he spent some time in Paris and Lausanne, and possibly lived in Germany for a period. After returning home he attempted unsuccessfully to establish himself as a music teacher in Christiania. He never managed to gain a firm footing in Norwegian musical life, and when he was discovered

drowned in a pond, he was assumed to have committed suicide.

Of Skramstad's compositions four sets of variations and a few small piano pieces survive. One set of variations is on a Norwegian folksong, the others on contemporary popular melodies. These works represented something new for Norwegian music of the time. Earlier pieces in this form were purely figural variations, in some cases amateurish. Although their model is the Classical Viennese variation form, Skramstad's compositions come close in character to variations of the Romantic era in their frequent use of tempo change and their greater artistic pretensions. All four have a similar structure, beginning with an introduction, the theme and five to seven variations (of which the last is in a contrasting mode) and ending with an independent coda. The separate introductory and concluding sections are unusual for this period; they could even suggest to some extent a free variation form, but as their relation to the main theme is tenuous, they are probably best described as fantasia sections. The works are particularly interesting in their harmonic vocabulary, which is that of early Romantic music, in a fairly developed form. Skramstad made frequent use of the normal altered chords, but also of enharmonic changes, unexpected resolutions of dominant 7th chords and chromatic sequences of parallel 6th chords.

Skramstad's works represent the vanguard of Norwegian composition about 1830. Although he did not achieve an entirely coherent artistic position, his few surviving works brand him the first true Romantic among Norwegian composers.

NILS GRINDE

Škraup, Jan Nepomuk. *See* ŠKROUP, JAN NEPOMUK.

Skrebkov, Sergey Sergeyevich (*b* Moscow, 25 March/3 April 1905; *d* Moscow, 6 Feb 1967). Russian musicologist. At the Gnesin State Institute for Musical Education he studied the piano with Yelena Gnesina until 1927 and composition with Glière until 1928. He then attended the Moscow Conservatory, where he studied music history with Ivanov-Boretsky and theory and acoustics with N.A. Garbuzov; he also studied in the faculty of physics and mathematics at Moscow University, graduating in 1930. In that year he joined the staff of the State Insititute for Music Research and undertook work on acoustics with Garbuzov in the department of physiology and psychology. He taught harmony and counterpoint at the Moscow Conservatory (1932–67), becoming professor (1946) and head of the music theory department (1948). He was also head of the music theory department at the Gnesin State Institute (1944–9), and a research fellow at the Institute for the History of the Arts (1944–52). In 1935 he was awarded an honorary *Kandidat* degree; in 1945 he took the doctorate at the Moscow Conservatory with a dissertation on musical form.

Skrebkov made an important contribution to Russian theoretical musicology, and developed new analytical methods. He achieved a synthesis of scientific and musicological approaches to the study of music. His areas of interest were the universal laws of musical thought, the history and theory of polyphony, and Russian choral music from the 17th century to the early 18th. He also undertook studies into musical performance from a physical and acoustical point of view. The culmination of his study of musical style was the book *Khudozhestvennïye printsipï muzïkal'nïkh stiley*; it was published posthumously under the editorship of Vladimir Protopopov, who in his introductory essay described the work as 'an important step in the study of historical stylistic development in European music of the last 1000 years'. Skrebkov's wife, Ol'ga Leonidovna Bekman-Skrebkova (*b* Moscow, 17/30 Oct 1905; *d* Moscow, 28 Oct 1997), was also a musicologist; together they wrote a number of textbooks on harmony, polyphony and musical analysis.

Skriabin [Skrjabin], **Alexander Nikolayevich.** *See* SKRYABIN, ALEXANDER.

Škroup [Schkroup, Skraup], **František Jan** (*b* Osice, 3 June 1801; *d* Rotterdam, 7 Feb 1862). Czech composer and conductor, brother of JAN NEPOMUK ŠKROUP. His father, Dominik Škroup (1766–1830), a teacher and composer, introduced František and his brothers Jan Nepomuk and Ignác (1807–89) to music. At the age of 11, already a good flautist, he went to Prague to finish primary school, and supported himself as a choirboy. He continued his schooling at one of the most important Czech national revival movement centres, Hradec Králové, where he was a choirboy at the cathedral and studied with the local choirmaster and composer Franz Volkert (1767–1831); then he returned to Prague to attend university. From 1822 he studied law but also pursued acting, music teaching and performing. Skroup was particularly involved in Czech amateur charity opera productions, which started on 28 December 1823 when the Prague Estates Theatre first gave a Czech version of Weigel's *Die Schweizerfamilie*.

The aim of the young Czech national revival movement – to express the intellectual power of the Czech nation and its language in opera as one of the highest achievements of art – soon led from translations to more ambitious ventures, and inspired Škroup to compose his first opera, *Dráteník* ('The Tinker', 1826), a two-act Singspiel in 14 numbers. The libretto was by J.K. Chmelenský (1800–39), a lawyer, poet, literary and music critic and publisher of the first Czech music magazine *Věnec ze zpěvů vlastenských* ('A garland of patriotic songs', Prague, 1835–9), in which some of Škroup's vocal works also appeared. The plot is of the Viennese Singspiel type, while the libretto uses both Czech and Slovak; the music owes less to Mozart than to early Romantic Italian and French opera and German Singspiel. As required by the national revival feelings, Škroup tried to imitate Czech national song. *Dráteník* used to be regarded as the first Czech opera; in fact, since most of Škroup's principal predecessors and contemporaries wrote to German or Italian texts, he was a pioneer in this field only for his period and his circle, for there are many Czech 'folk' operas of the 18th century by Jan Antoš, Father Alanus Plumlovský, Karel Loos and F.V. Míča, among others.

After the success of *Dráteník*, in which Škroup sang the title role, he devoted himself entirely to music, theatre music especially. In 1827 he became second Kapellmeister at the Estates Theatre, in 1837 first Kapellmeister. He directed the company successfully up to 1857 when he was dismissed because of a disagreement with the director, J.A. Stöger. He then conducted various concert groups and opened a singing school; in 1860 he became Kapellmeister at Rotterdam opera, where again he achieved great success.

The opera and Singspiel repertory given by Škroup in Prague, as at any theatre of his time, consisted mostly of the works required by public taste: historical dramas, genre-scenes, fairy-tales and thrillers. But he did introduce to Prague many valuable works by Marschner, Spohr, Halévy, Meyerbeer, Lortzing, Gluck (*Iphigénie en Tauride*) and Verdi (*Nabucco*, *Rigoletto* and *Il trovatore*). He gave the first Prague Wagner productions (*Tannhäuser*, 1854, *Lohengrin* and *Der fliegende Holländer*, 1856), and also gave Beethoven's *Fidelio* and works by Mozart. He wrote insertions for *La Juive*, Cherubini's *Médée* and Bellini's *Beatrice di Tenda*. In his role as Kapellmeister he wrote much incidental music, especially for plays by J.K. Tyl, of which the most famous is *Fidlovačka* ('Shoemakers' Feast', 1834), a farce describing Prague society on the background of the Easter fair and guild feast. The music consists of 21 numbers – overture, interludes, dances, songs and choruses, some of them quoting popular folk melodies. One song, 'Kde domov můj' ('Where is my homeland') soon became a national hymn, and shortly after the foundation of Czechoslovakia in 1918 a part of the national anthem.

After *Dráteník* Škroup wrote other Czech and German operas and Singspiels. To meet the taste of the wider Prague public he composed four fairy-tales, of which only *Der Nachtschatten* (1827) survives; the score shows the influence of Weber. His first attempt at a historical drama in music was *Oldřich a Božena* ('Oldřich and Božena', 1828). Chmelenský's libretto dealt here with the half-mythical story of love and marriage of a Czech 11th-century prince. In 1833 it also appeared in a German version (*Udalrich und Božena*). Also based on Czech legendary history was his and Chmelenský's last Czech opera, *Libušin sňatek* ('Libussa's Wedding'), composed and performed in 1835, rewritten in 1849 and given again in 1850. The libretto deals with the origins of Bohemia and the foundation of the first Czech princely dynasty, the Přemyslids (a popular subject that gave rise to numerous plays and operas, including works by Albinoni, Kreutzer, Grillparzer and, perhaps most important, Smetana). Škroup's *Drahomíra*, written to a German text by a philologist, student of aesthetics and gymnasium professor Václav Alois Svoboda-Navarovský (1848), was to picture the life and death of St Wenceslas and his mother, Princess Drahomíra, against the background of the struggle between pagans and Christians in 10th-century Bohemia (again a popular subject in music and drama, widely used, notably by Dvořák in his oratorio *St Ludmila*). Affected by the revolutionary movements of 1848, Škroup turned in 1851 to the history of the Netherlands. *Der Meergeuse* (to a libretto by the Prague writer and newspaper editor J.C. Hickel, who worked as theatre repertory adviser in Prague and Vienna), describes an episode of the Dutch revolt against Spanish rule in the 16th century; it was the most successful opera première of the year in Prague and brought Škroup one of his greatest triumphs in Rotterdam in 1861. His most important musical work, *Columbus*, based again on a libretto by Hickel and composed in 1855, was never performed during his lifetime.

Apart from a small number of songs, choral, chamber and orchestral works, Škroup's main output was for the stage. The strongest points of his compositions are the fresh *buffo* scenes, the moving lyrical songs and the use of well-balanced and colourful orchestration. He based *Dráteník* on the late Classical opera idiom, coloured by national elements. But the fresh *buffo* naivety so successful there did not suit his other operas. The sophisticated poetic structure of Chmelenský's later librettos for *Oldřich a Božena* and *Libušin sňatek*, with their historical plots which required such careful handling, led to works that are dramatically lifeless. The best of each work is found

in the individual songs that became popular. *Der Meergeuse*, with a plot concerning a different part of Europe and a libretto full of theatrical effects, offered a freer field to explore. The work is influenced by contemporary German and Italian opera – in places it even shows a neo-romantic feeling – and is dramatically well built. The same applies to *Columbus*, which was influenced by French grand opera. Škroup's style might be called eclectic, based on his work as a Kapellmeister; his work is chiefly of value as a successful experiment in the composition not simply of Czech but European music. This was not easy in the Bohemia of his time; the barriers erected by the nationalist revival movement, which wanted to make the music serve their artistic objectives through the use of folksong, were to be fully overcome only in the work of Smetana and Dvořák.

Škroup's son, Alfred Škroup, was a violinist in the Rotterdam opera orchestra, and Kapellmeister in Coburg, Danzig (Gdańsk), Breslau (Wrocław), Mainz and other German cities. He also worked for the Prague music publishers Hoffman, and as an impresario for various singers.

WORKS

STAGE

all first performed in Prague

Dráteník [The Tinker] op.1 (Spl, 2, J.K. Chmelenský), Estates, 2 Feb 1826 (Prague, 1913, 2/1926)
Oldřich a Božena op.19 (op, 3, Chmelenský), 14 Dec 1828; as Udalrich und Božena, 12 Feb 1833; 2 songs in F.J. Škroup and J.K. Chmelenský, eds.: Věnec ze zpěvů vlastenských [Garland of Patriotic Songs], i (Prague, 1835), iii (Prague, 1837)
Der Nachtschatten, 1827 (op, 3, K. Schikaneder), Jan 1830
Der Prinz und die Schlange (Spl, 3, F.V. Ernst), 1829; Cz. version 1835, lost
Libušin sňatek [Libussa's Wedding], op.20 (op, 3, Chmelenský), 6 Nov 1835; rev. version, 11 April 1850; excerpts in Věnec zpěvů vlastenských, i (Prague, 1835), iv (Prague, 1838)
Die Drachenhöhle bei Röthelstein, oder Der Hammer um Mitternacht (Spl, I. Kollmann), 28 May 1832, lost
Die Geisterbraut (op, Ernst, after W. Irving), 22 Dec 1836, lost
Drahomíra (op, 3, V.A. Svoboda-Navarovský), 20 Nov 1848
Der Meergeuse op.34 (op, 3, J.C. Hickel), 29 Oct 1851
Columbus op.38, 1855 (op, 3, Hickel), 1942
Incidental music to 8 plays, incl. Bratovah [Cain and Abel] (J.N. Štěpanek), 27 Feb 1831; Fidlovačka [Shoemakers' Feast] (J.K. Tyl), 21 Dec 1834, ed. (Prague, 1952); Čestmir (Tyl), 3 May 1835; Žižková smrt [Žižka's death] (J.J. Kolár), 17 Nov 1850

OTHER WORKS

Mass, chorus, orch, org; Synagogal choruses; Ger. cants.; Ger. and Cz. choruses and solo songs
Ovs., orch; 3 str qts; Trio, cl, vc, pf; 2 trios, vn/fl, vc, pf; pf pieces, incl. Polonaise, ed. in MAB, xx (1954)

MICHAELA FREEMANOVÁ

Škroup [Škraup], **Jan Nepomuk** (*b* Osice, 15 Sept 1811; *d* Prague, 5 May 1892). Czech composer, conductor and choirmaster, brother of FRANTIŠEK ŠKROUP. In 1836 he became vice-Kapellmeister, and in 1838 choirmaster, of the Prague Estates Theatre, where he was appointed second Kapellmeister in 1840. From 1838 he was also a choirmaster of the Crusaders' church in Prague. In 1843 he conducted the Czech opera performances in the Růžová Street Theatre, Prague, for whose opening he wrote *Slavná overtura* ('Festival Overture'), in 1842. He left the theatre to become director of the Sophien-Akademie (1844–9; in 1846 he took part in preparations for Berlioz's visit to Prague). From 1845 he was Kapellmeister at Prague Cathedral, where in 1856 he invited Liszt to conduct his *Missa solemnis*, and from 1846 he was a singing teacher of the archiepiscopal seminary. Between 1874 and 1882 he resumed the post of second Kapellmeister and choirmaster of the Estates Theatre.

Much of Škroup's work, including some of his theoretical writings, is devoted to the church. He also wrote songs, choral works (some of which were published), incidental music, overtures and other pieces. His first opera, *Elfriede*, composed by 1828, was possibly intended for children. Nothing is known about *La fiancée du gnome* (?1836 or ?1850), mentioned by Wurzbach and Teuber. In 1845 he wrote *Švédové v Praze* ('The Swedes in Prague'), but only the first act was performed. After its libretto was reworked, it was performed in full in the Provisional Theatre, Prague, in 1867.

Škroup's son Karl (1851–1909), a critic, actor, producer and playwright, was director of Erfurt Theatre by 1909, while another son, Alfons, was Kapellmeister in Danzig (now Gdańsk) by 1864, and Kapellmeister and choirmaster in Bremen by 1870.

WORKS

STAGE

Elfriede (children's op, 3, J. Siegl), Prague, before 1828, *CZ-Pnm*
La fiancée du gnome, ?1836 or ?1850
Švédové v Praze [The Swedes in Prague] (op,3, J. Pečírka; lib rev. by E. Züngel), 1845, Prague, Provisional, 22 April 1867
Der Liebersring (comic op, 3, H.T. Schmid), Prague, 18 Dec 1861
Vineta (op, 3, Schmid), 1864, Prague, 11 June 1870
Incid music to J.K. Tyl's Chudý kejklíř [The Poor Juggler]

OTHER WORKS

most MSS in CZ-Pnm

Sacred: Musica sacra pro populo (Prague, 1854–5); Hymne zu Ehren des heiligen Vaters Pius IX (Prague, 1859); masses, Requiem settings, grads, offs, Salve regina settings, Vespers, hymns, church songs
Other vocal: school songs, other songs, choral works
Inst: ovs., incl. Slavná overtura [Festival Ov.], Prague, 1842; piano works (dances); qt
Theoretical: Anleitung zum Figural und Choral Gesänge, nebst der allgemeinen Musiklehre (Prague, 1848); Manuale pro sacris functionibus quae per anni ecclesiastici decursum cum cantu celebrantur (Prague, 1858); Theoreticko-praktická škola hudební pro učitele [Theoretical-Practical School for Teachers] (Prague, 1864); Vyučování zpěvu z prvopočátku [Teaching Singing from the Very Beginning] (Prague, 1864)

MICHAELA FREEMANOVÁ

Skrowaczewski, Stanisław (*b* Lwów [now L'viv], 3 Oct 1923). American conductor and composer of Polish birth.

He made his début as a pianist on Polish radio at the age of 11, and in 1936 he played and conducted Beethoven's Piano Concerto no.3 at the Lwów Musical Association. Two of his compositions, an overture and songs for soprano and orchestra, were played by the Lwów PO in 1940. He began studies in conducting, composition, musicology and philosophy in Lwów at the conservatory and university; graduate studies were concluded in Kraków in 1945. After winning the Szymanowski Composition Prize in 1947 he obtained a French government grant for study in Paris with Boulanger (composition) and Kletzki (conducting), 1947–9. His directorships of the Wrocław (1946–7), Katowice (1949–54) and Kraków (1954–6) orchestras led to his appointment as conductor of the Warsaw National PO, 1956–9; he also won the 1956 Accademia di S Cecilia Competition in Rome. Skrowaczewski made his American début with the Cleveland Orchestra at Szell's invitation in 1958. His New York PO début in 1960, when he took over a series of concerts because of Mitropoulos's death, was a great success. The same year he left Poland to begin an international career and was music director until 1979 of the Minneapolis SO, suceeding Dorati. From 1984 to 1991 he was principal conductor of the Hallé Orchestra, with whom he recorded symphonies by Brahms, Bruckner and Shostakovich. He has conducted most of the leading American and European orchestras and has directed performances for the Metropolitan Opera and the Vienna Staatsoper, where he made his début in 1964 with *Fidelio*. His performances display a lean elegance and a fastidious technique that has often been compared with Szell's. Among his works are four symphonies, a string quartet and a concerto for english horn.

RICHARD BERNAS

Skryabin [Scriabin], **Aleksandr Nikolayevich** (*b* Moscow, 25 Dec 1871/6 Jan 1872; *d* Moscow, 14/27 April 1915). Russian composer and pianist. One of the most extraordinary figures musical culture has ever witnessed, Skryabin has remained for a century a figure of cultish idolatry, reactionary yet modernist disapproval, analytical fascination and, finally, aesthetic re-evaluation and renewal. The transformation of his musical language from one that was affirmatively Romantic to one that was highly singular in its thematism and gesture and had transcended usual tonality – but was not atonal – could perhaps have occurred only in Russia where Western harmonic mores, although respected in most circles, were less fully entrenched than in Europe. While his major orchestral works have fallen out of and subsequently into vogue, his piano compositions inspired the greatest of Russian pianists to give their most noteworthy performances. Skryabin himself was an exceptionally gifted pianist, but as an adult he performed only his own works in public. The cycle of ten sonatas is arguably of the most consistent high quality since that of Beethoven and acquired growing numbers of champions throughout the 20th century.

1. Life, 1871–96. The Skryabin family has been traced back to the 13th century; its first recorded member was described as a boyar and Aleksandr Nikolayevich himself stressed his noble origins. Hailing from the Nizhny-Novgorod region, they moved to Moscow in the 16th century and by the 19th were established as a respected military family; the composer's grandfather, Aleksandr Ivanovich (1811–79), is said to have run his immediate family like an army platoon. His son, Nikolay Aleksandrovich (1849–1914), broke away from the military tradition to train as a lawyer but abandoned his studies soon after marrying Lyubov′ Petrovna Shchetinina (1849–73); she was one of the first recognized female musicians in Russia, a pianist and composer who had studied with Leschetizky, knew Anton Rubinstein and drew high praise from Tchaikovsky. She gave a recital of works requiring a virtuoso technique five days before Aleksandr Nikolayevich was born, on Christmas Day 1871. Her husband returned to study diplomatic jurisprudence at Moscow University, but by September of 1872 Lyubov′ Petrovna was so ill (she had been weak since giving birth) that he again abandoned his studies to take her to Italy, where she soon died. Nikolay Aleksandrovich eventually finished his university course and, after studying oriental languages for two years, went as an interpreter to the Russian Embassy in Constantinople. Father and son had little contact: Aleksandr Nikolayevich's upbringing was entrusted to his two doting grandmothers and the infatuated aunt Lyubov′ Aleksandrovna, herself an amateur musician who gradually gained control over and responsibility for the child.

As a child, Skryabin attended concerts held by the Russian Musical Society and operas at the Bol′shoy; he could also play melodies he heard and improvise at the piano at the age of five. His first teacher was his aunt. He soon wrote plays, made toy pianos, enjoyed needlework and read Shakespeare and Molière. Although at this age, he was nervous, thin, delicate and unhappy – in 1896 Boris de Schloezer was struck by 'his frail and delicate appearance, his intense nervousness' (*Scriabin: Artist and Mystic*, 1923) – the ambitious Lyubov′ took him for assessment to Anton Rubinstein who guardedly confirmed her hopes in the boy's gifts. Meanwhile, in 1880 his father married an Italian, Olga Fernandez, and was a consul, working in countries where Turkish was spoken. Contrary to his father's and certainly his aunt's wishes, Skryabin expressed a desire – encouraged by his elder cousin Mitya – to attend the Cadet Corps; he became the 'only cadet of the Russian Army never to carry arms throughout five years of training' (Bowers, 1969), but amused his contemporaries (and the director, another amateur musician) with his piano playing and even had time to start composing.

In summer 1883 Skryabin received his first formal music lessons from Georgy Konyus, a neighbour at the dacha the old Skryabin ladies had rented at Khovrino, near Moscow. As Hugh Macdonald has pointed out, his doting aunt and two grandmothers 'pampered him endlessly and set his mind towards the fastidiousness and egocentricity of his later years' (*Grove6*). He studied Weber, Mendelssohn and Chopin on the piano and began to compose in a more controlled fashion. Through a family connection, he was prepared for entry to the Moscow Conservatory by the 28-year-old Taneyev, and through him met the formidable Zverev. This influential piano teacher, who had studied with Henselt, insisted that his teenage piano pupils should live in his own house and be subject to the most disciplined of regimes. Under his guidance, Skryabin learnt not only French and German but also the manners of high society; he was shown great literature and how to drink vodka. Although he studied

among a group of boys of similar age who included Rachmaninoff and Goldenweiser, he soon became Zverev's favourite. But when Skryabin dedicated a Nocturne in F♯ minor to his teacher (later published as op.5 no.1 but, typically for Skryabin, without the inscription), Zverev attempted to dissuade his pupil from composition. Skryabin's right arm was injured in a carriage accident, and although this had the undesirable effect of intensifying his aunt's coddling it also, like his hand strain later, acted as a catalyst to further composition. In 1886, he wrote his first significant work, the Etude in C♯ minor (published as op.2 no.1); in 1887 he had started to write poems that spiritually coexist with particular musical works as well as noting down his views on religion.

Skryabin entered the Moscow Conservatory in January 1888; he took no entrance examination because the director, Safonov, had heard him play at one of Zverev's salons years earlier. Like Zverev, whom he hated, Safonov adored Skryabin for his sensitive pianism but despite his laziness and wilfulness towards other aspects of study. Lessons learnt in Taneyev's polyphony class reverberate throughout Skryabin's output while Safonov's insistence on tonal variety, subtle pedalling and legato playing was to lead to these becoming the hallmarks of his performing style. He became one of the conservatory's foremost piano students; in a fit of competitiveness, he set about learning Beethoven's complete sonatas, stopping however at the tenth out of sheer boredom. His attacks of nervousness increased, especially during times devoted to composition, and he appears to have lived much of the 1890s on a Dostoyevskian knife-edge, precipitously close to breakdown. In 1891, in a further bout of pianistic competitiveness, Skryabin overstrained his right hand practising Liszt's *Don Juan* fantasy; when forbidden by a doctor to play, he turned to practising with his left hand and elaborated a virtuoso left-hand paraphrase of a Strauss waltz (the strength and subtlety he subsequently developed in his left-hand technique is reflected in much of his later writing). The final year at the conservatory, 1892, was marked by a series of disagreements between Arensky (who was attempting to teach him fugue) and his pupil, who was supported by Safonov; problems also arose because Skryabin wanted to graduate a year early, like Rachmaninoff. Skryabin graduated with a Small Gold Medal (as opposed to Rachmaninoff's Great Gold Medal) mainly on account of Arensky's intransigence and probably his jealousy.

In spring 1892 Skryabin gave a private concert under the auspices of the Circle of Music Lovers; Boris Jürgenson, in the audience, agreed to show some of the young composer's works to his father Pyotr, the publisher. Thus 14 pieces were published, without opus number and without remuneration to the composer; that summer, Skryabin wrote the First Piano Sonata in one short burst. The next year, he received 50 rubles for four mazurkas (later to form op.7 and part of op.2). During the summer of 1893 he made his first trip abroad, to Finland and Latvia, strengthening his yearning to leave Russia and giving him his first impressions of the sea. Later that summer, deemed unfit for military service, he returned to Moscow where he visited friends such as the Monighettis, Emil Rozenov, Taneyev and Safonov and where he also acquired the habit of staying out all night drinking (his tendency to do this was to increase before it subsided in later years). He read Schopenhauer and met Leonid Sabaneyev (his first biographer) and Paul de Schloezer (son of Boris). Skryabin had become enamoured of the 15-year-old Natal′ya Sekerina but the affair was forbidden by her parents; their subsequently painful friendship lasted for several years and it was probably through disappointment and desperation over this separation that he later married unwisely. Mitrofan Belyayev became acquainted with Skryabin's work through Safonov and agreed to publish it in 1894. He arranged for Skryabin to play in St Petersburg (where he greatly impressed Vladimir Stasov), to Tolstoy at Yasnaya Polyana and, in summer 1895, he enabled Skryabin to travel to Europe, where he wrote much music (many of the Preludes op.11 are inscribed with the location of their completion). Back in Russia, he completed more works – nearly all preludes, because of a bet with Belyayev that he would write 48 such works within a given period – before Belyayev took Skryabin off to Paris. There he mingled with the symbolist demi-monde and played in a number of private houses before making his European début in the Salle Erard on 15 January 1896, to general acclaim.

2. LIFE, 1896–1906. Skryabin remained in Paris long after Belyayev returned to Russia and his dealings with his publisher soon became strained, as they remained over the next few years. Skryabin's pleas for money caused by his hopeless accounting and Belyayev's demands that Skryabin finish pieces on which he had been working for months (as well as requiring that they were marked and edited properly) form a pattern that constituted only a part of the confusing relationship between the physically huge maecenas and the effete, nervous composer.

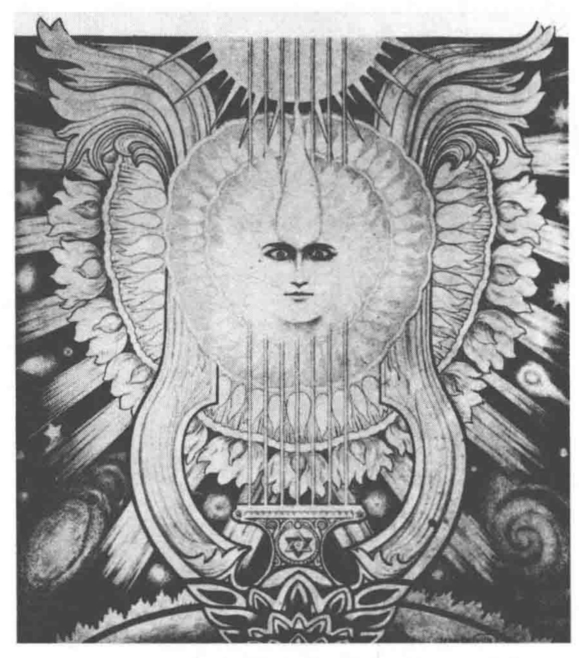
1. Aleksandr Skryabin, 1894

Skryabin travelled to visit his father in Rome, where he sketched a symphonic Allegro (several themes of which later reappeared in a sophisticated form in the Third Symphony) before returning via Paris – where his hedonism continued unabated – to Russia. Here he wrote the Piano Concerto op.20 at phenomenal speed. In August 1897 he married, against the advice of almost all who knew him, a pianist, Vera Ivanovna Isakovich (1875–1920), whom he had met through de Schloezer. The newly-weds travelled to Odessa, where Skryabin played his concerto in a concert arranged by Safonov before travelling to Vienna and Paris, where he struggled to find engagements but also started work on the Third Piano Sonata. He was saved once more from destitution by Belyayev, this time through a Glinka Prize, a form of supposedly anonymous financial supplement given mostly to Belyayev's composers and on which Skryabin relied on numerous occasions. Vera and Aleksandr gave a joint recital in January 1898 featuring solely Skryabin's works, including the recently finished Polonaise and the Second Piano Sonata. Vera's pregnancy forced their roundabout return to Russia; a daughter, Rimma, was born on 15 July 1898. A few weeks later, Skryabin met Boris de Schloezer's 15-year-old sister, Tat′yana.

By September 1898, Safonov and Belyayev had arranged a piano professorship at the Moscow Conservatory for Skryabin; until 1904 he frequently travelled between Moscow and St Petersburg, performing (the Russian première of the Piano Concerto was in St Petersburg in November 1898), teaching, composing and attempting to accustom himself to his new role as family man. His workload at the conservatory burgeoned – during the 1899–1900 academic year he had 21 pupils – but it enabled him to support his family and left the summers free for composition. Over summer 1899 he wrote the six-movement First Symphony, which was first performed in St Petersburg in November 1900, though without the chorus parts in the last movement. The performance was largely regarded as a failure, as was the follow-up in Moscow the next year. Meanwhile, Vera gave birth to another daughter, Yelena, in February 1900 amidst difficulties regarding the publication of the symphony. In June, Skryabin set off for Paris with Belyayev where he again performed to critical approval. Returning to Russia, he accepted another job, as Inspector of Music at St Catherine's Institute, and worked on an opera which, although never finished, sowed the seeds which were to implant in Skryabin's mind the concept of the *Misteriya*; he also composed the *Fantasie* op.28, which was first performed by Gol′veysev as late as 1907 (Skryabin apparently forgot that he had written the work). Since a disagreement with Belyayev in May 1900, Skryabin had been less inclined to keep his protector informed of every detail of his composing plans; he presented him with the completed Second Symphony in September 1901 with scarcely a word of warning. Its première, in St Petersburg in January 1902, elicited hissing and catcalls, and this, along with its equally dismal reception in Moscow a year later, upset Skryabin considerably; he also decided to leave the conservatory and obtained a promise of a much larger stipend from Belyayev. His spirits were lifted by the first all-Skryabin concert of orchestral and piano works, in Moscow in March 1902, two months before he formally resigned from the conservatory.

Freed from his teaching duties, Skryabin spent summer 1902 at Obolenskoye with Vera, starting work on his Third Symphony, the *Bozhestvennaya poema* ('Poème divin'), along with several shorter works. In August Vera gave birth to a fourth child, a boy, Lev, but soon after was nonetheless asked by Skryabin to start preparing the score of the Second Symphony for a performance by Lyadov the next March. Skryabin took a brief cure in Yalta before resuming work in earnest on the Third Symphony; the composition was not completed until 1904. He began to read more philosophy and Greek myth, often in Solov′yov's translations, and joined the Moscow Philosophical Society founded by Prince Sergey Trubetskoy, with whom he became friendly. In summer 1903 the Skryabins were neighbours of the Pasternaks at Obolenskoye; Leonid Pasternak later made a famous drawing of the composer at the time when Skryabin had become musical mentor to his son Boris. Long after he had abandoned his ambition to compose, Boris Pasternak wrote a memoir of Skryabin, probably the finest of the many that have come to light.

During that summer Skryabin saw much of Boris de Schloezer and, more importantly, his sister Tat′yana. She had been instantly captivated by Skryabin's music in 1901, when she heard Buyulki play the Third Piano Sonata; she was thus deeply flattered when Skryabin became her lover in late summer or early autumn of 1903. The group of works from op.30 to op.43 reflect the intense sensuality which had enveloped the composer's spirit; these compositions were all presented to Belyayev on his nameday in November of that year. Scarcely a few days after this event, Skryabin accepted an offer from the recently widowed Margarita Morozova, a former student, of a monthly income of 200 rubles. Little more than a month later Belyayev died at the age of 67; Skryabin was grief-stricken.



After Belyayev's death, the monthly payments from the publishers ceased and a row ensued; to add to this difficulty Skryabin seduced a former pupil, Mariya Bogoslovskaya, still in her teens, and was forced to resign from St Catherine's Institute. The move abroad he had long dreamed of was now necessary; ten days after he had arrived in Switzerland, in March 1904, Vera and the children did so. He had arranged for Tat′yana to live in a neighbouring village and explained her presence through reasons of health. Vera, however, was soon informed of the real state of affairs and, after she had left, Tat′yana took her place in the Villa des Lilas in Vézenaz. There Skryabin finished the Third Symphony in November before setting off for Paris where, with difficulty, he arranged for the work to be conducted by Nikisch in May 1905. He wrote to Morozova that the performance would be 'the first proclamation of my new doctrine', more than hinting that music was by then not the only expression of his intellect and creativity and also that the doctrine and the music were two different forms of expression of the same entity: Aleksandr Skryabin. The reception of the work was mixed; when it was heard in St Petersburg in 1906 it prompted an outburst of enthusiasm from the 80-year-old Stasov.

Skryabin returned to Italy, worn out by Paris and the stress surrounding the première of the symphony; he and the pregnant Tat′yana lived in the village of Bogliasco on the Riviera. Skryabin was overcome by guilt when his first and favourite child, Rimma, died in July, but relieved

when Vera returned to Moscow, having been offered a post at the conservatory. Tat′yana gave birth to a daughter, Ariadna, in October; meanwhile, Skryabin had become acquainted with Georgy Plekhanov, with whom he discussed his doctrine and the coming revolution. Despite the obvious disparity in philosophical approach between the impractical and mystic Skryabin and the inventor of dialectical materialism, they respected each other and their friendship lasted well over a year. Skryabin's material situation had worsened: the Belyayev board was sending him less money per composition than before and, in his fury at what he imagined was lack of respect for his talent, Skryabin broke with the publishers altogether in early 1906. Jürgenson could no longer afford Skryabin's terms, Zimmerman was musically too backward to appreciate his current language, and, after an unsuccessful attempt to publish his own works in Geneva, Skryabin found himself without a publisher. He and Tat′yana had moved to Geneva at the time of the break with Belyayev and, penniless and in desparation, asked Stasov to intervene in the publication problem. Skryabin was welcomed back into the Belyayev fold by Lyadov, who was promised a 'big poem for orchestra', the *Poema ėkstaza* ('poème d'extase').

3. Life, 1906–15. In October 1906 Skryabin was invited to America by Modest Altschuler, a cellist whom he had known as a student. He made his début on 20 December with an orchestra and then performed a solo programme two weeks later to mixed reviews. Tat′yana, against Skryabin's wishes, arrived in America in February 1907; a year earlier Maksim Gor′ky and his mistress had been hounded out of puritanical New York on account of their marital status and Skryabin feared a similar reaction. They returned to Paris, their domestic irregularities having already lost Skryabin Safonov's friendship and support. There Diaghilev was organizing his first Saison Russe and hired Nikisch to conduct the Second Symphony, but the impresario soon fell out with Skryabin who, when patronized by Diaghilev, had informed him that 'without us [artists] . . . you would be less than nothing on this earth!' The *Poème d'extase* was finally sent to Belyayev's only in December, by which time Skryabin was living in Lausanne and writing the Fifth Piano Sonata. In January 1908 he cut several piano rolls of his own works for the Welte-Mignon firm and in February a son, Julian, was born. Soon after, he met Koussevitzky, who had invited him to join the advisory board of his newly founded Edition Russe de Musique. Skryabin had discussed colour and music with Rachmaninoff and Rimsky-Korsakov in 1907, and from that time onwards his desire increased to formalize these ideas and then manifest them in a work. Initially, Skryabin assigned particular colours to particular keys, and he was similar to Rimsky-Korsakov in this respect (except that the colour-key assignations were not the same in each case). When writing *Prométhée*, Skryabin, like other synaesthetics who assign particular colours to letters of the alphabet, would complete a circle of correlations with a chord represented by both light and by the vowel vocalized by the wordless chorus, with the latter two thus also referring to each other. Taking these patterns of reference a stage further, the series of colours projected by the *tastiera di luce* (designed by Skryabin's friend, the photographer Mozer) during the course of the work were symbolic of the psychological states implied by the music's *alter ego*, in its philosophical-literary manifestation. Colour, the *tastiera di luce* and synaesthesia have played a prominent place in popular Skryabin mythology lending him, among composers, an otherness that increases his attraction and mystique but which has often detracted from his being taken seriously. Skryabin expounded to Koussevitzky his ideas for a multi-media *Misteriya* and his theories on colour and music; the entranced but astute Koussevitzky offered financial terms that Skryabin, again in poverty, could not refuse. Skryabin moved to Brussels where he met the painter Jean Delville (who later designed the cover for *Prométhée*; fig.2) and other Theosophists in whose circle Skryabin felt able to propound his doctrine. Many terms which became important for Skryabin, such as 'pleroma', he first encountered in Blavatsky's work; his desire for his music to inhabit – and to coax the listener to – a region divorced from human physical reality probably stems from early readings of her *Secret Doctrine*. But as he had done with others' music and others' philosophies, Skryabin soon amalgamated those aspects of her doctrine which were consonant with his own temperament into his far more grandiose yet specific theories (and with many more Russian ones: it should be stressed that Blavatsky was the assumed name of an Englishwoman) to such a degree that to call his own methods and aims theosophical would be inaccurate.

Skryabin's return to Russia in January 1909 was heralded by a concert in St Petersburg which included the *Poème d'extase*, conducted by Felix Blumenfeld, and solo piano works. Widespread critical acclaim, so long denied Skryabin in Russia, finally arrived; he turned down the offer of a post as superintendent of the Imperial Chapel while Koussevitzky organized a Skryabin Week in Moscow. Throughout the summer and winter of 1909 Skryabin worked on *Prométhée*; in this work he systematized more thoroughly than before the 'principles' (as he called them) by which he was to write his remaining music, the crystalline and technically unimpeachable

piano works, opp.61–74, unique in their luminosity. Skryabin moved to a flat in the Arbat; here, his visitors included the poets Bal'mont, Baltrushaitis and Vyacheslav Ivanov, the composers Drozdov, Gnesin, Krein and Sabaneyev Mozer, the painter Sperling, Gol'denveysev and the eccentric anglophile Bryanchaninov, one of Skryabin's oldest friends. In mid-1910, Koussevitzky accompanied Skryabin on a tour of several Russian towns, while in early 1911 a tour of Germany was completed soon after the birth of Skryabin's last child, Marina. Koussevitzky and Skryabin soon quarrelled so vehemently – over money – that their relationship was irreparably damaged. Again, Skryabin had outraged a patron by considering him an employer, an agent or an administrator rather than an artist in his own right; after handing over several more compositions to the Edition Russe de Musique to fulfil a contract, Skryabin was again without a publisher. Rachmaninoff and the pianist and conductor Aleksandr Ziloti soon rushed to Skryabin's aid and proposed several lucrative concerts. Alluding to his time spent in Koussevitzky's mansions, Skryabin sarcastically remarked to Rachmaninoff that it was 'pleasant for an artist to be a guest of an artist'.

By October 1911, Skryabin completed a circle by accepting Jürgenson's terms to publish his music; his financial situation was also improved by increased numbers of concert appearances (which however he did not generally enjoy making). When the concerts subsided he was able to write the sixth and seventh piano sonatas, the latter being among his favourite works. He and Tat'yana took a holiday in Switzerland in 1912, where Skryabin wrote the Etudes op.65 before returning to Moscow, where they moved to no.11 Bol'shaya Nikol-Petrovskaya Pereulka (the lease expired on the day of Skryabin's death). In early 1913, Skryabin gave a successful series of concerts in London. Henry Wood conducted *Prométhée*, no doubt encouraged by Rosa Newmarch, who wrote the programme notes. That summer was spent in the Kaluzhskiy province and there, as plans for the *Misteriya* fermented further, Skryabin finished three more piano sonatas, nos.8–10. At the end of the summer he went alone to Switzerland, where he

made peace with his father over Tat′yana and was visited, after much pestering, by Stravinsky. Stravinsky heard Skryabin play his late sonatas and found them 'incomparable'; Skryabin later said that Stravinsky's music possessed a 'minimum of creativity'.

Returning to Moscow, Skryabin became increasingly convinced that India would be the most suitable venue for the performance of the *Predvaritel′noye deystvo*, a preparatory act which would ready the human race for the *Misteriya* itself. In early 1914 Skryabin wrote *K plyameni* ('Vers la flamme') before returning to London, where he was afflicted by a furuncle on his upper lip. He improved upon his earlier successes; his reception was ecstatic in most quarters. The summer was spent in a dacha near Podol′sk accompanied by an entourage of disciples. There he finished his last works and laboured over the text of the *Predvaritel′noye deystvo*. Back in Moscow he gave a number of concerts with works from every stage in his life, ranging from the *Valse* op.1 to some of the op.74 preludes. Skryabin made his last public appearance in St Petersburg on 2 April 1915; the praise from the press reached new heights. Returning to Moscow, he noticed a pimple on his upper lip reminiscent of the one which had afflicted him in London; by 7 April he was bedridden and his temperature rose rapidly. By 11 April crowds thronged the staircase of his flat – the situation had become grave. One incision was followed by others, but by then two types of blood poisoning had set in. Skryabin died on 14 April, with the manuscript containing sketches for the *Misteriya* open on his piano.

4. THE MUSIC AND ITS PHILOSOPHICAL BACKGROUND. Skryabin is unique among composers, not only for his obsession with philosophy and mysticism but also on account of the global nature of his imagination. Through being, in Pasternak's words, 'more than just a composer', Skryabin was forced by his protean intellect and creativity to justify and rationalize his work as a musician; the maximalism so favoured by Russian artists of the Silver Age engendered in him not only an interest in unorthodox aspects of musical creativity such as synaesthesia but also, and more importantly, a desire to articulate by means of a metaphysical doctrine the *ultima ratio* of his creative existence. His philosophical tenets were reasons for, commentaries on and justifications of, but not programmes for, his music, and were not secondary nor auxiliary to his artistic creativity; although the discourse had a purely practical end it developed independently and in parallel to the music. Seen in the context of the literature of the time and the art of the Russian Silver Age as a whole, Skryabin loses much of the alien quality he assumes when compared with other musicians. His aesthetic code, wrote de Schloezer (1923), 'is remarkably similar to that of the vast intellectual and artistic movement which animated Russia' during the pre-Revolutionary era; Bal′mont, Vyacheslav Ivanov and Bryusov, like Skryabin, considered art a 'superior form of knowledge, an intuition analogous to that of the mystics, bearing the promise to reveal true reality and provide a passage to a transcendental world, to divinity'. Mallarmé occupied a position analogous to Skryabin's in the canon of Symbolism, and as he idealized beauty, Skryabin sanctified ecstasy and the act of creation by which that state is achieved; for both artists this process represented a means of passage to and a form of self-identification with the divine, or, in essence, a form of gnosis. Skryabin's demiurge sought to convey the listener – or in the case of the *Misteriya*, participant – on a journey to a supernaturally heightened plane of existence by means of a language of symbols, a language in which conventional musical phenomena are dislocated from their usual significance by means of an extraordinary departure from traditional tonal procedures.

4. Aleksandr Skryabin, c1914

Already in 1905 when composing the *Poème de l'extase*, Skryabin enthused that the work would be 'a great joy, an enormous festival'; this concept of his music to be not only a source of artistic celebration but a participatory act of celebration grew throughout the following years of the decade. *Prométhée* was at one point considered by Skryabin to be a section of a much larger *Misteriya* ('Mysterium') which would occupy his creative efforts from that time onwards. Later the incorporation of *Prométhée* into the larger work was abandoned in favour of the creation of an intermediate *Predvaritel′noye deystvo* ('Acte préalable') which would prepare an as yet unready public for the *Mysterium*. In 1914 Skryabin bought a piece of land in Darjeeling; for him, India was the 'land of sages, sadhus, magical and mystifying attainments' (Bowers, 1969, vol. ii, p.254) and its backdrop of the Himalayas would form a natural temple at which the selected participants could attain Skryabin's prescription of *samadhi*, an Indian word for the spiritual ecstasy central to Skryabin's artistic aims. The colour organ used in *Prométhée* was to have been only the beginning of a vast synaesthetic experiment: Skryabin intended the *Mysterium* to consist of music (with chorus, solo voices, orchestra and, of course, himself centre-stage at a piano), dance, lights and perfume, augmented by 'bells suspended

from the clouds'. The sketches for the music of the *Acte préalable* (the text was completed in 1915) contain several allusions to the later piano works as well as a simultaneity – consisting of two French 6th chords and one diminished 7th – in which each pitch of the chromatic scale appears once only. (This tantalizing glimpse into a future that was not to be was elaborated by the Russian composer Aleksandr Nemtin into an extended, three-movement work.) To paraphrase Skryabin's close friend Vyacheslav Ivanov, Skryabin's music and therefore also its logical culmination in the *Mysterium* 'would not have wanted to be and could not have been "only art"' (V. Ivanov: *Borozdï i mezhi*, Moscow, 1916), an assertion which, although made with reference to the Russian symbolist movement as a whole, is particularly pertinent to Skryabin's example.

Skryabin's early works reveal him to have assimilated a complex late Romantic language, to be frequently experimenting in formal matters (only the Third Piano Sonata follows the conventional four-movement format) and forging a personal harmonic language. The least convincing aspects of the early style – such as the bombastic octave passages in the *Allegro de concert* and the insipid vacuity of salon pieces such as the *Impromptus en forme de mazur* – are largely absent in the most successful works of this period such as the Piano Concerto, the 24 preludes and Piano Sonatas nos.2 and 3. Skryabin was short in stature; his delicate physique may well have lain behind the lack of bombastics in his playing. The small stretch of his hand – little more than an octave – informed his writing for the instrument. His works up to 1903 (the year of Piano Sonata no.4) bear witness to the immense influence of the piano writing of Chopin and Liszt not only on Skryabin but also on earlier Russian composers such as Balakirev and Glazunov whose piano style formed the basis of the contemporary Russian manner. Also common in Skryabin's early works is the use of ostinatos – a particularly Russian trait in itself – and these are often combined with other layered and rhythmically independent voices. Even though it has been said that Skryabin 'owed nothing to his predecessors nor to his Russian contemporaries' (de Schloezer), and that the early works bear the imprint of Skryabin's hand, they are not stylistically unusual for the period; the harmony is chromatic but not daring and in many ways represents the lingua franca of the era.

From 1903 onwards, Skryabin began to make significant departures: in the sonatas, single-movement structures became the norm, and although sonata form was largely adhered to, its variations and mutations in the later sonatas and especially in the last two orchestral works parallel only those made by Schoenberg and his pupils. Skryabin, however, was arguably better placed to expand this form because – unlike the Viennese – he had not removed from his language that aspect which lends the form its dynamism, namely its sense of tonal centre. The example of Liszt's experiments looms large in any consideration of Skryabin's construction of larger formal structures. All of Skryabin's larger works rely to a greater or lesser extent on tripartite classical sonata form and, as was the case with his 19th-century predecessors, he placed an especial emphasis on the development and coda sections, these being those parts of sonata form which he could most convincingly place at the disposal of his symbolic requirements. Many of the later piano sonatas (nos.4, 5, 8 and 10 in particular) open with an introduction containing motifs which are subsequently built into themes and subject groups; this introductory music later reappears in the development and eventually – usually in a highly developed and sped up form – in coda sections. Such tailored approaches to the sonata layout allowed Skryabin to build much larger structures than most sonata forms. Additionally, conventional characteristics of all sections of multi-movement works are frequently alluded to by Skryabin in his single-movement essays. Like Mahler, Skryabin used 'false' recapitulations approximately halfway through developments, not only separating quasi-lento and quasi-scherzando subsections, but also in order to create a wave of strophe-like thematic statements which lend the structure a narrative tone. From the middle of the first decade of the 20th century, Skryabin used with less frequency such genre designations as 'impromptu' and 'mazurka', which had been applied to earlier works (and which largely belonged to the previous century and Chopin in particular), in favour of the 'poème' or 'poema'; this genre, while not of his invention, was made his own. In a sense, nearly all the works of his middle and late periods could be described as *poèmes*. Titles such as *Poème fantasque* or *Poème languide* are not merely descriptive; they represent microcosmic manifestations in language of the world occupied by the composition itself. During his middle period, and especially in the *poèmes*, Skryabin extends his gamut of expression markings as no composer had done before; his remarks, rather than being mere instructions to the performer, are signposts for the psyche in its journey to lands previously unchartered and forbidden to musicians. The major works exude confidence – both musical and spiritual – and display an ever-widening range of contrapuntal and harmonic device.

The orchestra as employed by Skryabin in the First Symphony was remarkable for the addition of voices and had become by the time of *Prométhée* enormous, even in comparison with contemporary scores by Strauss and Schoenberg. His orchestration, however, was different from that of both these composers since its roots lay elsewhere. Although it is at once evident that Skryabin had shown great interest in the orchestra as used by Wagner, his choices of instrumental groupings, the manner in which these are employed in polyphonic layers, the resultant 'meta-timbre', and his placing of contrasting, almost antiphonic hierarchies as the music propels itself to points of climax; all these habits point to Skryabin's Russian musical identity.

Skryabin's development towards his later style – from the *Feuillet d'album* op.58 onwards – was seamless. It was not punctuated by a series of technical discoveries; just as he accepted and rejected various facets of other people's thinking for his own doctrine, its face changing only gradually, his musical language refined itself through the jettisoning of the irrelevant and the perfection of those elements appropriate to the needs of the moment. The later music has been rightly called 'an act that performs his desires', an act integral to the 'ceremony in which the entire universe takes part and which culminates each time in an ecstatic dance' (de Schloezer, 1953); this pattern is evident in the piano sonatas nos.5–10 and, most spectacularly, *Prométhée*. Although in the sequence of events representing the philosophical starting point of this last work, namely the birth and development of human

consciousness, there can be seen an analogy to the seven races depicted in Blavatsky's *Secret Doctrine* (the work that Skryabin claimed had most deeply affected the formation of his own doctrine), by this point both musical language and accompanying rationale – however irrational it may now seem – were inextricably intertwined, enhancing and justifying each other.

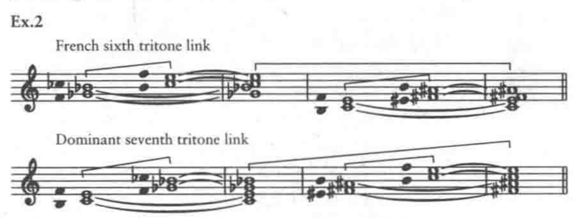
Much has been made of the stylistic disparity between the language of the early works and that of the later ones; more relevant, however, are the similarities in technique between the two extremes and the connections and continuities within various modes of expression recognizable as uniquely his. Elements in early- and middle-period works are transformed while still retaining their character as Skryabin's language becomes more complex while, paradoxically, attaining greater transparency. The outbursts of repeated chords in such works as the Etude op.8 no.12 and the Impromptu op.12 no.2 are frequently bombastic. By the time of writing of the fourth and fifth piano sonatas, similar writing is less oppressive (due partly to the abandonment of minor keys) and there it serves a different purpose: when this figuration appears in the Tenth Piano Sonata and *Vers la flamme*, the effect produces an aura of radiance and not doom. Similarly, an element which – with its preponderance of dominant harmonies and lyrical melody – could be retrospectively labelled saccharine, found in early works (such as the second subject of the *Fantasie* op.28), mutates into the otherworldly (such as the opening material of the *Poème* op.69 no.1). The lugubrious element of many of Skryabin's early miniatures (such as the B♭ minor prelude in the op.11 set) disappears altogether after the Prelude op.56 no.2, his last work in a minor key. This lugubriousness was superseded by the languor which is the hallmark of nearly all the slower music written after 1902, from the *Poème* op.32 no.1 of 1903 to the Prelude op.74 no.2 of 1914. A element noticeable in later works which can be described as fantastic – evident in compositions such as *Etrangeté* and in the music of the allegro sections of Sonata no.10 – is a logical development of the nervous, skittish, often explosive but sometimes filigree gestures found in works such as the Etudes op.8 no.10 and op.56 no.4. More generally, the triple metres which predominate in Skryabin's output – from the *Valse* op.1 onwards – are gradually refined (especially by means of dotting the second quaver) and developed into the compound elided formations of the Tenth Sonata. Complexity of texture had become a feature of his work early in his career: the dense polyphony found in the Polonaise, several of the mazurkas of the op.27 set, and in much of the writing of the *Fantasie* was to have direct repercussions in the music composed later. Such density is always imagined and executed with remarkable clarity; Taneyev's lessons in strict counterpoint were not learnt in vain. A common feature of this polyphonic writing is rhythmic complexity, involving the piling up of irrational rhythmic groupings which often start rather individually on the upbeat. This was an early development, as can be seen in the closing section of the Impromptu op.7 no.2.

Melodies, especially in the middle-period works, frequently begin with a rising 3rd and thence proceed along rising contours. The interval of a 3rd often serves as an impetus for modulation and also as a signpost delineating phrase structure, as in the *poèmes* opp.32 and 34. The intervals of a minor and major 3rd are the building blocks of dominant sonorities; these intervals are respectively the distance between every other pitch in octatonic and whole-tone scales. Skryabin's fondness for symmetrical constructions in composition (and this extends beyond the symmetrical division of the octave by the tritone link) and his tendency to arrange long-term harmonic progressions in steps of 3rds (a logical subdivision of the pairs of tritones) can be traced to his tendency to become obsessed with various intervals in a work; in the Prelude op.74 no.4 every intervallic detail can be traced to the opening two-bar melody.

Clues to the factors linking Skryabin's eschatological thinking and the music which he so closely related to it can be found in some of the most noticeable stylistic hallmarks of Skryabin's work. The phenomenon of upward contours (often dovetailed into the subsequent phrase unit) is a technical manifestation of his desire for music to deliver a sense of uplift (towards flight – *polyot*) and eventually *poriv* ('a transporting burst'); linked to the perpetually dominant harmonies, these melodic shapes suggest Skryabin's 'constant strivings to transcend the human' (Taruskin, 1997) through music. Even though the literary companion piece to the *Poéme d'extase* is of Skryabin's own creation, the content of the text is reminiscent of Bal'mont's *Budem kak solntse* ('We shall be as the Sun'), in which creation is identified with ecstasy and escape into the air. The sanctification of a creative process in which the sensation of uplift towards otherworldliness and ecstasy (often symbolized by the sexual act) is central to Skryabin's mature output.

For Skryabin, the horizontal and vertical in music were almost one and the same; when he stated that 'melody is unfurled harmony . . . harmony is furled melody' he was simply showing that his 'methods . . . had their basis . . . in the same practices as Stravinsky's' (Taruskin, *Stravinsky and the Russian Traditions*, Oxford, 1996) and those of most of his Russian contemporaries. Skryabin's penchant for dominant sonorities can be traced back to his earliest works: the *Vàlse* op.1 contains a passage in which a dominant chord (with an added 6th, a device which was to gain great significance in his later works) is superimposed over the tonic, D♭. The entire first line of the Impromptu op.12 no.1 is written in the dominant (of F♯ major), with only cursory and passing resolution on to the tonic. By the time he was writing the *Poème* op.32 no.1, Skryabin was in the habit of resolving one dominant onto another. These 'chords take on an independent, self-sustaining life' (Bowers, 1973) and are frequently presented with a flattened 5th, which itself is sometimes found as the lowest pitch of the chord. This constant use of dominants at first leaves the listener with a heightened sense of expectation, which in Skryabin's terms symbolizes desire. Eventually, because of the persistent lack of traditional resolution, a sense of alienation from normal harmonic procedure is produced. This can be linked to the sensation of otherworldliness that Skryabin strove to achieve. The shift from using a tonic underpinning a dominant resonance (C-G-B-F-D#-A) to using an enharmonic, symmetrical pair of dominant chords (D♭-G-C♭-F-E♭-A and G-D♭-F-B-E♭-E-A) – a transition particularly marked between the last two orchestral works – results in a significant alteration of the principal sonority. Latterly, instead of possessing a conventional and tonally responsive perfect 5th at its base, the chief chordal element is propelled into the outer reaches of harmonic stratosphere

by the insatiable and ultimately unresolvable diminished 5ths. In his inextinguishable thirst for light, Skryabin – like a character in a Dostoyevskian parable – brandishes the *diabolus in musica* and flirts with the infernal with the *Sataničeskaya poema* (and though acquiescence to Podgayetsky's lasting appellation of the Ninth Piano Sonata, 'Black Mass'), invoking the 'necessary presence of evil at the gates of knowledge' (G. Steiner: *Tolstoy* or *Dostoyevsky*, Harmondsworth, Middx, 1967).



Skryabin said that he wrote 'in strict style . . . there's nothing by accident . . . I compose according to definite "principle"'. The 'principle' behind his late works has long eluded analysts; however, during Skryabin's lifetime, Boleslav Yavorsky evolved a concept of modal rhythm based on the natural propensity of a diminished 5th to resolve on to either a major 3rd or a minor 6th. By resolving two complementary tritones on to two pairs of major 3rds, separated by a tritone, an altered dominant and a French 6th chord are arrived at, chords that form the backbone of the unique language Skryabin employed after 1909. Whole-tone and octatonic scales, both collections of which the French 6th and altered dominant chords are subsets, are a product of a series of chains of diminished 5th resolutions. This phenomenon links Skryabin's principles even closer to Yavorskian – and Russian – modal systems than to either tonal or proto-serial ones, because although Skryabin rarely wrote music that was strictly whole-tone or octatonic, the relevance of these scales to his music is immense. The mystic chord (ex.1) was for a long time regarded as the starting point

Ex.1

of all of Skryabin's later experiments and has, like theosophy, colour and his supposed effeminacy, contributed greatly to his mystique and, to some extent, diminished his status. The mystic chord is in fact one of many based on dominant and French 6th chords which Skryabin employed after 1908. This chord, rather than the host of others he used, has been particularly associated with Skryabin because, when presented horizontally, while being neither whole-tone nor octatonic (scales which figured prominently in the works of Debussy and Stravinsky of the same period and which are both mathematically consistent) it contains elements of both. The whole-tone scale had been used in Russian music since Glinka; the octatonic scale was in particular vogue in Russia, and especially St Petersburg, around the turn of the century. Skryabin used octatonic sets more subtly and less dogmatically than did Rimsky-Korsakov in his late operas; Skryabin rarely wrote music that was either whole-tone or octatonic in the strictest sense. By adding pitches to it, or by combining it with the whole-tone scale, Skryabin arrived at his own later language. Incomplete whole-tone scales are frequently found in dominant 9th chords with a flattened 5th; this is demonstrated in the first bar of the *Poème*, op.32 no.1. The Seventh Piano Sonata displays the most consistent use of octatonic sets, yet here they are often arranged to form dominant-type structures. In choosing these two scales as the modal starting points of his harmonic development, Skryabin was able to abandon traditional tonal relationships in his music while maintaining a sense of tonal gravitation – or rather ascent – without which the production of the sensation of *polyot* or *porïv* would be impossible.

Varvara Dernova expanded Yavorsky's theory by arranging various pairs of complementary dominant chords separated by a tritone. This relationship forms the essence of the tritone link, in which the two chords, called departure and derived dominants, 'are like brother and sister having related but equal and independent function within a . . . family of harmony' (Dernova, 1968). These pairs of chords, when arranged in an often interlocking series, each pair a tone or minor 3rd higher than the last, form the harmonic backbone of many of Skryabin's late works (ex.2). On this framework Skryabin constructs complex chords by adding, most commonly, major 6ths (in the case of the 'mystic' chord), major 7ths and minor or major 9ths, all of which in their turn form networks of passing tones and resolutions.

Ex.2

The intervallic invariance of this progression – a result of the fact that each set of chords is made up of the same groups of intervals – is the source of what is sometimes considered to be the claustrophobic ambience of Skryabin's harmony. Throughout Skryabin's later output, the twin dominant chords function as 'consonances requiring no resolution' (Bowers) and are the defining characteristics of a system 'not dependent on the release of tension, yet containing all the necessary tension'. This tension arises because most of the chords are formed from groups of interlocking tritones which require but rarely receive resolution. Through this rigorous extension of the dominant sonority, Skryabin was able to move to what he described as 'another stage . . . another plane'. While the later techniques went far beyond the concepts of traditional tonality, they are mostly explicable by Yavorsky's theories and thus adhere to natural laws of consonance. Despite claims that he was a proto-serialist, Skryabin did not move into the area of atonality in which all sense of tonal centre and gravitation is forsaken, even if the works of op.74 sound atonal.

5. Reputation and influence. By the time of his death, Skryabin's following was such that his funeral could be described as the most fashionable event in Moscow for years. Boris Pasternak (1959) called the beginning of the 20th century the 'era of Skryabin'; during his last ten years, Skryabin was seen as the modernist composer of Russia, and even during his prolonged stay in Europe (1904–9) he was regarded by his contemporaries as a glamorous and almost mythical figure. Older composers such as Rimsky-Korsakov, while questioning Skryabin's interest in the extra-musical facets of creativity, still considered him 'impeccable as a harmonist, not a trifler like Reger or Strauss' (Taruskin, *Stravinsky and the Russian Traditions*).

The messianic and egotistical nature of Skryabin's philosophy was such that although in itself it had no obviously discernible influence upon younger Russian

composers, it clearly had some appeal and resonance for artists working in the era of early Soviet Russia which, like Skryabin's music, may well have seemed apocalyptic and revolutionary. During the early Soviet era Skryabin was regarded as the composer who most convincingly represented the revolutionary character of the era and thus appealed not only to musicians but also to the fledgling authorities and the newly widened concert-going public. Only the works of Beethoven were heard more frequently than Skryabin's during this period, and the last piano sonatas were often played at recitals. The Commissar for Public Enlightenment, Anatoly Lunacharsky, was well known for his boundless admiration for Skryabin as man and composer. He still wrote about him in 1930, the year after his resignation from office: 'Skryabin well understood the instability of the society in which he lived . . . he felt the electricity in the air and reacted to its disturbance. In his music, we have the great gift of the Revolution's musical Romanticism' (*V mire muzïki*, Moscow, 1930). Skryabin's singular political beliefs have been described as a vein of socialism and these, along with his friendship with Plekhanov have been stressed by Soviet biographers such as Del'son. Skryabin's revolutionary, apocalyptic and essentially optimistic vision had great appeal and resonance for artists working in a society which in many senses was post-apocalyptic, revolutionary in political and social terms and which initially engendered optimism in large parts of the creative community and intelligentsia.

The cultural change which had taken place by the 1930s brought an end to the official favour in which Skryabin was held posthumously. After World War I and the deprivation of the civil war years, Skryabin's vision began a slow decline. By the later 1920s his mysticism found far fewer sympathizers and had less resonance in a radically changed society. Two comments – one anonymous, the second from Shostakovich – sum up the attitudes of the Stalinist era. Skryabin was criticized for his 'acute and morbid neuropathic egocentricity, [for being] totally un-Russian in his themes, and more anti-people than anything in the whole of Russian music'. By then, he was their 'bitterest enemy' (Bowers, 1969). This fall from grace was subsequently reversed: by 1972 his rehabilitation was so complete that a stamp depicting him was issued in the Soviet Union on the centenary of his birth.

The official view during the later Soviet period towards Skryabin is however neither one of the unconditional condemnation nor the idolatry that characterized the three decades after his death. In the continuing process of revising and rewriting the cultural history of Russia, Skryabin was eventually publicly heroized. However, the curious attitude of institutions such as the conservatories is demonstrated by the fact that while every student pianist will learn the op.8 and then the op.42 sets of études, Skryabin's later music – and the accompanying philosophy – tended to be viewed with nervous suspicion. It took 20 years for Varvara Dernova – long the foremost Russian Skryabin scholar – to publish her work on the late music.

Skryabin's influence on Russian composers of the early 20th century was as strong as it was on poets such as Vyacheslav Ivanov and Bal'mont. Many composers simply imitated him, his later style in particular. Indeed, Skryabin's influence was so pervasive that not only did he serve as a direct model from which less individual composers could copy but also he held a fascination for the more outstanding composers of the era following his death such as Stanchinsky, Roslavets, Lourié, Krein, Feinberg and Lyatoshyns'ky, most of whom, along with a handful of other figures less directly influenced, occupied central positions in Russian musical life from after Skryabin's death until the late 1920s.

In one way or another, Skryabin affected the development of nearly every Russian composer of the first half of the 20th century. Not only was he an idol during the early Soviet era; indeed, his influence began to take effect during his own short life: during the first decade of the century it can be seen in works by composers such as Catoire, Glier, Medtner and Vasilenko. More importantly, at this time elements of his style became discernible in the early works of Prokofiev and Stravinsky, both of whom arguably subsequently developed creative personalities as strong as his. Other composers active in Russia in the 1910s and beyond – from Aleksandrov, Myaskovsky, Polovinkin, Shaporin and Shebalin to Mosolov and Shostakovich – took one or more aspects of his music and all later defined various aspects of Soviet music in different ways. Thus Skryabin's influence reached out to the broader field of Soviet music.

Some of these composers were aesthetically quite distant from Skryabin. However, his influence was so pervasive that in the 1910s and 20s it affected even composers with quite different creative aims from his and whose music rarely sounded like his. Perhaps the most spectacular example of the unexpected nature of Skryabin's influence can be found in the case of Stravinsky, whose early works are generally thought to have been products of the St Petersburg traditions of Rimsky-Korsakov; but he too has been shown to have been influenced by Skryabin. That later Soviet music was dominated by Shostakovich, the only composer who remained in Russia with the status and position of artistic influence that Skryabin had until 1930, is paradoxical because in many respects he was the one most dissimilar to Skryabin in terms of output, philosophy, aesthetic character and musical technique. Those composers who actively eschewed Skryabin's influence from the later 1920s did so because of its pervasive nature; they made themselves artistically conspicuous in doing so. The evolution of Russian music in the 20th century can therefore be seen as having been defined not merely by ideology, as is frequently claimed, but by the paradox of and fundamental shift between Skryabin and Shostakovich. In essence, Skryabin is the most representative composer of the Russian Silver Age, arguably one of the most remarkable periods in the development of human culture.

WORKS

op.

ORCHESTRAL

op.	
—	Fantaziya, a, pf, orch, 1889 [orchestral part in second piano score only]
20	Piano Concerto, f♯, 1896
—	Simfonicheskaya poema, d, 1896–7 [pubd in piano version by N.S. Zhilyayev, 1929, full score, ed. A. Gauk, 1949]
24	Mechtï/Rêverie, 1898
—	Andante, str, 1899, unpubd
26	Symphony no.1, E, with chorus in finale, 1899–1900
29	Symphony no.2, C, 1901

43 Symphony no.3 'Bozhestvennaya poema/Le poème divin', C, 1902–04
54 Poema ėkstaza/Le poème de l'extase [Symphony no.4], 1905–08
60 Prometey, poema ognya/ Prométhée, le poème du feu, solo pf, orch, org, chorus, 1908–10

PIANO

— Noktyurn, A♭, 1881–2
— Canon, d, 1883
1 Val's/Valse, f, 1885
— Fuga, 1885–6
— Mazurka, C, 1886
— Sonata-fantaziya/Sonata fantasie, g♯, 1886
— Val's/Valse, c♯, 1886 [labelled op.6 no.1]
— Val's/Valse, D♭, 1886
— Variatsii na temu Yegorovoy [Variations on a Theme by Mlle Yegorova], 1887
— Sonata, e♭, 1887–9
2 Tri p'yesï/Trois pièces, 1886–9
— Stranitsa iz al'boma Monigetti/Feuillet d'album de Monighetti, A♭, 1889
3 Desyat' mazurek [Ten Mazurkas], 1889
— Mazurka, F, ?1889
— Mazurka, b, ?1889
4 Allegro appassionato [after Sonata, e♭, movt 1], 1892
5 Dva noktyurna [Two Nocturnes], 1885–90
6 Sonata no.1, f, 1892
7 Dva eksprompta v vide mazurki/Deux impromptus à la mazur, 1892
8 Dvenadtsat' etyudov/Douze études, 1894
9 Prelyud i noktyurn dlya odnoy levoy rukoy/Prélude et nocturne pour la main gauche seule, 1894
10 Dva eksprompta/Deux impromptus, 1894
11 Dvadtsat' chetïre prelyudii/Vingt quatre préludes, 1888–96
12 Dva eksprompta/Deux impromptus, 1895
13 Shest' prelyudiy/Six préludes, 1895
14 Dva eksprompta/Deux impromptus, 1895
15 Pyat' prelyudiy/Cinq préludes, 1895–6
16 Pyat' prelyudiy/Cinq préludes, 1894–5
17 Sem' prelyudiy/Sept préludes, 1895–6
18 Kontsertnaya allegro/Allegro de concert, 1896
19 Sonata no.2 'Sonata-fantaziya/Sonate-fantasie', g♯, 1892–7
21 Polonez/Polonaise, b♭, 1897
22 Chetïre prelyudii/Quatre préludes, 1897
23 Sonata no.3, f♯, 1897
25 Devyat' mazurek/Neuf mazurkas, 1898–9
27 Dve prelyudii/Deux préludes, 1900
28 Fantaziya/Fantasie, b, 1900
30 Sonata no.4, F♯, 1903
31 Chetïre prelyudii/Quatre préludes, 1903
32 Dve poemï/Deux poèmes, F♯, D, 1903
33 Chetïre prelyudii/Quatre préludes, 1903
34 Tragicheskaya poema/Poème tragique, B♭, 1903
35 Tri prelyudii/Trois préludes, 1903
36 Satanicheskaya poema/Poème satanique, C, 1903
37 Chetïre prelyudii/Quatre préludes, 1903
38 Val's/Valse, A♭, 1903
39 Chetïre prelyudii/Quatre préludes, 1903
40 Dve mazurki/Deux mazurkas, 1903
41 Poema/ Poème, D♭, 1903
42 Vosem' etyudov/Huit études, 1903
44 Dve poemï/Deux poèmes, 1904
45 Tri p'yesï: Listok iz al'boma/Feuillet d'album; Fantasticheskaya poema/Poème fantasque; Prelyud/Prélude, 1904
46 Skertso [Scherzo], C, 1905
47 Quasi-valse, F, 1905
48 Chetïre prelyudii/Quatre préludes, 1905
49 Tri p'yesï: Etyud/Etude; Prelyud/Prélude, Gryozï/Rêverie
51 Chetïre p'yesï: Khrupkost'/Fragilité; Prelyudiya/Prélude; Okrïlyonnaya poema/Poème ailé; Tanets tomleniya/Danse languide, 1906
— Prelyudiya [Prelude], F♯, 1907
52 Tri p'yesï: Poema/Poème; Zagadka/Enigme; Poema tomleniya/Poème languide, 1907
53 Sonata no.5, 1907
56 Chetïre p'yesï: Prelyudiya/Prélude; Ironiya/Ironies; Nyuansï/Nuances; Etyud/Etude, 1908
57 Dve p'yesï: Zhelaniye/Désir; Laska v tantse/Caresse dansée, 1908
58 Listok iz al'boma/Feuillet d'album, 1910
59 Dve p'yesï/Deux pièces: Poema/Poème; Prelyudiya/Prélude, 1910
61 Poema-noktyurn/Poème-nocturne, 1911–12
62 Sonata no.6, 1911–12
63 Dve poemï/Deux poèmes: Maska/Masque; Strannost'/Etrangeté, 1911–12
64 Sonata no.7, 1911–12 [known as the 'White Mass']
65 Tri etyuda/Trois études, 1911–12
66 Sonata no.8, 1912–13
67 Dve prelyudii/Deux préludes, 1912–13
68 Sonata no.9, 1912–13 [known as the 'Black Mass']
69 Dve poemï/Deux poèmes, 1912–13
70 Sonata no.10, 1912–13
71 Dve poemï/Deux poèmes, 1914
72 K plameni, poema/Vers la flamme, poème, 1914
73 Dva tantsa/Deux danses: Girlyandï/Guirlandes; Tyomnïye ogni/Flammes sombres, 1914
74 Pyat' prelyudii/Cinq préludes, 1914

OTHER WORKS

— Romans [Romance], hn, pf, 1890
— Keistut i Birut [Keistut and Birut] (op, Skryabin), 1891 [fragment]
— Romans [Romance] (A. Skryabin), 1v, pf, 1894
— Variatsiya II [Variation II], G, str qt, 1899 [for Variatsiya na russkuyu temu [Variations on a Russian Theme], collab. with Artsïbushev, Blumenfeld, Ewald, Glazunov, Lyadov, Rimsky-Korsakov, Sokolov, Winkler]
— Predvaritel'noye deystvo/Acte préalable (Skryabin), 1914–15 [fragments]

JONATHAN POWELL

Skrypnyk, Oleksy [Aleksey Viktorovich] (*b* Kirovsk, Voroshilovgrad region, 14 Aug 1955). Ukrainian composer. In 1986 he graduated from the Donets'k Musical-Pedagogical Institute, where he studied composition with A.I. Nekrasov; after being admitted into the Ukrainian Union of Composers in 1988 he returned to the institute in 1989 to teach music theory and composition. He was appointed pro-rector in 1996, five years after the institute had been renamed the Prokofiev State Conservatory. He was the winner of the Ostrovsky and Revutsky prizes (1990 and 1991 respectively) and takes part in various festivals both within the Ukraine and internationally, in 1991 winning third prize in the Mar'yan and Ivanna Kots's composition competition at the Second International Kiev Music Festival.

Skrypnyk's output – which covers a considerable range of genres – includes works employing jazz and rock groups which are often organically incorporated into more traditional ensembles; the results are notable for their eclecticism with frequent recourse to aleatory means in addition to a host of other contemporary methods. He has researched the use of aleatory methods by Ukrainian composers, and part of his dissertation on the subject has been published in the collection *Voprosï muzïkal'nogo iskusstva* ['Questions of musical art'] (vol.1, Donets'k, 1996).

INESSA RAKUNOVA

Skrzypczak, Bettina (*b* Poznań, 25 Jan 1962). Polish composer and musicologist. At the same time as taking her school-leaving examinations she concluded her study of music in Bydgoszcz with a piano diploma. She then attended Poznań Conservatory and University, gaining her diploma in musicology in 1985 and in composition (with Andrzej Koszewski) in 1988. She continued composition studies with Thomas Kessler at the Basle Musikakademie's Studio for Electronic Music (1988–9), and, at the academy, with Rudolf Kelterborn (1989–92). Besides her activities as a composer she works as a musicologist and music journalist and teaches theory and music history at the Lucerne Conservatory. She is on the board of the Boswil Künstlerhaus Foundation.

The categories of modes of procedure, tonal colour and tonal area are at the heart of Skrzypczak's composing. The harmonic processes occurring in her works are usually a function of timbre, and this also creates a strong spatial effect in her orchestral works, in a manner reminiscent of the sound techniques of Polish music in the 1960s. In her two concertos, various tonal continuities worked out with a fine feeling for sound are created between the solo instrument and the body of the orchestra. Her procedural developments are often pursued until they break down in chaotic circumstances, before finding their way back into an organized structure. She has won many awards, such as at the Zagreb Biennale in 1988, the Tadeusz Baird competition in Warsaw in 1990 and the 10th Mannheim international competition for women composers in 1994.

PATRICK MÜLLER

Skuherský, František Zdeněk (Xavier Alois) (*b* Opočno, 31 July 1830; *d* Budweis [now České Budějovice], 19 Aug 1892). Bohemian composer, theorist and teacher. Born into an educated family of physicians, he attended grammar school in Königgrätz (now Hradec Králové) and Prague, and medical school in Prague and Vienna for four terms before giving up medicine in favour of music. He had been a keen amateur musician and composer since he was 12 and had graduated from the Prague Organ School, where he was a pupil of Karel Pitsch (1846–7). After two years as a music teacher to Count Hardegg of Seefeld he studied with J.B. Kittl in Prague for a short time. From 1854 to 1866 he worked in Innsbruck, first as a theatre conductor, then as the director of the musical society and as choirmaster at the university church. There he performed symphonic and choral music, taught at the school attached to the musical society and wrote operas (which were unsuccessful). He failed to win the position of director of the Prague Conservatory (1865), but was appointed director of the Prague Organ School in 1866. He improved both its organization and its artistic results; among his pupils were J.B. Foerster and Janáček. He was also choirmaster at churches in Prague (St Hastal's and Holy Trinity), court pianist to Ferdinand V (1869), director of the court chapel and lecturer in music theory at the faculty of philosophy in Prague (1879, at the Czech university from 1882). Illness compelled him to retire in 1890.

Skuherský was an advocate of the reform of church music and was active in the Association for Advancement of Sacred Music (1884); in his own sacred compositions he combined the principles of the Cecilian movement with a musically richer and more modern conception. His vocal music was more Romantic in manner. He wrote the first systematic theory of composition in the Czech language; in harmony, he promoted progressive theories and brought to bear on them a scientific point of view. He renounced the principle of constructing chords in 3rds and allowed modulation between any keys. Some of his ideas influenced Janáček and Hába.

JIŘÍ FUKAČ

Skulte, Ādolfs (*b* Kiev, 15/28 Oct 1909). Latvian composer and teacher. He graduated from Vītols's composition class at the Latvian State Conservatory, Rīga, in 1934 and continued his studies in the practical composition class, 1934–6. In 1936 he was appointed to teach composition there, holding the chair in composition from 1948 to 1972 (professor from 1952). He is teaching composition at the Latvian State conservatory at present. From 1952 to 1954 he was also president of the Soviet Latvian Composers' Union.

Skulte is a symphonist *par excellence*, who shows a particular liking for large forms and music for the stage. A master of brilliant orchestral colour and displaying a penchant for picturesque programme music, he has an individual style which often leans on the melodic and metrical characteristics of Latvian folk music. His first orchestral works were influenced by impressionism, as is evident, for example, in the symphonic poem *Viļņi* ('The Waves', 1934). In 1950 he was awarded the USSR State Prize for the music to the film *Rainis* (1949) and the same year saw the first production of his *Brīvības sakta* ('The Brooch of Freedom'), a brilliant example of Latvian ballet in symphonic style and a work which voices the idea of the nation's freedom. As a highly accomplished teacher, Skulte has trained such Latvian composers as Grīnups, Imants Kalniņš, Kalsons, Zemzaris, and others.

JĒKABS VĪTOLIŅŠ/ARNOLDS KLOTIŅŠ

Slack-key guitar. A style of guitar playing and tuning originating in Hawaii in the 19th century. A variety of 'open' tunings are used, i.e. with the strings slackened from the standard guitar tuning to form an open major chord. The thumb of the right hand plays the bass while the other fingers play the melody and improvise, and the strings are fretted in the normal way with the fingers of the left hand. The enormous influence that this style had on guitar-playing technique in the USA is often underestimated. Another technique, in which the strings are fretted using a metal bar (a 'steel'), led to the development of the HAWAIIAN GUITAR and, later, the PEDAL STEEL GUITAR.

□

Slade, Julian (Penkivil) (*b* London, 28 May 1930). English composer, lyricist and librettist. The son of a distinguished barrister, he was educated at Eton and Trinity College, Cambridge. As an undergraduate he wrote the musicals *Lady May* and *Bang Goes the Meringue* and, upon leaving in 1951, decided to become an actor. He went to the Bristol Old Vic Stage School and then joined the company at Bristol's Theatre Royal. For a brief period he was an actor, but turned to writing in collaboration with other company members. Following the success of this first show, *Christmas in King St*, Slade became the company musical director and house composer. His first London success was through his music for *The Duenna* which transferred from Bristol in 1953. The following year *Salad Days*, a light piece written with Dorothy Reynolds to play to the strengths of the Bristol company, achieved spectacular success in London, running for a record 2289 performances. Using simple songs, a plot presented through affectionate caricature, and with accompaniment from two pianos, its small scale and engaging naivety has proved enduring and resulted in many revivals. Ellis's *Bless the Bride* was an acknowledged influence and Slade adopted some of its period lyricism, although did not follow that show's musical model in subtle characterization or extended forms. *Free as Air* (1957) shows a similar unpretentious approach, with Slade's diatonic and often pentatonic melodies, and uncomplicated harmonies. By the time of *Trelawny* (1972), although a more adventurous score than previously, his directness and simplicity was viewed as predictable and outdated. He never repeated the success of *Salad Days*, but maintained his associations with Bristol for whom he has written much incidental music. He has also contributed music for productions at Stratford-upon-Avon and the Regent's Park Open Air Theatre.

WORKS
(*selective list*)

dates those of first London performances unless otherwise stated

Musicals (where different, authors shown as lyricist; book author): Christmas in King St (Christmas entertainment, J. Slade, D. Reynolds and J. Cairncross), Bristol, Theatre Royal, 24 Dec 1952, rev. as Follow that Girl (2, Slade and Reynolds), Vaudeville, 17 March 1960; The Merry Gentlemen (Reynolds), Bristol, Theatre Royal, 24 Dec 1953; Salad Days (2, Slade and Reynolds), Vaudeville, 5 Aug 1954 [incl. I sit in the sun, The Time of My Life, We said we wouldn't look back]; Free as Air (2, Reynolds and Slade), Savoy, orchd P. Knight, 6 June 1957 [incl. Let the grass grow]; Hooray for Daisy (Reynolds), Bristol, Theatre Royal, 23 Dec 1959; Wildest Dreams (2, Slade and Reynolds), Vaudeville, 3 Aug 1961; Vanity Fair (2, R. Miller; R. Miller and A. Pryce-Jones, after W.M. Thackeray), Queen's, orchd D. Gornley, 27 Nov 1962; Nutmeg and Ginger (Slade, after F. Beaumont and J. Fletcher: *The Knight of the Burning Pestle*), Cheltenham, Everyman, 29 Oct 1963; The Pursuit of Love (Slade, after N. Mitford), Bristol, Theatre Royal, 24 May 1967; Winnie the Pooh (Slade), Phoenix, 17 Dec 1970 [after H. Fraser-Simson: *The Hums of Pooh*]; Trelawny (2, Slade; Slade, A. Woods and G. Rowell, after A. Wing Pinero: *Trelawny of the Wells*), Sadler's Wells, orchd A. Ralston and A. Gould, 27 June 1972; Out of Bounds (Slade, after A.W. Pinero: *The Schoolmistress*), Bristol, Theatre Royal, 26 Dec 1973
Incid music, incl. The Duenna; Love for Love; She Stoops to Conquer; The Merchant of Venice
Television: The Comedy of Errors (comic operetta, L. Harris and R. McNab), 16 May 1954 [staged London, Arts, 28 March 1956]; Love in a Cold Climate, 1980

JOHN SNELSON

Slancio, con (It.: 'with dash', 'with impetus'). A direction often found in violin music, particularly showpieces.

Slaoui, Houcine [al-Husīn al-Slāwī] (*b* Salé, 1918; *d* ?Salé, 7 Sept 1951). Moroccan singer, instrumentalist and songwriter. He first gained notoriety performing in *ḥalqāt*, the performance areas of public markets. Travelling with one or two percussionists and a violinist with whom he played the *gunibrī* (long-necked lute) and the *snītra* (banjo), he became quite well known across Morocco in the 1930s. His success in *ḥalqa* performance brought him to the attention of Pathé-Marconi, whose scouts took him to France to record in the 1930s and 40s. Recording and radio exposure expanded his popularity, allowing him to tour France as well as Tunisia and Algeria.

Slaoui's songwriting and performance style was heavily influenced by the work of Būjum'a al-Farrūj, a Moroccan singer from the Tafilalt. Slaoui recorded several songs of Farrūj, including *Ayyāmnā* (Our days) and *Yā mouj ghannī* (Sing, O waves). In recordings Slaoui introduced many new instruments to Moroccan *sha'bī* (popular) song; he broke stereotypes by using the *'ūd* (lute), an instrument associated with Middle Eastern and Arab-Andalusian classical traditions, to play songs of the *ḥalqa*, and also featured the *qānūn* (zither), the clarinet, the claves, the piano and the accordion. In French cabarets he was exposed to other North African musical traditions, and he subsequently incorporated material from the Tunisian *maqām* repertory in songs such as *Yā ghrīb lik Allah*. Another innovation was the topical nature of his

lyrics, which sometimes took the form of humorous yet sharply critical observations about contemporary Moroccan society; songs such as *Hadi ras'ek* (Watch your head) and *Al-amīrikān* (The Americans) addressed the impact of wartime rations and American soldiers on daily life.

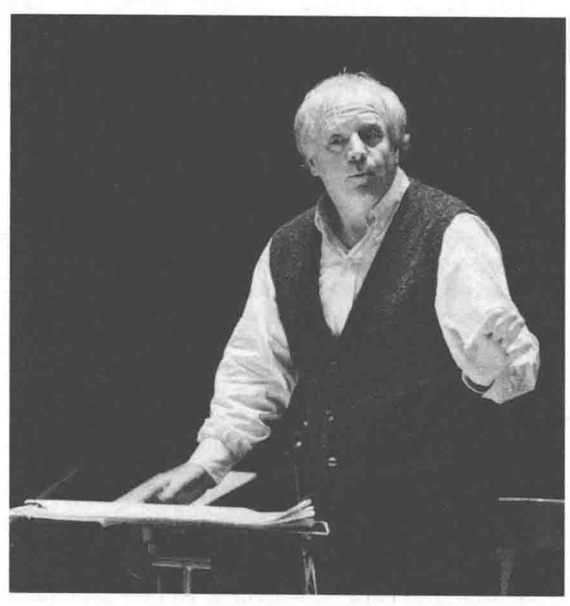
TIMOTHY D. FUSON

Slap-bass [slap]. An effect produced on the double bass by means of an exaggerated pizzicato technique: the string is drawn away from, or across the fingerboard at high tension and then released suddenly. The resulting note is accompanied by a percussive click or slapping sound as the string hits the fingerboard (*see* DOUBLE BASS, §5). It was widely used in jazz before the swing era, and consequently in revivals of music of that period; it was also prominent in the jump music of Louis Jordan (*see* JIVE) and in early rock and roll, notably in the playing of Al Pompilli with Bill Haley and the Comets. Double bass players in many areas of music (e.g. avant-garde jazz and contemporary art music) continue to employ slap-bass as one of a range of percussive effects. An effect known as slapping used on the ELECTRIC BASS GUITAR involves the player slapping the string with the side of the thumb and 'popping' higher strings with the index or middle finger, creating a very rhythmic, percussive sound, characteristic particulary of FUNK and funk-rock. Notable exponents include STANLEY CLARKE, Marcus Miller and Les Claypool.

ALYN SHIPTON

Slapstick. *See* WHIP.

Slargando. *See* ALLARGANDO.



Slatford, Rodney (Gerald Yorke) (*b* Cuffley, 18 July 1944). British double bass player. His first lessons were at the age of 14, after which he entered the National Youth Orchestra and studied with Eugene Cruft and later with Adrian Beers at the RCM. He held appointments as principal double bass with the Midland Sinfonia (1965–74) and the English Chamber Orchestra (1974–81) and played with the Nash Ensemble from its foundation in 1965 until 1994. He formed a duo with the pianist Clifford Lee in 1968 and made his London début in 1969, after which he appeared internationally as a soloist and lecture recitalist. With Lee he gave the premières of Lutyens's *The Tides of Time* (1969), Maconchy's Music for double bass and piano (1971) and Lennox Berkeley's Introduction and Allegro (1971), all of which are dedicated to him. Slatford was professor of the double bass at the RCM from 1974 to 1984, when he was appointed head of the School of Strings at the RNCM. He made many recordings, including most of the chamber repertory with double bass. He retired from the concert platform in 1994 in order to concentrate on teaching and broadcasting. In 1984 Slatford founded the Yorke Trust for the teaching of the double bass to children. His research into the repertory for his instrument led him to found a publishing company, Yorke Edition, devoted to the double bass literature.

MARGARET CAMPBELL

Slatkin, Felix (*b* St Louis, 22 Dec 1915; *d* Los Angeles, 8 Feb 1963). American violinist and conductor. He began violin studies with Sylvan Noack at the age of six. At the Curtis Institute, Philadelphia, he continued string training with Efrem Zimbalist and also studied conducting with Fritz Reiner. Although he frequently appeared with leading American orchestras as a soloist, he joined the violin section of the St Louis SO in 1931 and two years later became assistant leader. He moved to Los Angeles in 1937, and served as leader of the 20th-Century Fox studio orchestra. After wartime service in the US Air Force, he formed in 1947 the Hollywood String Quartet, the other members of which were originally Paul Shure (violin), Paul Robyn (viola) and Slatkin's wife Eleanor Aller (cello). This ensemble toured and recorded extensively until it was disbanded in 1961. In his later years Slatkin concentrated on playing in films, 'pops' concerts and recordings, his taste and classical training proving assets even in commercial enterprises. His sons are the conductor Leonard Slatkin and the cellist Fred Zlotkin.

MARTIN BERNHEIMER/R

Slatkin, Leonard (Edward) (*b* Los Angeles, 1 Sept 1944). American conductor. Grand-nephew of Altschuler, son of violinist and conductor Felix Slatkin and cellist Eleanor Aller, he studied the viola, violin, piano and composition before taking conducting courses at Indiana University (1962) and Los Angeles City College (1963). He also studied with Walter Susskind at Aspen, Colorado, in 1964 and, from 1964 to 1968, with Morel at the Juilliard School of Music, where he took the BMus. He made his Carnegie Hall début in 1966 conducting the Youth SO of New York. His mentor, Susskind, appointed him assistant conductor at the St Louis SO in 1968, promoting him to associate in 1971, associate principal in 1974 and principal guest conductor in 1975. From 1977 to 1979 he was music director of the New Orleans Philharmonic SO,

Leonard Slatkin, 1999

returning to St Louis as music director in 1979, a position he held until 1996. In that period he transformed St Louis into a leading American ensemble, earning a 30-disc recording contract with BMG, broadcasting weekly national radio concerts and making tours of Europe and Asia. Like Rattle in Birmingham, Slatkin chose to work for many years with a regional orchestra open to his ideas of balance and voice-leading, his commitment to new and American music and his intense periods of score study. Slatkin's loyalty was returned by an ensemble which became remarkably flexible and fluent in its readings.

While building the St Louis orchestra Slatkin also accepted guest engagements with leading orchestras in Europe and the USA and with the Chicago Lyric Opera, the Vienna Staatsoper and the Metropolitan. He has also directed summer concerts for the Cleveland Orchestra and for London's South Bank American Music Festival (1994). In 1996 he was appointed music director of the National SO of Washington, DC, and in 1999 music director of the BBC SO. His conducting is distinguished by a powerful sense of line, a sure command of form and acute attention to polyphonic detail. Although persuasive in standard repertory, as his recordings of Classical and Romantic symphonies, from Haydn to Elgar, reveal, Slatkin also favours such contemporary tonal composers as Adams, Barber, Castelnuovo-Tedesco, Corigliano, Ives and Piston. He holds an honorary doctorate at Juilliard and is a fellow of the American Academy of Arts and Sciences and an honorary member of the RAM.

CHARLES BARBER

Slatkonia, Georg (*b* Laibach [now Ljubljana], 1456; *d* Vienna, 1522). Austrian ecclesiastical administrator. A distinguished churchman, for 21 years he was leader (*obrister Capellmeister*) of Emperor Maximilian's Hofmusikkapelle. Slatkonia began his studies at the University of Ingolstadt but transferred after one year to the University of Vienna, where he received the baccalaureate in 1477. He became a chaplain to the emperor as early as 1495 and three years later assumed the post of Kapellmeister for Maximilian's newly formed Hofkapelle at Vienna. Slatkonia is pictured in the *Triumphzug Maximilians*, seated at the rear of the carriage behind the choristers and instrumentalists of the Hofkapelle. Isaac singled him out for special mention in the *secunda pars* of his 'imperial' motet, *Virgo prudentissima*. In 1513, when Vienna became a bishopric in its own right, Slatkonia was the first bishop. He is shown in his bishop's mitre on a commemorative plate now in the Stephansdom at Vienna, where he served for almost 25 years.

LOUISE E. CUYLER

Slatyer, William (*b* Tykeham, nr Bristol, 1587; *d* Otterden, Kent, Feb 1647). English clergyman and music editor. He graduated at Oxford University in 1609 and became a Fellow of Brasenose College; he later took the degrees of BD and DD (1623). In 1616 he became treasurer of St David's Cathedral, and for a while he was chaplain to the queen consort, Anne of Denmark. From 1625 until his death he was rector of Otterden. In 1630 he was censured by the Court of High Commission for publishing a book of metrical psalms, to which was attached 'a scandalous table to the disgrace of religion, and to the encouragement of the contemnors thereof'. The book was called *Psalmes or Songs of Sion Turned into the Language, and Set to the Tunes of a Strange Land* (London, 1642). In some copies the 'scandalous table' has been removed, but it survives in one (*GB-Cu*). It names various ballads and secular songs, as well as a few psalm tunes, to which Slatyer's versions may be sung. They include 'Walsingham', 'Barder Forsters Dreame', 'What if a day' and 'In sadnesse'. Slatyer declared that the metrical psalms were 'intended for Christmas Carols, and fitted to divers of the most noted and common, but solemne tunes, everywhere in this land familiarly used and knowne'. He also published *The Psalmes of David in 4 languages and in 4 parts, Set to the Tunes of our Church* (RISM 1643[6]), with metrical versions in Hebrew, Greek, Latin and English. Most of the settings here are by Thomas Ravenscroft; the others are by John Bennet, Edward Blancks, William Cobbold, Dowland and Kirbye. (*DNB* (E.I. Carlyle))

PETER LE HURAY/NICHOLAS TEMPERLEY

Slavenski [Stolzer, Štolcer, Štolcer-Slavenski], **Josip** (*b* Čakovec, 11 May 1896; *d* Belgrade, 30 Nov 1955). Croatian composer. His father gave him his first instruction in music, then in 1913 he entered the Budapest Conservatory where his teachers included Kodály and Siklós. His studies were interrupted in 1916 by army service and at the end of the war he was forced to return to his father's business in Čakovec. In 1921 he went to study in Novák's masterclasses at the Prague Conservatory. Having completed his studies in 1923 he returned to Croatia and taught for a year at the music school of the Zagreb Music Academy. In 1924 he moved to Belgrade, where he stayed for the rest of his life (except for a period in 1925–6 spent in Paris); he taught first at the Stanković School of Music, then at the music school of the Belgrade Academy (1937–45), becoming in 1945 professor of composition at the latter. Slavenski first attracted attention when in 1920 his orchestral Notturno op.1 was performed in Zagreb; in 1924 his First String Quartet was performed with success at the Donaueschingen Festival. Kleiber conducted his symphony *Balkanophonia*, first in Berlin in 1927 and then in various musical centres in Europe and the USA. Slavenski thus became the first Yugoslav composer of the 20th century to make an international reputation. At home, however, after the first success in 1920, he had to face the hostility of the then conservative Belgrade public and critics. After 1938 he composed very little; his works were seldom performed between 1940 and 1956 and he was almost forgotten. It was only after his death that his stature was recognized.

Initially Slavenski developed as an autodidact. The rich folk music of his native region, Medjimurje in north-western Croatia, left a decisive impact on him, and his youthful fascination with the sounds of church bells and the intricate combinations of their upper partials greatly contributed towards the formation of his harmonic idiom. His early compositions, dating from the time of his Budapest studies, show a blend of spontaneity with a

strong desire for experiment. Polytonality and bold dissonances occurred in his piano pieces as early as 1913, at a time when many southern Slav composers were still treating material borrowed from folk tradition in a predominantly Romantic way. Such interests brought him close to the music of Kodály and Bartók, and his academic studies deepened the mastery of counterpoint, which remained a vital ingredient of his style. He continued to experiment with new ideas throughout the 1920s: the Sonata for violin and organ contains sonorities which foreshadow electronic music, and the Piano Sonata uses aleatory technique. Slavenski's interest in folk music broadened in the late 1920s to encompass that of the whole of the Balkans, and the culminating result of this was his *Balkanophonia*. He was equally attracted by the mystical and ritual aspects of music, as may be seen from *Chaos*, a movement from the unfinished *Heliophonia*, and *Religiophonia*, the latter generally considered to be his masterpiece. During the 1920s and 30s he was one of the very few Yugoslav composers who showed an awareness of the searching spirit of the avant garde abroad. His imaginative use of percussion instruments may occasionally recall Varèse, whose works he did not know. He had no predecessors in Yugoslav music and no followers in his lifetime. When after his death his music became better known, it was already too late for it to exercise a direct influence on Yugoslav composers, though his creative use of folk music and his experiments of the 1920s provided a necessary impulse.

WORKS

Edition: *Sabrana djela* [Collected works], ed. N. Devčić (Zagreb and Belgrade, 1983–) [S]

BOJAN BUJIĆ

Slavický, Klement (*b* Tovačov, Moravia, 22 Sept 1910; *d* Prague, 4 Sept 1999). Czech composer and conductor. After receiving a basic musical education from his father, he studied at the Prague Conservatory (1927–31) with Jirák (composition), Dědeček (conducting) and Stupka (viola). He then took part in the masterclasses of Suk (1931–3) and Talich (1934–5). An appointment with Czech radio followed (for a time he was conductor of the radio orchestra); on leaving he devoted his attention to composition, although he was active in the administration of the Artistic Society (1939–72) and the Union of Czechoslovak Composers (1949–69). Slavický's music has its roots in Moravian folklore and he has been strongly influenced by Janáček and Novák. However, an individual character was already evident in the Woodwind Trio, and he developed a style of excited dramatic feeling and deeply expressive quality. One of his most important works, *Lidice*, displays his moral reactions to the German occupation; other major works include the Sinfonietta no.1 and the *Zpěv rodné země* ('Songs of my Country'). He worked slowly and deliberately and produced no occasional music.

JOSEF BEK

Slavík, Josef (*b* Jince, nr Příbram, Bohemia, 26 March 1806; *d* Budapest, 30 May 1833). Czech violinist and composer. His father, the teacher Antonín Slavík, taught him the rudiments of violin playing. At the age of nine Josef became a member of an amateur quartet which met in the flat of the count's clerk Josef Lábor in Horschowitz (now Hořovice). Under the patronage of the owner of Hořovice castle, Count Eugen z Vrbna, Slavík entered the Prague Conservatory (1816–23), where he studied the violin with B.V. Pixis, and theory and composition with B.D. Weber. He appeared for the first time at a conservatory concert on 30 March 1821, playing Mayseder's Polonaise in E. Two further school appearances attracted the attention of the critic for the Leipzig *Allgemeine musikalische Zeitung*, who predicted a great artistic career for the young violinist. After completing his studies in Prague he was a member of the Estates Theatre orchestra (1823–6), where he made friends with the soprano Henriette Sontag (who later helped him with his début in Paris). He also became associated with the Prague literary circle which included the foremost Czech historian, František Palacký. He appeared at several concerts in Prague, the Teplitz (now Teplice) spas, Carlsbad (Karlovy Vary) and Horschowitz.

In 1826 Slavík left for Vienna, where he made a living teaching the violin; when he failed to gain tuition from Mayseder, he prepared himself for the concert platform on his own. He became acquainted with Schubert, who dedicated to him the Fantasia in C D934; he performed it for the first time at a concert on 20 January 1828. Together with the composer, Slavík rehearsed Schubert's last string quartet. In 1828 he met Paganini in Vienna; their friendly relations and Paganini's approval during his stay in Vienna greatly influenced Slavík's further artistic development. Paganini embodied Slavík's ideal of virtuoso violin playing and became his model. In October he left for Paris, but he was unable to make his name against the strong international competition there.

In March 1829 he returned to Vienna to take up an appointment in the Viennese Hofkapelle (to which he had belonged previously as an unpaid member). He worked to perfect his playing, especially its musical expressiveness, which in recent years he had somewhat neglected while concentrating on technique. He gained great popularity with the Vienna concert public and audiences in Bohemia, where he toured regularly. His friendship with Chopin dated from December 1830 to June 1831. Chopin showered him with superlatives in his letters, and they planned to compose jointly variations for violin and piano on a theme by Beethoven. Slavík's Viennese concerts in 1832 and his last, on 28 April 1833 before the beginning of a proposed concert tour, were great artistic triumphs. In spite of illness he started the journey to Budapest, but there he fell ill again and died suddenly.

From his youth Slavík was interested in violin bravura and solving technical problems; this tendency appeared in his first compositions, such as the demanding Variations in E (*c*1820), dating from the period of his Prague studies. The Violin Concerto in F♯ minor (1823) is formally and expressively more mature, and contains features of the Romantic instrumental concerto. It was probably Slavík's graduation piece and in later years became one of the standard numbers in his programmes, although Pixis at the conservatory had rejected it as being meaningless and unplayable. Only a few of his works survive: the early variations, an incomplete copy of the F♯ minor concerto, the Caprice in D for violin solo, Grand Potpourri for violin and piano with Diabelli's edition of the Rondino in E for violin and piano, the Polonaise in D for piano, Variations on the G string on motifs from Bellini's *Il pirata* and a single movement of his best work, the Violin Concerto in A minor. Most of his other compositions are known only as titles in concert programmes, but even from this small and incomplete legacy it is possible to discern Slavík's artistic orientation as a Romantic virtuoso composer. He was the first modern Czech violinist to achieve an international reputation.

ALENA NĚMCOVÁ

Slayer. American death metal group. It was formed in 1981 by Kerry King (*b* Los Angeles, 3 June 1964; guitar), Jeff Hanneman (*b* Oakland, 31 Jan 1964; guitar), Tom Araya (*b* Chile, 6 June 1961; bass and vocals) and Dave Lombardo (*b* Havana, 16 Feb 1965; drums), who was replaced by Paul Bostaph (*b* San Francisco, 26 March 1964) from 1992 to 1996 and since 1997. They got their start by playing cover versions of songs by Iron Maiden and Judas Priest but eventually became the most successful and respected death metal band, due in part to their musically precise and speedy performances. Araya was a particularly influential death metal vocalist, and the rest of the band's members were highly regarded instrumentalists. Their lyrics frequently feature extreme violence and references to Satan, and are often cast in terms of defiant celebration as a response to a world filled with evil. Their calculatedly brutal, transgressive, sometimes chaotic-sounding music has caused controversy; ambiguous references to the horrors wrought by Nazism, such as in 'Angel of Death' on *Reign in Blood* (Def Jam, 1986), gained them some white supremacist fans and caused record distribution problems. In the mid-1980s, Slayer was considered one of the 'big four' of speed metal along with Metallica, Anthrax and Megadeth.

ROBERT WALSER

Šlechta, Milan (*b* Prague, 18 Oct 1923; *d* Prague, 24 April 1998). Czech organist. He played the piano from childhood and studied the organ at the Prague Conservatory with Wiedermann (1942–7) and at the Academy of Musical Arts (1947–51); at the same time he studied musicology and English at Prague University (1946–8). While a student he began to give broadcasts (1949) and a year later made his concert début with a recital of works by Bach. His performance at the organ competition in Ghent in 1955 led to an invitation to give several concerts in Ghent and Brussels in 1956. Subsequently he toured to the Netherlands, Britain, France, Italy, Yugoslavia, Germany, the USSR and other European countries. His playing was distinguished by a sense of style, accentuated

by a well-considered choice of stops, technical brilliance and great musicality. He was among the most erudite of Czech organists. In 1964 he was appointed to teach at the Academy of Musical Arts in Prague; he was also an artistic adviser on organ construction. His repertory included works by early Czech masters (Černohorský, Seger, Vanhal, Kopřiva), by Bach, and by French composers, notably the complete organ works of Franck and music by Dupré, Vierne and others. He contributed articles on organ music to *Hudební rozhledy* and edited early Czech organ music.

ALENA NĚMCOVÁ

Sledge, Percy (*b* Leighton, AL, 25 Nov 1941). American soul singer. A former hospital orderly, he had a major hit with his first recording, *When a Man Loves a Woman* (1966). Composed by Cameron Lewis and Andrew Wright and produced at the South Camp studio in Sheffield, Alabama, by Quin Ivy (a local disc jockey), the song was given a sparse arrangement featuring a Farfisa organ played by Spooner Oldham which offset Sledge's impassioned vocals; the recording was said to have been the primary inspiration for Procol Harum's *A Whiter Shade of Pale*. Sledge followed this with *Warm and Tender Love*, composed by Bobby Robinson. Oldham and Dan Penn composed two further Sledge recordings, *It tears me up* and *Out of Left Field*. His final pop hit was *Take Time to Know Her* (1968), but he continued to perform and record in the southern states. Although Sledge was black, he had grown up listening to country music and one critic described his vocal tone as 'Jim Reeves with grit and feeling'; he was a key exponent of what came to be called country soul, a style which amalgamated elements of both genres. See also B. Hoskyns: *Say It One Time for the Brokenhearted: the Country Side of Southern Soul* (London, 1987).

DAVE LAING

Slegel [Schlegel]. Netherlandish family of organ builders from Zwolle. Jorrien (i) (*d* before 5 March 1568) built a new organ for Osnabrück Cathedral, 1545–7, and with the help of his sons Cornelis (*d* 1593) and Michiel (*d c*1585) also built a new organ for the Broerenkerk in Zwolle in 1556–7. His sons built new instruments for St Martini, Stadthagen, in 1559–60, for Aalten and Nienburg in 1560, the Unserer Lieben Frauenkirche, Bremen, in 1561, Osnabrück Cathedral before 1570, and for the Marienkirche, Osnabrück, in 1571. Jorrien (ii) (*d* after 1615), son of Michiel, built new organs for the St Marien convent at Berg, Herford, and for St Marien, Lemgo, both in 1587 (the latter survives in altered condition); he became a citizen of Osnabrück in 1592. Michiel's son Jan (*d* before 7 Oct 1604) was organist of the Grote Kerk in Zwolle as well as an organ builder; he built a new instrument in Hattem, 1577–95, and one for the Reinoldikirche in Dortmund, 1591–6. Another Jan (*d* after 1684), grandson of the first, built a large organ for St Nicolaaskerk (Bovenkerk), Kampen, 1670–72 (many stops survive), and rebuilt his grandfather's instrument at Hattem, 1677–80 (which still survives). The specifications of the Slegel organs at Zwolle, Stadthagen and Herford, and of another at Warendorf have survived; they show *Hauptwerke* of seven or eight stops, and *Brustwerke* of four, supplemented by a 'full' Pedal. The full complement on a Slegel instrument consisted of Praestant 8′, Oktave 4′ and Mixtur, with perhaps also a Prinzipalquinte 2⅔′ and a Quintadena 16′. The *Hauptwerk* would have had 8′ and 2′ stopped and open flutes, the *Brustwerk* 4′ and 1′; the *Brustwerk* would also have had a Rauschende Zimbel. Trompete 8′ on the *Hauptwerk* and Krummhorn 8′ on the *Brustwerk* were divided into bass and treble. The principal sphere of the Slegels' activities lay outside their homeland, in the western areas of northern Germany, and they left their mark on the style of that region.

HANS KLOTZ

Sleigh bells. *See* BELL (i), §1.

Slentando (It.: 'becoming slower'). *See* RALLENTANDO.

Slezak, Leo (*b* Mährisch-Schönberg [now Šumperk], Moravia, 18 Aug 1873; *d* Egern am Tegernsee, Germany, 1 June 1946). Austrian-Czech tenor. Discovered and trained by the well-known baritone and teacher Adolf Robinson, he made a promising début at Brno on 17 March 1896, as Lohengrin. His early career was somewhat chequered; and his Covent Garden début, again as Lohengrin, on 18 May 1900, was ruined by the pandemonium aroused by the news of the relief of Mafeking. By contrast, his career in Vienna, whither he was called by Mahler in 1901, was brilliant and prolonged; he remained one of the leading tenors of the house until the mid-1920s, and subsequently made occasional guest appearances until a final *Pagliacci* in 1933.

During the interim Slezak had become internationally famous, especially after a period of study with Jean de Reszke in 1907. A marked improvement was noted on his reappearance at Covent Garden in 1909, when he sang Otello with robust power and beauty of tone. That autumn he made his first appearance at the Metropolitan Opera as Otello, to still greater acclaim; he remained with the company for four consecutive seasons, singing, among other parts, his main Wagner roles (Tannhäuser, Lohengrin, Walther), Verdi's Manrico and Radames, and Tchaikovsky's Hermann, and frequently appearing under the direction of Toscanini and Mahler. In later years he became well known as an interpreter of lieder, and later still made a new career for himself in 'comic uncle' roles in German and Austrian films. His irrepressible sense of fun comes out in his several autobiographical books; a similar volume by his son, the actor Walter Slezak, called *What Time's the Next Swan?* (New York, 1962), alludes to the tenor's celebrated stage whisper on an occasion when the swan in *Lohengrin* began to move off before he

Leo Slezak as Radames in Verdi's 'Aida'

had stepped aboard. Such anecdotes, together with his immense stature and ample girth, might suggest that Slezak was more of a 'character' than a serious artist. But the verdict of the New York critics during his seasons there, as well as numerous recordings made over a period of 30 years, prove the contrary. There were certain flaws in his technique, but at his best he combined great warmth and brilliance of tone with clear enunciation and a most delicate use of *mezza voce*. His lieder recordings are intensely expressive, but verge on the sentimental.

DESMOND SHAWE-TAYLOR/R

Slezské Národní Divadlo (Cz.: Silesian National Theatre). Opera and drama company founded in OPAVA in 1945.

Slide (i) (Fr. *coulé*; Ger. *Schleifer*). An ornament consisting of two short notes making a conjunct approach to the main note. The direction is usually upwards with the ornament on the beat, but downward motion is also found and an unaccented interpretation is occasionally possible.
See ORNAMENTS, §8(v)(f).

□

Slide (ii) (Fr. *glissade, port de voix*; It. *portamento*). In string playing the name given to an expressive method of changing smoothly and fairly rapidly from one note to another position (*see* SHIFT). The movement of the shifting finger along the string between two pitches is entirely audible without any of the intervening notes being distinguishable (*see* PORTAMENTO (ii)). In singing, the term slide is used as a synonym for vocal portamento (*see* PORTAMENTO (i)).

ROBIN STOWELL

Slide (iii) (Fr. *pompe*; Ger. *Zug*; It. *pompa*). On wind instruments, an airtight telescopic joint used to vary the length of the instrument and thus alter the pitch of the notes that can be sounded. On the SLIDE TRUMPET and the TROMBONE the slide can be moved freely and is long enough to allow a lowering of several semitones. Most brass instruments and some others incorporate at least one TUNING-SLIDE which is sufficiently stiff not to move in the course of performance. On some instruments such a slide not only allows tuning to match the other instruments of an ensemble but may be extended to lower the pitch by one or more semitones, giving a different transposition.

ARNOLD MYERS

Slide (iv). In Western guitar playing, especially blues, country and rock, the slide is an object held in the player's left hand to stop the strings above the fingerboard rather than fret them in the usual way with the fingers. Any object of suitable size, smoothness and weight may suffice, but most commonly used are glass bottlenecks, steel bars, metal combs or knives. *See also* STEEL.

TONY BACON

Slide (v). *See* JACKSLIDE.

Slider. In the WIND-CHEST of an organ, the slider is the perforated strip of wood placed between one hole admitting wind from the channel below and a second under the toe-hole of the pipe(s) above; when pulled or pushed directly (from its ends) or indirectly (from the stop-knobs at the console) the slider admits wind to that toe-hole. A single slider simultaneously controls all the pipes operated by one stop, and is thus perforated with as many holes as there are pipes for that stop (*see* ORGAN, §II). The nap of a carefully graded sheepskin leather under the slider has typically been used to make sure that wind does not escape between the slider's holes. The careful fitting of sliders has always taxed the skill of the organ builder, especially where sliders are superimposed, as in some types of COMBINATION ACTION. The vast majority of organs built between 1500 and 1850 had slider chests, at first for the CHAIR ORGAN only since multiple or spring chests were thought preferable for the bigger departments; the slider soundboard has since been revived as the system truest to the perfected classical organ. The term itself has an uncertain history; 'register' is used in some French and English sources (cf the harpsichord register, similarly a perforated strip of wood moving lengthwise), but it was not until 1837 (in Joshua Done's *A Complete Treatise on the Organ*) that the term became current in writing about organs.

PETER WILLIAMS/MARTIN RENSHAW

Slide trumpet (Fr. *trompette à coulisse*; Ger. *Zugtrompete*; It. *tromba da tirarsi*). A trumpet fitted with a slide mechanism whereby the length of the instrument can be altered while it is being played, thus making it possible to fill in gaps in the natural harmonic scale (it is classified as an aerophone: chromatic trumpet). It was used on the Continent during the Renaissance and Baroque periods

and, in another design, in England in the 17th and the 19th centuries.

According to evidence first presented by Sachs and later refined by Polk, Höfler, Welker and others, the Renaissance slide trumpet was made with the mouthpiece attached to a long cylindrical mouthpipe that telescoped inside the instrument's first length of tubing (fig.1). The player held the mouthpiece against his lips with one hand, moving the instrument back and forth on the mouthpipe with his other hand; depending on the length of the instrument, three or four positions were obtainable. When the instrument was in a closed position, it could scarcely be distinguished from the contemporary natural trumpet.

The straight natural trumpet was already in use in Flanders around 1330–50 in the alta (*see* ALTA (i)), the basic formation of which soon consisted of a shawm, a tenor shawm and a trumpet. Shortly before 1400 instrument makers learned to bend brass tubing; the earliest documentation of an S-shaped trumpet is a carving from the Worcester choir stalls, dated 1379 (the dating *c*1397 in Galpin, *Old English Instruments of Music*, 4/1965, p.149 seems to be a misprint). The single-slide

1. Renaissance slide trumpet (left) and treble shawm: detail from 'Christ and Music-Making Angels' by Hans Memling, completed c1492 (Koninklijk Museum voor Schone Kunsten, Antwerp)

trumpet seems to have been introduced shortly afterwards – according to Polk (1997) between 1400 and 1420, probably first in Burgundy, then in the Cologne-Flanders area – and was soon ubiquitous. It was used until the invention of the double slide around 1490 (this date according to Baines (1951) and Höfler; not earlier, despite Downey's reservations 1993), after which time the trombone gradually took over the single-slide trumpet's former function.

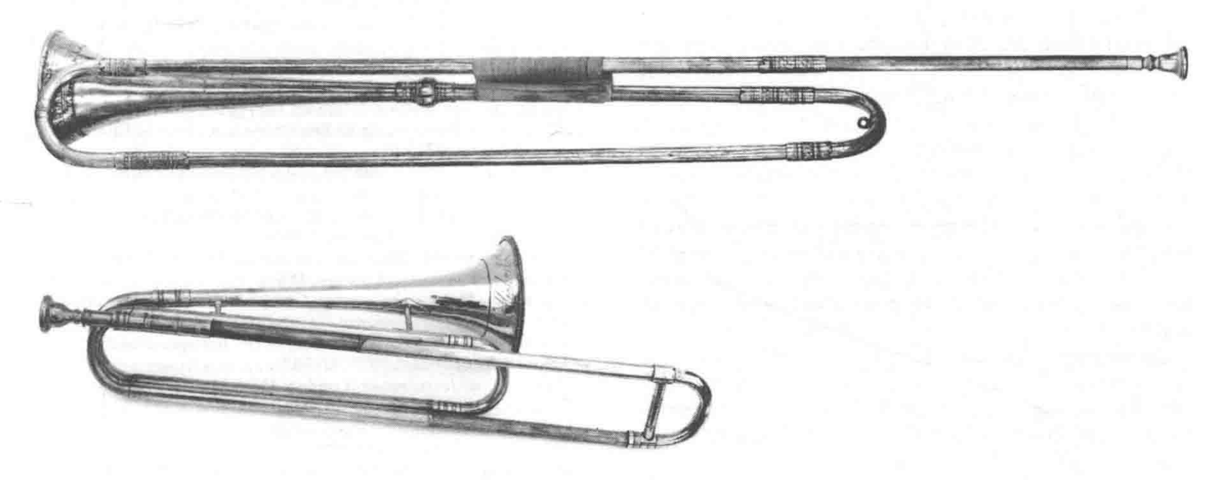
During this roughly 100-year period many shapes of slide trumpet co-existed: straight (both short and long, one of which can be seen in Hans Memling's Nájera altarpiece from *c*1490, fig.1); U-shaped (from an illustrated Bible from Padua, late 14th century, *GB-Lbl* Ms.15277, f.34); S-shaped (perhaps best exemplified by Michael Pacher's carving of two angel trumpeters from an altar showing the Coronation of the Virgin, from 1471–81, St Wolfgang im Salzkammergut, St Wolfgang); very long with a short folded section (as in the *Très Riches Heures* of Jean, Duke of Berry, *c*1411/1413–16, *F-CH* MS 65; *see* TRUMPET, fig.10*b*); folded with the non-parallel tubing lying in a kind of loop (popular in the north, as in the Memling painting mentioned above); and folded with parallel tubing like the later Baroque trumpet (from mid-century and possibly called 'clareta' or 'clarette'). There were also 'proto-trombones' with a single slide and in which the second bend of tubing lies behind the player's head (for example in a painting of the Coronation of the Virgin by the Master of the Life of the Virgin, *c*1480 in Munich, Bayerische Staatsgemäldesammlungen). With all due caution Höfler has determined on the basis of surviving illustrations that the lengths of such instruments could have been about 120 cm at the beginning of the 15th century, about 180 cm towards mid-century and later, and about 240–360 cm at the end of the century.

Terminology and nomenclature in a period of transition are always problematic. Early mentions of 'pusun', for example in Basle in 1410, could refer to either the long straight trumpet or perhaps the slide trumpet; 'trompette saicqueboute', in Burgundy in 1468, probably meant a slide trumpet, not yet the trombone; and various scholars including Höfler, Welker and McGee have shown that the brass instrument depicted on the Florentine 'Adimari wedding chest' of *c*1443–65 can no longer be termed a trombone, as had previously been thought (for illustration *see* ALTA(i)). By 1422 the trumpet in the alta – perhaps already a slide trumpet – was apparently known at the Burgundian court as the *trompette des ménestrels* to distinguish it from the natural trumpet or *trompette de guerre*. In Spain, where the alta consisted of four 'ministrers de xalamies' (shawms) and one 'trompeta de ministriers' as early as 1418, the slightly later term 'trompeta bastarda' probably referred to the slide trumpet.

The close connection between slide trumpet and trombone should not be surprising, since both instruments were then played in the alto-tenor range. Johannes de Grocheio (*De musica*, *c*1300) showed that the trumpet played predominantly in the second octave of the harmonic series, the octave in which prime, 5th and octave are present.

In addition, trumpet style for secular instrumental music was described in an early 15th-century German treatise (*PL-WRu*, IV.Qu.16, f.148): '*Trumpetum* and *stampania* may have two or three parts and wander

frequently to the 5th or the diapason, i.e. the octave, in the manner of a trumpet [*tube*] or a lyre'.



Johannes Tinctoris (*De inventione et usu musicae*, *c*1487) stated that the alta performed for church festivals, the weddings and banquets of the nobility, and for numerous other festivities both public and private, sacred and secular, 'very gracefully and with rich invention'. The usual repertory of the alta consisted of basses danses, in which the slide trumpet generally played the contratenor part with its characteristic leaps. The music was generally memorized or even partially improvised, but it could also be written out. The repertory of the ship's trumpeter Zorzi from *c*1444–9 contains various tenor and contratenor parts (*GB-Lbl* Ms. Cotton Titus A XXVI); in 1447–8 he was joined by two pipers, Girardo and Borttolomaio.

Certain 15th-century church compositions by Grossin, Loqueville, Lantins, Franchois de Gemblaco, Fontaine and others include the indication 'trompetto' or 'tuba' (chiefly in the contratenor parts) (see Heyde and Safowitz). Although it has been suggested that these parts may have been performed on other instruments in imitation of the slide trumpet, scholars now consider them to have been vocal imitations of the instrument. It was not until late in the century that wind instruments combined with voices.

Some later illustrations of slide trumpets, notably one in Jost Amman's *Stände und Handwerker* (Frankfurt, 1568), include a cross-piece with which the player seems to manipulate a double slide (fig.3). Thus the question is raised as to whether slide trumpets were always exclusively of the single-slide type.

The *Türmer Horn* ('tower watchman's horn') depicted in the early 16th century by Virdung (*Musica getutscht*, 1511) and Martin Agricola (*Musica instrumentalis deudsch*, 1529) may have been a slide trumpet. Trumpeters had been installed as tower watchmen as early as 1376 in Görlitz; the more usual terms were *Zugtrompete* and *tromba da tirarsi*. A Kassel inventory of 1573 recorded 'three German trumpets with their slides and mouthpieces' and another from 1601 mentioned two 'slide [*Zugk*] trumpets'. Thus it seems unlikely that the slide trumpet was invented in 1648 by the Weimar court conductor Adam Drese, as Downey has provocatively suggested. Still another inventory from the Wenzelskirche in Naumburg in 1658 spoke of 'two brand-new slide trumpets'. The only surviving example of such an instrument came to a Berlin collection (Musikinstrumenten-Museum, Staatliches Institut für Musikforschung) in 1890 from that church; made in 1651 by Huns Veit of Naumburg, it is pitched in modern E♭ and has a single slide nearly 56 cm long (fig.2*a*). G.C. Wecker, Kuhnau, J.S. Bach and J.L. Krebs wrote music for the slide trumpet; Gottfried Reiche owned one when he died in 1734. J.E. Altenburg (letter of 1767; *Versuch*, 1795) referred to the slide trumpet as used by tower watchmen and by *Kunstpfeifer* to play chorales. Another version of the slide trumpet, called the FLAT TRUMPET, was used in England in the late 17th century.

Towards the end of the 18th century in England a type of slide trumpet was developed in which the bend of tubing nearest the player's chin was a slide that could be drawn towards the player by a finger cross-piece on a bar fixed lengthwise inside the loop of tubing (fig.4). John Hyde, in his *New and Compleat Preceptor for the Trumpet & Bugle Horn* (London, *c*1798), described one of the earliest instruments of this type as a 'Chromatic Trumpet ... invented by J. Hyde, and made by Woodham' that allowed every note of the harmonic series to be lowered one semitone. The early models had a double watch-spring mechanism to return the slide to its normal position; later ones from about 1860 used a band of rubber. Surviving examples of 'Harper's Improved' model, licensed to John Köhler of London in 1833, are of both types (Bate Collection, Oxford). The standard English slide trumpet was in F, with crooks to lower the pitch to E, E♭, D or C (or by combining crooks, to D♭, B, B♭ or A) and had sufficient length in the slide to lower the pitch of open notes by a semitone or, in some instances, by a whole tone. Despite the advent of valved trumpets and cornets, English players – notably the Harpers, father and son – continued to play the slide trumpet throughout the century, taking up the cornet only occasionally for passages of great technical intricacy. In 1890, W. Wyatt introduced a doubly folded slide trumpet with more positions (an instrument of this type is now in the Padbrook collection.). Two other English variants were the large-bore short-model slide trumpet with a double fold, first built in 1815 (known as the REGENT'S BUGLE) and the 'patent ortho-chromatic slide trumpet' with

2. Slide trumpets: (a) by Huns Veit, Naumburg, 1651 (Musikinstrumenten-Museum, Berlin); (b) by Michael Saurle, Munich, c1820 (Musikinstrumentenmuseum, Stadtmuseum, Munich)

3. Slide trumpet, apparently with a double slide: woodcut from Jost Amman's 'Stände und Handwerker' (Frankfurt, 1568)

forward-extending slide, manufactured by Boosey about 1892.

In France the noted trumpeter J.D. Buhl rejected a German slide trumpet by Haltenhof of Hanau, brought to France in 1823, because of its cumbersome slide mechanism. However, in the mid-19th century Adolphe Sax in Paris made a slide trumpet of the English type, with a single watch-spring mechanism (now in the Bernoulli collection, Historisches Museum, Basle, Switzerland). F.G.A. Dauverné developed an instrument with the slide located in the bend nearest the bell, so that its movement was away from the player; six positions were possible. Courtois and Sax manufactured instruments of this type but French players preferred the *cornet à pistons* and the slide trumpet was generally little used in France.

An unusual type of slide trumpet, with two double bends of tubing (now in the collection of the Stadtmuseum, Munich), was made in about 1820 by Michael Saurle of Munich (fig.2*b*). Of the two bends in the tubing at the bell end of the trumpet, the inside one can be used as a tuning-slide and the outside one as a double-slide mechanism.

Slim, H(arry) Colin (*b* Vancouver, BC, 9 April 1929). Canadian musicologist. After receiving the BA from the University of British Columbia, Slim began graduate studies at Harvard University, and took the PhD in 1961. He taught at the University of Chicago from 1959 to 1965, then joined the staff of the University of California at Irvine. In 1972 he was appointed professor of music at the University of Chicago and in 1973 he became professor of music at the University of California at Irvine. From 1989 to 1990 he was president of the AMS and he received an honorary doctorate from McGill University in 1993. He retired in 1994.

Slim's earlier writings focussed on the keyboard and vocal music of Renaissance Italy; his later work is chiefly concerned with the iconographic representation of Renaissance music, musicians and instruments, particularly in the 16th century. His editions are remarkable for their high quality of scholarship, and they demonstrate Slim's breadth of interests.

PAULA MORGAN

Slingerland. Firm of percussion instrument makers. It was established in Chicago in 1921 as the Slingerland Banjo and Drum Co. by H(enry) H(arvey) Slingerland (*b* Netherlands; *d* Chicago, March 1945). Some time before 1941, however, the firm discontinued its banjos and devoted itself exclusively to the production of drums, becoming the Slingerland Drum Co. For many years the firm operated its own tannery and made its own heads. It specialized in the manufacture of machine timpani with an internal cable mechanism to connect tensioning screws to a pedal locking system. After World War II, and under the directorship of the founder's son, the company moved to larger premises in Niles, Illinois. In 1955 the patents of the Leedy Manufacturing Co. were acquired from C.G. Conn, but manufacture of its drums continued for only some three years. By 1978, when the J.C. Deagan Co. was purchased, Slingerland had become one of the world's largest percussion instrument manufacturers. By working closely with performers, the company developed a number of technical improvements to its products, including solid maple and five-ply drum shells, self-aligning lugs, various snare assemblies, and synthetic bar material for use on certain xylophones. In 1970 Slingerland became part of the C.G. Conn group of companies, and in 1984 the firms of Slingerland and Deagan were purchased by Larry Rasp (a former employee) and Sandra Rasp; Slingerland/Deagan's name was changed to the Sanlar Corporation. A year later Sanlar went out of business; the Slingerland name and product line were sold first to Fred Gretsch Enterprises, then, in 1994, to Gibson Musical Instruments, who established Slingerland as a subsidiary, manufacturing a full drum kit, including snare and bass drums, tom-toms and related hardware.

EDMUND A. BOWLES

Slit-drum (Fr. *tambour de bois, tambour à fente*; Ger. *Schlitztrommel*). An idiophone percussion tube or percussion vessel in the classificatory system of Hornbostel and Sachs – not a true drum. It is used for musical or signalling purposes (*see* TALKING DRUM) and made by cutting, burning or gouging one or more slits in the wall of a hollowed-out piece of wood. Slit-drums vary in size from gigantic, consisting of whole tree-trunks which are sometimes covered with a roof for protection (see illustration), to small portable ones like the temple block. On many slit-drums, especially in Africa, the two sides (or lips) of the slit are carved to different thicknesses so that at least two pitches can be produced. In areas where tonal languages are spoken, this enables the drum to be used for conveying messages by reproducing pitch phonemes, generally as conventional formulae; this is true, for example, of the Igbo regions of Nigeria, where the use of double as well as single slits extends the range of speech patterns that can be imitated. Elsewhere, as in Oceania,

Giant slit-drums at the village of Fonah on the coast of north Ambrim, Vanuatu

signalling codes are made up of arbitrary sequences of long and short beats. Sachs (p.37) discussed the ritual use of the slit-drum and the sexual symbolism implicit in its shape. Slit-drums are sometimes called slit-gongs, a term that Sachs rejected (p.30).

Slit-drums occur in several distinct regions of the world. In China, Korea and Japan they are used as ritual instruments and also in urban theatrical and village ensembles. Recently in China a slit-drum chime was invented for orchestral use comprising a number of *muyu* slit-drums of differing size tuned to a scale. Slit-drums (sometimes very large ones) may occur among hill tribes in India, for instance in Assam near the border with Myanmar and in one area of Madhya Pradesh. From Myanmar, Thailand, Vietnam and Malaysia slit-drum distribution continues into the islands of Indonesia and the Philippines and in a broad band south-eastwards among the Pacific islands stretching as far east as the Cook Islands. Another region of slit-drum use is Central and West Africa stretching from Angola and Zambia in the south to Mali and Senegal in the north-west (Laurenty recorded the names for over 100 different slit-drums in former Zaïre). Pre-Columbian civilizations of the Americas also used slit-drums, of which the best-known surviving types are the *teponaztli* of Aztec Mexico and the *tun* or *tunkul* of the Mayan Indians of Guatemala. Elsewhere in this region slit-drums have been reported in Cuba (several types), Costa Rica, Ecuador and Peru. Small slit-drums are used in Western dance and jazz bands,

most being simplified forms of the Chinese *muyu* or like the rectangular orchestral WOODBLOCK.

PETER R. COOKE

Śliwiński, Jan (*b* 1844; *d* 1912). Polish organ builder. He was one of the best and most prolific Polish organ builders. He trained with Cavaillé-Coll, subsequently working for him from about 1866 to about 1876 in Paris. In 1876 he founded his own large factory in Lemberg (now L'viv). He built 79 instruments before 1892, mainly in what is now Poland, the Ukraine, Slovakia, Romania and Hungary. Among his large organs are those built for St Pierre Cathedral, Le Vigan, France; the Franciscan church, Kraków; Our Lady of the Snows and the Conservatory, L'viv; the Catholic church, Kherson (Ukraine); the Franciscan church, Krosno; Luc'k Cathedral; and the parish church in Grybów. Although there is no complete record of his organs, he apparently built well over 150 instruments and trained several apprentices who continued his line. Śliwiński's extant organs betray a strong French influence, although reed stops were usually omitted, being then in disfavour with the Polish clergy (influenced by the Cecilian Movement). He also made reed organs of various sizes and good quality.

JERZY GOŁOS

Śliwiński, Józef (*b* Warsaw, 15 Dec 1865; *d* Warsaw, 4 March 1930). Polish pianist, conductor and teacher. The son of Jan Śliwiński, organist of Warsaw Cathedral and professor at the Music Institute in Warsaw, Józef began his piano studies with Juliusz Janotha and Kazimierz Hofman, continuing with Rudolf Strobl, Leschetizky in Vienna (1886–7) and Anton Rubinstein in St Petersburg (from 1890); he also studied the interpretation of Chopin's works with Karol Mikuli. His fame as one of the most talented pianists of his generation was established at the outset of his career with concerts throughout Europe, including Vienna, Warsaw, St Petersburg, Paris and London. He also made three concert tours in America to great critical acclaim (1894, 1902 and 1903). He was particularly esteemed in Russia, where he worked as a teacher in Riga (1910–14), Mitawa, Rostov and, from 1914 to 1918, in Saratov, as director of the conservatory. He also studied conducting in Riga, and in 1915 made an acclaimed conducting début in Warsaw. After he returned to settle in Poland in 1918 he combined his career as pianist with a conducting post at the Warsaw PO. In his later years he taught the piano at the Music School of Wielkopolska in Poznań. His unexpected death prevented him from making the gramophone recordings scheduled for 6 March 1930, though his playing is preserved on piano rolls (mainly of Chopin) made in Leipzig.

Śliwiński was acknowledged as one of the inheritors of the Romantic pianistic tradition of Anton Rubinstein. His playing was characterized by a light, silken touch, beautifully sustained cantilena lines, an acute feeling for Chopinesque rubato and a virtuoso technique. In addition to his exemplary Chopin interpretations, he was also a superb exponent of Schumann and Liszt. In his youth he composed a number of songs (before 1888) and some variations for piano (before 1892).

BARBARA CHMARA-ŻACZKIEWICZ

Sloane, A(lfred) Baldwin (*b* Baltimore, 28 Aug 1872; *d* Red Bank, NJ, 21 Feb 1925). American composer. He received his musical training from teachers in his home town. He was among the founders of Baltimore's Paint and Powder Club, an amateur theatrical group, for whose productions he composed some of his earliest songs. In the early 1890s he moved to New York, where his songs were interpolated in musicals and employed by vaudeville singers; one of his earliest successes was *When you ain't got no money, well you needn't come around*, introduced by May Irwin. He presented his first complete Broadway score, for *Jack and the Beanstalk*, in 1896. From 1900 to 1912 he wrote the music for 24 Broadway shows, including his best work, *The Mocking Bird* (1902), and the less successful *Lady Teazle* (1904) for Lillian Russell. His most famous song was 'Heaven will protect the working girl', sung by Marie Dressler in *Tillie's Nightmare* (1910), but its success lay more in Edgar Smith's amusing lyrics and Dressler's performance than in Sloane's music. With the blossoming of new talent in the American musical theatre around the time of World War I, demand for Sloane's work all but disappeared and his music was heard only infrequently. His last scores were for the *Greenwich Village Follies* of 1919 and 1920 and the posthumously produced *China Rose* (1925). Although Sloane was, in his brief heyday, the most sought-after and prolific writer of musical comedies and revues, his melodies were devoid of distinction; his music exemplified the competent but uninspired composition that critics of the time commonly characterized as 'tinkly' and 'reminiscent'.

GERALD BORDMAN

Slobin, Mark (*b* Detroit, 15 March 1943). American ethnomusicologist. He received the BA (1964) and the PhD (1969) at Michigan University, the latter under W.P. Malm. In 1971 he was appointed to the faculty of Wesleyan University, where he was made professor in 1984. He served as editor of *Asian Music* (1972–87) president of the Society for Asian Music (1987–9) and president of the Society for Ethnomusicology (1989–91). The focus of his early work was the music of Central Asia, particularly of northern Afghanistan, where he conducted fieldwork (1967–8, 1971 and 1972). In the mid-1970s he turned his attention to Eastern European Jewish music, concentrating on music found in the USA. His ethnographic work on Yiddish songs, Yiddish theatre, Klezmer musicians and cantors was complemented by research and writing on the theory and method of ethnomusicology. He has been in the forefront of efforts to forge links between ethnomusicology and sister disciplines such as folklore, performance studies, anthropology, sociolinguistics and cultural studies; he has also made

documentary videos and directed theatre projects. As an educator, he has played a key role in the development of the World Music Program at Wesleyan University and its model of a 'world music community'. He has also worked to open up a dialogue with scholars in the former Soviet Union and Eastern Europe.

THEODORE LEVIN

Slobodskaya, Oda (*b* Vilna [now Vilnius], 28 Nov 1888; *d* London, 29 July 1970). Russian soprano. She studied at the St Petersburg Conservatory and joined the company of the Mariinsky Theatre, where she made her début in 1919 as Lisa in *The Queen of Spades*. During the following years she sang most of the principal soprano parts of the Russian repertory and appeared also as Sieglinde, Marguerite (*Faust*), Elisabeth de Valois and Aida. In 1922 she was invited to sing the part of Parasha in the first performance of Stravinsky's *Mavra* in Paris; and thenceforward she began to make extensive appearances outside Russia. She sang Fevroniya in Rimsky-Korsakov's *Legend of the Invisible City of Kitezh* in Italian at La Scala in 1933, and in 1936 took part in a Russian season at the Teatro Colón, Buenos Aires. In London she sang Venus in *Tannhäuser* (1932, Covent Garden); Natasha in Dargomïzhsky's *Rusalka*, with Chaliapin (1931, Lyceum); Palmyra in Beecham's production of Delius's *Koanga* (1935, Covent Garden); and Khivrya in Musorgsky's *Fair at Sorochintsï* at the Savoy and on an English tour, in 1941 and subsequent years. By then Slobodskaya had made her home in England, where she was much in demand by the BBC, both for concert performances of opera (notably as the heroine of Shostakovich's *Lady Macbeth of the Mtsensk District*) and for recitals of Russian song. She possessed the imagination and the vivid temperament to convey to an audience ignorant of Russian the precise mood of each song, whether elegiac, boisterous, satirical or childlike. As her many recordings reveal, these rare interpretative powers were matched by a beautiful and ample voice of characteristically Slavonic colour and by a technical mastery which showed itself especially in supple and sustained legato phrasing. Slobodskaya retained her vocal and interpretative powers to an advanced age, making records as late as 1962.

DESMOND SHAWE-TAYLOR

Slonimsky, Nicolas (*b* St Petersburg, 15/27 April 1894; *d* Los Angeles, 25 Dec 1995). American composer and writer on music of Russian birth. At the St Petersburg Conservatory he studied the piano with his aunt, Isabelle Vengerova, and then composition with Kalafati and Shteynberg. In the USA he taught at the Eastman School of Music (1923–5) and then for two years was Koussevitzky's secretary. He conducted the Boston Chamber Orchestra (1927–34) and the Harvard University Orchestra (1927–30). During the 1930s and early 1940s he conducted in Europe and in North and South America, becoming known for his first performances of Ives, Varèse, Riegger, Cowell, Chávez and other composers of the Americas. He was a lecturer at Colorado College (1940, 1947–9), Peabody Conservatory (1956–7) and the University of California at Los Angeles (1964–7). In 1962–3 he travelled throughout eastern Europe as a lecturer under the sponsorship of the State Department.

Slonimsky was responsible for some of the major music reference works in English. He edited Thompson's *International Cyclopedia of Music and Musicians* from the fourth edition (1946), and under his guidance *Baker's Biographical Dictionary* continued its pre-eminence as an American bio-bibliographical source with expanded bibliographies and consistently accurate information on a wide range of musicians. He was also a member of the editorial board of the *Encyclopedia Britannica*. As a composer, he wrote a wide variety of works, from orchestral compositions to solo piano pieces. The titles and texts of his music often reveal a whimsical turn of mind, a trait also evident in his *Lexicon of Musical Invective* (1952) and in some of the entries in his reference books.

PAULA MORGAN

Slonimsky, Sergey Mikhaylovich (*b* Leningrad, 12 Aug 1932). Russian composer, pianist and teacher. The son of the writer M.L. Slonimsky and a relative of the composer and musicologist Nicholas Slonimsky, he began to study composition at the age of 11, with Shebalin. From 1945 to 1950 he attended a special music school for gifted children, where he was taught the piano by S. Savshinsky and composition by Arapov and Vol'fenzon. In 1955 he graduated from the Leningrad Conservatory in Yevlakhov's composition class, and in 1956 in V. Nil'sen's piano class. In 1958 he completed a postgraduate course on the theory of music, instructed by Ter-Martirosian. Since 1959 he taught music-theoretical disciplines, and since 1967 composition, at the Leningrad Conservatory. He has taken part more than once in folkloristic expeditions, and has recorded Russian folksongs. He is a Candidate of Arts (1963, for his dissertation on Prokofiev's symphonies), professor (1976), laureate of the State M. Glinka Prize (1983) and People's Artist of Russia (1987). He runs musical gatherings devoted to the popularization of Russian 20th-century music (especially from the 1920s). He is a member of the Composers' Union.

Slonimsky belongs to the generation who came into being as composers after World War II. Since the middle of the 1950s he has been interested in the musical avant garde and in a decisive stylistic renewal. Among his first works, which attracted attention by their use of non-traditional media, were the *Karneval'naya uvertyura* ('Carnival Overture', 1957) and the F minor Symphony (1958). Not uninfluenced by Stravinsky's folklorism, he became one of the pioneers of the 'new folklore wave' at the beginning of the 1960s, with his vocal cycle *Pesni vol'nitsï* ('Songs of the Runaway Serfs', 1960) and his opera *Virineya* (1967). He subsequently gravitated more towards archaic folk materials, towards medieval music and also the avant garde; these apparently contradictory tendencies may be seen in various compositions, both in parallel and separately (*Kontsert-buff* ('Concerto-Buffo', 1964–5) the cantata *Golos iz khora* ('A Voice from the Choir', 1964) and others).

Since the end of the 1950s Slonimsky has employed, in certain cases, the 12-tone system, and since the 1960s he has used aleatory, and sonoristic techniques, non-traditional graphic notation and quant rhythm. He made use of instrumental theatre in the *Dialogi* ('Dialogues', for wind quintet, 1964) and *Antifonï* ('Antiphons', for string quartet, 1968). In his later works he is frequently and unexpectedly paradoxical, and in striving to make his own all compositional models of past and present music presents them in an unbroken extravagance of generic symbiosis. Alongside the grotesque in *Kontsert-buff* and the extremely complicated counterpoint of *Simfonicheskiy motet*, he writes a Concerto for orchestra, electric guitar ensemble and solo instruments, and the *Prazdnichnaya muzïka* ('Festive Music') for balalaika, spoons and orchestra.

He has written ten symphonies: this particularly academic genre dominated Slonimsky's output of the 1980s. Although the second of these appeared 20 years after the first, the following six were written over just three years. Various models of sonata-symphonic cycle are presented there: lyrical-epic, pastoral, those with signs of narrative drama of the novelistic type (for example, the Fourth Symphony, dedicated to the composer's father, the writer Mikhail Slonimsky). In the later symphonies he displays a tendency towards post-Mahlerian massive cycles; the tragic Ninth Symphony depicts the catastrophes which have befallen humanity in the 20th century. The same theme is depicted through mythological images in the symphonic fresco *Apollon i Marsiy* ('Apollo and Marsyas'), commissioned by Ricordi. The programmatic Tenth Symphony *Krugi Ada* ('Circles of Hell') – written under the influence of the *Divina Commedia* by Dante Alighieri – is divided into nine parts ('circles') which follow without a break. The complex numerical symbolism of Dante's poem is reflected in the serial transposition of rows, and the composer pays great attention to effects of timbre and the various ways of creating sound on wind instruments.

Slonimsky's continued interest in the problems facing humanity and in tragic conflicts is reflected in his five operas, which represent various types of operatic drama in different periods of world history and literature. The steady success of *Virineya*, written in the traditions of Soviet opera, was no protection against the lengthy impossibility – due to censorship – of performing his second opera, *Master i Margarita* ('The Master and Margarita'), based on the novel by Bulgakov, which in 1955 had been published after years of disfavour under Stalin. The new type of chamber opera which he attempted to create remained unperformed for over 20 years, and it was only after another decade that the composer wrote his opera-ballade *Mariya Styuarda* ('Mary Stuart') in the style of European grand opera. The right to the première of this piece was contested among several leading theatres. Slonimsky followed the same path with his next opera, *Gamlet* ('Hamlet'), whose genre he defined as *dramma per musica*. This suggests the operas of Monteverdi, typological signs of which have enriched the musical lexicon of the late 20th century. In his fifth opera, *Ivan Grozniÿ* ('Ivan the Terrible'), he returns to tragic events in Russian history and renews the particular form of folk musical drama, which he modernizes under the name of

'Russian tragedy'. In his vocal cycles he favours the poets of the 'silver age' and his contemporaries (Akhmatova, Mandel'stam, Daniil Kharms, Yevgeny Reyn and Iosif Brodsky).

WORKS
(*selective list*)

STAGE

Virineya (op, 3, S. Tsesin, after L. Seyfullina), 1967, Leningrad, Maliy, 30 Sept 1967, rev. version, Leningrad, Maliy, Feb 1976
Ikar [Icarus] (ballet, Yu. Slonimsky), 1970, Moscow, Bol'shoy Theatre, 1971, rev. 1976
Master i Margarita [The Master and Margarita] (chbr op, 3, Yu. Dimitrin and V. Fialkovsky, after M. Bulgakov), 1970–72, concert perf., Moscow, Grand Hall of the Conservatory, 20 May 1989; staged Moscow, Mossovet, 11 Feb 1991
Mariya Styuarda (op-ballade, 3, Ya. Gordin, after S. Zweig), 1980, Kuybïshev (now Samara), Theatre of Opera and Ballet, 31 Jan 1981
Gamlet [Hamlet] (dramma per musica, 3, Gordin, after W. Shakespeare), 1990, Krasnoyarsk, Theatre of Opera and Ballet, 3/June 1993
Ivan Grozniy [Ivan the Terrible] (Russ. tragedy, 3, Gordin), 1995, Samara, Theatre of Opera and Ballet, 10 Oct 1998

OTHER WORKS

10 syms., 1958–92
Other inst: Vn Conc., 1956; Carneval'naya uvertura [Carnival Music], orch, 1957; Sonata, vn, 1960: Pf Sonata, 1963; Dialogi, wind qnt, 1964; Conc. buffo, chbr orch, 1964–5; Prashchaniye drugom [Bidding Farewell to a Friend] (vocal scene, Epic of Gilgamesh), 1966; Antifonï, str qt, 1968; Conc., solo insts, 3 elec gui, orch, 1973; Dramaticheskaya pesn, orch, 1973; Sonatina-Allegro, hn, pf, 1974; Prazdnichnaya muzïka [Festive Music], balalaika, spoons, orch, 1975; Solo espressivo, ob, 1975; Sym. Motet, orch, 1975; Vn Conc., vn, str orch, 1984; Org Conc., org, str orch, 1986; Sonata, vc, pf, 1986; Sonata, vn, pf, 1986; Ob Conc., 1988; works for solo pf incl.: 24 Preludes and Fugues, 1995
Vocal: Vesna prishla [Spring has Come] (Jap.), 1959; Pesni vol'nitsï [Songs of the Runaway Serfs] (Russ. trad.), S, B, pf, 1960; Golos iz khora [A Voice from the Choir] (cant., A. Blok), 1963; Pol'skiye strofï [Polish Stanzas] (A. Slonimsky), 1963; Liricheskiye strofïye (Ye. Reyn), 1965; Monologues (ancient eastern), S, ob, hn, hp, 1968; Vesyolïye pesni [Merry Songs] (D. Kharms), 1972; Pesni trubadurov [Songs of the Troubadours] (old Fr. texts), vocal cycle, S, T, 4 rec, lute, 1975; Pesnokhorka [Chorus of Songs] (Russ. folksongs), C, fl, ob, tpt, balalaika, 3 elec gui, vib, accdn, 1975; Pesn' pesney Solomona [Song of Songs of Solomon], S, T, chbr chorus, ob, fr hn, hp, 1975

LARISA GEORGIEVNA DANKO

Slovakia. Country in Central Europe. From 1018 the territory of the Slovaks was part of Hungary and in 1526 it was brought, together with Bohemia and Moravia, under Habsburg rule. The administrative division into the Austrian (Cisleithan) region and the Hungarian (Transleithan) region was created after declaration of the dual monarchy in 1867. In the Hungarian region a policy of aggressive oppression of minorities (including the Slovaks) was promoted, eroding the conditions for the development of Slovak culture. After 1918 the territory of Slovakia was incorporated into the new state of Czechoslovakia and was able to build its own cultural identity. In 1993 Slovakia became an independent state.

I. Art music. II. Traditional music.

I. Art music

1. To 1526. 2. 1526–1760. 3. 1760–1830. 4. Musical nationalism. 5. Since 1918.

1. To 1526. The first mention of music in the territory of present-day Slovakia dates from the end of the 8th century, when the Christianization of the central European Slavs began. In 863 the Byzantine missionaries Cyril and Methodius came to the Great Moravian Empire and laid the foundations of Slavonic liturgical chant, formed by the synthesis of Eastern (Byzantine) and Western (Latin) elements. After the incorporation of the territory of the Slovaks into Hungary in 1018 Western Gregorian chant became predominant. One of the most important monuments of Gregorian chant, equal in importance to the Nitra Gospel (11th century, with ekphonetic neumes) and the Pray Codex (late 12th century, with notation pointing to French and Italian models), is the Bratislava Missal (*c*1341). Like numerous liturgical manuscripts of the 15th and 16th centuries (e.g. the Spiš Gradual and Antiphoner of Juraj of Kežmarok, *c*1426; some four antiphoners from Bratislava and two large graduals from Košice, 15th and 16th centuries), the Bratislava Missal contains examples of indigenous liturgical music (sequences, tropes, rhymed offices etc.). Sacred songs were also sung in the vernacular. Secular music in the Middle Ages was largely practised by minstrels, the *igrici* who were at the same time musicians, dancers and jugglers. The earliest evidence of their existence dates from the 13th century.

Polyphony was cultivated chiefly in the larger towns such as Bratislava (also known as Pressburg and Pozsony), Kremnica, Levoča (Leutschau, Lőcse), Kežmarok, Spišské Podhradie, Bardejov and Košice, between the 15th and the 17th centuries. The repertory up to the end of the 15th century consisted of a large number of antiquated pieces (organa, conductus, polytextual motets), as in the

Trnava manuscript (*c*1400) or in fragments from Spiš and Košice (*c*1460–70).

2. 1526–1760. Bratislava, which became a coronation city in the 16th century, held its dominant position in the cultivation of sacred music. From St Martin's Cathedral the extensive polyphonic collection of Anna Schuman has been preserved, which contains antiphons, responses and hymns written in white mensural notation. The Franciscan library also houses a collection of 16th-century polyphony. The inventory lists from St Martin's Cathedral (1617, 1700) and from the Protestant church (1651, 1657) point to an influx of 17th-century Italian music, which came to western Slovakia via Vienna. Information on musical life of the second half of the 17th century can also be found in the inventory lists from other centres in Slovakia (e.g. from the Piaristic monasteries in Svätý Jur, Prievidza, Podolinec and churches in Pruské and Prešov).

The regions of Spiš and Šariš in eastern Slovakia provide important source materials documenting the cultivation of music in the 16th century and the 17th. The music collections from Bardejov and Levoča include motets, masses and vocal concertos by Franco-Flemish composers, Italian and German music of the late Renaissance and early Baroque and works by local composers. The major composers of polyphony in Slovakia were Johannes Ján Šimbracký (*d* 1657, organist in Spišské Podhradie between 1646 and 1648), whose music was influenced by Lutheran German *musica poetica* (e.g. that of Michael Praetorius and Schütz); Zachariáš Zarewutius (*c*1605–1667), organist in Bardejov, 1625–67; Samuel Marckfelner (1621–74), organist in Levoča; S.F. Capricornus (1628–65), music teacher and Kapellmeister in Bratislava from 1649 to 1657, who developed the South German and Italian *stile concertato*; Johann Kusser (1626–96), Capricornus's successor in Bratislava; and N.M. Pollentarius (*d* 1681), music director in Kremnica. Vernacular hymns, sung by the congregation in unison, played an important role in the period of the Reformation and Counter-Reformation, not only in the confessional conflict but also in the development of the Slovak language and Slovak culture, including art music. Some of these hymns were transmitted orally, others in manuscript hymnbooks, such as the *Ľubický spevník* (Ľubica Hymnbook) and the Prešov Gradual, but most in printed collections, such as the hymnbook of J. Silván (1578), the Protestant *Cithara sanctorum* (1636) and the *Cantus catholici* (1655).

In contrast to vocal polyphony, Baroque instrumental music drew much of its material from folksong and dance. The most important collections, such as the Vietoris manuscript (*c*1675–9), *Pestrý zborník* (a tablature book from Levoča, *c*1675), the Eleonora Susana Lányi collection (1729), Anna Szirmay-Keczer's collection of songs and dances (1730) and two Uhrovec manuscripts (1730, 1742), contain, in addition to local and foreign dance music, a large number of arrangements of folksongs for keyboard, wind and strings as well as for ad lib groups.

This was paralleled in sacred music by the late high Baroque forms of the sacred aria and pastorella (a particular type of the central European Christmas carol) for smaller vocal and instrumental ensembles, which were also greatly indebted to folk music. Most of the principal exponents of these forms were west Slovak Franciscans. Some of them, such as Paulinus Bajan (1721–92) and Georgius Zrunek (1734–89), were musicians of merit. Their music was intended for a broad rural population. On the other hand, the music of F.X. Budinský (1676–1727), Pantaleon Roškovský (1734–89) and Gaudentius Dettelbach (1739–1818) contains strong Italian traits.

3. 1760–1830. Music of the Classical era was swiftly and favourably assimilated in Slovakia. Contemporary copies and even some autographs of works by the major composers are common in Slovak libraries. Except in Bratislava and Košice, where most of the aristocracy lived, the church remained the centre of musical life; and the majority of local composers were orientated towards sacred music.

During the Classical period Bratislava, owing to its proximity to Vienna and its political and economic importance, was one of Europe's leading musical centres. Whereas previously musical patronage had been dispensed by members of the royal family, the wealthy aristocracy (notably the Esterházy, Grassalkovich, Erdödy, Apponyi and Pálffy families) and the ecclesiastical establishment, now the bourgeoisie began to take a dominant role in the spread of musical culture, through the municipal societies organizing public concerts and theatre performances. Bratislava's flourishing musical life was stimulated by the high quality of the city's music education and music journalism (notably in the *Pressburger Zeitung*), by distinguished local instrument makers and by a number of able composers, including Anton Zimmermann, cathedral organist and master of music to Cardinal Josef Batthyany in the mid-18th century, who composed symphonies, concertos and chamber music, among other works; Georg Druschetzky (Jiří Družecký), renowned for his music for wind instruments and his operas and other works for the theatre; the keyboard player and composer F.P. Rigler; J.M. Sperger; and F.X. Tost.

In the region of western Slovakia music was intensively cultivated in the towns (Skalica, Malacky, Trenčín, Prievidza, Pruské, Žilina), in religious centres (Trnava, Nitra, Svätý Jur) and in the residences of the nobility (Dolná Krupá, Hlohovec, Želiezovce). Many well-trained musicians and composers lived and worked in the region (Augustin Smehlík, Norbert Schreier, Alojz Schliester etc.). Musical activities of central Slovakia were particularly developed in the mining centres (Kremnica, Banská Štiavnica, Banská Bystrica); composers there included František Hrdina, Anton Hiray and Anton Aschner. The cultural tradition in the region of Spiš developed in Levoča, Kežmarok, Ľubica, Spišská Kapitula, Spišské Podhradie, Podolinec and other towns, and was influenced by the co-existence of different nationalities (including a substantial German population) and faiths. Most local compositions were backward-looking in style, adopting a Baroque rather than Classical idiom. In eastern Slovakia, where there was little bourgeois or aristocratic patronage, musical life was dominated by the church. The sacred works of several local composers, notably Ľudovít Skalník, Jozef Janig and, especially, F.X. Zomb, organist and teacher in Košice, were valued throughout Slovakia.

4. Musical nationalism. The development of musical nationalism in Slovakia was closely connected with the study and cultivation of folk music in other European cultures. A number of manuscripts and printed books containing folksongs and national hymns date from the 1830s and 40s. The culmination of this activity was a three-volume edition of Slovakian folksongs, *Slovenské*

spevy (1880–1926), containing more than 2000 songs. Folksong formed the basis of the popular choruses and songs of several amateur composers (Blažej Bulla, Štefan Fajnor, Miloš Francisci, Ľudovít Izák, Jan Kadavý, Milan Lichard and Miloš Ruppeldt) and of Ľudovít Vansa, who trained professionally in Prague. The first important Slovak nationalist composer was Ján Levoslav Bella (1843–1936), who composed orchestral, chamber and sacred music as well as the opera *Wieland der Schmied*. Most of his compositions, however, do not realize the ideas about Slovak music expounded in his theoretical writings (1873). He succeeded in creating a synthesis of his professionalism and a Slovak nationalist spirit only in a few works of the earliest and latest (after 1920) creative periods.

Musical associations and choral societies were important disseminators of music during the 19th century. They cultivated both sacred and secular music, often in the same programme. The choral societies in the country towns of Martin, Liptovský Mikuláš and Tisovec were particularly significant for their propagation of nationalist musical ideals. Several composers, notably Ján Egry, Leopold Dussínký, the brothers Andrej and František Žaškovský, Alexander Kapp and Oldrich Hemerka, composed church music in an international idiom which was widely performed throughout Slovakia. The church music society of St Martin's Cathedral in Bratislava, founded in 1828, had a particularly high reputation. Although the teaching of music developed mostly on a private basis, the first Slovak public music school had been opened in 1775 in Bratislava. During the 19th century some towns tried to set up municipal music schools, and in 1830 a school modelled on the conservatory in Prague was opened in Trnava.

The spirit of Slovak musical nationalism was developed in the works of Mikuláš Schneider-Trnavský (1881–1958), who composed mainly church music and lyrical song cycles, and in the chamber and orchestral music of Mikuláš Moyzes (1872–1944). Viliam Figuš-Bystrý (1875–1937) was the composer of the first Slovak opera, *Detvan*. Frico Kafenda (1883–1963), a pianist and teacher trained in Germany, wrote mainly chamber music in a late Romantic style. Alexander Albrecht (1885–1958), a friend of Bartók and director of the church music society at St Martin's Cathedral, Bratislava, from 1921, cultivated a more progressive idiom.

5. Since 1918. The professionalization of Slovak musical culture had profound and far-reaching effects. The establishment of various musical institutions on a national basis started soon after the creation of the first Czechoslovak Republic in 1918. These included the opera ensemble of the Slovak National Theatre (1920), Hudobná a Dramatická Akadémia pre Slovensko (Music and Drama Academy in Slovakia, 1928) and the Bratislava RSO (1929), as well as the department of musicology at the Comenius University in Bratislava (1921). From the late 1920s a progressively orientated group of composers emerged, whose works often aimed at a synthesis between the tonality of traditional Slovak folksong and modern modal harmonic structures. This group included Alexander Moyzes, Eugen Suchoň, Ján Cikker, Ladislav Holoubek, Andrej Očenáš, Dezider Kardoš, Šimon Jurovský, Jozef Kresánek and Tibor Frešo.

The stylistic development of Slovak music in the second half of the 20th century was accompanied by a gradual removal of the doctrines of socialist realism enforced during the period 1948–89 when Slovakia belonged to the Soviet bloc. In the 1960s a group of avant-garde composers emerged who drew their inspiration from a broad spectrum of 20th-century European music, especially from the Second Viennese School, the Darmstadt School and the Polish avant garde. This group includes Ivan Hrušovský, Roman Berger, Pavol Šimai (who emigrated to Sweden in 1968), Miro Bázlik, Juraj Pospíšil, Ilja Zeljenka, Jozef Malovec, Ivan Parík, Dušan Martinček, Ladislav Kupkovič (who emigrated to Germany in 1969), Peter Kolman (who moved to Austria in 1977), Tadeáš Salva, Jozef Sixta, Juraj Beneš and Juraj Hatrík. From the 1980s a number of composers, including Vladimír Godár, Iris Szeghy, Martin Burlas, Peter Zagar, Peter Martinček and Daniel Matej, wrote in an essentially postmodern idiom.

The position of music in postwar society was closely connected with the systematic state control of culture in Slovakia. The communists decreed that music should be widely accessible to all strata of society, and developed institutions to this end. The position of Bratislava, capital of Slovakia, was reinforced as the centre of national music life, and new institutions were created, notably the Slovak PO, the High School of Musical Arts (both established in 1949), the State Music Publishing House (1951, from 1970 OPUS) and the Slovak Music Fund (1954). From 1951 musicological research was concentrated in the Institute of Musicology at the Slovak Academy of Sciences. After the fall of communism in 1989 the Union of Slovak Composers became the Slovak Music Union representing the interests of composers, performers and musicologists. The Slovkoncert Music Agency organized concert life in Slovakia and arranged foreign tours for Slovak artists.

These institutions have helped to form a whole new generation of composers, performers and musicologists in Slovakia. These include the conductors of the Slovak PO (Ľudovít Rajter, Ladislav Slovák, Bystrik Režucha, Ondrej Lenárd), the chorus directors Juraj Haluzický, Štefan Klimo and Ladislav Holásek, and Bohdan Warchal, conductor of the Slovak Chamber Orchestra; the pianists Michal Karin, Rudolf Macudziński, Klára Havlíkova, Eva Fischerová-Martvoňová, Helena Gáfforová, Peter Toperczer, Marián Lapšanský and Daniela Varínska; the organists Ferdinand Klinda, Ivan Sokol and Ján Vladimír Michalko; the string players Tibor Gašparek, Peter Michalica, Juraj Alexander and Jozef Podhoránsky; the early music ensemble Music Aeterna; the Moyzes Quartett; and the singers Lucia Popp, Edita Gruberová, Peter Dvorsky, Sergej Kopčák, Magdalena Hajóssyová, Peter Mikuláš and Martin Babjak.

Jozef Kresánek, professor of musicology at the Comenius University in Bratislava from 1956 to 1980, was the founder of modern musicological research in Slovakia. His distinguished contemporaries and successors have included the music historians Richard Rybarič and Darina Múdra, the ethnomusicologists Ladislav Leng, Alica Elscheková and Oskár Elschek, the acoustician Miroslav Filip and the theorists Ladislav Burlas and Peter Faltin. The results of their research were reflected in the journals *Slovenská hudba* ('Slovak music', founded 1957) and *Hudobný život* ('Musical life', founded 1969) as well as in the annuals *Hudobnovedné štúdie* ('Musicological studies'), *Musicologica slovaca* (founded 1955) and *Hudobný archív* ('Musical archives', founded 1974).

The cultivation of folk traditions has been an important aspect of contemporary Slovak music. In addition to the presentation of authentic folk music at festivals and competitions, folksong has also been cultivated in stylized forms by the Slovak National Folk Ensemble and the youth ensemble Lúčnica.

The establishment of the Opera of the State Theatre in Košice (1945) was followed by similar opera companies in Prešov (1948) and Banská Bystrica (1959). After World War II a network of primary music schools was created throughout Slovakia, conservatories were founded in Žilina, Košice and, later, in Banská Bystrica, and music teaching to degree level was established at institutes in Trnava, Nitra, Banská Bystrica and Prešov. Regular concert life began in the eastern and central regions of Slovakia with the formation of the State PO in Košice (1969) and the State Chamber Orchestra in Žilina (1974). The principal monuments of Slovak music are held in the music department of the Slovak National Museum in Bratislava, the J.N. Hummel Museum in Bratislava, the Literary and Music Museum in Banská Bystrica, the Museum of Keyboard Instruments in Markušovce and the Matica Slovenská in Martin.

The most important international festival in Slovakia is the Bratislava Festival, established in 1965. The Central European Festival of the Performing Arts has been held annually in Žilina since 1990, and the Festival of Historic Organs takes place each year in various churches throughout Slovakia. Smaller summer festivals are held in Bratislava and in other towns, especially spas. Other recent festivals include the Biennale Melos-Étos, devoted to new music, and a festival of contemporary chamber music organized by the Slovak section of the ISCM.

II. Traditional music

Slovakia is situated at the intersection point of western and eastern European cultural areas. This is reflected in its folk music, which is based on east European elements but contains many features of west European origin, especially in the newer style. Slovak folk music has served as a bridge between the folk music of the two areas by introducing styles and elements of west European melodies and harmonic and tonal principles to Hungary, the Ukraine and other areas. Through transformation and assimilation, it has acquired a remarkable stylistic variety. Bartók, referring to central European folk music in general in a letter of 1911, wrote: 'in this country, it seems, the Slovak people is the richest in folk song. In almost every village they know different songs'. Slovakia in its central European position unites old European styles and new European folk music developments. Old Slav and non-Slav elements are balanced in its history and presence.

1. Sources. 2. Historical styles. 3. Regional music areas. 4. Folksong genres. 5. Cross-cultural relations. 6. Instruments and instrumental music.

1. SOURCES. The sources for Slovak folk music are manifold. In the Middle Ages there was a social group of folk epic singers called *igric* or *igrec* ('player') who performed mainly in villages but also at court. They can be traced in 12th- to 18th-century sources, which describe various ordinances, prohibitions and penalties against them. 15th- and 16th-century sources show greater interest in folksongs and were frequently cited in editions of spiritual songs and to a lesser extent in folkdance music: many central European sources mention such dances as the *haiduc* and *ungaresca*.

Collecting on a large scale began in the 17th and 18th centuries, some results of this activity being the Vietoris manuscript, a collection of harpsichord pieces (see Burlas, Fišer and Hořejš), a collection by Anna Szirmay-Keczer of violin pieces (see Kresánek, 1967) and four manuscripts from Uhrovec containing almost 800 melodies (see Terrayová, 1990). In the 19th century such groups as the Friends of Slovak Songs began systematically collecting and editing folksongs; they collected about 5000 Slovak folksong melodies including 2000 published in the *Slovenské spevy*, available in a new edition. Similar work was done from the 1870s onwards by the Matica Slovenská. Among later important collectors were Bartók, H. Bím, A. Halaša, Janáček, J.E. Jankovec and Jozef Kresánek. After 1950 extensive fieldwork was started by the ethnomusicology department of the Institute of Musicology of the Slovak Academy of Sciences, and in the folk music department of Bratislava Radio. 26,000 Slovak folksong melodies had been published by 1995; there is also a stock of 90,000 folk music transcriptions and more than 110,000 recorded folksongs and instrumental melodies in the archives. Study is aided by computers. Historic and regional studies have been supplemented by basic methodological studies in folk music analysis, systematization, comparison and cross-cultural relations. Electronic melographic and spectrographic devices are used for transcription and sound analysis, as are graphic and written kinetic dance notations. Instrumental folk music, folk instruments and folkdance receive great attention and are widely documented on film and video.

2. HISTORICAL STYLES. The many different styles of contemporary Slovak folk music may be classified according to their historical strata, regional characteristics and folk music genres. (Style in this context refers to a group of melodies or melodic types with a similar or identical musical structure.) These are discussed in a hypothetical chronological order.

The 'magico-ritual style', whose recitative-like melodies have a tonal skeleton of a 2nd or 3rd, is represented by about 2200 songs, 1·5% of all the Slovak folksongs collected. 51% of them are in a free melodic form based on simple motivic formulae and short repeated lines; 31% show two- or four-section structures with four to six syllables per line. Melodic structure and content are largely determined by the texts. These songs are associated with ceremonies for the winter and summer solstices and with harvest and funeral rites. Children's songs and play songs are also found in this style, which is similar to eastern Slav ceremonial songs and more generally to the European children's repertory. Melodic types are not clearly differentiated; they consist of static formulae moving around a tonal skeleton, as shown in ex.1. All

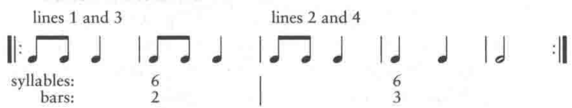
Ex.1 Spring ceremonial song, Rožňava district; rec. M. Danková, transcr. A. Elscheková

transcriptions are of recordings in the sound archives of the Slovak Academy of Sciences.

The 'peasant style' is characterized by the interval of the fourth which acts as the skeleton or frame for the melody: the central tone and the note a 4th above are the most important notes of the melody. 4–5% of collected Slovak folksongs (about 5000 melodies) belong to this 4th-tonal style. The frame of a perfect 4th is sometimes extended to more complicated forms, such as that

juxtaposing two 4th frames, authentic and plagal; this is common in the '5th formation' of dance-songs (i.e a phrase repeated a 5th lower). Ex.2 is representative of this style, with rhythmically expanding cadences (i.e. note values increasing towards the end of a phrase). It cannot be organized into regular bars and, as in 75% of the songs in the peasant style, it has four sections. 62% of these four-section melodies are isometric with six-syllable lines; their form varies (e.g. *AABB*, *ABAB*, *AABC* or *ABCD*). The tempo of performance is crotchet = *c*100, the prevailing durational values being a crotchet and a quaver. Types of song in this category are harvest and hay-making songs, wedding and christening songs, and laments and lullabies. The most beautiful and characteristic melodies are the *trávnice*, the hay-making or meadow songs (as in ex.2), whose texts are predominantly based on subjects drawn from nature.

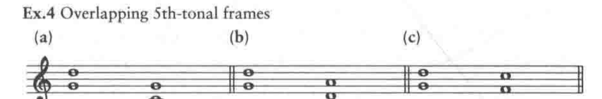
The 'shepherd style' developed between the 14th century and the 18th, with a melodic structure built on the framework of a 5th. It represents 30% of the collected Slovak folksong repertory. This style is partly a continuation of earlier traditional Slovak peasant styles and partly the result of acculturation from the period of the 'Valachian colonization'. The mountain regions of central and north Slovakia were sparsely inhabited and insufficiently exploited economically. The nobility therefore encouraged sheep-rearing by giving various rights and privileges to shepherds when they settled in these regions. These privileges brought to Slovakia Valachian shepherds from Romania (13th to 15th centuries), the Ukraine (15th to 16th centuries) and the northern side of the Tatra mountains (17th to 18th centuries). Every wave of immigration brought new cultural elements which were assimilated and transformed, as the mountain areas were mostly settled by Slovaks from the plains and lowlands. This new economic, social and cultural development resulted in the Valachian musical style. The social and economic hardship of the 17th century, deepened by the Turkish wars, brought misery to the country and greater oppression for the serfs; the result was an increase in feudal warfare. One of the most spontaneous forms of protest against the ruling class was flight into the mountains where bands of outlaws and robbers were formed. The songs and dances that arose out of these circumstances greatly influenced the shepherd culture and indeed represent some of the most beautiful examples of this style.



The shepherd style is characterized by the following structural features: the intervals of a 5th, or a 3rd and a 5th, form the framework of the music, remaining unchanged throughout; the melodic line is usually descending; augmentation of note values takes place as the melodic line proceeds, with notes of longer value at cadences; 62% of the melodies are in the F mode, robber songs are often in the G mode, and the C and D modes are also fairly common; closed forms are unknown, but there is a tendency towards periodic forms, in which a phrase is repeated with slight variation, for example *AA′B* or *ABB′*. In later examples of the shepherd style, the characteristic range of a 5th is expanded, probably as a result of the influence of instrumental music (on the bark horn, flute and string ensembles) and polyphonic singing. Contact with more recent songs or songs of Western origin has also exerted some influence.

Ex.2 Hay-making song, Liptovský Mikuláš district; rec. and transcr. A. Elscheková

♩ = 120
SOLO CHORUS
Hra-baj ďie-vča hra-baj, to ze - le- nuo se - no,
ja bi ho hra ba - la (hej) ňe mam na ko se nuo.



In 55% of these songs the melodic stanza consists of four six-syllable lines, of which the second and the fourth are rhythmically augmented so that lines one and three are of two bars, and lines two and four of three bars (ex.3). The robber dance-songs are built on conjunct or

Ex.3 Rhythmic and metric construction, shepherd-style songs; rec. and transcr. A. Elscheková

overlapping 5th structures: authentic (ex.4*a*), plagal (ex.4*b*) or a tone apart (ex.4*c*). These melodies consist of

Ex.4 Overlapping 5th-tonal frames

five or six lines with the form *ABC*, repeated a 5th lower, and a bimetric syllabic structure, for example 8 + 6 + 6 + 8 + 6 + 6. 20% of the shepherd songs show such a bimetric structure, as in ex.5 (6 + 6 + 7 + 7 syllables). The example is rhapsodic in character, and shows how the melody may be subtly varied from one stanza to another.

The origin of melodies constructed on a 5th is probably connected with the earlier 4th-tonal types, as transitional types are common. The interval skeleton of a 5th was

Ex.5 Shepherd's song, Púchov district; rec. H. Polomíková, transcr. O. Elschek

extended to 3rd–5th and further to 4th–6th structures. Two- and three-part homophonic singing, in which, however, both heterophony and polyphony may occur, is another characteristic feature of this style.

Besides robbers' and shepherds' themes there are narrative, ballad and love motifs, as well as songs connected with weddings, christenings, harvest and other such events. Dance-songs are typical of the shepherd style; for example the *haiduc* (robber) dance *odzemok*, the bear dance and sheep dance, as well as the Christmas carols and songs to Christmas plays enacted by shepherds.

The last stage of Slovak folk music development consists of a harmonic-melodic style refered to as the 'new song style'. This style originated in the 16th and 17th centuries, attaining stability and its principal features in the 19th century. The birth of the new style was accelerated by various factors: the influence of Baroque art and popular music; folksongs of Western (German) origin; market songs from Poland, Bohemia and Moravia; and, in the late 19th century, the urban music of Gypsies.

The final note of a melody functions also as the main note of an arched melodic structure, in what is termed 'contrary fifthing', that is, the transposition of a phrase (A) a 5th higher (A^5); this arises from the new (to this tradition) tonal relationship of the tonic and dominant. The formal types AA^5BA and AA^3BA have become very common, showing a preference for a closed formal structure with the repetition of the first phrase at the end. The syncopated or 'pointed' rhythm (ex.6) appears in

Ex.6 Syncopated or 'pointed' rhythm

about 30% of the new songs and is applied in a free, often improvised, manner. Isometric and bimetric structures occur approximately equally in four-line melodic stanzas. It is characteristic for the third line to have a different number of syllables from the other three (e.g. 12 + 12 + 10 + 12 or 14 + 14 + 12 + 14) and to employ some rhythmic and metric contrast. The number of syllables has increased beyond the six to eight of the earlier styles and now lies between eight and 25 syllables to a line, thus allowing a new type of longer melody. In contrast to the smooth melodies with small intervals of the earlier styles, melodies of the new style show a free use of large intervals (ex.7).

Another aspect of these new songs is their changed thematic content and social function. Representative genres are ballads, love songs, military and recruiting songs, and humorous, social and emigration songs. This

Ex.7 Young men's song, Rožňava district; rec. J. Hlaváč, transcr. A. Elscheková

Noteheads in brackets indicate variants in the melody.

new song style at present constitutes 60–70% of the collected Slovak folksong repertory.

Folk music of the 20th century showed some new elements: for example, in the richness of polyphonic singing in all parts of Slovakia, and in the merging of traditional forms with modern popular dance-songs of the 1930s and 40s. Another significant change was the emotional style of performance. The texts of the songs were closely related to everyday life.

In the 1940s and 50s new folksong genres came into use: songs about Slovak national rising, partisan songs, songs about the cooperatives in villages and about industrialization and the events changing rural social structure. The texts of these new genres of folk poetry are sung to traditional melodies selected from the earlier and new styles. This technique of singing new texts to older melodies was also common in the revolutionary work songs of the 19th and 20th centuries. There has been a conscious revival of folksong and music in ensembles in towns, schools and among young people as well as on radio and television programmes. A new powerful revival began in the late 1960s associated with folk music instruments and instrumental music. Festivals, folk music meetings, seminars, competitions, jamborees and other events were an important part of this revival. Rediscovering, imitating and reconstructing older traditions were the basis of the folk music revival, and the function and character of folk music changed due to the musical transformation of different styles. Cooperation between folk music practice and folk music research influenced this process.

3. Regional music areas. Different music areas or dialects have developed in response to particular regional, cultural, social, geographical and musical conditions. They consist of a special configuration of the known historical styles, whereby individual stylistic elements are integrated in a relatively new formation. There are four main regions, which are divided into the sub-styles of smaller regions, valleys and villages with folk musics of their own.

The significant feature of west and south Slovakia is that the earliest magico-ritual and 4th-tonal peasant styles are found in their most typical and developed form. This is because from the 5th century this region was the oldest central cultural area of the western Slavs. The shepherd style plays an inferior role there. The new song style predominates though it shows many common elements with the melodic formulae of the earlier styles, for example, melodies of small range with five to six notes, two- or three-line structures and short motifs. The influence of western European elements is strongest in this area. 8% of the region's melodies originate in the earlier styles, 30% are 5th-tonal but without clear connections with the shepherd style and 60% belong to the new repertory.

The mountain regions of north and central Slovakia constitute the largest and richest music area. 60% of the songs there originate in the shepherd style, and in some villages of north Slovakia (e.g. Terchová) almost 60% of the songs are in the F mode. In the north the 'Podhalan tonality' (*d–f♯–g–a–b–c♯′–d′–e′–f′*), based on the natural scale of flutes without finger-holes, is characteristic, while the G mode is favoured more in central Slovakia. The origin of these modes in Slovak folk music is connected with folk instruments (the shepherds' horn, flutes without

finger-holes and the *fujara*, a duct flute with three finger-holes). In this region partsinging and parlando performance play an important role.

East Slovakia forms the third music area. 80% of the songs are performed in *tempo giusto*. The melodic structure is characterized by repetition, transposition and the sequential repetition of miniature motivic formulae. An important aspect of these songs is their use for accompanying dance. The melodies on the whole are longer and have a greater range than in other areas. Cadences of a 4th are typical and therefore hypomodes (i.e. plagal) predominate. Closed forms such as *AABA* or *ABBA* are most common. The rhythm is organized exclusively in two-beat bars, as is characteristic of 90% of Slovak folksongs. In east Slovakia, the alternation of 2/4 and 3/4 metres occurs in the *karičky*, a round-dance performed by girls, without instrumental accompaniment. In this region archaic tonal elements are coupled with a feeling for harmony and modern formal principles.

The regions of Gemer and Spish are characterized by their texture of musical styles and form an independent regional style. They are situated between the north and central mountain regions and the east Slovak region; thus there is an integration of elements of the shepherd style with east Slovak modern folksong style. More than 20% of Gemer songs show hypomodal features. In Spish remarkable rhapsodic melodies alternate with dance in *tempo giusto*. The fluctuation between fixed metric and free performance has resulted in many 5/8 and 7/8 melodies; they are performed slowly in a rhapsodic and declamatory manner.

In all the regions mentioned the predominance of one style is the result of stylistic integration due to the coexistence of other regional and historical styles. These are not isolated from each other, the cross-currents between the different styles being a typical feature of Slovak folk music.

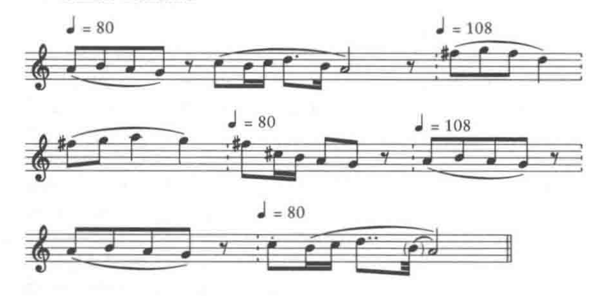
4. Folksong genres. Slovak folksongs cover a wide variety of functions and thematic content. In general there is no static dependence of a single text on a single melody, but certain text groups are connected with a melodic type or style. A firm connection between music and texts exists only in a few old-style songs and in the popular or composed songs of the 19th century. Individual performers may tend to relate certain melodies in specific texts, but this is not an indication of regional practice. Some songs are performed only during their respective ceremonies or events, among them songs for the ceremonies of 'burying winter' (*morena*, *smrt*, *kyselica*), the advent of spring and summer (St John's Day), laments, Christmas carols, lullabies, harvest and wedding songs. These song genres are homogenous both in musical and textual structure although there are melodies of great historic and typological variation among them. Their function, performance and similarity of content give them common unifying features.

5. Cross-cultural relations. As Slovakia is in central Europe, it has come into close cultural contact with its nearest neighbours and also with wider areas of east and south-east Europe. The earliest musical styles show similarities to the magico-ritual melodies of the east and south Slavs (Ukrainians, Bulgarians, Serbs, Croats and Slovenes), indicating that they are remnants of a common Slav folk music style. The 4th-tonal peasant style (see §2 above) shows some relation to this ancient Slav style but can be qualified as the first stage of development of specifically Slovak folk music (starting in the 5th and 6th centuries). The 15th- and 16th-century musical style was built on this basis. Economic conditions and migrations, however, led to the introduction of foreign music, partly from east Europe and the Balkans, and partly through the German miners' colonization in the 13th and 14th centuries. Under these new influences there arose a new style, which would be expected to be heterogeneous, but since the beginning of the 18th century (according to historical sources) it has, in fact, been one of the most homogeneous Slovak folk music styles in which it is difficult to differentiate single elements of foreign origin (Romanian, Ukrainian etc.). This form of the shepherd style was brought from Slovakia to the Tatra region of south Poland and to south-east Moravia by Slovak colonists in the 18th century. After the defeat of the Turks, more Slovak colonists travelled in thousands to south-east Europe to settle depopulated areas, especially north and south-east Hungary, west Romania, north Serbia, Croatia and Bulgaria. In this way new areas of Slovak culture were established, which developed relatively independently in the 19th and 20th centuries as a result of cultural contact with their foreign ethnic surroundings.

During the 18th century Slovakia played a central role in the distribution and transformation of the new musical style in middle Europe. Important new relationships supplemented the older ones, and Bartók, characterizing these relations in 1934, estimated that 38% of Hungarian folk melodies were of Slovak-Moravian origin (although 15% of Slovak folksongs developed under the influence of the new Hungarian music style, which should be understood not as an ethnic style but as a style of the multi-ethnic Hungarian state). Cross-cultural relationships vary regionally within Slovakia: the folk music of west Slovakia has a close affinity with that of south Moravia; east Slovak folk music is related to that of west Ukraine; and cross-influences between Slovak and Hungarian folk music can be seen mainly in south Slovakia and north Hungary. The regional development of Slovak folk music is partly based on these ethnically differentiated relationships.

6. Instruments and instrumental music. There are more than 200 different types of folk music instruments in use in Slovakia, spread over the central and western territories. The richest is the aerophone group with a predominance of duct flutes, of which 35 types have been discovered. These include flutes without finger-holes and others with two, three, five or six holes; they are made of wood, bark or metal with a single or double bore. The most typical is the *koncovka* (end-blown flute) without finger-holes, where closing and opening of the end and overblowing are used to change the pitch. A rare European folk instrument of the duct flute group is the *fujara* which is more than 180 cm long and has three finger-holes. The little shepherds' flute with six finger-holes is widely distributed over the country and has its own typical repertory and playing technique. The *dvojanka* (a double duct flute) and the transverse flute are both played with great virtuosity and expressiveness (see illustration).

The single reed is found in the *drček* and *fanfarka* (clarinet-like instruments) and in the *gajdy* (bagpipe), which has a long bass drone pipe and a chanter with five



Slovak fujara (duct flute, left) and dvojanka (double duct flute)

or six finger-holes. The most common form of bagpipe has a double chanter, that is, a counter-pipe joined to the melody pipe. A rarer type of bagpipe has two supplementary drones ('little drones'), so that these instruments can produce four- or five-part music. Some double-reed instruments are played by children, especially the *trubka* made of various materials, such as bark or corn stalks. Bark and wooden trumpets are found all over Slovakia but are becoming more rare.

There are about 50 different idiophones in Slovakia, some of which are regarded as musical instruments proper, others merely as children's toys. Membranophones are rare. Bowed string instruments used are the violin and double bass, the short *oktávka* (octave-violin),

Ex.8 Robber dance-song, played on *fujara*, Zvolen district; rec. J. Rybár, transcr. O. Elschek

shlopcoky (scuttle-shaped violin) and *kôrová basa* ('bark bass'), a double bass whose ribs are of bark. Struck and plucked string instruments are the *cymbal* (dulcimer) and zither.

Instruments are played solo, in combinations such as bagpipe and flute or bagpipe and violin, or in diverse ensembles of bowed string instruments consisting of first and second violin, counter-violin or viola and double bass. In east and south Slovakia this ensemble is completed by the dulcimer and in west Slovakia by the clarinet or trumpet. In addition, brass bands with about eight members play as folk music ensembles in the villages of west Slovakia.

Solo instrumental genres serve various functions. They may act as a signal (horns, bone flutes or rattles), as an acoustic accompaniment to ceremonies (clappers, rattles or bells), and above all in a purely aesthetic function for self-entertainment (*fujara* or flutes). The only solo instrument used for dance accompaniment is the *gajdy*. All the string ensembles serve for entertainments in which dance predominates, but singing and other forms of entertainment are also included.

Instrumental music mainly derives from the song repertory. Pure instrumental melodies are rare, although the vocal melodies are substantially transformed in motivic content, melismatic variation and rhythm, and often have a shifting tonal basis when played on instruments (ex.8; the central note in this example moves between *a′* and *g′*, while the melody is built on the 4th–6th-tonal frame of *a′*-*d′*-*f*♯′).

A regional style of ensemble playing has developed in Slovakia. Its special characteristics include a richly ornamented leading voice performed on the first violin, sometimes supported by a second violin playing in 3rds

Ex.9 *Haiduc* dance-song, Brezno district; transcr. O. Elschek

or presenting a new decorated melodic line, as in ex.9, where there are two main melodic voices. The other bowed instruments supply a chordal harmonic accompaniment. The *cymbal* (when used) provides both melody and harmony in arpeggiated figurations, enriching the instrumental colour of the ensemble.

RICHARD RYBARIČ/ĽUBOMÍR CHALUPKA (I), OSKÁR ELSCHEK (II)

Slovak Philharmonic Orchestra. Orchestra founded in 1949 in BRATISLAVA.

Slovenia (Slov. Republika Slovenija). Country in Europe. It is situated between the gulf of Trieste, east Alps, and the River Drava. Although populated by Slavs, it was divided between several Austrian duchies in the Middle Ages and remained within Austria-Hungary until its incorporation in 1918 into the state of Yugoslavia. In 1992 it became an independent republic.

I. Art music. II. Traditional music.

I. Art music

1. The Middle Ages. 2. The Renaissance. 3. The Baroque and Classical periods. 4. Romanticism. 5. The 20th century.

1. THE MIDDLE AGES. In the 6th century CE migrating Slavs established the state of Caranthania, which included the territory of present-day Slovenia. The beginnings of Slovenian music can be traced in the state of Caranthania back to the arrival of Christianity in the 8th century, when plainchant was introduced and the Kyrie was sung during religious services. The *Conversio Bagoariorum et Carantanorum* manuscript of 871 testifies to their widespread use. Singing in the Slovenian vernacular is documented in the *Brižinski spomeniki* (*Freisinger Denkmäler*) manuscript, which probably dates from the end of the 10th century and is the oldest extant Slovenian and Slavonic text. Other sources state that the Kyrie was sung in Slovenian on the occasion of the enthronement of the Caranthanian dukes. The period from the 11th to the 15th century is a time when Slovenian sacred music began to come into existence, influenced by some elements of German sacred song. The tradition of art music developed first in churches and subsequently in monasteries. In 753 the Caranthanians built their first cathedral; its existence is well documented in various codices and surviving fragments of choral chants from the 10th and 11th centuries and also in later reports of performances of polyphonic music. Secular music was spread mainly by minstrels and German Minnesinger, who included Ulrich von Liechtenstein in the 13th century and the poet-composer Oswald von Wolkenstein in the 15th century. Both bear witness to the popularity of Slovenian folksong among the nobility. The emphasis during that time was largely on interpreting music. This is also the period when we can first talk about the phenomenon of music migration. Jurij Slatkonja, born in Ljubljana (at the time the centre of Carniola dominion), for example, was a Viennese bishop and Kapellmeister to Maximilian II.

2. THE RENAISSANCE. After the line of Caranthanian dukes died out in the 13th century, the Slovenians were ruled by the Habsburgs for the next six centuries. The unfavourable social circumstances in the 16th century were aggravated by peasant uprisings and particularly by Ottoman incursions, which impeded the development of the Slovenian ethnic group for two centuries. However, Catholic music in monasteries and churches was unaffected, while the development of Protestant music paralleled that in the German lands. Its leading exponent, Primus Trubar, and his collaborators published more than 50 books in the second half of the 16th century, among them a translation of the Bible in 1584. The first Slovenian printed book, the *Catechismus* of 1550, also contained a number of songs and their tunes in mensural notation. The first Slovenian hymnbook, *Eni psalmi*, appeared in 1567 and was followed by four enlarged editions. However, Protestantism was suppressed by the end of the century. Among Protestant musicians, the German-born Wolfgang Striccius (*b* *c*1555–60) was Kantor of the Ljubljana Estates School from 1588 to 1592 and an outstanding composer of German songs. Slovenian composers who worked abroad included Jacobus Handl (Gallus), one of the leading European late-Renaissance composers, Georg Prenner, a native of Ljubljana, and Daniel Lagkhner, a native of Lower Styria (now Maribor).

3. THE BAROQUE AND CLASSICAL PERIODS. The early Baroque period was heavily influenced by the Counter-Reformation, whose ideological leader was Tomaž Hren, the Prince-Bishop of Ljubljana, who procured the latest music from Italy. This is confirmed by several volumes of music in the manuscript section of the Slovenian National and University Library, as well as the *Inventarium librorum musicalium ecclesiae cathedralis labacensis* of 1620, which lists more than 300 items. After Hren's death music in Slovenia was promoted principally by the Ljubljana Jesuits, in the Jesuit theatre and in the church of St James. They staged religious plays with music (from 1598) and operas. Although documentation for the first half of the 17th century is scarce, reliable information

exists for the years 1652, 1655 and also for 1660, when on the occasion of Emperor Leopold I's visit to Ljubljana an Italian opera (*comedia italiana in musica*), was performed. Among émigré Slovenian composers, Gabriel Plavec, nicknamed Carniolus, worked in Mainz, Isaac Posch in Carinthia and Carniola, and J.B. Dolar in Ljubljana and Vienna. The Italian baroque composer Gabriello Puliti worked at various times in Capodistria (now Koper), where the composer Antonio Tarsia was employed as cathedral organist. Giuseppe Tartini was born in Pirano (now Piran) and received violin instruction in Capodistria. The heart of Slovenian musical life in the early 18th century was the aristocratic Academia Philharmonicorum, founded in Ljubljana in 1701 on Italian models as the first European music institution of this kind established outside Latin and Anglo-Saxon territory. The society gave concerts of choral and orchestral music, took part in both ecclesiastical and secular celebrations, and also organized annual regattas on the Ljubljanica river.

With the rise of the middle class in the second half of the 18th century several new societies were formed in Slovenia, among them the revival circle of Baron Žiga Zois, which fostered a growing national consciousness among Slovenians still separated by provincial borders. In music the new spirit was first felt in the field of opera, although the first Slovenian opera, *Belin*, composed by Jakob Zupan in 1780 or 1782, does not survive. The earliest extant operatic music in Slovenian is the incidental music *Figaro* by J.B. Novak (1790). In 1794 the Philharmonische Gesellschaft was founded in Ljubljana. The first concert society of its kind in central Europe, it brought together the Slovenian- and German-speaking sections of the middle class and nobility. Its repertory was orientated towards contemporary Viennese composers, and both Haydn and Beethoven were elected to honorary membership. Apart from Zupan, Novak and a number of Slovenian amateur composers, most of the composers active in the late 18th and early 19th centuries were foreigners. The pianist, singer and composer Francesco (Franz) Pollini, born in Ljubljana, was aquainted with Mozart in Vienna and later settled in Milan. Matej Babnik (Babnig) was active in Budapest, and Jurij Mihevec (Miheuz, Michaux) in Vienna, Paris and Mennecy.

4. Romanticism. The March Revolution of 1848 brought a sharp increase in the activities of Slovenian nationalists and a programme for a united Slovenia, with its own parliament in Ljubljana. The newly formed Slovensko Društvo (Slovenian Society) organized bésede, political and cultural events in which music played a patriotic role. In the 1860s bésede were succeeded by čitalnice (reading rooms), cultural societies which devoted much time to music, often with a nationalistic emphasis; this meant the beginning of a new concert life. The organization of the čitalnice was taken over by the Glasbena Matica (Musical Centre), founded in 1872 in Ljubljana, and other similar organizations on Slovenian ethnic territory. The activities of the Glasbena Matica were initially focussed on a choir which soon achieved international success, and in 1896 performed in Vienna under Dvořák. The German Ständisches Theater in Ljubljana (later the Landestheater, where Mahler conducted in the 1881–2 season) ensured the domination of the German and Italian repertory, at the expense of national opera, until the closing years of the century. The Dramatično Društvo (Dramatic Society) was founded in 1867 and gave rise to the Slovenian Opera, which from 1892 was housed in the new Deželno Gledališče (Regional Theatre) in Ljubljana, initially sharing the theatre with the German ensemble. The Slovenska Filharmonija (Slovenian PO) was founded in 1908 and was conducted until 1912 by Václav Talich. A consciously national idiom was cultivated by composers such as Fran Gerbič, the naturalized Czech Anton Foerster, and Benjamin Ipavec, who worked in Graz. In the years preceding World War I new Slovenian music was promoted by the magazine *Novi Akordi* ('New Chords', 1901–14). Anton Lajovic was the leading composer of the younger generation, which also included Risto Savin, Emil Adamič, Janko Ravnik and Marij Kogoj. Their idioms incorporated elements of late Romanticism, neo-Romanticism, Impressionism and Expressionism.

5. The 20th century. National hopes were dashed after World War I when Slovenia was incorporated into the state of Yugoslavia. The central role of the Ljubljana Glasbena Matica continued, but several of its activities became independent. In 1919 a conservatory was founded, which became the Academy of Music in 1939. The Slovenian Opera was renamed the Opera of the Slovenian National Theatre in 1918; the company flourished especially between 1925 and 1939, when the composer and conductor Mirko Polič was its musical director. New choirs and chamber ensembles were founded, along with the amateur Orchestral Society and, in 1934, the professional Ljubljana PO. Specialist music magazines included *Nova muzika* ('New music', 1928–9), *Zbori* ('Choirs', 1925–34) and *Pevec* ('Singer', 1921–39), while the most enduring Slovenian music magazine, *Cerkveni glasbenik* ('Church musician'), was published from 1878 to 1945. The interwar generation of Slovenian composers was characterized by an eclectic range of styles, from Romanticism to modernism. The 1920s were dominated by the Expressionist composer Marij Kogoj, a pupil of Schoenberg, and the 1930s by Slavko Osterc, whose works embraced avant-garde techniques, neoclassicism and Expressionism. Matija Bravničar and Vilko Ukmar worked along similar lines to Kogoj, while a circle of composers around Osterc included Karel Pahor, Marijan Lipovšek, Pavel Šivic and Danilo Svara. The music of Lucijan Marija Škerjanc reveals the influence of French Impressionism within a fundamentally late Romantic idiom.

After the communist revolution in 1945, the Socialist Republic of Slovenia was established within Yugoslavia. This became an independent republic in 1992. Systematic musicological research in Slovenia began in 1962, when the study of the history of music was shifted from the Academy of Music (which became part of Ljubljana University in 1975) to the department of musicology at Ljubljana University. The department has published the *Muzikološki zbornik* ('Musicological annual') since 1965. An institute of musicology was established at the Slovenian Academy of Sciences and Arts in 1980; since 1983 it has produced the publication Monumenta artis musicae Sloveniae.

The Slovenian Opera developed in the postwar years and achieved an international reputation. A permanent opera company was re-established in Maribor, where a symphony orchestra was founded in the 1990s. In 1948 the Ljubljana PO was reconstituted as the Slovenska Filharmonija. Leading conductors and soloists have

worked with the orchestra, including several natives of Slovenia: the tenor Anton Dermota, the mezzo-soprano Marjana Lipovšek, the flautist Irena Grafenauer, the violinist Igor Ozim and the pianist Dubravka Tomšič Srebotnjak, a pupil of Rubinstein. The Slovenian national radio broadcasting station re-established its symphony orchestra in 1955 (the present-day Simfoniki RTV Slovenija), its chamber choir (Komorni Zbor RTV Slovenija) was founded in 1945 and its youth choir (Mladinski Zbor RTV Slovenija) in 1957. The tradition of choral singing is also maintained by the Slovenski Komorni Zbor (Slovenian Chamber Choir). The chamber ensemble Ave (1984) has become a leading European choir, and the Carmina Slovenica an internationally renowned youth choir. Chamber ensembles in Slovenia include the Trio Lorenz, Trio Tartini, Ansambel Slavko Osterc and Slovenicum. Foremost among the publishers of Slovenian music is the Society of Slovenian Composers, with its series *Edicije* ('Editions'), focussing mainly on the works of contemporary Slovenian composers. Specialist music magazines have included *Naši zbori* ('Our choirs', 1946), *Grlica* ('Turtledove', 1953–88), the re-established *Cerkveni glasbenik* (1976–) and *Slovenska glasbena revija* ('Slovenian music magazine', 1951–60).

In the immediate postwar years Slovenian composers tended to retreat from the advanced idiom of the pre-war period, although the influence of socialist realism was limited. In the early 1960s, however, links with the European avant garde were re-established under the influence of Darmstadt, Paris and the new Polish music, as well as of the Slovenian avant-garde composers of the inter-war generation. A new avant-garde generation was established by Primož Ramovš and the young composers of the Ljubljana Pro Musica Viva group: Alojz Srebotnjak, Milan Stibilj, Darijan Božič, Ivo Petrič, Jakob Jež, Igor Štuhec and Lojze Lebič. Their work uses the techniques of dodecaphony and serial organization, and has latterly encompassed aleatory and electronic music. Another facet of the Slovenian avant garde is represented by Vinko Globokar, who is also a noted trombonist, Božidar Kos (working in Australia), Janez Matičič and B. Kantušer, both active in Paris, and Pavle Merkù active in Trieste. Other composers whose work is based mainly on 12-note techniques include Matija Bravničar, Vilko Ukmar, S. Koporc, Danilo Švara, Zvonimir Ciglič and Janko Ravnik. After their earlier neo-classical phase Marijan Lipovšek, Uroš Krek and Pavel Šivic later turned to modernism. Dane Škerl, Karel Pahor, D. Žebre, Marjan Kozina and Lucijan Marija Škerjanc cultivated a neo-classical or post-Romantic idiom. The younger generation of Slovenian composers, whose leading representative is Uroš Rojko, inclines towards postmodernism.

II. Traditional music

Slovenia is situated between various cultural regions: the Alps in the north, Central Europe to the east, the Mediterranean in the west, while the south of Slovenia is culturally connected to the Balkans. The Slavs settled the territory that is now Slovenia in the 6th century CE bringing characteristic song themes (particularly epic and mythological songs) and instruments. The remnants of ancient and medieval traditions have been preserved in bordering regions (like Prekmurje and Haloze in the east, Soško and Rezija in the west, Bela krajina in the south and Notranjska in central Slovenia). Regional musical identities differ strongly among themselves. Bela krajina and Istria have Musics which show the influence of Middle Eastern traditions which came with early settlers and refugees.

Equally tempered musics had not been heard until World War II. With the arrival of the radio in cities and villages, semitone equalization started and tempered instruments entered most bands. Traditional vocal music of the 20th century has no instrumental accompaniment; this only occurs in old songs accompanied by zithers, dulcimers, Rezian zithers and *bunkulas* (three-string bass). A distinctive accompaniment to church holidays and

ceremonial occasions is the solemn chiming of church bells (*pritrkavanje*).

1. Vocal. 2. Instruments. 3. Research.

1. Vocal. Slovenian traditional vocal music comprises children's play and dance songs, counting games, rhythmic texts (for children and rituals), supplications and exclamations, ritual songs (and songs bound to life-cycle rituals, lullabies, lovers' songs, death songs and laments), calendrical songs (for various festivals, saints' days, Midsummer Night, Christmas and Epiphany carols, thrashing songs for 28 December, rhythmic blessings for abundant crops or a fertile year), epic songs, ballads and lyrical love songs.

These songs are predominantly performed by a chorus, most frequently with three voices. The middle voice is the leading one (*naprej*), especially in boys' singing from Alpine and central Slovenian villages during the second half of the 20th century. Singers in Carinthia, and probably elsewhere in Slovenia, used to prefer singing in five voices (*na štrko*, denoting four voices above the bass). While in the Stajersko region they used *na tretko*, denoting three voices above the bass. These forms of singing are the remnants of a medieval style (*triplum*, *quadruplum*). The leading voice always sang ahead of the other singers, melodically leading the group. The highest male voice (a remnant of falsetto) was particularly appreciated.

In Prekmurje, for Midsummer Night songs are in the form of a canon and, in some Istrian traditions, a two-part texture is used. In northern Slovenia (Carinthia) 'pleasant singing' is considered to be 'calm' singing, leaning on rising tones, while in Rezija an older guttural style is preferred. In Prekmurje, in the east, traditionally the songs have anhemitonic pentatonic melodies, while in Rezija, which is considered to have older traditions, the melodic material mostly draws from tetrachords, using a drone/ostinato and sometimes an added upper 5th. Tetratonic and pentatonic melodies have been noted throughout Slovenia. Another characteristic feature of Slovenian singing is the crossing of voices. Performers are aware of the relative importance of the text and music; the more important the content of the text, the plainer the musical style, and vice versa.

The guttural singing style slowly disappeared during the 20th century (practised after World War II only in Rezija, in Bela krajina due to the influence of refugees, and partially in Stajerska and Prekmurje under the influence of the Croatian guttural style). Improvisation also died out, kept up in Rezija until the second half of the 20th century (in both instrumental and vocal music), and in Prekmurje and Porabja (in dulcimer and fiddle playing). The characteristic five-part singing style was forgotten by the second half of the century and rubato rhythm (with shifting accents derived from the text) and changeable tempo were gradually dropped in favour of the stretching and accenting of favoured harmonies (especially in Koroska). The typically Slovenian three- and five-part styles were replaced by four-part singing after World War II, under the influence of western European choral singing.

2. Instruments. Bone whistles (similar to prehistoric ones found in the region) are still found. The *žvegle* are transverse flutes played in Haloze/Štajerska until the 1980s, which derive from medieval instruments (other instruments derived from medieval ones include the *drumlice* jew's harp, sometimes home-made, and the *gadalo*, a struck clay pot). Bagpipes of various types can be found, a Western type with one or two drones, a double clarinet with or without a bag (*diple*) and an untempered instrument without a drone. The last performer on the reed panpipes stopped producing and playing in 1997. Other aerophones include long, wooden alphorns (played up to the 17th century), trumpets made of bark, whistles made from leaves and grass, and various children's instruments made from autumn fruits and blades of grass.

At the end of the 19th century accordions with a distinctive penetrating sound were taken up. At first they had buttons (diatonic accordions) and were later followed by those with keys (piano accordions). Tempered band instruments started to replace older untempered and quieter village instruments.

The *oprekelj* (dulcimer) can be seen in church frescos of the 14th century. It was played with wooden sticks which were wrapped in felt or leather, creating a typically piercing sound. The last performer on the *oprekelj* died in Notranjska in 1979. The plucked zither was found in Slovenia from the 17th century onwards. These were intially home-made instruments with from 7 to 12 strings, 2 to 4 of which were melodic, the rest accompanying drones. It was plucked with a wedge (*biglo*). After World War II it was mostly played in western and Alpine Slovenia and is still found in Prekmurje. This instrument was replaced in villages and towns by manufactured harmonic zithers (of different sizes), mainly from Austria and the former Czechoslovakia, which had numerous accompanying strings. During the 14th century the Turks brought the *tamburice* to the region and this instrument became especially widespread during the pan-Slavic revival movement.

During the 18th and 19th centuries the most widespread ensemble in Slovenia was the trio consisting of violin, dulcimer and double bass. Into the early 20th century the *cimbale* (large dulcimer) was still played in an ensemble of violins, violas and clarinets in eastern Slovenia (Prekmurje and Porabje). The sticks of the *cimbale* were wrapped in cotton wool, producing a velvety sound. The ensembles played rhapsodic melodies and lively dances and were known as 'bands' or 'fiddlers' groups'.

The duo of *citíra* (fiddle) and *bunkula* (little bass or cello with three strings) used to perform in Rezija (now in Italy). The *bunkula* is tuned a 3rd higher than the western European cello. The fiddle was held against the player's chest, the *bunkula* between the player's knees (*gamba*). The fiddle player would play 2nds, 3rds and 4ths against a constantly sounding drone, while keeping time with alternate stamps of the feet. The Slovenian instrumental tradition derives from that of medieval players, the performer must play one or more instruments, sing the local song repertory and also play the fool.

After World War II pop-folk music (performed by ensembles of accordions, clarinets, trumpets, double bass, guitars and a singer) spread widely across the region and was also played by Slovenian immigrants abroad. The musicians usually paraphrase the tunes of the Alpine region and the melodies of the L. Slak and V. Avsenik ensembles. Nearly every village now has its own pop-folk ensemble.

3. Research. The collecting of traditional songs had already started in Slovenia during the 18th century.

Separate volumes of extensive systematic collections of traditional songs were published quite early (8686 transcriptions do not have notations) and edited by K. Štrekelj (*Slovenske narodne pesmi*, 1895–1923). The collecting of instrumental music and instruments remained rather modest until the second half of the 20th century (the exception being the instrumentarium from Rezija, which was already being studied during the 19th century). The first recordings were made by J. Adlešič in Bela krajina in 1912. The Folklorni Institut was established in 1934, headed by France Marolt, and started collecting instrumental music and traditional dances. It was renamed Glasbeno Narodopisni Institut (musical folklore institute) in 1956 and became part of the Slovenian Academy of Arts and Science in 1972. It has collected about 30,000 recordings of traditional music (including transcriptions approximately 50,000 items).

The institute's collections include, the extensive works of Z. Kumer (vocal and instrumental music and texts of traditional songs), V. Vodušek (mostly vocal music and its structures), J. Strajnar (vocal and instrumental music), M. Ramovš (dance tradition) and works by younger researchers like I. Cvetko (children's musical tradition) and Marko Terseglav (the lyrical tradition of songs). Extensive research on eastern Slovenia has been done by J. Dravec (vocal music), on western Slovenia by the composer P. Merkù (the musical tradition of Slovenes in Italy) and in Austrian Carinthia by B. Logar. Traditional instruments and instrumental music have been researched extensively not only by F. Marolt, but by R. Hrovatin, D. Hasl (the *žvegle* in Haloze), B. Ravnikar, Mira Omerzel-Terlep and Matija Terlep (the instrumental tradition and the collecting of instruments and D. Marušič in Istria (vocal and instrumental music). Numerous recordings of vocal and instrumental music have been preserved in the Musical Archives of Radio Slovenija by Jasna Vidakovič since 1973. The Music Department (called the Folklore Centre of Radio Slovenija since 1996) carries on with frequent recordings and prepares weekly programmes of 30 minutes entitled *Slovenska zemlja v pesmi in besedi* ('Slovenia, its music and its words').

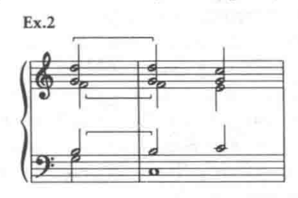
IVAN KLEMENČIČ (I), MIRA OMERZEL-TERLEP (II)

Slur [bind]. In musical notation, a curved line (or square bracket etc.) extending over or under a succession of notes to indicate their grouping as a coherent unit, for example in legato performance, or for purposes of phrasing. The term is also applied to the musical effect associated with the notational slur, which is invariably a sense of coherence and continuity. In general, on string instruments, all notes grouped under a slur are taken within one stroke of the bow if possible, whilst for wind players and vocalists, slurs serve to some extent as breathing instructions.

The earliest form of the slur was the TIE, a term used only for slurs between notes of the same pitch, even if differently spelt, for example A♭ to G♯. In the 16th century, keyboard music, in which bar-lines were used, required some such device in order to permit the notation of chords or notes extending beyond the bar-line; the tie was not otherwise necessary at the time, since the note durations in the 16th-century repertory could all be



expressed in terms of single notes, dotted or undotted. The earliest source containing ties is Cavazzoni's *Recerchari, motetti, canzoni ... libro primo* (1523). Generally speaking the tie has continued to be used exclusively for notes that are not to be repeated, except when the first of the two notes tied is qualified by a staccato dot, when the tie is sometimes converted into a slur in the broader sense, and the second note is to be sounded and grouped with the first (as in ex.1).

Ex.1 Liszt: *Consolations* for piano, no.6

No general need has ever been felt to eliminate the few possible ambiguities in the use of slur and tie, but Matthay (1928) claimed that a notated slur between two notes of the same pitch was a tie only when it joined the noteheads, but a slur when it joined the ends of the stems; and Sterndale Bennett recommended the use of a squared slurmark to distinguish the tie (ex.2, from Stainer and Barrett: *Dictionary of Musical Terms*, 1898, p.58).

Ex.2

In the 17th century the slur between notes of different pitches took on the function earlier fulfilled by ligatures, since no ligature signs existed to join minims or smaller note values to each other (Praetorius: *Syntagma musicum*, iii, 2/1619). It is commonly used in 17th-century vocal music, with all the notes to be sung to a single syllable slurred (and often beamed) together. In this context the slur may be regarded as a type of ornament (*see* ORNAMENTS, §8); no connotations of phrasing etc. are normally intended. Surprisingly, this conventional vocal notation has survived all notational reforms, and it is still used in most vocal music. From the 17th century the slur was also used in instrumental music, broadly with its modern meanings of bowing (John Playford: *A Breefe Introduction*, 7/1674, p.36), breathing or tonguing. Such symbols are not at this date used rigorously or systematically, however, and must be interpreted with some latitude (for the use of the slur to indicate various types of bowstroke, *see* BOW, §II).

In some Baroque music, the slur carries rhythmic connotations. Couperin, by dotting the second of pairs of slurred quavers, indicated that they were to be played unequally, short–long; but the device is uncommon. A slur over several notes may indicate that they are to be played equally rather than as notes inégales.

From the 18th century, the slur, over white-note keyboard scales, may indicate glissando (as in ex.3); vertical slurs beside chords indicate that the chords are to be broken; and slurs over melodies generally indicate legato – the most frequent use of the sign in the period 1750–1850. Such legato slurs may be longer than in modern practice, for example in string music; or they may be shorter, for example, broken at the ends of bars

Ex.3 Weber: *Concertstück* op.79 (1823 edn)

without implying corresponding breaks in the legato. Some composers, such as Mozart, were more precise than others in their use of the slur, but no composer of this period used it precisely in accordance with post-Riemann practice (ex.3).

To speak of phrasing slurs before the second half of the 19th century is, strictly, anachronistic: it was only during that century that the beginnings and ends of slurs came invariably to carry their modern connotations of the beginnings and ends of phrases (first, according to Matthay, in the music of Joachim Raff). In consequence, Hugo Riemann believed that the notation of Haydn, Mozart, Beethoven and others was by now misleading and in need of radical revision; and he brought the slur into the service of phrasing theory (*see* ARTICULATION AND PHRASING). In his phrasing editions, in particular, Riemann used the slur (as well as the beam and other devices) to mark off *Motive* and their multiples and submultiples: these are defined in his *Musikalische Dynamik und Agogik* (1884) as basic rhythmic units of phrasing, each normally comprising a growth phase and a decay phase and each implying a subtle use of dynamics and agogics. Riemann's *Motiv* includes all that is normally implied in the modern term 'phrase', and more: some of the *Motive* in his editions, duly marked off with slurs, comprise only rests.

Schenker's reaction against the phrasing editions of Riemann and others (1925) took the form of a plea for a return to the Urtext and, with it, the 'non-phrasing' slur, connoting only legato. At the same time, Schenker's graphic analyses of tonal works use the slur for novel purposes: the groupings of *Züge*, or melodic progressions within the part-writing. Other novel types of slur in the 20th century include the square bracket in editions of early music to indicate the presence of ligatures in the original source (with variations to indicate coloration),

and graphically modified forms also to distinguish slurs added editorially from those in the original.

GEOFFREY CHEW

Sly and Robbie. Jamaican reggae rhythm section and production team. Sly (Lowell Charles) Dunbar (*b* Kingston, 10 May 1952; drums) began playing soul-influenced reggae with Skin, Flesh and Bones in the early 1970s, while Robbie Shakespeare (*b* Kingston, 27 Sept 1953; bass guitar) was a protégé of the Wailers' esteemed bass player, Aston Barrett. In the mid-1970s, as the Revolutionaries, they recorded sessions during Channel One Studio's most productive and acclaimed period and pioneered the style of reggae known as rockers, characterized by a spacious mix with a prominent booming bass and shimmering hi-hat. Often described as robotic, this precise and mechanical sound presaged the digital movements of the 1980s and 90s. During this time they played on five Peter Tosh first albums and subsequent tours, before working with reggae's first Grammy winners, Black Uhuru.

In the 1980s and 90s many reggae musicians have made use of their services, including Dennis Brown, Gregory Isaacs, Ini Kamoze and Bunny Wailer, as well as such artists as Joan Armatrading, Bob Dylan, Mick Jagger and Carly Simon. They have incorporated the digital sound of the 1990s into work on their own Taxi Records and kept alert to new trends, notably with Chaka Demus and Pliers' successful single *Murder She Wrote* (1992). Among their own work is *Reggae Greats* (Island, 1985), *Crucial Reggae* (Taxi, 1984) and *Taxi Connection Live in London* (Taxi, 1986). They won their first Grammy award in 1999.

ROGER STEFFENS

Sly and the Family Stone. American funk group. Its original members were Sly Stone (Sylvester Stewart) (*b* Dallas, 15 March 1944), singer, keyboard player and songwriter; Freddie Stone (Stewart) (*b* Dallas, 5 June 1946), singer and guitarist; Rosie Stone (Stewart) (*b* Vallejo, 21 March 1945), keyboard player; Larry Graham (*b* Beaumont, 14 Aug 1946), bass guitarist; Greg Ericco (*b* 1 Sept 1946), drummer; Cynthia Robinson (*b* 12 Jan 1946), trumpeter; and Jerry Martini (*b* Colorado, 1 Oct 1943), saxophonist. Sly Stone sang and played with a number of bands while working as a disc jockey on the San Francisco radio stations KSOL and KDIA. When he was 20 he began producing for Autumn records; here he worked with Bobby Freeman, the Beau Brummels, the Mojo Men and the future singer of Jefferson Airplane, Grace Slick. In 1967 Sly and the Family Stone recorded a single with the San Francisco label Loadstone, before being signed by the Columbia subsidiary Epic. The group's recordings defined the subgenre of psychedelic soul. This style was equal parts psychedelic rock and soul, with traces of doo wop and funk being integral parts of the sound. On their best singles, the 1967 *Dance to the music*, the 1969 *Sing a simple song*, *Stand!* and *(I want to take you) higher* and the 1970 *Thank you (fallettinme be mice elf agin)*, the racially and sexually integrated group fused complex syncopation, multiple lead vocalists displaying deliberately contrasting timbres and ranges, production effects, altered instrumental timbres such as wah-wah guitar and fuzz bass, and multi-sectioned arrangements. Some of Sly's material, such as the 1968 *Don't call me nigger, whitey* and *Thank you for talkin' to me Africa* (1970), took on a political edge. Sly reached the apotheosis of his career with his performance at Woodstock before half a million people in August 1969. Shortly thereafter he developed a debilitating drug problem exacerbated by an ego that had become completely out of control. He was able to produce one more masterpiece, the much delayed 1971 album *There's A Riot Goin' On* (including the hit singles 'Family Affair', 'Runnin' Away' and 'Smilin''), before his personal problems slowly stripped him of his talent. In late 1972 Larry Graham left to form Graham Central Station and over the next few years the remaining members of Sly and the Family Stone gradually went their separate ways.

Sly and the Family Stone's recordings have had a significant influence on a number of musicians and performers including the Temptations, the Chambers Brothers, Parliament/Funkadelic, Prince and Miles Davis. Larry Graham's innovative 'slap bass' technique has become standard among funk bass players.

ROB BOWMAN

Smack. *See* HENDERSON, FLETCHER.

Smallens, Alexander (*b* St Petersburg, 20 Dec 1888/1 Jan 1889; *d* Tucson, AZ, 24 Nov 1972). American conductor of Russian birth. He was taken to the USA as a child and studied at the New York Institute of Musical Art and, from 1909, at the Paris Conservatoire, returning to the USA as assistant conductor of the Boston Opera, 1911–14. After two years as conductor of Pavlova's touring company, including a South American tour, he returned to become conductor of the Chicago Opera, 1919–23. He took American citizenship in 1919. His Chicago association began when he replaced Hasselmans as conductor for the première of De Koven's *Rip Van Winkle*, and he

also gave the première of Prokofiev's *The Love for Three Oranges* at Chicago in 1921. He was musical director of the Philadelphia Civic Opera, 1924–31, where he gave the American premières of Strauss's *Feuersnot* in 1927 and *Ariadne auf Naxos* in 1928, and was also assistant conductor of the Philadelphia Orchestra, 1927–34. Later he moved towards a lighter repertory, conducting the première of Gershwin's *Porgy and Bess* at Boston in 1935 and taking a production of it on a European tour in 1952 which included its British stage première at the Stoll Theatre, London. He was conductor of the Robin Hood Dell (Philadelphia) and Lewisohn Stadium (New York) open-air concerts for several seasons, and music director of Radio City Music Hall, New York, 1947–50. Ill-health brought about his retirement in 1958, and he made his home in Sicily.

BERNARD JACOBSON

Smalley, Denis (Arthur) (*b* Nelson, 16 May 1946). New Zealand composer. He studied in New Zealand at the University of Canterbury and Victoria University and in Europe at the Paris Conservatoire with Messiaen, with the Groupe de Recherches Musicales (GRM) and at the University of York. Since 1971 he has lived in England. He taught at the University of East Anglia (1976–94) and in 1994 became professor of music at City University, London. His compositions, many of which have received international prizes, all make use of electro-acoustic resources, uniting a concern for the intrinsic timbral details of initial 'sound-objects' with the transformational potentials of studio technology. He maintains a strong belief in the 'acousmatic' (source unseen) nature of electro-acoustic music and its potential to extend sound imaginatively beyond the limitations of physical sources. Out of his concern for a perceptually based theoretical understanding of that medium, he has developed the notion of 'spectromorphology' to describe and classify the way sound spectra are shaped in time. Of his works, *Pentes* (1974), with its organic structural clarity, is regarded as one of the classics of electro-acoustic music, while more recent works, such as *Tides* (1984), *Wind Chimes* (1987), *Valley Flow* (1992) and *Névé* (1994), present powerful analogies between sound and environmental phenomena. He has also composed mixed instrumental/electro-acoustic works, notably *Piano Nets* (1990) and *Clarinet Threads* (1985), as well as *Pneuma* (1976) for amplified percussion-playing vocalists. He is committed to the effective concert presentation of electro-acoustic music, through controlled multiple loudspeaker installations, which he pioneered in the UK.

WORKS
(*selective list*)

Vocal: Pneuma, amp vv, perc, 1976, rev. 1981; Chanson de geste, amp v, amp clvd, perc, 1978; Word Within, 2 amp vv, perc, 1981; O Vos Omnes, Tr, A, T, 8-pt choir, el-ac sounds, 1986

El-ac sounds with solo inst.: Cornucopia, amp hn, 1973; Gradual, amp cl, 1974; Cl Threads, amp cl, 1985; Piano Nets, pf, 1990

El-ac: Pentes, 1974; Ouroboros, 1975; Darkness after Time's Colours, 1976; The Pulses of Time, 1979; Berne Mobiles, 1980; Vortex, 1982; Tides, 1984; Wind Chimes, 1987; Valley Flow, 1992; Névé, 1994; Empty vessels, 1997

JOHN YOUNG

Smalley, (John) Roger (*b* Swinton, nr Manchester, 26 July 1943). English composer, pianist and critic, later active in Australia. Entering the RCM in 1961, Smalley studied composition with Fricker and John White, whose wide-ranging interests he found especially stimulating, and piano with Antony Hopkins. He also studied composition with Goehr at Morley College, London (1962); with Stockhausen in Cologne (1965–6); and with Boulez during a Darmstadt summer course (1965). In 1968 he was appointed the first artist-in-residence at King's College, Cambridge, where he subsequently held a three-year research fellowship. During this time he co-founded the live-electronics ensemble Intermodulation with Souster, Peter Britton and Robin Thompson. In 1974 Smalley was artist-in-residence at the University of Western Australia, returning two years later to become a research fellow and subsequently associate professor. He eventually became a naturalized Australian. He was a prizewinner at the 1966 Utrecht International Competition for Interpreters of Contemporary Music and gave the first British performances of numerous avant-garde piano works (including some of Stockhausen's *Klavierstücke* and Boulez's Third Sonata). During the 1960s and early 70s he was an insightful critic of Boulezian zeal, writing mostly for the *Musical Times* and *Music and Musicians*.

His earliest published works – *Piano Pieces I–V* (1962–5), the String Sextet (1963–5) and the Variations for Strings (1964) – are founded on pitch serialism of a relatively free kind, with some quasi-serial manipulation of duration too. While they show a certain amount of post-Webernian fragmentation, with indeterminacy sometimes being drawn upon to the extent of allowing the performer to control the timing of events (in *Piano Piece III*, for example), a tendency towards integration maintains the upper hand, suggesting a fundamentally organicist cast of mind. Some of the *Piano Pieces* and the String Sextet show an incipient interest in techniques and forms associated with Renaissance music. This burgeoned in a series of works based on keyboard pieces by Blitheman from the Mulliner Book, including *Gloria tibi Trinitas I* for orchestra (1965, rev. 1969), *Gloria tibi Trinitas II* for soloists, chorus and orchestra (1965–6), *Missa brevis* for 16 solo voices (1966, rev. 1967), *Missa parodia I* for piano (1967) and *Missa parodia II* for piano and ensemble (1967).

The Blitheman-based works follow Peter Maxwell Davies' lead in their combination of serial, cantus firmus and (medieval) parody techniques. However, Smalley's music of the late 1960s and early 70s is more influenced

by Stockhausen: *The Song of the Highest Tower* (1967–8) is the first of several works in which Smalley sets out to investigate 'moment' form, though (again) the music often possesses a far greater degree of continuity and integration than one normally associates with that term. Indeed, *Pulses for 5 × 4 Players* (1969) achieves a grandeur that belies the inconsequentiality (using the word in a technical rather than qualitative sense) that moment form in theory enshrines.

Pulses is based on one chord. Though the effects remain highly complex, the simplicity of the basic material puts into practice Smalley's call for a 'rigorous contemplation of essentials' in contemporary composition (*MT*, cx, 1969, p.50). This rethinking of basic building blocks as well as the use of electronics and a degree of improvisation in their extension has parallels in works by Stockhausen such as *Stimmung* (1968) – also based on one chord – while the impulse thereby to enhance communicability suggests a point of contact with minimalists like Terry Riley, some of whose music was also performed by Intermodulation.

The experimental, even provisional, nature of much of Smalley's music of the Intermodulation period (some of it text-based in the manner of Stockhausen's *Aus den sieben Tagen*, though less mystical in nature) contrasts with the definitiveness of the main work composed during Smalley's first trip to Perth, *Accord* for two pianos (1974–5), which he has described as his 'real' op.1. *Accord* consolidates the move since *Pulses* and *Strata* (1970–71) to a vertically-oriented approach to composition, in which lines are generated from related chords; the opposite generally occurs in the Davies-influenced music. Many of the works written since employ material and techniques derived from this work, the harnessing of the expressive and structural potentialities of intervallic differentiation proving especially fruitful.

The Symphony (1979–81), one of a number of works that re-engage traditional genres, ends, like *Accord*, with the emergence of a single pitch class played in several octaves. This is not a return to tonality in the traditional sense so much as an expansion of resources to include pitch-centricity as one of many structural options. The range of harmonic and melodic material has also expanded, with Smalley employing tonal chords at the beginning of the Piano Concerto (1984–5) and basing certain later works – the Variations on a Theme of Chopin (1988–9), the Piano Trio (1990–91), *Poles Apart* (1990–92) and the Oboe Concerto (1995–6) – wholly or partly on mazurkas by Chopin.

One of the stimuli for *Accord* was the view of the city of Perth and its environs from a high vantage point, and alongside the 'European' works mentioned above are a number of works showing a rich interaction with Australian subject matter. These include *Didgeridoo* for four-track tape (1974), the first work Smalley completed on Australian soil; *The Southland* for chorus and orchestra (1986–8, rev. 1993); *Diptych (Homage to Brian Blanchflower)* for orchestra (1990–91), based on some of the eponymous Perth artist's work; and *Close to the Edge* for orchestra (1994–5), inspired by the miniatures of another Western Australian artist, Lesley Duxbury.

WORKS

DRAMATIC

A Round of Silence (radio score, C. Brooke-Rose), 1966

Giacometti (film documentary score, dir. D. Sylvester), 1967

William Derrincourt (music theatre, 12 scenes, Derrincourt: *Old Convict Days*), 1977–9, rev. 1984, S. Atlas, Instrumental Ens, cond. Smalley, Perth, 31 Aug 1979

The Narrow Road to the Deep North (music theatre, M. Basho), 1982–3, B. Rayner Cook, Fires of London, cond. J. Carew, London, Queen Elizabeth Hall, 29 Nov 1983

ORCHESTRAL AND VOCAL–ORCHESTRAL

Variations, str, 1964; Gloria tibi Trinitas I, 1965, rev. 1969; Study for Pulses, text composition, ww, brass, str, 1969, Scratch Orch, London, 24 April 1970; Beat Music, 4 elec insts, orch, 1970–71; Konzertstück, vn, orch, 1979–80; Sym., 1979–81; Pf Conc., 1984–5; Vc Conc., 1985–6; Diptych (Homage to Brian Blanchflower), orch, 1990–91; Chimera, 1994; Figures in a Landscape, bn, 8 vn, 2 va, 2vc, db, 1994; Close to the Edge, 1994–5

Elegies (R.M. Rilke), S, T, brass, bells, str, 1964–5; Gloria tibi Trinitas II (Bible: Revelation), S, C, T, Bar, B, double chorus, orch, 1966; The Song of the Highest Tower (A. Rimbaud, W. Blake), S, B, chorus, brass, perc, str, 1967–8; Das Sklavenschiff (H. Heine), solo vv, chorus, chbr orch, 1975, inc.; The Southland (J. Davies, T. Ismail, C. Thatcher, trad., Chief Seattle), double chorus, didgeridoos, gamelan ens, folk group (S, T, Bar, B, fl, vn, gui, accdn), 1986–8, rev. 1993

OTHER VOCAL

3 Invocations, T, pf, 1959–60, withdrawn; 3 Poems (W. De la Mare), S, pf, 1961, rev. 1970; 3 Poems of Friedrich Hölderlin, S, T, fl, ob, cl, hn, tpt, trbn, hpd, vc, 1961–5, withdrawn; The Canticle of the Rose (E. Sitwell), B, ob, cl, hn, vn, vc, perc, org, 1962, inc.; Septet (e.e. cummings), S, T, fl, ob, cl, tpt, trbn, va, vc, 1963, withdrawn; Der Lattenzaum (C. Morgenstern), Bar, trbn, 1964, withdrawn; 2 Poems (D.H. Lawrence), B, cl, t hn/trbn, pf, 1965, withdrawn; Missa brevis, 16 solo vv, 1966, rev. 1967; The Crystal Cabinet (Blake), chorus, 1967; Barcarolle (trad.), TB, s sax, 2 perc, 2 pf, 1982 [from music theatre work William Derrincourt]

OTHER INSTRUMENTAL

Chbr: Madrigal, hp, pf, brass, timp, str, 1961–2, withdrawn; Sextet, fl, cl, hn, vn, va, vc, 1962–3, inc.; Antiphony, 3 inst groups, 1963, withdrawn; Str Sextet, 1963–5; The Leaden Echo and the Golden Echo, tpt, accdn, pf, 1964, withdrawn; Missa parodia II, fl, ob, cl, hn, tpt, trbn, vn, va, pf, 1967; Melody Study I, 4 players, 1970, withdrawn; Melody Study II, 4–12 players, 1970, withdrawn; Strata, 10 vn, 2 va, 2 vc, db, 1970–71; 7 Modulator Pieces, 4 fl, 1976–7, withdrawn; Str Qt, 1978–9; Ceremony I, 4 perc, 1986–7; Strung Out, 8 vn, 2 va, 2 vc, db, 1987–8; Ceremony II, fl + pic + a fl, cl + E♭-cl + b cl, vn, vc, perc, pf, 1989, rev. 1990; Pf Trio, 1990–91; Poles Apart, fl, b cl, vn, va, vc, 1990–92

Duos, solo works: Pf Pieces I–V, 1962–5; Canticle, org, 1963, withdrawn; Capriccio no.1, vn, pf, 1966, withdrawn; Capriccio no.2, va, pf, 1966, inc.; Canon, pf, 1967 [for Stravinsky's 85th birthday]; Missa parodia I, pf, 1967; Pf Piece VI, 1969, inc.; Accord, 2 pf, 1974–5; Movement, fl, pf, 1976–80, rev. 1985; Barcarolle, pf, 1986; Variations on a Theme of Chopin, pf, 1988–9; Albumblatt, pf, 1990; Fl Variations, 1990; Landscape with Figures, bn, 1992; Music for an Imaginary Ballet, perc, 1994

ELECTRO-ACOUSTIC

Transformation I, pf, ring mod, 1968–9, rev. 1971; Pulses for 5 × 4 players, brass, perc, ring mods, 1969, rev. 1985–6; My Generator, text composition, 16 wave-generators (4 pfmrs), Intermodulation, London, 14 Oct 1971; Monody, pf, ring mod, 1971–2; Change of Direction, text composition, 1972; Memories, text composition, 4 pfmrs, 1973, Intermodulation, Witten, 28 April 1973; Zeitebenen, live elecs ens (4 players), 4-track tape, 1973; Didgeridoo, 4-track tape, 1974; Echo I, pf, tape delay, 1978, inc.; Echo II, vc, tape delay, 1978; Echo III, tpt, tape delay, 1978; Echo IV, hn, tape delay, 1983; Impulses, fl + pic, trbn + a trbn, vc, perc, pf, synth, 1986: see Orch [Beat Music, 1970–71]

CHRISTOPHER MARK

Small Faces, the. English pop group. Formed in London in 1965 by Steve Marriott (1947–91; vocals and electric guitar), Ronnie Lane (*b* 1946; bass guitar), Kenny Jones (*b* 1948; drums) and Jimmy Winston (organ), who was replaced by Ian McLagan (*b* 1945). A string of hits between 1966 and 1968 mirrored the general maturing of the pop scene, from the adolescent hysteria of *Sha-la-la-la-lee*, *All or Nothing* and *My Mind's Eye* to the psychedelic detached observation in *Here comes the nice*, *Itchycoo Park* and *Lazy Sunday*. The mix of hard rock and cockney-voiced music hall impudence in the last of these encapsulates the self-confidence of the time. The influence of soul and gospel on McLagan's organ style gave the band credibility with the East End mods who had lionized the hip quality of black soul artists, while Marriott's background as a child actor gave the band a strong focus on stage.

They disbanded after their successful third album *Ogden's Nut Gone Flake* (1968), Marriott forming Humble Pie while the rest joined Rod Stewart and Ronnie Wood (who later played with the Rolling Stones) as The Faces. The Small Faces reformed in 1977 but made no impact, and Jones replaced the late Keith Moon in The Who the following year. Marriott continued to perform until his death in 1991.

Small-pipe. A Northumbrian bagpipe. *See* BAGPIPE, §5.

Smareglia, Antonio (*b* Pola, Istria, 5 May 1854; *d* Grado, 15 April 1929). Italian composer. He found his vocation listening to the music of Mozart, Beethoven and Wagner in Vienna and Graz where he was studying mathematics. In 1871 he moved to Milan to study composition with Franco Faccio, first privately then at the conservatory from 1872 to 1877. The 1873 Milan première of *Lohengrin* found Smareglia among the work's staunchest supporters, and Wagnerian opera later exercised a major influence on his own works.

His formative years in Milan were influenced by *scapigliatura*, the late Romantic, progressive trend led by Faccio, Boito and Praga. The choice of subjects and the stylistic references of Smareglia's early works reflected the *scapigliati*'s tastes and attitudes and were to become similarly decadent. Boito became Smareglia's closest friend and mentor, sharing his enthusiasm for German Romanticism and German music. Within the *scapigliatura* circle, Smareglia's apprenticeship and experiences were very similar to those of Alfredo Catalani, who attended the Milan Conservatory during the same period. His one-act 'oriental eclogue' *La falce* and Smareglia's dramatic sketch *Caccia lontana* were performed in the conservatory theatre in summer 1875 within weeks of each other and established their composers as the most promising young musicians in Milan. They also earned the support of the progressive publisher Giovanna Lucca [Giovannina Strazza], who printed Smareglia's first two operas and nearly all those of Catalani.

Smareglia's *Preziosa* (1879) and *Bianca da Cervia* (1882) seem disappointingly conventional, based as they are on the uninspired imitation of Verdi's middle-period style and *grand opéra*. Sequences of unremarkable vocal numbers strung together by dull recitatives characterize these early works, which Smareglia later disowned as 'contemptible nonsense', though they were well received by Milanese audiences and critics. A third opera, *Re Nala*, was written in Milan and had its première in Venice in 1887. This was the only failure in Smareglia's career and was subsequently destroyed by the composer. It also brought to an end his Milanese period.

In the next few years, Smareglia moved away from Italian models and assimilated Wagnerian compositional techniques, in pursuit of a more congenial form of music theatre that favoured symphonic treatment at the expense of vocal supremacy. *Il vassallo di Szigeth* (1889), *Cornill Schut* (1893) and *Nozze istriane* (1895) marked innovatory stages in Smareglia's artistic evolution, and the librettist, Luigi Illica, mediated between contemporary trends and the composer's sensibility. *Il vassallo* followed the fashion for funereal and demonic subjects that prevailed in the 1880s. A belated product of *scapigliatura*, *Il vassallo* has a weird and muddled story set in 13th-century Hungary, featuring Andor, master of Szigeth, his brother Milos (who are both in love with Naja) and their satanic vassal Rolf, who causes the woman's death by poison and Andor's killing at the hands of Milos. The

opera was first performed with great success in Vienna under Hans Richter and praised by Brahms. *Cornill Schut* (dealing with 17th-century Flemish painters) was also successfully performed in Prague and Dresden, and then in Vienna under Richter. Reviewing *Il vassallo* Hanslick noted how Smareglia had mastered 'all the new skills of orchestration'.

In 1894 Smareglia returned to Istria and stayed for a few months in Dignano where he was joined by Illica who was to work with him on the adaptation of Flaubert's *La tentation de Saint Antoine*. Illica, however, suggested that, after the furore caused by *Cavalleria rusticana*, a *verismo* subject might prove a better choice. The village life of Dignano was to hand, ready to be portrayed by the librettist, and the composer was obviously familiar with the customs and folklore of his own region. *Nozze istriane* was written in summer 1894 and had its première in Trieste with the first interpreters of *Cavalleria*, Gemma Bellincioni and Roberto Stagno, in the leading roles. In 1908 the opera reached the Volksoper in Vienna. The critic of the *Neue Musik-Zeitung*, Max Dietz, praised the work as an original synthesis of the German, Italian and Slav musical traditions. *Nozze istriane* had little in common with the *verismo* of the 1890s: the vocal parts are delicately combined with a minute and transparent instrumental embroidery; there are no violent outbursts or naturalistic shouts; the action allows for humorous scenes of Rossinian subtlety (for example, the duets between the old miser Menico and the marriage-broker Biagio). Similarities could more easily be found with Smetana's *The Bartered Bride* than with contemporary *verismo* operas.

A crucial turning-point in Smareglia's production came with *La falena* (1897) and *Oceàna* (1903), the best examples of his allusive, purely musical theatre. Wagner's *Tristan* and *Das Rheingold* had a clear influence on the last phase of the composer's evolution, but the music bears the imprint of a strong personality and the aesthetic conception has a different, original character. *La falena* and *Oceàna* are undramatic, oneiric fantasies consisting of vast, symphonic movements which convey a psychological mood (anguish, erotic frenzy) or suggest an ambience (harvest time, a seascape, night and dawn), but blur contrasts and dampen action. The texts were arranged by the young writer Silvio Benco (1874–1949), who artfully combined decadent and symbolist elements: the lustful Falena is Baudelaire's 'Sorcière au flanc d'ébène, enfant des noirs minuits' seen through D'Annunzian eyes; the evanescent sea creatures of *Oceàna*, as Benco himself wrote, are akin to the fairies of *A Midsummer Night's Dream*, and to the tritons and nereids painted by Arnold Böcklin.

Benco also wrote the libretto of Smareglia's last opera, *Abisso* (1914), an overtly D'Annunzian imitation. Like *Oceàna*, it was performed at La Scala only thanks to the wholehearted support of Boito and Toscanini. (Smareglia later orchestrated Act 1 of Boito's *Nerone* at Toscanini's invitation.) The hostility of the principal Italian publisher, Ricordi, as well as Smareglia's awkward character (worsened by the total blindness that struck him in 1900), have been blamed for the undeserved oblivion into which his operas fell. In the years that saw the creation of *Pelléas et Mélisande* and *Salome*, Smareglia remained a late 19th-century Romantic composer, a fine lyricist and an excellent orchestrator. As Benco put it in his *Ricordi di Antonio Smareglia* (1968):

> He did not belong to this world intellectually and psychologically saturated with refined drugs: he was an unsophisticated and sound man who would not conceive of leading music through the sense of sin or the fluctuations of the uncertainty of existence.

MATTEO SANSONE

Smart. English family of musicians. George Smart (*d* London, *c*1805) was a publisher at 331 Oxford Street, London, from 1774 until his death. He issued many minor publications, such as country dances and sheet music. He had some skill as a double bass player, and was one of the founders of a benevolent society for musicians; he is also the only known maker of the sticcado pastrole. His wife was named Ann Embrey; among their children three became musicians: (1) George, (2) Henry, and Charles Frederick, a double bass player in the principal London orchestras. On 14 February 1806 Henry married Ann Stanton Bagnold at Stoke Poges in Buckinghamshire; their children included (3) Henry Thomas and Harriet Anne (1817–83), an amateur composer who married the painter William Callow. There is no evidence of any relationship between this family and Thomas Smart, the organist of St Clement Danes in 1783 and a composer of songs.

(1) Sir **George (Thomas) Smart** (*b* London, 10 May 1776; *d* London, 23 Feb 1867). Conductor, organist and composer. He became a chorister of the Chapel Royal in 1783, studying with Edmund Ayrton (voice), Thomas Dupuis (organ), Samuel Arnold (composition) and J.B. Cramer (piano). In 1791 he obtained the appointment of organist of St James's Chapel, Hampstead Road, and was also engaged as a violinist at Salomon's concerts. At a rehearsal of a symphony by Haydn for one of those concerts the drummer was absent, and Haydn, who was at the harpsichord, inquired if anyone present could play the drums. Smart volunteered, but from inexperience was not very successful, whereupon the great composer ascended the orchestra and gave him a practical lesson in the art of drumming.

About the same time Smart practised as a harpsichord and singing teacher. He soon showed an aptitude for conducting. In 1811, having successfully conducted some concerts in Dublin, he was knighted by the Lord Lieutenant. He was one of the original members of the Philharmonic Society in 1813, and between that date and 1844 conducted 49 of its concerts. From 1813 to 1825 he conducted the oratorio concerts given every year in Lent at Covent Garden or Drury Lane Theatre: in the course of these he gave the first English performances of Beethoven's *Christus am Oelberge* and 'Battle Symphony'. From 1818 to 1822 he conducted the City Amateur Concerts, an unusually enterprising series that included Beethoven symphonies, Mozart piano concertos (often played by Cipriani Potter), and new music by various composers. He conducted the first English performance of Beethoven's Ninth Symphony at the Philharmonic Society in 1825.

On 1 April 1822 Smart was made an organist of the Chapel Royal. In 1825 he toured Europe extensively; his detailed observations of musical practice, carefully noted in his journals, are almost comparable in scope with those made by Burney nearly half a century earlier. He was particularly interested in the size and composition of orchestras, in the details of opera production, in methods of conducting, and in performing speeds. To ascertain the proper tempos for Beethoven's symphonies he visited the composer in Vienna, and his famous conversations with Beethoven survive. He also accompanied Charles Kemble on a visit to Weber in connection with the latter's approaching journey to London to produce *Oberon*. When Weber went to London the following year he was the guest of Smart, and died in his house on the night of 4–5 June. It was mainly through the efforts of Smart and Benedict that the statue of Weber at Dresden was erected, the greater part of the subscriptions having been collected in England. In 1836 Smart introduced Mendelssohn's *St Paul* to England at the Liverpool Festival, and he performed important musical duties in connection with the coronation of Queen Victoria the next year. On the death of Attwood in 1838 he was appointed one of the composers to the Chapel Royal.

Smart was not a 'conductor' as the term is now understood. He directed music by presiding at the piano or organ, not by wielding a baton; and the qualities that made him efficient in this office were his social position, administrative ability, punctilious accuracy and thorough knowledge of performing traditions. He was also an excellent keyboard player. For several decades he was much in demand as director of musical festivals and other performances on a large scale. He conducted festivals at Liverpool in 1823, 1827, 1830, 1833 and 1836; Norwich, 1824, 1827, 1830 and 1833; Bath, 1824; Newcastle upon Tyne, 1824 and 1842; Edinburgh, 1824; Bury St Edmunds, 1828; Dublin, 1831; Derby, 1831; Cambridge, 1833 and 1835; London (Handel Festival, Westminster Abbey), 1834; Hull, 1834 and 1840; and Manchester, 1836. He was much sought after by singers wishing to learn the traditional manner of singing Handel's airs, which he had been taught by his father, who had seen Handel conduct his oratorios; among the many he so instructed were Henriette Sontag and Jenny Lind. He gave singing lessons until he was past 80. As an organist Smart

George Smart: portrait by William Bradley, 1829 (National Portrait Gallery, London)

also preserved an older tradition. He made his opinion of pedals quite clear when he was asked to play on one of the pedal organs displayed at the Great Exhibition of 1851: 'My dear Sir, I never in my life played upon a *gridiron*'.

Smart was no musical antiquarian, though his large library included a few pre-Handelian items. But his meticulous observations of the practice of his own day have proved invaluable to students of musical history. His collection of annotated programmes in the British Library gives timings of some 140 performances of chiefly orchestral music between 1819 and 1843, as well as other details. His journals provide a wealth of similar information from Paris and many cities of Germany as well as from Great Britain and Ireland.

Smart's compositions are of little importance. They include six anthems, eight glees, chants, responses, and psalm tunes. He published his anthems and glees in 1863. He edited some of Gibbons's madrigals for the Musical Antiquarian Society (1841) and Handel's Dettingen *Te Deum* for the Handel Society (1846–7).

(2) Henry Smart (*b* London, 1778; *d* Dublin, 27 Nov 1823). Violinist, brother of (1) George Smart. He began his musical education at an early age and studied the violin with Wilhelm Cramer, making such progress that when only 14 he was engaged at the Opera, the Concert of Ancient Music and the Academy of Ancient Music. He was engaged as leader of the orchestra at the Lyceum Theatre in 1809, and continued there for several seasons. He was leader at Drury Lane Theatre from its reopening in 1812 until 1821. On 12 June 1819 the orchestra presented him with a silver cup as a token of their regard. He was leader of the oratorio performances given at Covent Garden and Drury Lane Theatre from the time they came under the management of (1) George Smart (1813), and was a member of the Philharmonic Society's orchestra, which he occasionally led. In 1821 he opened a piano factory, and on 22 July 1823 obtained a patent for improvements in piano construction. He composed a successful ballet, *Laurette*, produced at the King's Theatre in 1803. In 1823 he went to Dublin to superintend the début of a pupil, and was attacked there by typhus fever from which he died.

(3) Henry Thomas Smart (*b* London, 26 Oct 1813; *d* London, 6 July 1879). Organist and composer, son of (2) Henry Smart. He was educated at Highgate, and as a boy frequently visited Flight & Robson's organ factory, where he laid the foundations for his profound knowledge of organ mechanics and construction. He acquired mastery of draughtsmanship as an apprentice at Maudsley's, a famous engineering firm. After declining a commission in the Indian army, he was articled to a solicitor, but gave up law for music. His natural faculty was great, and apart from learning instrumentation from W.H. Kearns, he was largely self-taught. From 1831 to 1836 he was organist of Blackburn parish church, and his first anthem was performed there (4 October 1835). In 1836 he settled in London as organist of St Philip's, Regent Street, as critic for *The Atlas*, and as a music teacher. In March 1844 he was appointed to St Luke's, Old Street, where he remained until 1864, when he was chosen organist of St Pancras New Church, Woburn Place.

Smart was an excellent organist (especially happy as an accompanist in the service), a splendid extemporizer and a voluminous and admirable composer for the instrument, and became the leading concert organist in the country. His expertise in organ design was valued by many. Among the most important instruments he designed were those in the City and St Andrew's halls, Glasgow, and the town hall at Leeds. He was a pioneer in developing the English symphonic organ on French principles. In 1878 he went to Dublin to examine and report on the organ in Christ Church Cathedral. All his life Smart suffered from a weakness of the eyes, and soon after 1864 he became too blind to write. His compositions after that date were dictated. In June 1879 the government granted him an annual pension of £100 in acknowledgment of his services to the cause of music, but he did not live to enjoy it.

Smart wrote operas, cantatas, anthems and services, songs and partsongs; his partsongs were especially popular. His compositions were fantastically overrated by his contemporaries: Spark called him 'one of the finest composers England ever produced' and rated him second only to Bach as a composer of organ music; Broadhouse's evaluation was almost as high. Today his music seems competent, but generally mild and lacking in any feature that would seem to justify strong judgments either for or against it. Perhaps the secret of his success was the ability to write effective and singable melodies, such as the two hymn tunes which are now the only music of his that is widely known, 'Heathlands' and 'Regent Square'. Tunes such as these, suited to the newly popular trochaic metres, were cheerful and even inspiring in certain contexts, expressing the mood of religious revival that prevailed. Similar tunes appear in his organ music, his partsongs, and in other contexts where their obvious, square rhythms are less appropriate. To Bumpus, his Service in F 'stands out with majestic prominence', and for a long time it was heard in cathedrals; but it makes a feeble impression today. Bennett treated Smart as 'occupying a position between "high and dry" and "sweet and low", scouting both with equal vigour'.

WORKS

all printed works published in London

Op and choral: Berta, or The Gnome of the Hartzberg (op, Fitzball), Haymarket, 26 May 1855; 2 inc. ops; The Bride of Dunkerron, cant., Birmingham Festival, 1864; King René's Daughter, cant., 1871; The Fishermaidens, cant., 1871; Jacob, orat, Glasgow, 1873

Sacred: Full Services, F (1868), G (1871); Evening Services, G, B♭; 23 anthems; hymn tunes

Other vocal: 143 partsongs and trios, 50 duets, 167 songs

Org: 2 trios; 50 preludes and interludes (1862); Choral with variations; preludes, postludes, marches, andantes; other pieces

W.H. HUSK/NICHOLAS TEMPERLEY

Smbatian, Armen Bagrati (*b* Yerevan, 17 Nov 1954). Armenian composer. He studied the piano at the Yerevan Conservatory with Meliksetian (1975–80) as well as attending Mirozian's composition class (1977–81, as a postgraduate 1981–3). He then worked as a radio editor (1982–8) while he taught harmony and composition at the conservatory, of which he was later appointed professor and in 1995 rector. He was Minister of Culture and Sport in Armenia from 1996 to 98. He has won a string of prizes and gained several commissions on the international level. His work as a composer is associated with Neo-Classicism and symphonic jazz. These two areas appear separately and in synthesis, but in both cases national expression is preserved. Thus, in Neo-Classical works melodic material is frequently based on medieval Armenian vocal music (as in *Manuscript*, the first movement of the Symphony), while in the concerto-like jazz influenced works – such as *Yerkar gisher* ('A Long Night') and *Spanakan eskizner* ('Spanish Sketches') – and his piano compositions, the national element is present in the modal harmonies and aperiodic rhythms common in Armenian music. A type of descriptive thinking which is peculiarly Smbatian's finds expression in the television ballet *Lilit*, in which a logic behind unexpected combinations of sounds and structures determines the orchestral palette and the musical development.

SVETLANA SARKISYAN

Smeaton, Bruce (James) (*b* Melbourne, 5 March 1938). Australian composer. A self-taught musician, he played the baritone saxophone in jazz clubs before joining the RAAF Central Band in 1957, a post he held for six years. Following surgery for lip cancer, he turned to composition, later studying film music composition in the USA, Europe and the UK and receiving advice from Jerry Goldsmith and Charlie Russell. His early unpublished works date from the late 1950s and early 1960s and include 132 woodwind quintets as well as numerous other chamber pieces. His reputation was established during four years of writing 2500 commercial music backings (which ranged from simple diatonic jingles to complex arrangements), and with his popular songs, including *Zap-Zow* for children, *Takone* and which won industry awards *Time Slot*. His compositional versatility embraces lush orchestral scoring, polytonal writing, serialism, folk styles, pop, experimental rock, *musique concrète*, multi-tracked electronic scores and digitally synthesized music. He has written music for many Australian films and TV series since the 1970s, including *A Town like Alice*, *The Cars that Ate Paris* and *Picnic at Hanging Rock*. Smeaton has worked with several international directors including Fred Schepisi (e.g. *Roxanne*), John Duigan and Peter Yates. For *Wendy Cracked a Walnut* (1989) he collaborated with Joe Cindamo, using a network of 17 computers to convert visual patterns directly into sound while retaining composer control over timbre, pitch, rhythm and durations. Smeaton was president of the Australian Guild of Film Composers and on the board of the Australasian Performing Right Association (1978–90).

CHRISTINE LOGAN

Smegergill, William. *See* CAESAR, WILLIAM.

Smelkov, Aleksandr Pavlovich (*b* Vïshniy Volochek, Kalinin province, 13 Jan 1950). Russian composer. In 1974 he graduated from the classes of Yevlakhov and Tsïtovich at the Leningrad Conservatory; he completed his postgraduate studies under Mnatsakanyan in 1977. His work is characterized by a marked traditionalism and a rejection of the avant garde as (in his own words) 'a manifestation of dark destructive forces'. He follows the traditions of Russian programmatic epic symphonism in the spirit of Rimsky-Korsakov – in the symphonic tale *Khozhdeniye za tri morye* ('Voyage Beyond the Three Seas') – and he cultivates the aesthetics of the stage parable and mystery play in works such as *Pegiy pyos, begushchiy krayem*

morya ('The Skewbald Dog Running Along the Shoreline'). He attempts to find an original solution to the problem of musical time, which 'must model the eternal, as a counterbalance to fluidity, momentariness and narrowness' (the composer). In *Klichi lesov* ('The Calls of the Forests') the Russian national theme is interpreted in an original way. The work is based on folklore melodies and signals from various regions of the country and the music contains stereophonic effects which evoke a forest landscape. An ensemble of 12 performers is written for as an orchestra of soloists; Smelkov thus approaches the aesthetic of the Second Viennese School or Hindemith. He has also written a number of essays, tales, poems and a novel.

WORKS
(*selective list*)

Stage: Pegiy pyos, begushchiy krayem morya [The Skewbald Dog Running along the Shoreline] (op-parable, 2 parts, Yu. Aleksandrov, after Ch. Aytmatov), 1984–5; Drakon [Dragon] (ballet, 2, V. Salimbayev, after Ye. Schwarz), 1989–90; Karlik nos [Pygmy Nose] (op, 2, Aleksandrov and K. Komarov, after W. Hauf), 1992–3; Pyatoye puteshestviye Khristofora Kolumba [The Fifth Journey of C. Columbus] (op-mystery, 2 movts, M. Rozovsky), 1992–3

Vocal: Tsarskosel'skaya statuya [The Statue from Tsarskoye Selo] (cant., A.S. Pushkin, A. Akhmatova, V. Livshits), chorus, 1980; Puteshestvuyushchiy prints [Travelling Prince] (cant., medieval Chin. poems), S, fl, str orch, 1984; Exegi momentum (cant., Horatius, J.W. von Goethe, G.R. Derzhavin), S, T, B, B chorus, orch, 1988; V chem tayna char tvoikh? [What is the Secret of Your Charms?] (P.I. Tchaikovsky), elegy, S, orch, 1990; Demetrius Imperator (cant., M. MARINA GALUSHKO

Smend, Friedrich (*b* Strasbourg, 26 Aug 1893; *d* Berlin, 10 Feb 1980). German musicologist, librarian and theologian. He studied Protestant theology at the universities of Strasbourg, Tübingen, Marburg and Münster (1912–14, 1918–19). In 1921 he took a licentiate in theology at Münster with a dissertation on the accounts in *Acts* of the conversion of St Paul, and their source materials. He then worked on the academic staff of the Münster University Library (1921–3) and at the Prussian State Library (1923–45). In 1945 he joined the Berlin Kirchliche Hochschule as a lecturer, but in 1946 he was appointed director of the library; from 1949 to his retirement in 1958 he held a professorship, and was also rector (1954–7). He received an honorary doctorate of theology from Heidelberg University (1951) and an honorary doctorate of philosophy from Mainz University (1954).

Respected as both a theologian and Protestant music scholar, Smend's reputation during his lifetime rested on his editions of J.S. Bach's music (his edition of Bach's Mass in B minor was most contentious), his research on parody techniques and on Bach's cantatas (1947–9). However, Smend is known today for his writings on number organization in Bach's music, a side interest which grew out of a 30-year long correspondence with his friend and colleague Martin Jansen. As a tribute to Jansen after his death, Smend published a series of articles on numerical analysis, arguing that numerical relationships in Bach's music carried symbolic or illustrative meaning and were consciously placed there by the composer. Despite a lack of documentary evidence to support his theories, Smend's solid repuation as a scholar led other writers to accept his views. His provocative methods of analysis, in which he drew on numerical systems used in poetical paragrams and cabalistic gematria, sparked similiar studies and have continued to fascinate and divide modern authors.

His father, the theologian and musicologist Julius Smend (*b* Lengerich, nr Münster, 10 May 1857; *d* Münster, 7 June 1930), was professor of theology at Strasbourg University from 1893; in 1896, with Friedrich Spitta, he co-founded the periodical *Monatschrift für Gottesdienst und kirchliche Kunst*, of which he remained co-editor until his death and to which he contributed nearly 200 articles. He also published books, chiefly on Lutheran church music, and was closely involved with the Neue Bachgesellschaft (director from 1905, president 1925).

HANS HEINRICH EGGEBRECHT/R

Smert, Richard (*b* ?Devon, *c*1400; *d* ?Exeter, ?1478/9). English composer. He was ordained priest in 1427. He was a vicar-choral of Exeter Cathedral from 1427 to about 1430 and again from 1449 to about 1478. In addition to his cathedral post, he was also rector of Plymtree, Devon, from 1435 to 1477, an indication of his privileged status. He died probably between midsummer 1478 and Michaelmas 1479. Smert composed a number of carols in the Ritson Manuscript (*GB-Lbl* Add.5665), some of which are ascribed jointly to him and to another Devon musician, John Trouluffe, and must therefore antedate Trouluffe's death in about 1473.

DAVID GREER/N.I. ORME

Smetáček, Václav (*b* Brno, 30 Sept 1906; *d* Prague, 18 Feb 1986). Czech conductor and oboist. At the Prague Conservatory he studied (1922–30) the oboe with Ladislav Skuhrovský, composition with Jaroslav Křička and conducting with Metod Doležil and Pavel Dědeček. He studied musicology, aesthetics and philosophy at Prague University, where he obtained a doctorate in 1933. In 1928 he founded the Prague Wind Quintet; he remained a member for 27 years. He was an oboist in the Czech PO (1930–33) and then worked in Prague Radio and as a conductor of the radio orchestra (1934–43). From 1934 to 1946 he conducted the Prague choir Hlahol, performing a number of large-scale cantatas with the Czech PO and the Prague FOK SO, which he built into a first-rate symphonic ensemble. He taught the oboe, chamber wind playing and conducting at the Prague Conservatory and Prague Academy of Musical Arts (AMU) from 1945 to 1966.

Smetáček's international career began in 1938 with a tour of England. He showed a preference for Slavonic works, especially Czech 19th-century and contemporary music, although he often included such older Czech masters as Míča, Mysliveček and Voříšek. As a conductor his natural ability at building large musical structures was best heard in extended symphonic works, cantatas and oratorios. On foreign tours he often conducted opera: at the Teatro Colón, Buenos Aires, *Boris Godunov*, Bartók's *Duke Bluebeard's Castle*, Shostakovich's *Katerina Izmaylova* and Janáček's *Kát'a Kabanová*; in Iceland and in Berlin, *The Bartered Bride*; and at La Scala, Janáček's *From the House of the Dead*. He made many recordings. As an oboist he made successful solo and chamber appearances. He composed and arranged several works for the oboe and wind quintet, and wrote articles on organology in the periodicals *Tempo*, *Rytmus* and *Československá vlastivěda*.

ALENA NĚMCOVÁ

Smetana, Bedřich [Friedrich] (*b* Litomyšl, 2 March 1824; *d* Prague, 12 May 1884). Czech composer, conductor and critic. The first Czech nationalist composer and the most important of the new generation of Czech opera composers writing from the 1860s. His eight operas established a canon of Czech operas to serve as models for Czech nationalist opera and have remained in the Czech repertory ever since. Such was the force of his musical personality that his musical style became synonymous with Czech nationalist style, his name a rallying point for the polemics which were to continue in Czech musical life into the next century.

1. YOUTH AND TRAINING, 1824–47. As a master brewer Smetana's father František (Franz) Smetana (1777–1857) was a comparatively rich man with cultural pretentions which included domestic music-making as a member of a string quartet. He initiated his son into the elements of music when he was four. Soon, however, he entrusted him to the care of a tradesman Jan Chmelík (1777–1849), who organized musical events for the owner of the estate, Count Waldstein, from whom Smetana's father rented the Litomyšl brewery. At first Smetana learnt the violin, but the piano took his fancy even more. He demonstrated his talent publicly at the age of six at a student concert in Litomyšl, where he played a piano arrangement of the overture to Auber's *La muette di Portici*. His father, however, had different plans for his son and so, after finishing his main schooling, Smetana continued at the gymnasium. He attended several: in Neuhaus (now Jindřichův Hradec) 1834–5, Iglau (Jihlava) 1835–6, Deutschbrod (Havlíčkův Brod) 1836–9, and finally in Prague 1839–40. Here his not very successful studies culminated in his abandoning school altogether, attracted as he was more to the social and cultural life of Prague. With fellow students he played in a quartet for which he arranged pieces heard at promenade concerts by military bands. The seriousness which even then he brought to bear on his musical activities is attested by the first list of compositions which he entered in his diary in 1841, although only one of these pieces survives intact: his *Louisen-Polka* for piano.

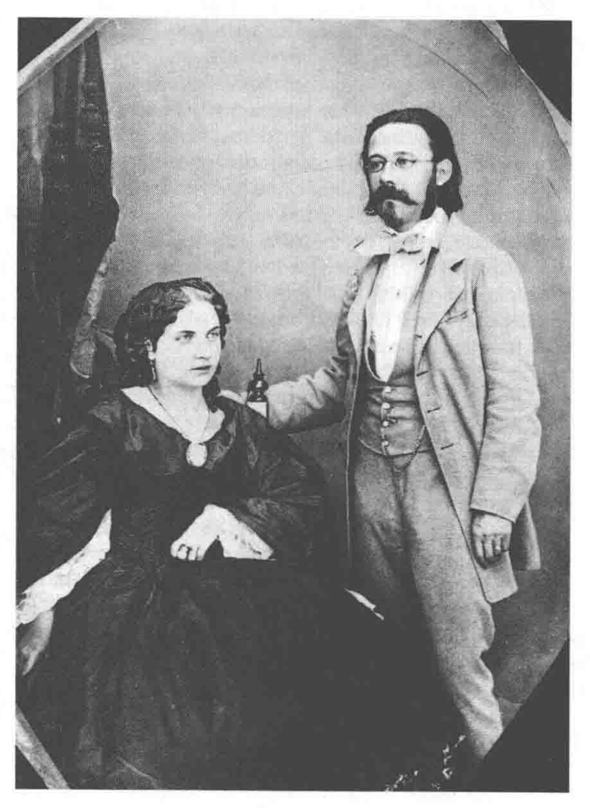
After the inevitable break with his father, Smetana was saved from a career as a clerk by his older cousin, Josef František Smetana, a Czech patriot and teacher at the Premonstratensian Gymnasium in Plzeň, where, under his watchful eye, Smetana completed his studies. An enthusiastic dancer, who liked entertaining a whole company, Smetana composed mainly dance and salon pieces for

piano at that time 'in total ignorance of a spiritual musical education', as he later noted on the Overture in C minor for four hands. But he also recorded his aims in his diary (23 January 1843): 'By the grace of God and with his help I will one day be a Liszt in technique and a Mozart in composition'. With the agreement of his father he returned to Prague in October 1843, having decided to devote himself only to music.

In view of his father's worsened financial circumstances Smetana was unable to depend on help from home and his plans changed into worries over his very existence. However, fortune smiled on him at the beginning of 1844 when, on the recommendation of the director of the Prague Conservatory Johann Friedrich Kittl, he acquired a place as music teacher to the family of Count Leopold Thun. Furthermore Anna Kolářová (Kolar), mother of his later wife Kateřina (Katharina), whom Smetana had worshipped from his time in Plzeň, introduced him to Joseph Proksch, with whom Kateřina was studying the piano and who now accepted Smetana as a private composition pupil. Proksch's musical institute belonged to the most important in Prague, his teaching methods were the most modern in Europe. He taught composition from the second edition (1841–2) of the latest textbook, *Die Lehre von der musikalischen Komposition* by Adolf Bernhard Marx, which, in line with Proksch's views, was based mainly on Beethoven but also drew from Berlioz, Chopin and the Leipzig circle and exerted a huge influence on Smetana's development as a composer. Smetana did indeed start from scratch. A fine series of assignments survives demonstrating a systematic development from simple harmonic exercises to a mastery of forms, crowned in 1846 by the Piano Sonata in G minor. He proudly showed the piece to Robert and Clara Schumann, who were giving concerts in Prague in January 1847 but, as we read in their diaries, they disapproved of it as being too Berlioz-like. Naturally Smetana did not confine himself to set assignments. He wrote piano pieces inspired by the refined salon and virtuoso output of the time (Henselt, Chopin, Schumann) and his first piano cycle, *Bagatelles et impromptus*. In the middle of 1847 Smetana completed his studies with Proksch and almost at the same time (1 June 1847) ended his teaching at the Thuns. The reason for his departure from the Thuns is given in his diary for 1847: 'I wanted to travel the world as a virtuoso, accumulating money and gaining a public position as a choirmaster, conductor or teacher'. He also planned to organize his own orchestra.

2. AT THE BEGINNINGS OF A MUSICAL CAREER, 1848–56. Smetana wished to secure an independent existence as a musician for himself. He tried making a living as a virtuoso, but the concert tour (to western Bohemia) of an unknown pianist with a most demanding programme (Beethoven, Mendelssohn, Chopin and Liszt filled out with his own piano fantasy *Böhmische Melodien*) ended in failure. So on 28 January 1848 he requested permission from the Provincial Government to open a music institute: his main concern was to acquire the financial means to open it. In straitened circumstances he wrote a letter to Liszt (23 March 1848), who was known for his support of young artists, asking him to accept the dedication of his piano cycle *Six morceaux caractéristiques* op.1 and help find a publisher for it. He also asked for the loan of 400 gulden. Liszt encouraged Smetana with words but no loan. He accepted the dedication and, after a reminder in December 1848 when Smetana looked him up on his way through Prague, Liszt recommended op.1 to the Leipzig publisher Kistner, who published it in 1851.

At the beginning of the summer, permission for the institute was granted and on 8 August 1848 it began its activities. Smetana supplemented his income from the generally prospering institute with fees from private lessons, especially in aristocratic families (this included visits to the castle to play to the deposed Emperor Ferdinand). Thanks to this he was able to start a family. On 27 August 1849 he married Kateřina Kolářová, who bore him four daughters, three of whom, however, died by 1856. The public concerts of the pupils from the institute, with Smetana's participation, became a respected part of Prague musical life. In addition Smetana took part in the musical life of the town as a chamber player and as an organizer of chamber concerts. In 1854 he participated in the Beethoven celebration, in 1856 in the even grander Mozart celebrations, when his piano playing was widely praised by the critics. On 26 February 1855 he organized his first and successful independent concert where he made his début as a conductor, giving the première of his *Triumf-Sinfonie*.



Smetana was drawn into public events especially by the group of Prague artists, Concordia, founded in 1846. And it was more an attempt to attract attention to himself than a wish to manifest deeply felt political convictions which led him to the production of occasional pieces in the revolutionary year 1848. He dedicated two piano marches to two quite different organizations, the National Guard (organized by the state to protect persons and property) and to the radical student legion, which was ultimately banned by the state. His unison march with piano *Píseň svobody* ('Song of Freedom'), his only piece up to 1860 with a Czech text, did not, however, come before the public. After the marches, which were his first compositions to be published and one of which also appeared in editions orchestrated by the bandmaster Jan Pavlis, followed the publication in Prague of his *Trois polkas de salon* and *Trois polkas poètiques*. These initiated a whole series culminating at the end of the 1870s with the *České tance* ('Czech Dances'), which tended towards a type of idealized dance 'in the manner of Chopin's mazurkas', he noted in his diary in 1859. He also contributed to the fashionable genre of albumleaves, which he later arranged in cycles. Smetana hoped for a response to his work and sent some of his pieces for an opinion to his models Clara Schumann and Liszt.

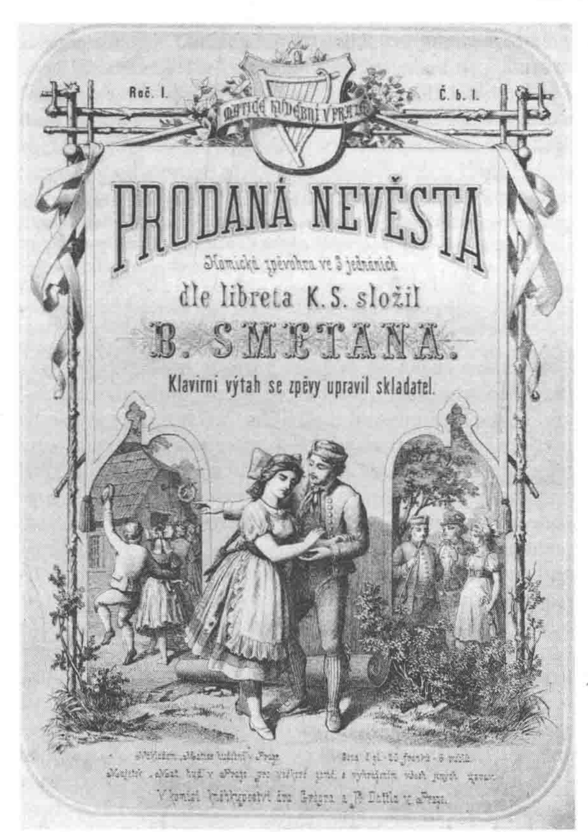
After his first substantial orchestral work, the *Jubel-Ouverture* (1848–9), he completed his first and only symphony in 1854. This *Triumf-Sinfonie*, however, intended to be dedicated to the marriage of Franz Joseph I with Elisabeth of Bavaria, is also just another example of his attempts to attain artistic and social prestige. His finest work at this point in his life was his Piano Trio in G minor. Smetana was hurt by the lack of comprehension among the Prague critics after the première. All the more satisfaction, then, he derived from Liszt's recognition of this work. At last he had occasion to get to know him personally over a longer period when Liszt was in Prague rehearsing his *Missa solemnis zur Einweihung des Basilika in Gran*, which he conducted in September 1856. By that time, however, Smetana had decided to leave Prague and take up the offer mediated by the pianist Alexander

Dreyschock to become a music teacher in the Swedish town of Göteborg.

3. IN SEARCH OF RECOGNITION ABROAD: SWEDEN, 1856–61. 'Prague did not wish to acknowledge me, so I left it', Smetana informed his parents in a letter of 23 December 1856, two months after his arrival in Sweden (16 October 1856). Although he had not fared badly financially in Prague, teaching in Göteborg, a commercially rich town, brought him more money. Apart from private lessons, immediately on his arrival he opened a music institute, and one year later a ladies' singing school. In the mid-1840s Prague was a city of culture which fêted Berlioz, Liszt and the Schumanns and with a theatre which, in the 1850s, was a meeting point where all types of opera (Meyerbeer, Verdi and Wagner) were performed. In comparison Göteborg was merely provincial. 'People are here continually firmly trapped in antediluvian artistic opinions. Mozart for them is the subject of unbounded admiration but at the same time they don't understand him. They are frightened of Beethoven, they proclaim Mendelssohn as indigestible and they are unaware of any more recent composers' (Smetana to Liszt, 10 April 1857). He added: 'Here I have a splendid opportunity to work for progress and to cultivate the taste of the people and there is an impact which I could never have achieved in Prague'. In the period of neo-absolutism after 1848 in which run-of-the-mill institutionalism reigned, Prague could provide no new job opportunities. However, Göteborg to some extent fulfilled Smetana's goal of becoming a conductor. As director he had at his disposal the music society Harmoniska Salskapet, through which, despite its being amateur, he could promote his artistic orientation. This is evident from the very names of the composers whose works he performed both at concerts of vocal-instrumental music and at the chamber cycles he initiated. His programmes included the works of Handel, Haydn, Mozart, Beethoven, Schubert, Chopin, Schumann, Mendelssohn, Liszt, Wagner, Verdi, Rubinstein, Gade and not surprisingly Smetana. It was Franz Liszt who drew Smetana out of the artistic isolation which he suffered in Göteborg. The relationship of teacher and pupil, which Smetana maintained towards Liszt all his life, was no doubt strengthened by Smetana's two visits to Liszt in Weimar. Smetana's direction was determined by Liszt's ideas and above all by the quantity and character of the music which he now had the opportunity of getting to know. On the way to Göteborg for a second season Smetana visited Liszt in Weimar, where he heard the first performance of Liszt's *Faust Symphony*. 'Regard me as your most passionate supporter of our artistic direction who in word and deed stands for its holy truth and also works for its aims', he wrote to Liszt on 24 October 1858, a year after this first trip to Weimar. Shortly before a second visit to Liszt in Weimar (where he heard the *Tristan* prelude for the first time), Smetana was among the participants at the Künsterversammlung in Leipzig in June 1859 celebrating the 25th anniversary of the founding of Schumann's *Neue Zeitschrift für Musik*, an occasion where the Allgemeines Deutsches Musikverein was founded and the 'Neudeutsche Schule' was proclaimed. In the years 1858–61 Smetana returned intensively to his work as a composer, exploiting ideas from these trips, and writing his first three symphonic poems, *Richard III*, *Walensteins Lager* and *Hakon Jarl*. Their orchestral performances had to wait until his return to Prague.

During his stay in Sweden there were important changes in Smetana's personal life. The northern climate had badly affected the tuberculosis of his wife Kateřina, who died in Dresden on 19 April 1859, on the way home to Bohemia. During a holiday in Bohemia Smetana became acquainted with Bettina (Barbara) Ferdinandi (the sister-in-law of his brother Karel) and returned to Sweden already with the promise of marriage. These circumstances strengthened his ties to his homeland and so, after his second marriage (10 July 1860), he set off in the autumn of 1860 with Bettina and his surviving daughter Žofie to Sweden for a final season. It was not only personal reasons which drew Smetana back to his homeland. Throughout all this time he had carefully followed events at home (he read the Prague newspaper *Bohemia*) and the news which especially interested him was that of the imminent formation of a permanent Czech professional theatre, the Czech Provisional Theatre. Hopes appeared of new possibilities of employment, strengthened by political developments arising from the promises made in the emperor's October Diploma of 1860. In any event the pettiness of Göteborg's environment had already become unbearable. 'follow other goals. . . . I cannot bury myself in Göteborg. . . . I must attempt finally to publish my compositions and create for myself the opportunity to gain new ideas. . . . Therefore up into the world and soon!' (diary, 31 March 1861). After the financial failure of two final attempts at the career of a travelling piano virtuoso (Stockholm, Norrköping, Cologne, Leiden), Smetana returned home to Bohemia for good.

1. Bedřich Smetana with his second wife, Bettina



4. IN NATIONAL LIFE, 1862–74. In order to draw attention to himself Smetana organized two concerts in Prague in January 1862, a piano recital and an orchestral concert. The latter, at which the premières of the symphonic poems *Richard III* and *Wallensteins Lager* were given, demonstrated that his name was still not familiar enough to fill what was then the largest concert hall in Prague, on the Žofín island, which he had hired for the occasion. In the spring of 1862 he went once again for almost three months to Göteborg (March to May 1862). In October 1863, together with his friend the experienced teacher Ferdinand Heller, he opened a music institute in Prague, which was active until 1866. Vigorously Smetana set about making a new artistic existence for himself in Prague. Through his pupil and later propagandist Jan Ludevít Procházka he was initiated into Czech society of the Měšťanská Beseda (Townspeople's Society) and made his views and new ideas known in discussions at the regular Tuesday meetings of the Czech élite in the home of Rudolf Thurn-Taxis. During Smetana's youth, teaching in the Austrian higher education system was given exclusively in German. Smetana's education, like that of all Czechs of his generation, had consequently been in German with the result that he expressed himself more naturally in German. The decision to engage in Czech national life and identify with the aims of the national movement made him aware of his linguistic inadequacies. Surviving exercises in Czech grammar demonstrate his attempts at remedying this and he now began writing in Czech as a matter of course. He commented in this diary: 'In the newly growing self-awareness of our nation I too must also make an effort to complete my study of our beautiful language so that I, educated from childhood only in German, can express myself easily, in speech and in writing, just as easily in Czech as in German'.

Smetana's position in Czech society slowly became more secure. In 1863 his biography was published, for the first time, in the music periodical *Dalibor*. In 1863–5 he worked as choirmaster of the recently established Czech choral society Hlahol, the body for which most of his choral works were written. In 1864–5 he worked also as the music critic of the most important Czech daily newspaper, *Národní listy*. In 1863 he was chosen as first chairman of the music section of the artists' society Umělecká Beseda (Artistic Society), which had recently been founded to promote Czech artistic culture. Smetana's first important action here in the season 1864–5 was an attempt to establish subscription orchestral concerts. Partly for financial reasons and partly through lack of interest by audiences more used to the so-called mixed programmes, only three concerts took place. The most prominent event of the Umělecká Beseda in 1864 was the celebration, on 23 April, of the 300th anniversary of the birth of Shakespeare, at which Smetana conducted Berlioz's dramatic symphony *Roméo et Juliette* and his own march for orchestra for a procession of 230 characters from Shakespeare. On 20 April 1866, at Liszt's behest, he conducted the latter's oratorio *Die Legende von der heiligen Elisabeth* at a concert organized by the Umělecká Beseda.

Not all of Smetana's attempts at establishing himself were crowned with success. In 1865 he failed to be chosen as director of the Prague Conservatory in succession to Kittl; nor was he awarded the Austrian state scholarship he applied for. However, on 15 September 1866 he won the position that he longed for most: after political changes in the theatre administration he was appointed principal conductor of the Royal Provincial Czech Theatre known as the Provisional Theatre, the first permanent Czech professional stage, which had begun its activities in the autumn of 1862. Smetana was able to take further the work of his predecessor, the conductor Jan Nepomuk Maýr, who in a relatively short time had built up an ensemble and a permanent orchestra for this new Prague stage. And like Maýr, Smetana had to make compromises because of the theatre's precarious finances and the taste of the Czech theatrical community. Occasionally he had to descend from the lofty attitudes he had espoused earlier in his position as music critic of the *Národní listy*. Nevertheless he managed to expand the repertory, and to continue to perform classics of operatic literature (Gluck, Mozart, Beethoven) as well as Slavonic operas (Glinka, Moniuszko). Understandably he performed a large number of new works by Czech composers (Blodek, Bendl, Rozkošný, Šebor and others) inspired by the existence of the theatre. In 1872 he was also able to establish a singing school attached to the theatre. For eight years he worked in the theatre, for the last two as artistic director. The position of conductor with an orchestra at his disposal allowed him to realize his ideal of subscription orchestral concerts. These he began on 5 December 1869 with his theatre orchestra. Later he was able to create a larger body for this purpose by combining the orchestras of the Czech and German theatres (from 1873 as the orchestral association Filharmonia), taking turns at the podium with the conductor of the German theatre Ludwig Slansky.

Smetana was well aware of the crucial role which Czech opera could play in national life and realized that a permanent professional stage would need a body of new Czech operas. With a few exceptions none so far existed. This need had also been foreseen by Count Jan Harrach, who in February 1861 announced a competition for the best two Czech operas, comic and serious. Smetana began his search for a libretto and in 1862–3 composed his first opera *Braniboři v Čechách* ('The Brandenburgers in Bohemia'). He entered it anonymously in the Harrach competition under the motto 'Music – the language of feeling, word – the language of thought', and, after three years of deliberations by the jury, it was eventually declared the winner, on 25 March 1866. By then, however, Smetana had already rehearsed and given its première at the Provisional Theatre (on 5 January 1866), thus marking his début as an operatic conductor. Its success with a public eager for Czech original operas led to the theatre's immediately accepting a second opera by Smetana, *Prodaná nevěsta* ('The Bartered Bride'), which was already complete by that time. Although the work went through many modifications after its unpromising première on 30 May 1866 (overshadowed by the impending war with Prussia) it began to be gradually accepted by the public as a model Czech opera fulfilling the ideal of opera as representative of the nation; as a comic opera, however, it was sometimes felt to be too lightweight for such a serious purpose.

The première of a third opera by Smetana, *Dalibor* (16 May 1868), took place as part of the celebrations for laying the foundation stone of the National Theatre, the building planned to replace the tiny Provisional Theatre. The lack of success of the opera and of his later revision

2. *Title-page of the first edition of the vocal score of Smetana's 'Prodaná nevěsta' ('The Bartered Bride') (Prague: Hudební Matice, 1872)*

in 1870 is testimony to the fact that the Czech public could not identify with the Czech tragic hero of his opera: Dalibor was considered too passive and did not correspond to the contemporary ideal of the Czech knight and the historical awareness of the times. The opera was castigated as an exemplar of Wagnerian polemics which, as it flooded through Europe, affected the Czech lands in its full intensity at the beginning of the 1870s. After the first decade of uninterrupted freedom of Czech opera on the professional stage and with the prospect of the opening of a grand new permanent Czech theatre, the National Theatre (which, however, did not take place until 1881), this was a time of heightened interest in the future of Czech national opera, a time of stock-taking. The variety of types in Czech operas (drawing on French, Italian and German traditions), a variety also evident in Smetana's first operas, did not make any easier the decisions of the Czech musical public in their search for a Czech operatic style. Furthermore, Smetana who was by no means accepted at the time as a national composer, brought no new operas of his before the public for six years after *Dalibor*.

In these polemics the aesthetician Otakar Hostinský was an adherent of Wagner. For him as an adherent of the idea of progress Wagner now represented the most advanced stage in the evolution of opera. He wanted Czech national opera to be created on the basis of Wagner's theories (which he regarded as supranational) and thus go to the forefront of European musical development. At the same time the declamatory style of Wagner's voice parts suggested to him that correct declamation of the text could provide an opportunity for a national element in opera since he regarded speech as a distinctive and exclusive characteristic of the nation. He saw Smetana's *Dalibor* as the beginning of this 'correct' direction. The position of the anti-Wagnerians was formulated by the singing teacher František Pivoda. He defended the principle of Italian opera in which the chief dramatic means was the expression of the human voice in song. Wagner's operas, he contended, lacked this particular resource on account of the through-composed role of the orchestra, which undermined the dominance of the human voice and, according to him, negated the principles of opera as such. Wagner he regarded as unsuitable as a model for Czech national opera and the orchestra in Smetana's *Dalibor* seemed to him Wagnerian.

Used in arguments both for and against Wagner, Smetana defended his viewpoint with an unshaken faith in his own originality as an artist. He described this in a letter to the conductor Adolf Čech (4 December 1882): 'I do not write in the style of any famous composer, I admire only their greatness, taking for myself everything that I recognize as good and beautiful and above all truthful in art. You have known this of me for a long time but others do not and think that I am introducing Wagnerism!!! I've got my hands full with Smetana-ism, as long as this style is honest'. At the time of the sharpest polemics he composed the ceremonial opera *Libuše* (1869–72), followed by the salon opera *Dvě vdovy* ('The Two Widows', 1873–4). Polemics in the daily and specialist press were not of course only purely artistic affairs but also reflected different cultural and political preoccupations of the time and even personal aversions. In the quarrels about his position as conductor of the Czech theatre Smetana received support from colleagues and the public. In 1872 a petition of Czech artists was drawn up in favour of his continuing in the theatre. Smetana was finally reappointed, now as artistic director, with an increased salary. After the première of *The Two Widows* on 27 March 1874 his adherents ceremonially handed over a decorated baton. But the dénouement was unexpected and for Smetana fateful. The sudden loss of his hearing in September 1874 meant that he was forced to give up his place in the theatre. In his letter of resignation (7 September 1874) to the deputy chairman of the theatre board Antonín Čížek, Smetana traced the course of his loss of hearing. What began as extraneous noises in his ears in June 1874 became a permanent buzzing in July and soon he was unable to distinguish individual sounds. At the beginning of October he lost all hearing in his right ear, on 20 October in his left. Treatment, based on quiet and isolation from all sounds, did not help. His former aristocratic pupils organized a concert in 1875 whose takings enabled him to travel to consult foreign specialists (Smetana later thanked them with the piano cycle *Rêves*); a collection was also organized by his friends in Sweden. But this trip similarly brought no positive results.

5. Final years, 1874–84. Smetana was granted an annual pension of 1200 gulden by the theatre consortium in exchange for permission to stage his operas without payment. In order to reduce his expenses the whole family moved in June 1876 from Prague to live with Smetana's oldest daughter Žofie, married to the forester Josef Schwarz, in Jabkenice near Mladá Boleslav. Josef Srb-Debrnov became a self-sacrificing intermediary in various

3. *Bedřich Smetana*

negotiations in Prague, acting as a type of personal secretary until the end of Smetana's life. Contact with the theatre was made principally through the conductor at the Provisional Theatre, Adolf Čech. Deafness in no way crushed Smetana's spirit or diminished his musical imagination; on the contrary, throughout all the final decade of his life, he took advantage of being able to compose undisturbed. Immediately after becoming deaf, while still in Prague, he completed the first two movements, *Vyšehrad* and *Vltava*, of his symphonic cycle *Má vlast* ('My Fatherland'); the remaining four movements were written in Jabkenice over the next five years. During his final decade he also wrote the two string quartets (the first of which, subtitled 'Z mého života' – 'From my Life', movingly portrays the onslaught of deafness), both series of *Czech Dances* for piano, and the song cycle *Večerní písně* ('Evening Songs'). Choruses of the period include the demanding *Píseň na moři* ('Song of the Sea') and two pieces written for the 20th anniversary of the Prague Hlahol, *Věno* ('The Dowry') and *Modlitba* ('Prayer'). Most importantly, there were three more operas: *Hubička* ('The Kiss', 1875–6), which at its première on 7 November 1876 immediately won an overwhelming ovation, *Tajemství* ('The Secret', 1877–8) and *Čertova stěna* ('The Devil's Wall', 1879–82).

In the Czech musical and cultural world Smetana gradually became recognized as the chief representative of a Czech national music. This process of equating Smetana's personal style with a national style was consolidated through the second half of the 1870s and continued after his death. He himself was fully aware of the role which some of his works had begun to fulfil; the more this awareness grew among the Czech public, the greater became his sense of obligation. A characteristic attitude can be found in a letter to Ludevít Procházka of 31 August 1882, when he refused to compose a comic insertion for *The Two Widows* requested by the German arranger of the opera:

> I must seek to keep that honourable and glorious position which my compositions have prepared for me among my people and in my country. – According to my merits and according to my efforts I am a Czech composer and the creator of the Czech style in the branches of dramatic and symphonic music – exclusively Czech. . . . I cannot work with such a frivolous text; such music disgusts me and, if I were to do it, I would only prove to the whole world that I write whatever they want from me for money.

Smetana began to acquire various honours. He was made an honorary member of many musical societies, and at the beginning of the 1880s Czech society began to prepare several significant celebrations as a sign of artistic recognition. On 4 January 1880 in memory of the 50th anniversary of his first appearance as a performer a gala concert took place with the premières of the symphonic poems *Tábor* and *Blaník* (the two final parts of *Má vlast*) and *Evening Songs*. In September 1880 Smetana's birthplace organized the ceremonial unveiling of a plaque. On 5 May 1882 an exceptional event in the history of Czech opera took place – the 100th performance of *The Bartered Bride*. Its success was so great that a second '100th performance' had to be given. Similarly celebratory and exceptional events included the first collective performance of the symphonic cycle *Má vlast* on 5 November 1882. For Smetana, however, a particular satisfaction was the ceremonial opening of the National Theatre on 11 June 1881 with his *Libuše*, which had won the competition for this purpose. Although he had finished it in 1872, Smetana had patiently waited for the completion of the theatre and not allowed it to be performed before then. After the fire which demolished the theatre soon after its opening he too, despite his age and condition, took part in fund-raising activities. His concert in Písek on 4 October 1881 in aid of the rebuilding of the theatre was his last appearance as a pianist. The theatre reopened with *Libuše* on 18 November 1883. In the following year celebrations for Smetana's 60th birthday began to be prepared, the gala concert and the banquet in his honour however took place without him. His worsening health meant that in April he had to be transferred to the Prague Lunatic Asylum, where he died on 18 May 1884. The orchestral cycle *Pražský karneval* ('The Prague Carnival') and the opera *Viola* based on Shakespeare's *Twelfth Night* (which he had begun in 1874 before *The Kiss* and resumed in 1883) remained incomplete at his death.

6. OPERAS. Smetana is regarded as the 'father of Czech opera' (and indeed of Czech 'modern' music) not because he was the first composer to write operas in Czech, but because his operas were the first to stay in the Czech repertory and thus form the basis for a continuous tradition which has lasted to this day. Professional composers such as František Škroup wrote operas in Czech from the 1820s onwards (Škroup himself was preceded by half a century of semi-amateur attempts), but apart from Škroup's *The Tinker* none was given more than a couple of times.

The opening of the Czech Provisional Theatre in 1862 provided the greatest incentive towards the establishment of a permanent Czech operatic tradition. The first opera given there was Cherubini's *Les deux journées* – there

was no suitable Czech piece – but 19 years later when the Czech National Theatre was finally opened, it was with Smetana's *Libuše* (1881). In between these dates all but one of Smetana's completed operas were performed at the theatre or its summer alternatives. Smetana was not alone in taking advantage of the new possibilities. Even before his first opera *The Brandenburgers* had been staged in 1866 a German opera by his older contemporary Skuherský had been translated into Czech and given at the Provisional Theatre, and *The Templars in Moravia* by Smetana's younger contemporary Šebor had narrowly anticipated Smetana's première. As well as Šebor, other Czech composers of the new generation such as Bendl, Rozkošný and Blodek were all enthusiastically composing operas – their premières mingled with those of Smetana – but of their operas only a single one, Blodek's unassuming one-acter *In the Well*, has managed to maintain a place in the Czech repertory. It is the canon of Smetana's eight completed operas which dominate the early history of Czech opera and consciously provided models for his contemporaries and successors.

Smetana's eight operas fall into three groups: three serious operas based on Czech history and myths (*The Brandenburgers in Bohemia*, *Dalibor* and *Libuše*); two comic operas conceived as *opéras comiques* (*The Bartered Bride* and *The Two Widows*) – the spoken dialogue was later adapted to recitative; and the three final operas all to librettos by Eliška Krásnohorská. *Libuše*, with its static monumentality, is best described as a sort of musical *tableau vivant* (a popular genre in Prague at that time). Paradoxically the other two overtly nationalist operas are the nearest to common European patterns: *The Brandenburgers in Bohemia* a rather clumsy French grand opera, and *Dalibor* a straightforward tragedy with the death of hero and heroine at the end.

The five other operas share a common thread. All are comedies, the later ones increasingly serious, and all concern the healing of a central relationship. This relationship has been soured either by a failure of communication (Jeník and Mařenka in *The Bartered Bride*), or by the passing of years – Smetana's later central couples are distinctly middle-aged, one of them usually a widow or a widower, or long unmarried. Healing is achieved in *The Two Widows* by shock treatment, but in the Krásnohorská operas it is internal, and suggested by physical metaphor: in the deep forest (*The Kiss*), the dark tunnel (*The Secret*) or by a perilous crossing of the swollen waters of the Vltava (*The Devil's Wall*). Such plots have little to do with contemporary operatic models and much more to do with Shakespeare's comedies and romances or with Mozart's *Die Zauberflöte*: the Viennese musical, magical 'quest' plays transplanted easily to the Prague stage and their Czech successors were a dominant strain in Czech theatre of the generation before Smetana and Krásnohorská.

Smetana's mission to create a canon of Czech operas did not prevent his drawing on existing traditions of European opera. His attitude towards these can be inferred from the reviews that he wrote in *Národní listy* (1864–5) and from the repertory he maintained and introduced at the Provisional Theatre during his time there as chief conductor. Most of the objections in his reviews were to the Italian repertory, which he found faded and dramatically inept. German opera – in the language of the oppressor – was understandably unpopular (and was anyway available in Prague at the German opera house), so Smetana sought to move towards the inclusion of more Slavonic repertory and, despite the cramped resources, tiny chorus and orchestra, towards the French repertory.

There is some echo of French grand opera particularly in his early works. *The Brandenburgers in Bohemia*, for instance, is based on the Scribe-Meyerbeerian canvas of large-scale historical events against which the characters enact their own dramas. The build-up of atmosphere of Act 1 scene ii, with its genre choruses, ballet and 'revolutionary chorus', has similarities with Auber's *La muette de Portici* rather than with later Meyerbeer works. There is for instance no exploitation of double-chorus confrontations which the plot would suggest (in fact, apart from a single soldier, no musical depiction of any Brandenburger). Most of these 'French' traits in *The Brandenburgers*, however, can be traced back more to the librettist than to the composer.

Where Smetana made compositional choices he seems to have taken Italian rather than French models. There are several cantabile–caballetta arias and duets in *The Brandenburgers*, and the outer acts both make use of the concertato–stretta formula. Indeed such traits are sometimes present in Smetana's later operas: Act 1 of Smetana's most advanced opera, *Dalibor*, concludes with a cabaletta duet, and there are elements of the concertato reactive ensembles in all his later operas. Even when, in the later operas, the repetitions characterizing a cabaletta structure disappear, the slow–fast cantabile–cabaletta design underlies some of the solo arias and duets. Such survivals are puzzling in view of Smetana's stated aversions, but can be partly explained by the conditions in which he worked. Most of the singers at the Provisional Theatre were trained in the Italian school and felt more comfortable with its traditions. Smetana, furthermore, regularly complied with their requests for extra arias. Thus Act 3 of *The Brandenburgers*, dramatically far from clear, is further confused by two specifically requested insert arias. The first, for the baritone Josef Lev (as Jan Tausendmark), showed off Lev's cantabile legato so well that there was a danger of this villain appearing too sympathetic.

Such habits cannot be dismissed as the composer's lack of assertiveness at the beginning of his operatic career: in the Hamburg revisions to *The Two Widows* (1882) he added a cabaletta ending for Anežka's aria as requested; by *The Secret* he was still adding music for Josef Lev, for instance the 115-bar expansion to his Act 2 aria added after the première. Smetana's admiration for Lev's especial gifts, which were wholly lyrical and undramatic, and his tailoring of leading baritone parts to them, meant that after *The Brandenburgers* baritone villains virtually disappeared from his operas. Similarly the fact that the Provisional Theatre lacked dramatic sopranos and Heldentenors as permanent members of the ensemble, meant that Smetana generally avoided writing for these heavier voices in his operas: he learnt his lesson in *Dalibor*. And for all his reservations about italianate traits he included coloratura when appropriate to the singer. The leading Czech prima donna Eleonora z Ehrenbergů did not hide her contempt for a part she was allocated in *The Bartered Bride* (Mařenka) with no scope for her talents. Thereafter Smetana made sure to give something to please her (such as Jitka's melismatic flourishes over the Act 2 soldiers' chorus in *Dalibor* or the trill-laden part of the First Reaper in *Libuše*). This also accounts for the presence in *The Kiss*

of Barče's 'lark song', written expressly for the coloratura soubrette talents of Marie Laušmannová. The small and fairly stable group of singers assembled at the Provisional Theatre during Smetana's time there had a lasting effect on his future voice typing – even in his final opera *The Devil's Wall* he was writing with their specific voices in mind. In general Smetana confined himself to light, lyrical voices; and after the unfieldable demands of *The Brandenburgers* (three tenors, including a Heldentenor) and *Dalibor*, he and his last librettist Eliška Krásnohorská were careful to write for what was on hand.

The role of Krásnohorská as Smetana's last librettist was a particularly dominant one. She chose the subjects of his last three completed operas (two of them her invention), determined the voice types and the conventions. She believed in ensembles (as she wrote forcefully to Fibich when negotiating a libretto of *Blaník* with him), and consequently included many in her librettos. She determined where there was duet writing, where there were formal solos. Smetana took what was given him (he mentioned that he had left out only four lines of Act 1 in *The Secret*) and, apart from obliging favoured singers, made no specific requests other than for more 'comedy' in the final opera.

Most of their work was done when Smetana was at his most vulnerable – deaf, and with rapidly deteriorating health – so that it is not surprising that he was so passive. However, the scanty evidence available suggests that Smetana was no more assertive in his relationships with earlier librettists. The texts for *Dalibor* and *Libuše* were written ahead of any commission; similarly it would seem Smetana had no great say in the subject matter of the two texts he received from Karel Sabina, *The Brandenburgers* and *The Bartered Bride*, apart from specifying a comic opera of the latter and, for the former, a serious historical opera that would comply with the conditions for the Harrach competition. Conventions of ensemble and simultaneous singing tended to vary with the librettists. Sabina, lacking the time, patience and skills for the equal-length lines needed, provided little usable material for ensembles. Thus *The Bartered Bride* has few ensembles (compared, for instance, to *The Two Widows*, which benefited from Emanuel Züngel's much greater experience as an opera translator and versifier), and those in *The Brandenburgers* had to be eked out from scanty and unpromising material. *Dalibor* has so few ensembles that one suspects that its librettist, Josef Wenzig, conceived it originally as a play. Only in monumental *Libuše* did Wenzig attempt to provide material for ensembles.

4. Title-page of Smetana's opera 'Hubička' ('The Kiss') (Prague: F.A. Urbánek, 1880)

Smetana wrote opera in a medium that was politicized almost the moment he began. In his preamble for his Czech opera competition, Count Harrach had suggested that use should be made of Czech country life and 'old chorales' to establish a Czech identity. This was a position which became associated with the conservative faction of Czech politics (the *staročeši*), whereas Smetana belonged to the progressive wing (the *mladočeši*) and was against the quotation of Czech folksong. Accordingly there are almost no direct quotations in his operas and the few that he employs – for instance the pastorella lullaby in *The Kiss* – are there for specific reasons. There are, however, pseudo-folksongs and/or choruses in all of Smetana's operas. The suggestion of folksong was usually made by the use of strophic structures, repetitive tunes and variable metres or tempos (a slow, ruminative beginning accelerating into a more regular and faster continuation, e.g. Ludiše's 'folksong' in *The Brandenburgers*).

Smetana may well have decided that his 'progressive', Lisztian orientation (which resulted for instance in the near monothematic construction of *Dalibor*) was not compatible with the quotation of folk music. But a crucial factor was that the music he imbibed in his youth was popular dance music from the town rather than genuine Czech folk music from the country. It is dance rhythms rather than folk tunes that provide the closest link between Smetana and vernacular music. A number of dances are specifically named, for instance the *skočná* and the *furiant* in *The Bartered Bride*. He also made frequent use of the *sousedská* (a ländler-type waltz), but the most common dance of all in his operas was the POLKA, whose rhythms most clearly mirrored the stress patterns of the Czech language. Thus fast 2/4 pieces with well stressed beats and polka-like rhythmic figures underlie many of Smetana's operas from *The Bartered Bride* onwards. Lukáš's ironic serenade to Vendulka in *The Kiss* is 'à la polka'. When the countryfolk celebrate at the end of *The Two Widows*, it is with a named polka, but many unnamed polkas (specifically allowed for in the predominantly trochaic libretto), can be heard throughout the opera, most noticeably in the Act 2 prelude and the associated duet for the two widows.

Other sources of 'Czechness' reside in the setting of the Czech language itself but, at least in Smetana's early operas, this is compromised by his poor word-setting (only by his fourth opera *Libuše* did he manage to avoid mis-stressings), and by the fact that in two operas, *Dalibor* and *Libuše*, the Czech text follows the rhythms and metres of the German originals. Although in the later operas the word-setting is fully idiomatic, Krásnohorská's

penchant for high-style iambics (alien to Czech's distinctive first-syllable stress) led to less natural-sounding word-setting than Smetana achieved with the trochees in *The Two Widows*. If from the mid-1870s Czech audiences perceived Smetana's operas musically as particularly 'Czech' it may not merely be because of the use of dance rhythms or idiomatic setting of the Czech language but because familiarity with *The Bartered Bride* led to Smetana's personal voice being taken as the clearest expression of 'Czechness' in music.

7. Orchestral works. When in 1848–9 Smetana wrote his first extended orchestral composition, the *Jubel-Overture*, he was aware of the need to extend his technique in this medium. Copies have survived that he made of passages from various scores with interesting orchestration (Beethoven's symphonies nos.2 and 9 and *Leonora* no.1 Overture op.138, Mendelssohn's overtures *Die schöne Melusine* and *Meerestille und glückliche Fahrt*, Weber's *Jubel-Overture* and overture to *Der Freischütz* and Berlioz's arrangement of Meyer's *March marocaine*) as well as symphonic fragments and sketches culminating in the composition of the *Triumf-Sinfonie* in 1853–4. Known during this period as a teacher and chamber player, Smetana longed above all to be recognized as a composer by fellow artists and society. The external stimulus for the symphony was the marriage of Emperor Franz Joseph I with Elisabeth of Bavaria, and Smetana sought, unsuccessfully, official acceptance for the dedication of the composition at the Viennese court. The celebratory intent was underlined by his use of Haydn's melody for the Austrian National Anthem of the time. For future performances of Smetana's only symphony this turned out to be a fatal decision in view of the various political meanings which became attached to the anthem in the course of time. In the first half of the century hymns were used as the basis for variations or overtures. Smetana, however, wanted to show off his craft in the elevated form of the symphony. He employed the melody of the hymn as a solution to a compositional problem: to unify the four movements of the symphony including the monumental climax of the finale. Haydn's tune first emerges in a brief hint at the conclusion of the development of the first movement; its first strain is lyrically transformed as the second subject of the slow movement; its full version is displayed in the grandiose coda of the finale. While its identity as a melody is preserved, all the movements have their own independent logic. Smetana performed the symphony at his début as a conductor on 26 February 1855 and for the second time in Göteborg in 1860. It was performed in 1882 by Adolf Čech, at whose instigation Smetana, who continued to value the work, revised it and gave it the Czech title of *Slavnostní symfonie*.

Smetana's return to orchestral music in the years 1858–61, during his time in Sweden, brought a change of direction in the composition of symphonic poems. He wrote three: *Richard III*, *Wallensteins Lager* and *Hakon Jarl*, based respectively on plays by Shakespeare, Schiller and Oehlenschläger. This direction in his composition, however, is also evident in the piano sketch *Macbeth*, the unfinished piano sketches for *Cid*, the plan to elaborate an earlier fragment as *Wikinger-Fahrt* and in the unrealized plan to compose a *Wallensteins Tod* (after Schiller); it also possibly explains the musical sketches designated 'Maria Stuart'. Smetana's visit to Liszt in Weimar 3–7 September 1857 provided a powerful stimulus for this new orientation, during which time not only the strength of Liszt's thoughts but also his music left an indelible impression on him. It was here that he heard the premières of Liszt's *Faust Symphony* and his tone poem *Die Ideale* as well as other pieces in piano arrangements. Also available at the time were Liszt's first six symphonic poems, which had been published a year earlier by Breitkopf & Härtel. Liszt had presented him with one of these, *Tasso*, during his stay in Prague in September 1856. Smetana's response was all the more powerful since some of Liszt's compositional devices were already emerging as tendencies in Smetana's earlier music. Such shared features include unity within a variety of character, thematic transformation and the triumphal conclusion of large forms. Decisive for the whole of Smetana's output is the notion that a poetic thought or programme is changed into a completely musical form (in *Richard III* and *Hakon Jarl* on the basis of the sonata principle, with *Wallensteins Lager* on the basis of a symphonic cycle) always with its own autonomous musical logic. It is interesting that Smetana did not at first designate these pieces symphonic poems. Of *Richard III* he wrote to Josef Proksch on 9 September 1858 that it was 'a composition in one movement, neither an overture nor a symphony: in short something still to be named'. After completing the first two, Smetana tried hard to get them performed, but Liszt did not keep the promise given to him on his second visit to Weimar in June 1859. *Richard III* and *Wallensteins Lager* were performed only during Smetana's first orchestral concert on 5 January 1862, on his return to Prague (as 'fantasies for large orchestra'); *Hakon Jarl* was given (as a 'symphonic poem') on 24 February 1864.

Occupied by operatic work, except for occasional pieces, Smetana returned to orchestral music only in the middle of the 1870s with *Má vlast*. With the 'Swedish' poems Smetana had espoused the Lisztian idea of a symphonic poem centred on the expression of striking musical ideas and their mutual relationships; the thoughts behind the existing literary or graphic masterpieces which inspired them are taken further as part of a new synthesis rather than as the basis for mere musical illustration or a musical duplication of the programme. When he began composing *Má vlast*, however, Smetana had been serving Czech national emancipation for more than ten years and, in accordance with it, formulated his own programme for the cycle. The first traces of the conception go back to 1872, to a time when he was completing his opera *Libuše*. Although Smetana's conception crystallized only gradually, the basic idea did not change. This was of a cycle of symphonic poems celebrating the homeland headed by *Vyšehrad* and *Vltava* (respectively a rocky promontory in Prague with mythic associations, and the Bohemian river that runs through Prague). These two pieces were completed in full score in the second half of 1874, i.e. shortly after the composer went deaf. Another pair, *Šárka* (the name of a female warrior, well known from early Czech legends) and *Z českých luhů a hájů* ('From Bohemian Fields and Groves'), followed a year later (fig.5). After some years, in 1878–9, Smetana returned to what had seemed a closed tetralogy, expanding it with two more symphonic poems, *Tábor* and *Blaník* (respectively the names of the Hussite town and the magic mountain in which Czech warriors, according to legend, wait to come to the rescue of their homeland). Both were

5. Autograph MS of the beginning of 'Z českých luhů a hájů' ('From Bohemian Fields and Groves'), composed 1875, from Smetana's 'Má vlast' ('My Fatherland') (Muzeum Bedřicha Smetany, Prague)

a celebration of Hyssitism (the Czech Hussite chorale 'Kdož jste boží bojovníci – 'Those who are Warriors of God' – was used both as building material and emblematically), which nationally aware Czechs of the time regarded as one of the historical periods which could serve as a basis for a contemporary, nationally charged ideal. With this Smetana completed the monumental cycle which is a unique musical apotheosis of the homeland, of

the country in which the existence of the nation is rooted, and a celebration of the countryside which for the emergent Czech nation was filled with mythical and historical reminiscences all bound up with a vision of the future. The individual movements of *Má vlast* were first performed separately. The cycle was heard as a whole for the first time on 5 November 1882 and as such was acclaimed by the Czech musical public as representing Czech national style. Smetana dedicated the cycle to the city of Prague.

Smetana's thoughts for a further symphonic cycle can be found in the year 1880 in a letter to Ludevít Procházka (25 February): 'I would write . . . orchestral symphonic poems under the title "Böhmischer Karneval" or "Prager Karneval", in which not only Czech dances would occur but also small scenes and characters, for example from my operas, as masques'. In 1883 he began composition, but managed to complete only the first section, the *Introduction and Polonaise*.

8. Chamber music. Not many of Smetana's works were inspired by real incidents in his life but it was chamber music that became for him the area which, as an intimate conversation between instruments, belonged to the private sphere. The first of these works, the Piano Trio in G minor, arose, according to Smetana in 1855, as a reaction to the death of his first-born child, the musically talented daughter Bedřiška (Friederike). The three-movement composition sums up the composer's musical thoughts in a large-scale form which, before the composition of Smetana's first symphonic poems, was represented at the time only by the student Sonata in G minor for piano of 1846 and by the *Triumf-Sinfonie*. Thematic variation work, thematic affinities and transformation ensure the unity of the work as a whole as well as the unity of music of contrasting characters within individual movements. The trio was performed on 3 December 1855 with the composer at the piano. For contemporary critics the work's 'rhapsodic' nature went against the aesthetic ideal for chamber music of the time but nevertheless its reception was not as unfavourable as Smetana and later commentators would have us believe. In May 1857 Smetana reworked the first and third movements and performed the trio in a new version for the first time in 1858 in Göteborg.

The impulse for the creation of a further chamber work, the First String Quartet 'Z mého života' ('From my Life'), written in 1876 and thus 20 years after the Piano Trio, came most probably from Ludevít Procházka. Procházka, a tireless promoter of Smetana's music, was one of the founders of the permanent institution for chamber concerts in Prague, the Czech-German Organization for Chamber Music, at whose first concert on 19 February 1877 Smetana's work was announced. 'I wanted to depict in music the course of my life . . . the composition is almost only a private one and so purposely written for four instruments which, as in a small circle of friends, talk among themselves about what has oppressed me so significantly', Smetana wrote to Josef Srb on 12 August 1878 in a letter in which he supplies the first of the five extant outlines of his programme for the work. Thus arose a work that is almost unique in the tradition of chamber music by virtue of its subjective nature and its use of a programme, something which was hitherto the domain of symphonic work. Against the background of the Classical plan for individual movements Smetana created poetic pictures through the play of individualized musical characters which have their own autonomous musical logic and which, together with their programme (which can be described as reminiscences of the state of mind at important junctures of Smetana's life) are capable of providing rich starting points for associative listening. Instead of a scherzo in the outer parts of the second movement there is a polka, following the precedent of Fibich's and Dvořák's string quartets. In Smetana's case, for instance in his symphonic and operatic work, he used it as a symbol of Czech country life and Czech local colour. Here it is a reminiscence of his passionate devotion to dancing in his youth. In the coda of the finale, before the reminiscence of the lyrical theme from the first movement, a very high sustained note (*E‴*) is heard as a fateful proclamation of Smetana's deafness. 'I allowed myself this little trifle because it was so crucial for me' (Smetana to Srb, 12 August 1878). The work was finally performed publicly at the concert of Umělecká Beseda on 29 March 1877 and during Smetana's life received several performances abroad (in 1880 in Weimar on Liszt's initiative, but also in Hamburg, Vienna, Meiningen, Magdeburg, Paris, Dresden, Moscow and overseas).

The external stimulus for Smetana's last important work, the Second String Quartet in D minor, can also be traced to Procházka's efforts to promote Smetana's music. The quartet was composed in the years 1882–3, when, on account of his worsening state of health, Smetana was able to compose only in snatches. This fact has influenced the view of many commentators on this work, going, as it does, against the more stable norms of the genre. Smetana's quartet is characterized by its remarkable shortwindedness, its aphoristic character and the density of its musical expression (for instance the first movement is a carefully thought out miniature double-function form) and looks forward to such tendencies of the future. It is significant that a comment by Arnold Schoenberg (although not substantiated) has been handed down in Smetana literature from the 1920s that it was this quartet which 'opened the world to him'.

9. Piano works. As far as quantity is concerned, piano works take up a dominant position in Smetana's works of the 1840s and 50s. In his self-taught period standard dance genres predominate, above all polkas; there are also attempts at the lyrical piano piece. During his studies with Josef Proksch this field developed in parallel with his exercises and compositional studies, with Smetana's first piano cycle *Bagatelles et impromptus* appearing at the beginning of 1844. It points to the various ways forward taken in his future works: salon pieces as a type of poeticized study and song without works linked with the names of Mendelssohn and Henselt but also with the poetical music of Schumann. For Smetana's orientation the French titles of the compositions are themselves eloquent in this respect, and he continued to use them frequently. It was only the further cycle of *Six morceaux caractéristiques* which he designated as his op.1, among other reasons to add weight to the dedication to Liszt. The plan to compose a cycle of albumleaves in all 24 major and minor keys also arose during this period. But it remained incomplete and in the end Smetana grouped some of the albumleaves into his opp.2 and 3 and into the *Skizzen* opp.4 and 5, which he dedicated to Clara Schumann. In the continuing composition of polkas, stylistic tendencies appeared to be modelled on Chopin, a

characteristic which deepened in 1848–54 in the *Trois polkas de salon* op.7 and the *Trois polkas poétiques* op.8. The culmination of this attempt at idealized dances is the *Souvenir de Bohême en forme de polkas* opp.12–13 (1859–60). Besides reviews and reminiscences of his contemporaries Smetana's virtuoso composition tell us about his technical abilities. He wrote most of these pieces, for instance the transcription of Schubert's song *Der Neugierige* from *Die schöne Müllerin*, or the concert étude *Am Seegestade – eine Erinnerung*, or the cadenzas for Mozart's and Beethoven's piano concertos, for his own use at a time when he saw this as a major part of his role as a musician coming from his career as a piano virtuoso. He initiated this line with the fantasia *Böhmische Melodien* and closed it with the *Fantasie na české národní písně* ('Fantasia on Czech Folksongs'), which he wrote in 1862 for concerts in the aid of the National Theatre.

After his return to Bohemia Smetana's works were bound up with musical genres considered as representative of national music and he returned to piano works only after 13 years with the cycle *Rêves* (1875). Its various movements were dedicated to his former aristocratic women pupils who in 1874 organized a benefit concert for his trip to foreign ear specialists. The whole cycle nostalgically harks back to the famous era of the characteristic piano pieces of the 1840s and to Smetana's models, Schumann, Chopin and Liszt. Quite different aims are represented by the two series (1877 and 1879) of *Czech Dances* with a claim to large-scale concert forms. About the first series, polkas, he wrote to his publisher Velebín Urbánek on 2 March 1879; 'My title "Polkas" is important, for my efforts are directed towards idealizing the polka in particular, as Chopin did in his day with the mazurka, and these four polkas are a continuation of those published years ago.' And the aim of placing in the concert hall the stylization of further *Czech Dances* in the second series of the cycle Smetana formulated polemically in a letter also to Urbánek a month later: 'I suggest publishing folkdances under the title *Czech Dances*. Every dance under its own name, e.g. "Furiant", "Skočná", "Rejdovák and Rejdovačka", "Sousedská", "Hulán" . . . etc.. . . Whereas Dvořák gives his pieces just a general name "Slawische Tänze" with people not knowing which they are, and whether they exist at all, we would show which dances with real names we Czechs have'.

10. Posthumous reputation. Smetana's achievement as a composer is the composition of a canon of Czech opera where none before existed and the creation of a personal style, both in his operas but also in his symphonic and chamber works, which came to be equated with the Czech style of the time. This achievement has been complicated both by the fact that his sudden deafness at a crucial time has led to the Romantic image of artist-as-hero (and a vein of sentimental protectiveness in some writings about him) and by the close connections with Czech nationalism, which have monumentalized him into a figure where criticism of aspects of his life or work was discouraged. Thus Smetana's syphilis, which resulted in his deafness, madness and death, is not generally acknowledged by Czech sources. German aspects of his life, perfectly natural for the time, have until recently been airbrushed out of the picture. In his music there has been careful control over which influences are conceded in his mature works: those of Liszt and Wagner are made much of, being 'progressive'; those of other figures such as

6. *Title-page of the arrangement for piano duet of 'Z českých luhů a hájů' ('From Bohemian Fields and Groves') from Smetana's 'Má vlast' ('My Fatherland') (Prague: F.A. Urbánek, 1880)*

Rossini, Donizetti, Verdi, Meyerbeer or Offenbach are dismissed. Furthermore and often quite destructively, Smetana became, in the hands of his proselytes, the starting-point for a prescriptive view of Czech music which excluded figures such as Dvořák, Janáček and Suk. Since critical writings are of their time and quickly superseded none of this might have mattered were it not for the fact that the sympathetic and zealous advocacy of his contemporaries such as Otakar Hostinský turned in the next generation into dogma, most wilfully in the hands of the masterly polemicist, Zdeněk Nejedlý. Furthermore, the political developments which brought Nejedlý, as an old but powerful man, into the postwar communist administration of Czechoslovakia as minister of education, atrophied attitudes almost to the end of the 20th century.

Much of this is a source of bemusement for foreign commentators, who generally find Dvořák a more substantial composer. Such attitudes have halted scholarly work on certain areas of Smetana's life or on the interesting minor figures around him such as Šebor, Bendl or Rozkožný. And, for all the adulation, several major scholarly tasks in connection with Smetana remain to be done. It is perhaps not surprising that Nejedlý's grandiosely conceived biography only reached volume 7 (taking Smetana to 1843). But there is still no published thematic catalogue of his works: Bartoš's was incomplete at his death; Berkovec's, whose new numbers are supplied in the work-list to this article, may at last remedy this. For the biographer it is especially infuriating that there is no complete edition of Smetana's letters and no edition at all of his diaries, despite the generous provision for scholarly ventures by the communist administration. It presumably did not help that the diaries were kept in German up to

1860, and that both they and the letters may occasionally disturb the sanitized view that generations of Czechs have had of their hero. A Czech 21st-century view of Smetana will perhaps be rather different.

WORKS

Editions: *Z pozůstalých skladeb Bedřicha Smetany* [Compositions from Bedřich Smetana's estate], i–xiii, ed. O. Hostinský, J. Löwenbach and others (Prague, 1903–12) [PS]

MARTA OTTLOVÁ (1–5, 7–9, work-list), MILAN POSPÍŠIL (bibliography), JOHN TYRRELL (6, 10)

Smetana, Robert (*b* Vienna, 29 Aug 1904; *d* Brno, 6 Oct 1988). Czech musicologist and folklorist. He studied composition with Kvapil at the Brno Conservatory (1925–8) and musicology with Helfert at Brno University (1924–9), where he took the doctorate in 1934 with a dissertation on melodic idioms in folksong. He worked as a music archivist at the Moravian Museum, Brno (1924–32), and as a music journalist (1926–46); in 1936 he moved to Olomouc, where he was an official in a cultural organization. In 1946 he initiated the teaching of musicology and music education at Olomouc University and was later appointed lecturer and head of the musicology institute (1951) and professor of music history (1965); he retired in 1973, later returning to Brno. In 1967 he was granted the DSc by Prague University. Much of his work has dealt with folksong, on which he has worked closely with the literary historian Bedřich Václavek, devoting special attention to the question of songs which became accepted as folksongs. He has also been concerned with music aesthetics and with the history of music, writing the section on musical Romanticism in the *Československá vlastivěda* volume of Czech music history that he edited with Očadlík (1971). The annual Olomouc conferences on the arts (from 1960) were founded on his initiative.

JOHN TYRRELL/KAREL STEINMETZ

Smetana Quartet. Czech string quartet. It was formed in 1945 by Jaroslav Rybenský (*b* Bojanov, 12 Jan 1923; *d* Teplice, 19 Feb 1997) and Lubomír Kostecký (*b* Ostrava, 5 June 1922), violins; Václav Neumann (*b* Prague, 29 Oct 1920; *d* Vienna, 2 Sept 1995), viola; and Antonín Kohout (*b* Lubná, nr Rakovník, 12 Dec 1919), cello; they were all students in J. Micka's class at the Prague Conservatory. Their début was at Prague on 6 November 1945 in works by Smetana and Novák. At the end of 1946 Neumann left to pursue his conducting career; Rybenský became the viola player and his place as first violin was taken by Jiří Novák (*b* Horní Jelení, nr Pardubice, 5 Sept 1924). A further change in 1955 brought Milan Škampa (*b* Prague, 4 June 1928) as viola player in place of Rybenský. Until 1949 the players, except the first violinist, were also members of the Czech PO, but in 1951 the quartet became the orchestra's official chamber group and they were no longer required to perform orchestral duties. They first travelled abroad to Poland in 1950, when they also began to make gramophone records; from 1954 they toured widely and often, making their London and New York débuts in 1955 and 1957 respectively, and in 1958 becoming the first Czech group to appear in Japan. Quartets by Smetana, Dvořák and Janáček formed the basis of their repertory, which also included works by Martinů, Shostakovich and Sommer. The players' individual virtuosity was combined with a unity of ensemble that derived from great attention to dynamic and expressive detail, enabling them (from 1949 onwards) to give performances from memory. Kohout and Škampa published articles on the subject (in *HRo*, x, 1957, pp.71, 1020). In 1967 they were appointed to teach at the Prague Academy. Until 1972 they played Czech instruments, including a viola of 1859 by F.A. Homolka that formerly belonged to Dvořák; they were then lent instruments from the state collection: violins by Stradivari (the 'Libon', 1729) and Francesco Ruggieri (1694), a viola of Italian origin (*c*1680) and a cello by Grancino (1710). The quartet disbanded in 1989 after a farewell concert in Brno.

ALENA NĚMCOVÁ

Smetanin, Michael (*b* Sydney, 1 Oct 1958). Australian composer of Russian descent. He studied composition with Richard Toop at the NSW Conservatorium of Music (BMus, 1981) and then with Louis Andriessen in Amsterdam and at the Royal Conservatory in The Hague (1982–4). After the serial piano trio *Triskelion*, his student works such as *Three Songs*, *Troika* and his first acknowledged work, *Undertones* (1981), show the strong influence of the minimalist style of Reich and Andriessen, especially the latter's *De staat*. Smetanin's interest in rock music, especially funk, was encouraged while he was in Holland. It emerges in the expanded drum kit sound of the percussion quartet *Speed of Sound* (1983) and in the minimalist *Ladder of Escape* (1984) for Harry Sparnaay's Basklarinetten Kollektief. He also drew on the art music avant garde as exemplified in the uncompromising *Afstand* (1983).

On his return to Australia in 1985, Smetanin briefly worked as information officer for the Australia Music Centre; he also completed commissions for two Dutch ensembles, *Track* for Hoketus and *Vault* for the Nieuw Ensemble. While *Vault* is again influenced by Andriessen,

Track is a loud, aggressive piece incorporating influences from rock and free improvisation, a precursor of the controversial, though highly acclaimed, *Black Snow* (1987).

Smetanin has been the recipient of many awards, including first prize in the Georges Enesco International Composition Competition for *Fylgjir*, one of the works he wrote while composer-in-residence with the chamber music organization Musica Viva in 1988. Since the late 1980s, the compositional approach exemplified in *Black Snow* has developed in combination with a radical modernist virtuosity redolent of Xenakis and accommodating diverse influences from funk to Stravinsky. *Strange Attractions* (1990), *Hot Block* (1991), the large song cycle *Skinless Kiss of Angels* (1992) and the chamber opera *The Burrow* (1993), concerned with the last minutes in the life of Kafka, demonstrate the diverse crystallization of his style. Since *Strange Attractions* Smetanin has also used the 'automaton', a numerical grid to influence compositional decisions about different musical parameters.

WORKS
(selective list)

Op: The Burrow (prol, 5 scenes, A. Croggon), 1993, Perth, Octagon, 21 Feb 1994

CHRISTINE LOGAN

Smeterlin, Jan (*b* Bielsko, 7 Feb 1892; *d* London, 18 Jan 1967). British pianist of Polish birth. At the age of 17 he went to Vienna and became a pupil of Godowsky, then head of the Klaviermeisterschule of the Vienna Conservatory. Through a fellow pupil, Heinrich Neuhaus, he came into contact with Szymanowski and later gained recognition as an effective champion of the latter's piano music. His career was interrupted by World War I, in which he served as an officer in the Polish cavalry, and it was not until 1930 that he made his US début with a recital in Carnegie Hall. After this he gave regular concerts there over a period of 30 years, though his career remained firmly based in Europe. Smeterlin became a British subject in 1934. Despite his advocacy of Szymanowski's music, it was above all as a Chopin specialist that he had greatest success. A poetic and cultured player, his direct and unmannered interpretations, as heard, for instance, in his discs of the complete Nocturnes, capture the soulful intensity of Chopin's style, while at the same time not adhering too closely to details of markings in the text.

JAMES METHUEN-CAMPBELL

Smethergell, William (*b* London, bap. 6 Jan 1751; *d* London, before March 1836). English composer. In 1765 he was apprenticed to the organist and composer Thomas Curtis, and became organist of All Hallows, Barking-by-the-Tower, 1770–1823, and of St Mary-at-Hill, 1775–1826. According to his membership application to the Society of Musicians in 1779, his annual income of about £200 was derived from his two posts, from playing 'first tenor' (viola) at Vauxhall Gardens and from teaching. The keyboard writing in his compositions suggests that he was an accomplished player. His first publication, about 1770, was a set of *Six Lessons* for keyboard; these were followed with the publication of keyboard concertos, symphonies, miscellaneous instrumental pieces and songs. While some of the more interesting compositions might first have been performed at the King's Arms Tavern, Cornhill, of which subscription concerts Smethergell was steward about 1775, others he wrote as teaching material for his violin pupils. There is a uniform mediocrity about these, and as if aware of it the composer noted that the intention was educational. His *Six Easy Solos* op.8 are 'composed for the improvement of juvenile performers', his op.12 violin duets being 'in a familiar pleasing stile' for the same executants. But there are also some delightful movements in a light and assertive *galant* style in his 12 overtures and seven keyboard concertos. To the conventional exhibition of arpeggio and scalic figures, and the persistent repetition of direct and simple rhythmic ideas in the accompaniment, Smethergell contributed broad, wide-ranging themes. Apart from op.5 no.4, his symphonies are three-movement pieces; his concertos are in two movements, except for no.1 of the set published about 1775, where a slow movement is inserted between the normal Allegro and Rondo. The keyboard soloist in the concertos is accompanied by two violins and cello only. There is a fuller orchestral texture in the symphonies, which are scored in eight parts and were popular enough not only with the band at Vauxhall but also with musicians generally for a second edition to have appeared of the op.5 set.

WORKS
all published in London

6 Lessons, hpd/pf, op.1 (*c*1770)

6 Concertos, hpd/pf, 2 vn, vc (*c*1775)

6 Overtures in 8 parts, vns, obs, hns, va, b, op.2 (*c*1778); 1 ed. in The Symphony 1720–1840, ser. E, iii (New York, 1983)

6 Canzonetts, 1v, hpd/pf (*c*1778)

A Favorite Concerto, hpd/pf, 2 vn, vc (1784); ed. T. Rishton (Stavanger, 1996)

OWAIN EDWARDS/TIM RISHTON

Smijers, Albert(us Antonius) (*b* Raamsdonksveer, 19 July 1888; *d* Huis ter Heide, Utrecht, 15 May 1957). Dutch musicologist. He studied philosophy and theology at the Haaren Seminary and was ordained priest in 1912. He then taught at the Beekvliet Seminary (St Michielsgestel). He went to Vienna in 1915 and spent a year at the academy's church music section at Klosterneuburg; at the same time he studied at Vienna University with Adler. In 1917 Smijers received the doctorate with a dissertation on Karl Luython. On his return to the Netherlands he again became a teacher at Beekvliet Seminary and held this post until 1929. At the same time he was director of the church music department of the Tilburg Conservatory and from 1929 to 1933 taught music history at Amsterdam Conservatory.

In 1928 the Maatschappij tot Bevordering der Toonkunst founded a chair in music history and theory at Utrecht University, and the post was offered to Smijers who became the first reader in musicology at any Dutch university. The music history department opened officially on 13 October 1930 when Smijers outlined his course of study with an inaugural lecture, *Nederlandsche muziekgeschiedenis*. His programme paid special attention to music from the Low Countries in the 15th and 16th centuries. In 1934 the Dutch government began financing the Utrecht chair and in 1945 Smijers was appointed full professor. He remained at Utrecht University until his death.

Smijers paid special attention to the meticulous investigation of sources. Under him musicology thrived in the Netherlands and he trained a generation of important scholars, including Antonowycz, van Crevel, H.E. Reeser, Wagenaar-Nolthenius and Vente. Smijers earned an international reputation through his publication of *Werken van Josquin des Prés*. In 1919 the Vereniging voor Nederlandse Muziekgeschiedenis had commissioned him to edit Josquin's complete works, a monumental task continued after Smijers's death by Antonowycz and Elders. Smijers also started a revised edition of the complete works of Obrecht and published the series *Van Ockeghem tot Sweelinck*, neither of which were completed before his death. For these studies he made use of his own collection of photocopies of Netherlandish music in libraries abroad (particularly in Italy and Spain). After years of labour during which he discovered many 15th- and 16th-century works that had been lost by faulty cataloguing, he was able to compile an extensive card catalogue of works that he took with him to the Institute of Musicology at Utrecht.

Smijers remained closely connected with the Vereniging voor Nederlandse Muziekgeschiedenis: he was president from 1934 to his death and supervised many of its editions. From 1921 until shortly before his death he was editor of the organization's journal, *TVNM*, for which he wrote many articles, including those on the Confraternity of Our Lady at 's-Hertogenbosch. During the congress of the IMS at Utrecht in 1952 Smijers was elected president, a position which he held for three years. In 1950 he was appointed a member of the Royal Dutch Academy of Sciences.

ELLINOR BIJVOET

Smiley, Pril (*b* Mohonk Lake, NY, 19 March 1943). American composer. Arriving at the Columbia-Princeton Electronic Music Center in 1963, she assisted Ussachevsky on several of his works. By the time she completed the BA (Bennington College, 1965), she had become a technician, composer and instructor at Columbia University. She was

appointed acting director of the Electronic Music Center in 1984 and served as its associate director during the period 1985–95. She has also taught at the universities of Iowa, Michigan and Utah, the California Institute of the Arts and the Peabody Conservatory. Her awards include a Guggenheim Fellowship.

Smiley has written electronic music for many dramatic productions, including scores for the theatre, dance, television documentaries and films. Her recorded analog works stem from the tape music of Ussachevsky and others, applying classical studio techniques to synthetic and acoustic sources. The spatial structure of the four-track composition *Eclipse* features antiphonal relationships among sounds emanating from the four corners of a room. In *Kolyosa*, precisely shaped extremes of register, envelope and contrasting timbres interact, climax dramatically and then die away. Rhythmic counterpoint, timbral contrast, phrasing and spatial concerns are all central aspects of her work.

WORKS
(selective list)
all electro-acoustic

Dramatic: Can You Hear Me? (TV score), 1967; Elephant Steps (occult op), Tanglewood, MA, 1968; Bananas, New York, 1969; Incredible Voyage (TV score), 1969; Inner Journey, New York, 1969; Line of Apogee (film score), 1969, collab. V. Ussachevsky; The Increased Difficulty of Concentration, New York, 1970; Operation Sidewinder, New York, 1970; Trip (film score), 1971; Creation of the World and Other Business, New York, 1972 [rev. as Up from Paradise, 1981]; Dr Faust ... , Cleveland, 1972; Swinging Quantum (film score), 1975; Synthesis (film score), 1975; The Crazy Locomotive, New York, 1976; Danger: Radioactive Waste! (TV score), 1976; Emigres, New York, 1979; Gimme Shelter, New York, 1979; Holesville, New York, 1979; incid music for W. Shakespeare plays, 1966–80; dance scores

MARA HELMUTH

Smirczeck, Josef Blažej. *See* SMRČEK, JAN MATĚJ.

Smirnov, Dmitry (Alekseyevich) (*b* Moscow, 7/19 Nov 1882; *d* Riga, 27 April 1944). Russian tenor. He studied with Émiliya Pavlovskaya and apparently in Milan. He made his début as Gigi in the first performance of Esposito's *Camorra* at the Hermitage Theatre, Moscow, in 1903. After a trial début as Sinodal in Rubinstein's *The Demon* he sang at the Bol'shoy (1904–10). From 1910 until 1917 he was a member of the Imperial Opera, St Petersburg. He often sang in western Europe (Paris, in the Diaghilev seasons, Monte Carlo, Brussels, Madrid, Barcelona), and appeared at the Metropolitan (1910–12, début as the Duke in *Rigoletto*). In 1911 he sang in *Lakmé* with the Boston Opera Company and toured Latin America. He took part in Beecham's Drury Lane Russian opera productions in summer 1914. After 1919 he sang widely in Paris, Brussels and London. Besides his large French and Italian repertory, he sang many Russian roles, including Lensky, Grigory (*Boris*), Levko (*May Night*) and Lohengrin. He made approximately 90 recordings, which reveal the peculiar plangency of his tone allied to an instinctive sense of the right style for the music in hand.

HAROLD BARNES/ALAN BLYTH

Smirnov, Dmitry Nikolayevich (*b* Minsk, 2 Nov 1948). Russian composer. Smirnov belongs to the rich generation of Moscow composers who first came to prominence in the early 1970s. Born into a musical family, he grew up in the eastern USSR (Ulan Ude and Frunze) before coming to Moscow in 1967 to attend the conservatory, where he studied composition with Sidel'nikov, orchestration with Denisov, and analysis with Yury Kholopov. He also benefited from private lessons with the Webern pupil Herschkowitz at that time a strong influence on Moscow's underground or unofficial composers. In 1973 he began work as a music editor for the state publishing-house *Sovetskiy Kompozitor*. Over the next seven years, he was able to use his position to arrange publication of music by composers he considered to be neglected or held back by officialdom or ideology. In 1974, he was accepted into the Union of Soviet Composers. Since 1980 he has worked as a freelance composer and teacher.

His music first attracted particular attention outside the USSR in 1979, when, along with six others, as one of the so-called Khrennikov Seven, he was publicly rebuked by the First Secretary of the Composers' Union for allowing his music to reach the West without passing through official channels of selection and control. Unsurprisingly, this episode sharply increased foreign interest in his music, and with the political relaxations of the late Soviet period his works achieved frequent performances outside Russia. In 1989, for example, three of the largest of his many works inspired by William Blake were given premieres in the West: an opera *Tiriel* at the Freiburg Festival, a chamber-opera *The Lamentations of Thel* at the Almeida Festival, and the First Symphony 'The Seasons', at the Tanglewood Festival. In 1991, together with his wife the composer Yélena Firsova, Smirnov emigrated to the UK. From 1993 to 1997 the couple were visiting composers in residence at Keele University.

Smirnov is prolific, having completed over 100 compositions by the age of 50. The language in which he writes reflects the deep impression made on him, as upon many Russian composers of his generation, by the techniques and style of Edison Denisov, and especially by Denisov's combination of modernist, chromatic and densely heterophonic textures with melodic and formal gestures owing more to 19th-century examples. In recent years, Smirnov has also shown interest in devices like ciphers and number-alphabets. In his most impressive pieces, often scored for large forces (like his 1992 Cello Concerto), these have enabled him to conjure up a distinctive tension between a generous, almost filmic surface manner and an arcane and largely unexplained interior structure. As well as writing music, Smirnov has devoted energy to diaries and memoirs of his contacts with other Soviet musicians. Though mostly unpublished, these constitute an important documentary record of the last 25 years of Soviet music.

GERARD McBURNEY

Smirnov, Dmitry Valentinovich (*b* Leningrad, 7 Dec 1952). Russian composer and conductor. He was educated at the Glinka Choral College (1960–70), after which he entered the Leningrad Conservatory and began studies in the choral department of the conducting faculty, graduating in 1975 from Avenir Mikhaylov's class. He pursued further conducting studies with Eduard Grikurov (1972–5), and after military service (1976–7) he studied with Grikurov as a probationary *assistent* of the conservatory specializing in opera and orchestral conducting (1978–80). From 1978 he taught choral conducting and directed the choir at the Rimsky-Korsakov Musical College attached to the Conservatory and at the same time was a senior lecturer at the conservatory in the operatic, choral conducting and folk instrument departments (1978–94), as well as being active as an orchestral conductor throughout Russia.

Smirnov began serious composition at the beginning of the 1970s; his favourite genre is choral music. His work is notable for careful proportion and polyphonic virtuosity; stylistically, it is rooted in the choral (Gesualdo and Monteverdi) and instrumental (Marcello and Albinoni) traditions of the Renaissance, while the influences of Lyadov, Stravinsky, Lutoslawski and Berio are also evident. At the 1992 composers' competition in Tolosa, Spain, two of his works won prizes – *Amaiur* for unaccompanied children's chorus and *Lo Hadi Aingueria* for children's chorus and piano – both of which became regular set works at international children's choral competitions. His works have entered the repertories of leading St Petersburg choirs, including the Petersburg Chamber Choir, Lege Artis and the Young People's Choir.

ADA BENEDIKTOVNA SCHNITKE

Smirnov, Valery Vasil'yevich (*b* Leningrad, 9 July 1937). Russian musicologist and music critic. After graduating from the Leningrad Conservatory in 1959, where he studied with Galina Filenko, he undertook a postgraduate course with Kremlyov at the Leningrad Institute of Theatre, Music and Cinematography (1962–5). He worked at the institute (1959–73, 1982–6), as senior scientific collaborator from 1972 and as head of the department of musical research from 1982. He was artistic director of the Leningrad PO (1973–6). He was appointed to teach at the Leningrad Conservatory in 1969, later becoming professor in 1983 and head of the department of foreign music in 1986. He gained the doctorate in 1981. He became a member of the international Tchaikovsky society in 1993 and the international Weber society in 1995.

Smirnov's areas of academic interest are the history, theory and aesthetics of Russian and Western European music in the 19th and early 20th centuries. In particular, he has studied Russian musical culture at the turn of the 20th century, the work of Stravinsky and French musical Impressionism. His writings on Stravinsky focus on the composer's Russian period, addressing the issues of the national sources of his work and the diversity of his links with Russian artistic culture at the beginning of the 20th century. In his studies of French music, particularly that of Ravel and Debussy, he combines an examination of each composer's individual style with an analysis of Impressionism as a general musical aesthetic concept that interacts with other artistic tendencies such as symbolism and neo-classicism. Smirnov has also written many articles and reviews on the works of contemporary Russian composers.

NATALYA IVANOVNA DEGTYARYOVA

Smit, Leo (i) (*b* Amsterdam, 14 May 1900; *d* Sobibor, 30 April 1943). Dutch composer and pianist. He studied piano with Ulfert Schults and composition with Zweers and Dresden. After taking his piano diploma in 1922, in 1923 he was the first composition student to graduate 'cum laude' at the Amsterdam Conservatory. There he taught music analysis and harmony (1924–7). In 1927 he moved to Paris where he met Milhaud, who was a major influence. Searching for new music he was impressed by the première of Markevitch's *Cantate* (1930), and enjoyed the informal music-making as practised by Milhaud and Honegger with their pupils in the Café 'Camélion', where he got to know the music of Ferroud. His ballet music *Shemselnihar*, performed in Amsterdam in 1929 under the direction of Monteux, shows he also studied the Russian composers. Although his film music for *Jonge harten* was a success, he criticized the commercialism that rapidly started to infect the genre. In Brussels he finished his Concerto for piano and wind instruments and the Concertino for cello and orchestra before returning to Amsterdam in December 1937. Now he had developed a unique style combining a characteristic drive with moving lyricism as well as spirit and humour. Smit's view on neo-classicism is an emotional one. The Concerto for piano and wind instruments has a startling opening with jazz elements. The slow movement is a chorale with sardonic 'wrong' notes in the style of Stravinsky.

In an interview with Karel Mengelberg (1940), Smit said: 'One should stimulate one's production without forcing it'. The brilliant Symphony in C for Classical orchestra that Karel Mengelberg directed in 1936 shows that Smit had been right to be patient with himself. Carefully studying the masterworks of modern composers such as Debussy and Ravel, Smit had gradually developed his craftsmanship to its peak. In his first orchestral work, *Silhouetten* (first performed by the Concertgebouw Orchestra in 1925), six miniatures inspired by drawings of Paul Süss end with a daring foxtrot that already testifies to great fantasy and a remarkable talent for orchestration. During the 1920s he composed for the harpist Rosa Spier theatre music and lyrical works for harp, strings and flute that show a great knowledge of harp technique. In 1933 Spier gave the première of Smit's Concertino for harp and orchestra under van Beinum's direction. In 1938–9 he composed vocal works of which the song *Kleine prelude van Ravel* is most ambitious in its use of vocal technique. The Trio for clarinet, viola and piano (1938) is one of the highlights of Smit's chamber music. Spending his last years composing and teaching in Amsterdam, Smit, who was of Jewish descent, became the victim of Nazi persecution during the war and was deported to the Sobibor deathcamp with his wife on 27 April 1943. They were murdered on 30 April 1943; only months before, Smit had finished the Lento of his *Sonata* for flute and piano, a masterpiece that can be justly called one of the most beautiful contributions to the 20th-century flute repertory.

HUIB RAMAER

Smit, Leo (ii) (*b* Philadelphia, 12 Jan 1921). American composer and pianist. He studied the piano with Vengerova at the Curtis Institute of Music (1930–32) and composition with Nabokov (1935). In 1936–7 he prepared three of Stravinsky's ballets, including the première of *Jeu de cartes*, under the supervision of the composer for Balanchine's American Ballet. His work with Nabokov

and Stravinsky established the integration in his career of performance and composition. His solo début in 1939 was at the Carnegie Hall. In 1943 Smit met Copland with whom he had a lifelong association culminating in his recording of the complete piano works of Copland. Smit taught at Sarah Lawrence College (1947–9), UCLA (1957–63) and SUNY, Buffalo (1962–82); he was composer-in-residence at the American Academy, Rome (1972–3), and at the Brevard Music Center (1980).

Smit's music is strongly tonal, even when generated by serial technique as in the Piano Concerto of 1968. His large-scale work *The Ecstatic Pilgrimage* (1988–90), six cycles on poems by Emily Dickinson, is characteristic of his entire output. Its forms and textures are eminently clear yet diverse and highly contrastive, while lyrical and dramatic elements vie with each other over the course of the work in response to poetry which is both intimate and grand.

NILS VIGELAND

Smith [White; Meadows White], **Alice Mary** (*b* London, 19 May 1839; *d* London, 4 Dec 1884). English composer. The daughter of Richard Smith, a lace merchant, she was a private pupil of William Sterndale Bennett and G.A. Macfarren and at 21 attracted attention when her First Piano Quartet was performed in London by the Musical Society. On 2 January 1867 she married Frederick Meadows White, QC, and in November of that year was elected Female Professional Associate of the Philharmonic Society. Unusually for a woman composer at this period, several of her large-scale works received prominent performances: the overture *Endymion* at the Crystal Palace (1871), the Clarinet Concerto at the Norwich Festival (1872), the overture *Jason* by the New Philharmonic Society (1879) and the ode *The Passions* at the Three Choirs Festival in Hereford (1882). The last, declared by S.S. Stratton to be 'very near to greatness', generated debate about women as composers. In 1884 she was made Hon. RAM.

A prolific composer, Smith was highly regarded in her day. Besides the duet *Maying* (1870), her most popular works were *Ode to the North-East Wind* (1880), *The Passions* (1882), *Song of the Little Baltung* (1883) and *The Red King* (1885), all choral works which were published in the Novello Octavo Edition. Of her chamber works, the fluent Clarinet Sonata in A (1870) and the unusual programmatic String Quartet 'Tubal-cain' are noteworthy. The majority of her instrumental music remains unpublished and awaits reassessment.

ROSEMARY WILLIAMSON

Smith, Arthur Edward (*b* Islington, London, 1880; *d* Canberra, 16 May 1978). Australian violin maker of English origin. He emigrated to Australia in 1909 and established a workshop in Sydney. By the 1930s he had become known internationally for his repair work and for his copies of the Stradivari violins belonging to Yehudi Menuhin, Tossi Spivakovsky and David Oistrakh. In 1949 he became the first Australian to be elected to the International Society of Violin and Bow Makers. He is regarded as the founder of violin making in Australia. Although Smith admired local timbers for their variety and beauty, as an emulator of Cremonese tradition he chose European timbers. However, he experimented with local gums and resins, devising hundreds of varnish recipes. He developed an innovative method for tuning violin plates. Rather than using the customary 'tap tone' method, he placed the plates on a flat surface at particular nodal points, bowing them along the edge with a violin bow to assess their resonances. Smith made over 200 instruments. During World War II he also made strings.

MICHAEL ATHERTON

Smith, Barbara B(arnard) (*b* Ventura, CA, 10 June 1920). American ethnomusicologist. She studied at Pomona College (1938–42) and the Eastman School of Music

(1942–6), where she received the MMus (1943) and a performer's certificate in piano (1945). She taught in the preparatory department at Eastman (1943–9) and at the University of Hawaii (1949–82), rising to associate professor (1953) and professor (1962). In 1955, while lecturing and giving solo and concerto performances as a pianist, she began to study traditional Hawaiian chant and learnt to play Asian instruments, such as the koto and the kayagŭm; in 1963 she went to Micronesia to survey the traditional music and dance. This experience enabled her to adapt her teaching to the ancestral backgrounds in the Pacific and Asia of her students and the Hawaiian people; her focus changed after she moved to Hawaii to include music and dance from these heritages. Her fieldwork has contributed to the growth of the ethnomusicology programme in Hawaii; rather than publish much of her research, she has preferred to apply it to that programme and to the development of other professional ethnomusicological organizations.

□

Smith, Bernard. *See* SMITH, 'FATHER'.

Smith, Bessie [Empress of the Blues] (*b* Chattanooga, TN, 15 April 1894; *d* Clarksdale, MS, 26 Sept 1937). American blues, jazz and vaudeville singer. She began her professional career in 1912 by singing in the same show as Ma Rainey. She then performed in various touring minstrel shows and cabarets, as well as the 81 Theatre in Atlanta. After further tours, she was sought out by the jazz pianist Clarence Williams to record in New York. Smith's first recording, *Downhearted Blues* (1923, Col.), established her as the most successful black performing artist of her time; she recorded regularly until 1928. During this period she also toured throughout the South and North, performing to large audiences. In 1929 she appeared in the film *St Louis Blues*. By then, however, alcoholism and the Depression, which affected the recording and entertainment industries, had severely damaged her career. A recording session, her last, was arranged in 1933 by the critic John Hammond for the increasing European jazz audience; it featured among others Jack Teagarden and Benny Goodman. By 1936 Smith was again performing in shows and clubs, but she died before her next recording session had been arranged. The somewhat obscure circumstances of her death (after a car accident) were made the subject of Edward Albee's play *The Death of Bessie Smith* (1959).

Smith was unquestionably the greatest of the vaudeville blues singers, and brought the emotional intensity, personal involvement and expression of blues singing into the jazz repertory with unexcelled artistry. *Baby Doll* (1926, Col.), *After you've gone* (1927, Col.), both made with Joe Smith, and *Nobody knows you when you're down and out* (1929, Col.), with Ed Allen on the cornet, illustrate her capacity for sensitive interpretation of popular songs. Her broad phrasing, fine intonation, blue-note inflections and wide expressive range made hers the measure of jazz-blues singing in the 1920s. She made almost 200 recordings, of which her remarkable duets with Louis Armstrong, including *St Louis Blues* and *J.C. Holmes Blues* (both 1925, Col.), are among her best. Although she excelled in the performance of slow blues, she also recorded vigorous versions of jazz standards, notably the exhilarating *Cake Walking Babies (from Home)* (1925, Col.) and *Alexander's Ragtime Band* (1927, Col.), both made with a small contingent from Fletcher Henderson's orchestra. The cornet player on these titles, Joe Smith, was her preferred accompanist, but possibly her finest recording (and certainly the best-known in her day) was *Back Water Blues* (1927, Col.), with James P. Johnson on piano. Her voice had coarsened when, at her last session, she made *Gimme a Pigfoot* (1933, OK), but few jazz artists have been as consistently outstanding.

PAUL OLIVER

Smith, Carleton Sprague (*b* New York, 8 Aug 1905; *d* Washington, CT, 19 Sept 1994). American musicologist and music librarian. He took the BA and MA at Harvard University (1927 and 1928), and was also music critic for the *Boston Transcript* (1927–8). In 1930 he took the doctorate at Vienna University with a dissertation on Austro-Spanish relations in the 17th century, and then returned to the USA to join the history faculty of Columbia University (1931–5). In 1931 he was appointed chief of the music division of the New York Public Library, a position he held until his retirement in 1959, and where he developed an extensive collection of American music and conceived the idea of a 'library-museum', which was realized in 1965. From 1939 to 1967 he taught music and history at New York University and in 1967 he became

director of the Spanish Institute, New York. Upon his retirement he, together with Ernesto da Cal, established the Brazilian Institute at New York University. From 1944 to 1946 he was engaged as American Foreign Service Officer in São Paulo.

Smith combined his musical interests with a concern for international cultural contacts, particularly between the nations of the western hemisphere. He lectured throughout Europe, the USA and Latin America, and became associated with the Institute of Public Affairs and Regional Studies at New York University in 1946. He served as president of the Music Library Association (1935–8) and the AMS (1939–40). He was also a proficient flautist, and performed in chamber concerts and made recordings.

PAULA MORGAN, ISRAEL J. KATZ

Smith, Cyril (James) (*b* Middlesbrough, 11 Aug 1909; *d* London, 2 Aug 1974). English pianist. He studied with Herbert Fryer at the RCM, where he won the Dannreuther Concerto Prize and taught from 1934 until his death. He made his début at Birmingham in 1929 in Brahms's Piano Concerto no.2. His exceptional technique and interpretative powers, notably in Rachmaninoff's concertos and Paganini Rhapsody, soon won him recognition as one of the leading British pianists of his time. He married Phyllis Sellick in 1937 and from 1941 they gave frequent performances of music for two pianos. In 1956, during a visit to the USSR as part of a delegation of British musicians, Cyril Smith suffered a thrombosis that paralysed his left arm. In 1957 he and his wife reappeared together playing music for three hands, and they made that medium their own, performing with great success works specially composed or arranged for them by composers including Arthur Bliss, Gordon Jacob and Malcolm Arnold, many of which they recorded. Cyril Smith was awarded the OBE in 1971. He published an autobiography, *Duet for Three Hands* (London, 1958).

FRANK DAWES

Smith, Dave [David] (*b* Salisbury, 19 Aug 1949). English composer and performer. He read music at Cambridge University (1967–70) but as a composer is self-taught. In 1971 he joined the SCRATCH ORCHESTRA, and from 1973 he was a member of various composer-performer ensembles: Keyboard Duo with John Lewis (1973–7); the Garden Furniture Music Ensemble, which included John White and Ben Mason (1977–9); an ad hoc group, with Michael Parsons and Howard Skempton (1975–80); and the English Gamelan Orchestra (1980–83); of which he was a co-founder. He joined the Gavin Bryars Ensemble in 1979.

Smith's output after 1983 largely consists of a series of 'piano concerts' (for solo piano), each of which lasts about 90 minutes. The content of these reflect his predilection for less mainstream composers, such as Alkan, Ives and Godowsky, and his wide-ranging knowledge of traditional musics; he is drawn in particular to the music of Ireland, Albania and Latin America.

In their concern for the quality of sound and for preserving the objectiveness of the material, many of Smith's compositions show the influence of American experimental music of the 1950s and 60s, namely that of Cage, Feldman and the minimalists. Other works exemplify the detachment, wit and irony of the English experimental and systemic composers – such as White, Parsons, Skempton and Christopher Hobbs – while a political consciousness and commitment reminiscent of the later Cardew informs works such as the second *Piano Concert*, which is based on Irish traditional music.

JOHN TILBURY

Smith, David Stanley (*b* Toledo, OH, 6 July 1877; *d* New Haven, CT, 17 Dec 1949). American composer and conductor. As a boy in Toledo he studied harmony, counterpoint and organ, and at the age of 15 was appointed organist of Trinity Episcopal Church. In 1895 he went to Yale, where he attended Horatio Parker's composition classes and served as organist in various New Haven churches. Parker took a particular interest in Smith's work, and conducted his protégé's *Ode for Commencement Day* op.4 at Smith's graduation ceremony in 1900. Smith then went to Europe, first to London, where some of his pieces were published, and in 1902 to Munich, where he studied with Thuille. Later the same year he moved to Paris and took lessons with Widor. On Parker's recommendation he was appointed instructor in the theory of music at Yale (1903), where he remained until 1946, succeeding Parker as dean (1920) and as conductor of the New Haven SO. Northwestern University awarded him an honorary DMus in 1918, as did the Cincinnati Conservatory of Music in 1927. In 1910 he was elected to the National Institute of Arts and Letters.

An intellectual yet sensitive composer, Smith modelled his music on the works of the great classical masters. His music clearly differentiates between vocal and instrumental styles, and, although an eclectic, his strongest tendency was towards Romanticism.

WORKS
(*selective list; for fuller list see Goode*)

Stage: Merrymount (op, 2, L. Dodd, after N. Hawthorne), op.36, 1914; incid music

GUSTAVE REESE/MICHAEL MECKNA

Smith [Smyth], **Edward** (bap. Durham, 5 March 1587; bur. Durham, 4 Feb 1612). English organist and composer. The son of a George Smith, he was a chorister at Durham Cathedral from May 1597 until some time in 1601 when he became a King's Scholar at the grammar school. By October 1608 he had become Master of the Choristers and organist, posts which he held until his early death. In his will he left his 'best clarigandes' to his nephew William Smith (i). Of the anthems ascribed to him, *If the Lord himself* has now been identified as by Matthew Jeffries, and the precise relationship between Smith's *O Lord consider my distress* – ascribed to him in the Durham Cathedral manuscripts – and the anthem of that title attributed to 'R N' (Richard Nicholson) in one part book (*GB-Ob* Arch.F.e.24) has yet to be established.

WORKS
in GB-DRc and also where stated

Preces for Ascension Day Matins, verse, inc., *Cp*, *Y*; Preces and Psalms for All Saints' Day (Ps cxix.1, 169), full and verse, *Cp*, *Lbl*, *Ob*, *Y*
4 verse anthems, *Cp*, *Lbl*, *Ob*, *Y*

PETER LE HURAY/BRIAN CROSBY

Smith, 'Father' (Bernard) [Schmidt, Bernhard] (*b c*1630; *d* London, 1708). Organ builder and organist, active in England. His birthplace is unknown, though he is first heard of as 'Baerent Smitt', coming from Bremen in 1657 to Hoorn in the Netherlands. In 1660 'Baerent Smit, organist' requested a fee for repairs to the organ in Hoorn Parish Church, and in 1662 he contracted to build two organs, for the Grote Kerk and the Cleinjne Kerk in Edam.

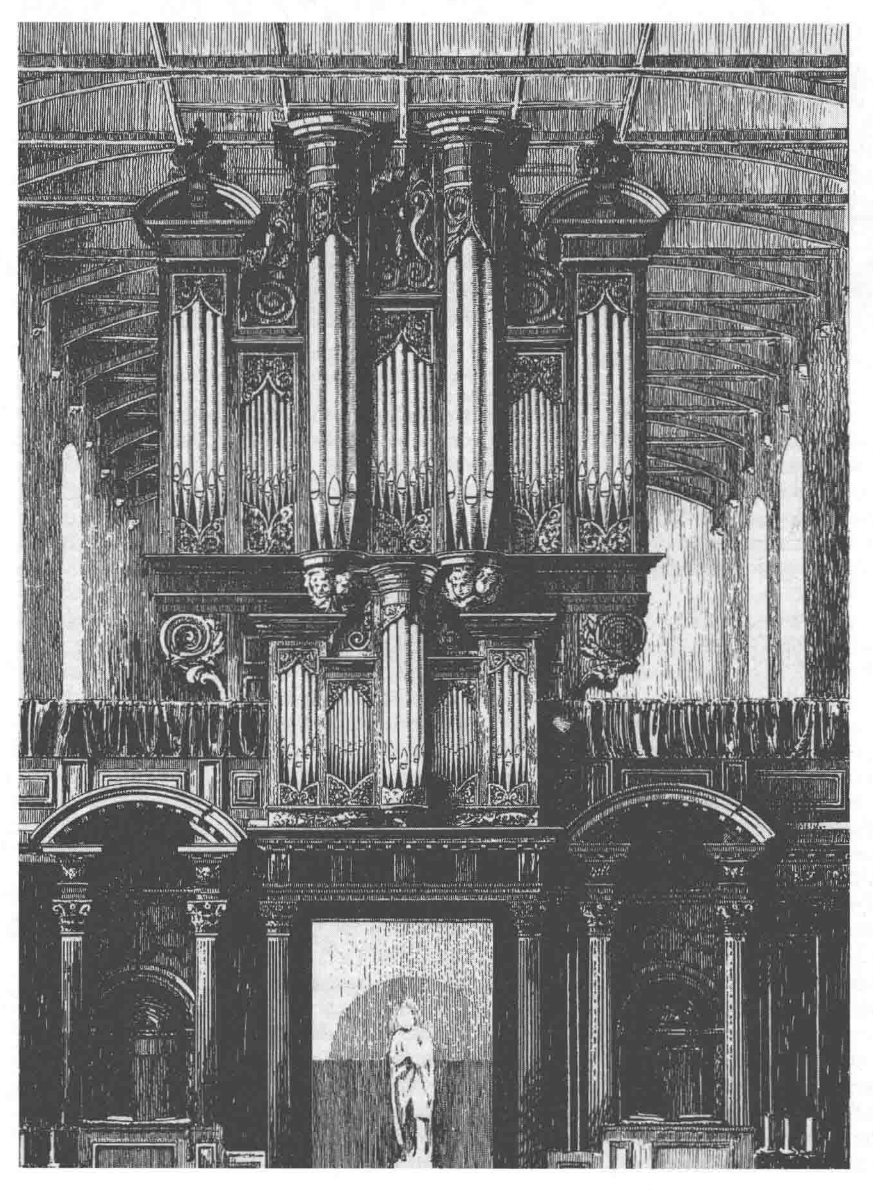
'Bernard Smith' is first noted in England in the Westminster Abbey treasurer's accounts of 1667, where he was paid for tuning the organs. The following year he was paid 'for the repayre of the old organ and a new chayre organ' at Rochester Cathedral. The first documented new organ in England by Smith was that for the Sheldonian Theatre, Oxford (1670–71). It had the following specification:

Open Diapason	8
Stopped Diapason	8
Principal	4
Twelfth	$2\frac{2}{3}$
Fifteenth	2
Sesquialtera	III
Cornet	III
Trumpet	8

By 1671 Smith was described as 'the King's organ maker', and in 1673 he built a new organ for the King's private chapel at Windsor. He built a new organ for St Margaret's, Westminster (1675–6), and in April 1676 was appointed organist there, at a yearly salary of £20. The connection between 'Baerent Smit' and 'Bernard Smith' is clear not just from the chronology from 1662 to 1687, but also from his signatures and pipemarks at Edam and in England. The similarity of style and detail between the *Rückpositiv* case at the Grote Kerk, Edam, and that of the organ at the King's private chapel, Windsor (the prospect of which is at Walton-on-Thames), is clear. In addition, the stop names of the Edam organ correspond to those on instruments by Smith in England, for example, the organs at Durham and Canterbury Cathedrals, and the Temple Church, London. It has traditionally been said

1. Organ case by 'Father' Smith, 1697, at St James Garlickhythe, London

that premiums were offered to Smith and other craftsmen to induce them to come to England at the Restoration in 1660. However, 1667 was the most likely year for Smith to have made the journey: the court was re-established, the Trade Wars with the Netherlands had ceased, the Plague was over and London had been almost destroyed by the Great Fire, which provided many new opportunities for work.



Smith was confirmed as the King's organ maker in 1681, and made keeper of the King's organs in 1695; he built organs at Windsor and Whitehall. His foreman was a German named Shrider, who married his daughter; he also employed two nephews, Gerard and Christian, who were his assistants until they left to start their own workshops in 1689 and 1690 respectively. In 1691 Gerard Smith built a new Great Organ in a Harris-style case for Ely Cathedral; he also produced organs for St Edmund's, Sedgefield, and St George's, Hanover Square (1708 and 1725 respectively; parts of each survive). Christian Smith built an organ for St George's, Tiverton, in 1696, parts of which survive, and one for St Mary Magdalen, Bermondsey, in 1698, which was replaced in 1750 by Shrider. The craftsmanship of Gerard and Christian does not appear to have equalled that of Bernard. When CHRISTOPHER SHRIDER took over Bernard Smith's business and succeeded him as organ maker to the royal family he completed and installed a number of Smith's instruments, making it difficult to distinguish fully the achievements of the two men. For example, the organ at St Mary the Virgin, Finedon, Northamptonshire (*c*1717) has been attributed to Shrider but the case and other details suggest the work of Bernard Smith. Several chamber organs of 17th-century provenance have been ascribed to Smith although contemporary corroborative evidence is lacking, beyond an inscription, possibly in Smith's hand, in the organ from Brickhill House, Northiam (now in the Royal College of Music, London) which states '1702', jane Frewin, her organ'.

Smith, who was a Protestant, was much in competition with Renatus HARRIS, who was a Roman Catholic; their rivalry was seen at its most acrimonious in the 'Battle of the Organs', a dispute which began in 1682 when the benchers of the Temple consulted Smith about a new organ for their church, and were later persuaded by some of their number to consider Harris. Each builder set up an organ to demonstrate its quality; in the ensuing contest it is said that some of Harris's friends even cut the bellows of Smith's organ. In 1688 the matter was decided in favour of Smith. (For a stoplist *see* ORGAN, §V, 8, table 17.)

Significant organs by Smith include those at Christ Church, Oxford (1680–?1685), Temple Church, London (1682–8), Durham Cathedral (1684), St Clement Dane's, London (1689–?1690), St Paul's Cathedral (1696–7), St Mary the Great, Cambridge (1698), the chapel at the Banqueting House (1699), Eton College Chapel (1700–01) and Trinity College Chapel, Cambridge (1708; fig.2). A relatively unaltered chamber organ survives, in the possession of Noel Mander, but otherwise none of Smith's work remains in complete condition. There is casework

at Christ Church, Durham, St Paul's, St Mary the Great and Trinity, and pipes at St Paul's, Trinity and St Mary the Great; the latter has perhaps the largest amount of surviving pipework, though this has been much moved and altered. No playing action from any of his large instruments survives. The disposition of Smith's organs derives from 17th-century practice in the northern Netherlands and Friesland: *Hauptwerk* and *Rückpositiv*, *Hauptwerk* and *Brustwerk*, and *Hauptwerk* and *Hinterwerk*, paralleled by Smith in his use of Great and Chayre, Great and Eccho, and Great and Choir. The most common organs in north-west Europe were single-manual instruments of five to ten stops, and were similar in size to most of Smith's output in England. Smith's organs were noted, as were German and Dutch instruments, for their sweetness and brilliance in the period before the development of the more powerful Schnitger-style organ. Their compass was usually *G'* to *d'''*, including a short bass octave, although that of the organ in Durham Cathedral was *F'* to *c'''*. Smith's awareness of the problems of unequal temperament is seen in his use of divided sharps in the Durham and Temple organs. This also confirms his links with north-west Europe, where divided sharps had been used by Fritzsche and Germer; but in keeping with the English practice, Smith did not employ pedals. A typical specification for a large organ was that for Durham Cathedral:

Great Organ		*Chair organ*
Open Diapason		Stop Diapason
Open Diapason		Principal
Stop Diapason		Holfluit
Principall		Super Octave
Holfluit		Two & Twenty
Quinta		Voice Humand
Super Octave		
Block Flute		
Small Quint		
Sex Quialtera	III	
Mixture	IV	
Cornet	IV (from c'#)	
Trumpet		

2. Organ by 'Father' Smith (completed by Christopher Shrider), 1708, Trinity College Chapel, Cambridge: drawing by H.T. Lilley, showing the state before the organ was enlarged in 1870

The specification of the St Paul's organ was similar, with the addition of a Quintadena, Twelfth and Cimball (but no Two & Twenty) on the Chair, plus an Echo organ of Stopped Diapason, Principal, Nason, Fifteenth, Cornet and Trumpet. The organs were winded by wedge bellows, at St Paul's each 8′ by 4′.

Smith's scaling appears to have been based around a diameter of 138 mm for C of the Open Diapason, halving around the 17th and with a quartermouth width and quarter cut-up. Possibly the best indication of the sound of a Smith organ is given by the restored Diapasons on the instrument at Trinity College, which was rebuilt by Metzler in 1976. There is no indication, however, as to how a complete chorus might have sounded, as Smith's use of Mixtures remains unclear. Instruments had three or four tower cases, with or without a Chayre case, the four-tower format possibly resulting from the need to find space on the main case prospect for the long pipes of the low *G*′.

The surviving pipes and case at Trinity College remain as testimony to the quality of the work of 'Mr. Bernard Smith, of London, one of His Majesty's servants and chief of all that this nation has known in the art of making organs'.

JOHN ROWNTREE

Smith, Hale (*b* Cleveland, 29 June 1925). American composer. He studied at the Cleveland Institute of Music (BM 1950, MM 1952), where his teachers included Marcel Dick (composition), Ward Lewis (theory), Dorothy Price (piano) and Robert U. Nelson (calligraphy). In 1958 he moved to New York, where he served as editor, consultant and general music advisor with several prominent music publishers. He later taught at the C.W. Post College of Long Island University and the University of Connecticut, Storrs. His awards include the first composition prize of Broadcast Music, Inc. (1952), the Cleveland Arts Prize (1973) and membership in the American Academy and Institute of Arts and Letters (1988). He received an honorary doctorate from the Cleveland Institute in 1988.

Smith was influenced at an early age by the jazz styles of fellow black musicians Earl Hines and Duke Ellington. His experience as a jazz performer, composer and orchestrator led him to undertake projects with several noted jazz musicians, including a collaboration with Foreststorn 'Chico' Hamilton on the film score for *Mr Ricco* in 1974.

Smith's music is characterized by a clever organization of motivic materials, an attention to melodic writing and a free use of chromaticism. His lyrical style is best exemplified by the *The Valley Wind* songs (1952–5), *Epicedial Variations* for violin and piano (1956–7) and *Meditations in Passage* (1980–81). *Contours for Orchestra* (1961) and *Evocation for Piano* (1966) incorporate serial techniques. Striking dramatic qualities and a colouristic use of percussion are notable aspects of *Ritual and Incantations* (1974).

LUCIUS R. WYATT

Smith, Jennifer (Mary) (*b* Lisbon, 13 July 1945). British soprano. She studied in Lisbon and made her operatic début there as the Voice from Heaven in *Don Carlos* in 1968. In 1971 she moved to London where she had further tuition from Winifred Radford and Pierre Bernac. Her roles include Mozart's Countess Almaviva (1979, WNO) and Amyntas in *Il re pastore* (1987, Lisbon), and Rameau's Alphise in the stage première of *Les Boréades* (1982, Aix-en-Provence); she made her American début as Cybele in Lully's *Atys* in New York in 1988. Other parts include Gluck's Eurydice and Rameau's Folly (*Platée*). She has also appeared with Scottish Opera and Kent Opera, and in 1991 sang the Queen of Night in Toronto and Reine Berthe/La Vieille (Duni's *La fée Urgèle*) at the Opéra-Comique. In 1998 she sang the title role in Terradellas's *Artaserse* in Barcelona. Smith is a versatile artist, able on the one hand to bring grandeur and pathos to her interpretations and on the other to sustain light-hearted, comic and mischievous roles, as she has demonstrated in *Platée*. An admired concert singer with a wide repertory, Smith has recorded mainly the Baroque choral and operatic repertory for which she is best known, notably works by Purcell, Handel, Bach and Rameau.

NICHOLAS ANDERSON

Smith, Jimmy [James Oscar] (*b* Norristown, PA, 8 Dec 1925). American jazz organist. He first learnt the piano, largely from his parents and through self-instruction, although in Philadelphia he attended the Hamilton School of Music (1948), where he studied the double bass, and the Ornstein School of Music (1949–50). He took up the Hammond organ in 1953, and acquired a formidable reputation in the Philadelphia area before making his extremely successful début in New York at the Café Bohemia in 1956. An appearance at Birdland and a highly acclaimed performance at the Newport Jazz Festival in 1957 launched his international career as the first important jazz player on his instrument. Although the organ had been played previously in jazz (for example, by Fats Waller and Count Basie), it was usually treated as a novelty instrument. Smith spent the next 20 years touring, visiting Israel in 1974 and Europe in 1975. He then settled in Los Angeles, where, with his wife Lola, he opened his own club, Jimmy Smith's Jazz Supper Club. He resumed touring in the early 1980s.

Smith was the first player to make the organ effectively serve as a group (minus drums), providing walking bass lines with his feet, chordal accompaniment in his left hand and a solo line in his right, as may be heard on *Walk on the Wildside*, from the album *The Unpredictable Jimmy Smith: Bashin'* (1962, Verve). His powerful style, which combined rhythm-and-blues elements with the more sophisticated bop vocabulary, has influenced virtually every subsequent jazz organist.

BILL DOBBINS/R

Smith, John Christopher [Schmidt, Johann Christoph; Smith, John Christian] (*b* Ansbach, 1712; *d* Bath, 3 Oct 1795). English composer of German birth. He was Handel's assistant and is frequently confused with his father, also John Christopher, who was Handel's secretary, treasurer and principal copyist.

1. 1712–59: Operas; assistant to Handel. 2. 1760–95: Oratorios; successor to Handel.

1. 1712–59: Operas; assistant to Handel. At Handel's request, the elder Smith came to London in 1716 to assist him with his business affairs. The rest of the family – John Christopher, Charlotte, Judith and probably Frederic – joined him in 1720 and also participated in Handel's activities. Charlotte married William Teede (1733) and Judith married John Rector, both oboe/flute players for Handel, while Frederic was probably the trumpet player and percussionist who played for the Foundling Hospital and also for various Handel oratorios. Judith, Charlotte and William Teede may well have been members of the elder Smith's copying team.

John Christopher Smith the younger was enrolled in Clare's Academy while his father sold music from the Hand & Music-book in Coventry Street. By 1725 he was having lessons from Handel; his early copies and arrangements of works by Handel demonstrate that his progress was rapid and that he was being instructed in composition as well as keyboard. By 1727 he had joined his father as viola player (they both appear on the performers' list proposed for the Lord Mayor's Day musical entertainments) and Handel copyist, and probably soon after that applied to Thomas Roseingrave and Pepusch for further tutorial assistance. In 1729 Smith wrote his first extant work, the ode *The Mourning Muse of Alexis*, which demonstrates considerable compositional technique for a 17-year-old. Several non-musical mentors also motivated Smith during his formative years: Samuel Clarke, regarded as the first of the English metaphysicians, instilled in him a profound and lasting religious sense, while the authors John Arbuthnot, William Congreve, Jonathan Swift, Alexander Pope and John Gay nurtured his love of letters. With recommendations from Handel and these literary friends, Smith left the family home in Soho at the age of 18 to establish himself as a music teacher; however, in the spring of 1730 he contracted tuberculosis, and it was not until the following autumn, after having rested at Arbuthnot's home, that he recovered sufficiently to resume his musical activities.

Smith's musical sensitivity was unveiled by the 1963 London revival of his fine opera *Ulysses*, but after its miserable reception in 1733 he performed none of his own works for the next seven years. Following his marriage to Frances Packenham in the late 1730s, at least two children were born: John Christopher in 1738 and Frances the ensuing year. Smith was busy with Handel as well and the two travelled to Cheshire. Copies of various Handel operas during the 1730s attest that the younger Smith was directly involved with their production. When Handel's health deteriorated in 1737, it was Smith who played the harpsichord.

In 1740 Smith followed Handel's lead by producing his own works. As part of a series of 20 subscription concerts

and entertainments at Hickford's Room, Smith presented the 'musical drama' *Rosalinda*, actually a mini-opera in English, and the oratorio *David's Lamentation over Saul and Jonathan*. The season was a hectic one for Handel, Smith, Thomas Arne and William Defesch, each vying for an audience already limited by the freezing temperatures. Conflicts eventually took their toll, with Handel appropriating Smith's singers for *L'Allegro* and *Saul*. The two composers must have quarrelled over this, but they managed to remain the closest of friends.

Towards the end of 1741 or in early 1742, following a successful season at Hickford's Room, Smith lost his wife to tuberculosis, their children having died previously. He consoled himself with a new set of friends, including Benjamin Stillingfleet and Robert Price, both of whom wrote librettos for Smith. William Coxe, Smith's stepson and author of *Anecdotes of George Frederick Handel and John Christopher Smith* (London, 1799), erroneously believed that Smith had met them in Geneva. According to Burney, these men 'gave him a taste for, and procured him admission into, good company; so that he formed his character on models of a higher class than that of a mere musician'. During these years Smith continued to work closely with Handel, but surprisingly, at the very moment when his mentor was turning to English oratorio, Smith veered towards Italian opera. These Metastasian works, however, appear never to have been staged.

When Smith's ailing pupil Peter Walter inherited his grandfather's fortune, he offered Smith an annuity of £300 to accompany him and his sister to the south of France. With no family to support, Smith abandoned his friends and pupils for an effortless future. Smith remained on the Continent for over three years, during which time he completed the Italian opera *Dario* (1746), further Italian opera sketches and anthems for private use. When Handel began to lose his eyesight in 1750, he summoned Smith, who then returned to London. From 1751 until Handel's death, Smith's role in the performances and modifications of Handel's oratorios became increasingly important. In 1753 Smith began writing singers' names on Handel's conducting scores, and soon after this he made various cuts, alterations and additions, most likely at Handel's behest. Smith's ever-increasing responsibility is demonstrated by new or altered recitatives before additional arias, and, as Hicks has pointed out, several of the late oratorio additions may well be by Smith.

Smith and David Garrick presented two full-length all-sung Shakespearean operas in 1755 and 1756: *The Fairies*, based on *A Midsummer Night's Dream*, and *The Tempest*. Perhaps because both operas were supported by Smith's society friends, he retained the traditional operatic form with recitatives and an excess of da capo arias. Attempts to popularise the works – for *The Fairies* Smith composed several lighthearted airs and Garrick cast children in the roles of the fairies – failed to assure extended runs. The two quarrelled when Garrick's principal actors threatened to desert the company if the operas continued to leave them in the wings, but a reconciliation brought forth the afterpiece *The Enchanter* four years later, written by Garrick as a Christmas spectacle. Smith kept recitative to a bare minimum, and the work boasts not only music to enchant but also dancing, special effects and magic. Its 'Turkish' background was novel for its time: 18th-century England exhibited a marked interest in things Eastern, particularly literature based on real or fictional Turkish tales and the mystique of the seraglio, and Smith's is the first extant opera in the English language to take advantage of the new trend. *The Enchanter* was the last and most successful of Smith's productions with Garrick.

2. 1760–95: Oratorios; successor to Handel. After Handel's death Smith turned his back forever on theatre music. With Handel's recommendation, he had secured the post of organist at the Foundling Hospital in 1754 and retained that position until 1770, when a disagreement over the Italian violinist Felice Giardini's musical involvement with the hospital prompted his resignation. Smith had assisted Handel in the annual *Messiah* performances there, as he had for the other Lenten Oratorios at Covent Garden, conducting from the keyboard while Handel played the organ between the parts. Smith now had sole access to all the manuscripts his father had inherited from the master, and he and his new partner John Stanley drew on this rich source for their oratorio seasons, first at Covent Garden and later at Drury Lane.

In 1760 Smith's own oratorio *Paradise Lost* met with some success. Handelian idioms are evident in this and in *Rebecca* (1761), but 18th-century audiences were turning towards the *galant*, accepting only Handel's music in the now old-fashioned style. To this end, Smith set three pasticcio oratorios, *Tobit* (*c*1761), *Nabal* (1764) and *Gideon* (1769), eventually including his own work under the Handelian guise. For the first, in which an angel miraculously cures Tobit's blindness, Smith followed the normal pasticcio process and composed only the recitatives, but for *Nabal* he included a new minuet in Handel's overture and newly set 'When beauty sorrow's livery wears'. Close to half the selections in *Gideon* are Smith's: the overture and seven vocal items from *The Feast of Darius*, one aria from the Italian opera *Issipile*, and three arias and a duet apparently newly composed. His trio 'Like a bright cherub' enjoyed repeated revivals under the Handelian banner.

Smith's personal life changed considerably when he inherited his father's effects and married the widow Martha Coxe in 1763. Although her first husband, William Coxe, had stipulated in his will that if she remarried her entire income would revert to their five children, the family moved to a new home in Kensington large enough to accommodate the whole family as well as rehearsals. Smith, according to Burney, was a 'studious and cultivated man, and much esteemed by many of the first people in the kingdom', and by now Smith had made their acquaintance: John Stuart, 3rd Earl of Bute, for whom he programmed a large barrel organ with works by Corelli, Vivaldi and of course Handel; King George III, whose patronage at Smith's oratorios filled Covent Garden; and his student Augusta, dowager Princess of Wales, to whom Smith formed a special attachment and for whom several of Smith's compositions (perhaps *The Feast of Darius* and *Tobit*, which contain singers' names, transpositions and cuts, and certainly *Gideon*) were performed at Carlton House, her London home. In 1765 John Walsh printed Smith's fifth and final set of keyboard works, which epitomize his familiarity with a variety of styles. They combine the Handelian style of his opp.1 and 2 (1730s) with the Scarlattian of opp.3 and 4 (1750s), along with an earnest (if sometimes awkward) endeavour to come to grips with the *galant* style.

Following Augusta's death in 1772, George III continued Smith's £200 annual salary, but, according to Coxe, 'Though he loved the art, he found himself unequal to the trade, and had not courage to encounter obstacles, or patience to reconcile contending interests'. As the oratorios fell into disfavour, Smith began to spend time in Bath and purchased a home there in 1774. He presented the Handel manuscripts to George III; they are now in the Royal Music Library at the British Library. Handel's conducting scores, along with most of Smith's larger works, eventually made their way into Chrysander's collection and then to the Staats- und Universitätsbibliothek, Hamburg. Smith continued his teaching at a school for girls in Bath; he received many guests and on at least one occasion visited the young composer Samuel Wesley. A tremor in his hands precluded further enjoyment of the harpsichord, and there is no record that he ever took part in the musical establishments at Bath. After his wife died in 1785, he resided with his stepdaughter Emilia Coxe until his own death in 1795.

Dwarfed by Handel's greatness, Smith's music had little chance for real success. His strongest work retains the style of his mentor, while his attempts at more modern idioms are, with some exceptions, generally less effective. Much of his music is indeed worthy of revival, particularly the opera *The Fairies* and individual arias, choruses and keyboard selections, but Smith's reputation rests today more on his association with Handel than on his musical accomplishments.

WORKS

LLF – *London, Lincoln's Inn Fields*
LCG – *London, Covent Garden*
LDL – *London, Drury Lane*
LHR – *London, Hickford's Rooms*
NP – *no performance known*

OPERAS

Teraminta (3, H. Carey), LLF, 20 Nov 1732, 1 air, British Musical Miscellany, iv (London, 1735), 5 airs, *GB-Cfm*

Ulysses (3, S. Humphreys, after Homer: *Odyssey*, bks 16–24), LLF, 17 April 1733, *D-Hs**, 2 airs *GB-Cfm*, ov. *Lcm**; incl. 2 choruses from The Mourning Muse of Alexis

Rosalinda (musical drama, 1, J. Lockman), LHR, 4 Jan 1740, music lost

Issipile (3, P. Metastasio), 1743, NP, *GB-Lbl**, *US-Wc*, both without recits; aria, *J-Tn*

Il Ciro riconosciuto (3, Metastasio), *c*1744–5, NP, *D-Hs**, with only one set recit; 2 arias, *J-Tn*; ov. used in The Tempest

Dario, 1746 (3), NP, music lost, mentioned in Coxe, 1799

Demofoonte (3, Metastasio), *c*1747–8, NP, 4 arias, *Tn*

Artaserse (3, Metastasio), 1749, NP, 6 arias, *Tn*

The Fairies (comic op, 3, D. Garrick or Smith, after W. Shakespeare: *A Midsummer Night's Dream*), LDL, 3 Feb 1755, excerpts (London, 1755), ov., Six Favourite Overtures (London, *c*1760), prol, *The Gentleman's Magazine*, xxv (1755), 86, recits and dances unpubd; ov. from Winter, or Daphne; incl. song texts by J. Hammond, G. Granville (Lord Lansdowne), J. Milton, Shakespeare and E. Waller

The Tempest (3, Garrick, after Shakespeare), LDL, 11 Feb 1756, excerpts (London, 1756), ov., Six Favourite Overtures (London, *c*1760), recits and choruses unpubd; ov. from Il Ciro riconosciuto; incl. song texts by J. Dryden, A. Cowley, G. Granville (Lord Lansdowne), J. Hughes, B. Jonson, J. Milton, T. Shadwell and E. Waller

The Enchanter, or Love and Magic (musical drama afterpiece, 2, Garrick), LDL, 13 Dec 1760, excerpts (London, 1760), ov., Six Favourite Overtures (London, *c*1760), recits, dance and last chorus unpubd

Medea (3, B. Stillingfleet), *c*1763, only 2 acts completed, *D-Hs**, 1 air in Coxe (1799), lib in Coxe, ed. (1811)

ORATORIOS

David's Lamentation over Saul and Jonathan (Lockman), 1738, LHR, 22 Feb 1740, music lost except 1 duet in Coxe (1799)

The Seasons (short, Lockman, after J. Thomson), 1740, NP, *D-Hs**

Judith (R. Price), *c*1758, NP, *Hs**, 1 aria from Issipile

The Feast of Darius, *c*1758, NP, *Hs**

Paradise Lost (Stillingfleet, after Milton), LCG, 29 Feb 1760, *Hs**, pubd without recits and choruses (London, 1760); 1 chorus from The Seasons

Rebecca (?Stillingfleet), LCG, 4 March 1761, *Hs**, pubd without recits and choruses (London, 1761); 1 chorus from The Feast of Darius

Tobit (T. Morell), *c*1761, NP, *F-Pn**, music from Handel, recits by Smith

Nabal (Morell), LCG, 16 March 1764, *Pn**, music from Handel, recits, minuet and 1 aria by Smith

Jehosaphat (?Stillingfleet), *c*1765, inc., *D-Hs**, music from Paradise Lost, Judith, The Feast of Darius, The Seasons

Gideon (Morell), LCG, 10 Feb 1769, *F-Pn**, *GB-Lbl*, ov. and 7 items from The Feast of Darius, 1 aria from Issipile, 3 items newly composed

Redemption (W. Coxe), NP, *F-Pn**, 3 choruses from Burial Service, recit and 1 aria in Coxe (1799)

OTHER VOCAL

The Mourning Muse of Alexis (ode, after W. Congreve's pastoral on the death of Queen Mary), 1729, NP, *D-Hs**

Thamesi, Isi e Proteus, 6 Feb 1741, music lost, mentioned in Coxe (1799)

Winter, or Daphne (cant., after A. Pope), 2vv, 1744, NP, *Hs**

Anthems, SB, *c*1748, *J-Tn**: O Lord God; Let God arise; Hearken unto my voice

How cruelly fated is woman to woe, song (Garrick: The Chances), LDL, 1754, in Thalia: a Collection of Six Favourite Songs (London, *c*1767)

Attend all ye fair, song (Garrick: The Way to Keep Him), LDL, 1760, in Cleo and Euterpe (London, 1762)

Hymns: The Foundling's Hymn, in *Christian's Magazine* (Oct 1763); When rising from the bed of death, in Foundling Hymns, vol.xii of the Coram Foundation (*c*1769); The Lord descended from above (Ps xviii), in a vol. of hymns at the Greater London Record Office (*c*1769)

Hunting scene and song, for Queen Caroline's Hermitage, music lost, mentioned in Coxe (1799)

Songs: 1, 1v, rec, in British Musical Miscellany, ii (London, 1735); 3, 1v, 2 with rec, in British Musical Miscellany, iii (London, 1735); 1, 1v, rec, in British Musical Miscellany, iv (London, 1735); 2, 1v, 1 with Ger. fl, in The Musical Entertainer, ii (London, 1738); 8, 1–2vv, in M. Prior, *Lyric Poems* (London, 1741); 1, 1v, in *Universal Visitor* (London, 1756); 1, *GB-Lbl*; 1 in Coxe (1799)

Burial Service, for Augusta, dowager Princess of Wales, 1772, *D-Hs**

Doubtful: 5 anthems, *J-Tn*; When the sun o'er yonder hills, in Handel's Israel in Egypt

BARBARA SMALL

Smith, John Stafford (*b* Gloucester, bap. 30 March 1750; *d* London, 21 Sept 1836). English musicologist and composer. He was the son of Martin Smith (*d* 1786), organist of Gloucester Cathedral from 1739 to 1781. He was sent to London to study with Boyce, and in 1761 became a chorister of the Chapel Royal. He continued to sing there after his voice had broken; on 16 December 1784 he was made a Gentleman of the Chapel Royal and on 22 February 1785 a lay vicar of Westminster Abbey. In 1790 he was engaged as organist for the Gloucester Music Meeting; in 1802 he was appointed one of the organists to the Chapel Royal and on 14 May 1805 Master of the Children. He resigned the latter post in June 1817.

Smith gained an early reputation as a glee composer, winning two prizes from the Catch Club in 1773 and several more during the next few years. He published five collections of glees as well as several separate pieces; many others appeared in Warren's collection and other anthologies of the time. The later glees are strikingly original; one, *Sweet poet of the woods*, uses quarter-tones. He also produced a madrigal, *Flora now calleth forth each flower*, which is a genuine essay in the old madrigal idiom. He published a collection of songs, and a set of 20 anthems, besides composing a number of hymn tunes and chants. His anthems, too, display unusual boldness, both in the choice and treatment of texts, and deserve revival. He became a member of the Anacreontic Society in 1766. His song, *To Anacreon in Heaven*, was composed for this drinking and singing club; he published a harmonized version (A,T,B) in his *5th Book of Canzonets, Catches, Canons and Glees* (1799). In much altered form, this was later adapted to *The Star-Spangled Banner*, now the national anthem of the USA.

He is now chiefly remembered for his pioneering work as a musical antiquary. He began early to collect old music manuscripts and editions, and he placed his collection and his knowledge at the disposal of Sir John Hawkins, who acknowledged his debt to him in the preface to his *General History of the Science and Practice of Music* (1776–89). Smith transcribed and edited many of the music examples in that work. In 1779 he issued *A Collection of English Songs ... Composed about the year 1500. Taken from MSS. of the same age*, which was perhaps the first scholarly edition printed in England. He continued to build a collection of music that is priceless by today's standards, but was probably acquired at little cost. It included the Mulliner Book, the Old Hall MS (which he bought in 1813), and the copy of the *Ulm Gesangbuch* (1538) formerly owned by J.S. Bach and presented to Smith by C.P.E. Bach at Hamburg in 1772. Some of the riches of Smith's library can only be guessed at, for it passed on his death to a daughter. In 1844, the daughter being pronounced insane, her property was sold by an incompetent auctioneer, and the greater part of it disappeared without trace and without even an adequate catalogue or description being made. 2191 volumes of music were disposed of, including 578 in manuscript. The Old Hall MS, however, was retained by the family, and was presented to St Edmund's College, Ware, by Smith's great-grandson, Thomas Tordiffe, in 1893.

Smith was much more than a mere collector; in Young's words, he was 'virtually the first English musicologist'. In a copy of Burney's *General History of Music* which he bought in 1789 he wrote copious marginalia which show not only his rancour against Burney for stealing Hawkins's thunder but also his ability to see through the shallowness of the doctor's musical scholarship. He continued to study and to edit early music, and his labours culminated in *Musica Antiqua*. This outstanding achievement drew not only on Smith's own library but on many other available sources. He transcribed 11 trouvère songs from the *Chansonnier de Mesmes*, which was soon afterwards destroyed by fire; in Karp's view these transcriptions 'occupy a historical position among the earliest attempts at a rhythmic solution of the Trouvère notation'. The collection was approximately chronological in arrangement, extending from Gregorian chant to Geminiani. It includes much early English keyboard music and movements from the Jacobean masques, but there is also a good representation of continental composers including Ockeghem, Obrecht, Willaert, Wert, Clemens and Morales. Historical notes on each piece are provided; considering the state of knowledge at the time they are by no means contemptible. Scholars continued to draw on *Musica Antiqua* for many decades.

WORKS

printed works published in London

63 glees, catches and partsongs pubd singly, in 18th- and 19th-century anthologies, and in Smith's collections: A Collection of Glees, 3–6vv (*c*1776); A Select Collection of Catches, Canons and Glees, 3–4vv (*c*1780); A Miscellaneous Collection of New Songs, Catches and Glees, 1–5vv (1781); A Collection of Songs of Various Kinds and for Different Voices (*c*1785); A 5th Book of Canzonets, Catches, Canons and Glees, Sprightly and Plaintive (1799); also in *GB-Ge*, *Ob*, *US-Bp*
[20] Anthems composed for the Choir-Service of the Church of England (*c*1793); several pubd singly
12 Chants (*c*1803)
2 hymn tunes in T. Chapman: The Young Gentleman and Ladies Musical Companion, i (1772)
The Sun is now too Radiant (cant.), *GB-Ob*
1 voluntary, org, in 10 Select Voluntaries (*c*1780)
*c*24 songs pubd singly, in 18th-century anthologies, and in Smith's collections
Sketches and commonplace books, *GB-Ge*, *Lbl*

EDITIONS

A Collection of English Songs, in Score for 3 and 4 Voices, Composed about the Year 1500. Taken from MSS. of the Same Age (London, 1779)

Mr. Purcell's Grand Te Deum Alter'd ... for His Majesty's Chapel Royal (London, c1790)
Musica Antiqua, a Selection of Music of This and Other Countries from the Commencement of the 12th to the Beginning of the 18th Century Comprising ... Motetts, Madrigals, Hymns, Anthems, Songs, Lessons and Dance Tunes ... The Whole Calculated to Shew the Original Sources of the Melody & Harmony of this Country; & to Exhibit the Different Styles & Degrees of Improvement of the Several Periods (London, 1812)

NICHOLAS TEMPERLEY

Smith, [Vielehr] **Julia (Frances)** (*b* Denton, TX, 25 Jan 1911; *d* New York, 27 April 1989). American composer, pianist and writer on music. She graduated from North Texas State University (1930) and studied piano and then composition on a fellowship at the Juilliard Graduate School (1932–9), where she gained a diploma. At New York University she completed the MA (1933) and the PhD (1952). She was the pianist for the Orchestrette Classique of New York, a women's orchestra (1932–9), and gave concerts in Latin America, Europe, and the USA, playing much American music, especially that of Aaron Copland. She taught at Hartt College (1941–6), where she founded the department of music education.

All Smith's operas and orchestral works have been performed, some frequently. Her music, which has an appealing directness, is tonal, often dissonant, and incorporates elements of jazz, folk and 20th-century French harmony. The String Quartet, her best chamber work, uses irregular metres and driving rhythms; and the operas *Cynthia Parker* and *Cockcrow* employ folk music within a generally conservative tonal idiom. A recipient of several commissions and awards, Smith was also active in music organizations, especially the National Federation of Music Clubs, for which she chaired the Decade of Women Committee (1970–79). Among her publications are *Aaron Copland: his Work and Contribution to American Music* (New York, 1955), and a *Directory of American Women Composers* (Chicago, 1970), of which she was the editor.

ADRIENNE FRIED BLOCK

Smith, Leland C(layton) (*b* Oakland, CA, 6 Aug 1925). American composer, performer and theorist. He studied composition with Milhaud at Mills College (1941–3, 1946–7) and with Sessions at the University of California, Berkeley (MA 1948), where he also studied musicology with Bukofzer. During 1948–9 he studied with Messiaen at the Paris Conservatoire. He taught at Mills College (1951–2), the University of Chicago (1952–8) and from 1958 at Stanford University. Smith is a noted bassoonist and clarinettist. He has received a Fulbright scholarship (1964–5) and a Copley Foundation award.

Smith has carried out leading research into computer programming for music composition and printing. He is one of the founders and directors of the computer music centre at Stanford, has been an adviser to IRCAM (Paris) and is the deviser of SCORE, the first computer program for music printing. These endeavours are the topics of two articles, 'Computer Sound Research at Stanford', *Journal of Audio Engineering Society*, xix (1971), and 'Score – a Musician's Approach to Computer Music', *Journal of Audio Engineering Society*, xx (1972), pp.7–14.

The SCORE program, developed from the Music-4 program conceived at Bell Telephone Laboratories, originated as a system to convey musical data to the Stanford University Artificial Intelligence Laboratory digital sound system. Smith's installation of sophisticated graphics adapted SCORE to music printing in 1971.

SCORE is a parameter-based system in which every item of data (sonic or graphic) is described by a group of numerical parameters. This allows the program both to operate with maximum flexibility and to undergo continuous development. Most of the basic musical symbols were created using print-outs of the engraving tool set used by B. Schott's Söhne, Mainz. The personal computer version of the program is written in Microsoft Fortran.

In 1988 B. Schott's Söhne became the first major publisher to adopt SCORE for the majority of its editions. Since that time, virtually every large music publisher worldwide has used SCORE for music publications.

In his music Smith frequently employs serial methods to generate pitch succession, harmonic movement and rhythm. His works are notable for their polyphonic

textures, flexible rhythms and expressive instrumental timbres. He has used computer-generated sounds in several compositions and has made a computer realization of the rhythmicon part for Cowell's *Rhythmicana*. He is the author of *Handbook of Harmonic Analysis* (Palo Alto, 1963/*R*).

RICHARD SWIFT

Smith, (Joseph) Leo [Leopold] (*b* Birmingham, 26 Nov 1881; *d* Toronto, 18 April 1952). Canadian composer, cellist and critic of English birth. He made his début as a performer in Birmingham Town Hall at the age of eight. Later he studied at the Royal Manchester College of Music with Fuchs (cello) and at Manchester University (MusB). In 1910, after working as a cellist in the Hallé and Covent Garden orchestras, he emigrated to Canada to teach the cello and theory at the Toronto Conservatory. He was a member of the Conservatory String Quartet and for many years a contributing editor of the *Toronto Conservatory Quarterly Review*. He was the principal cellist of the Toronto SO during its early years and held a similar post later with the orchestra of the city's summer Prom concerts. Smith also played the viol and led viol ensembles. He was appointed to the Faculty of Music, University of Toronto, in 1927, becoming a professor in 1938. From the time of his retirement in 1950 until his death he was the principal music critic of the Toronto *Globe and Mail*. The Royal Manchester College of Music elected him as an honorary fellow in 1925.

Smith's first compositions include a symphonic movement, now lost, and numerous songs. In the mid-1930s songs, piano pieces, folksong arrangements and cello pieces were published internationally and the Quartet in D was performed in both Canada and England. A sonata in E minor for cello and piano (1943) won a Canadian Performing Rights Society prize and *A Summer Idyll* (1945), for small orchestra, was recorded. Smith's music is often marked by a 'Celtic' use of pentatonic scales, lilting 6/8 rhythms and a restraint that recalls Delius or MacDowell. Over the course of his career he set a variety of texts by poets ranging from Shakespeare and Blake to his Canadian contemporary Duncan Campbell Scott. Smith's setting of Scott's poem *When twilight walks in the west* suggests an appropriate tone through the use of modality. Its twilight character is shared by the best of Smith's work, including the Four Trios for high voice, cello and piano, *London Street Cries* for two voices, cello and piano, Three Pieces for piano, Four Pieces in an Old English Style for cello and piano and Five Pieces in Folk-Song Style (or Folk-Song Suite) for string quartet.

According to McCarthy, Smith saw himself as one who 'piped Canadian tunes … to an English ground bass'. He used Canadian folklore – from French-Canadian fiddle tunes to Northwest Coast Indian melodies – as the basis for both arrangements and free compositions. His music nevertheless retained an English spirit. His three text-books, *Musical Rudiments* (Toronto, 1920), *Music of the 17th and 18th Centuries* (Toronto, 1931) and *Elementary Part Writing* (Toronto, 1939), have been much used. In the 1980s and 90s a number of his works were republished as part of *The Canadian Musical Heritage* (Ottawa, 1982–99; 25 vols.) series and several of his songs were re-recorded.

JOHN BECKWITH

Smith [née Robinson], **Mamie** (*b* Cincinnati, 26 May 1883; *d* New York, ?30 Oct 1946). American jazz and vaudeville singer and entertainer. She toured as a dancer with Tutt-Whitney's Smart Set Company in 1912 and gained a reputation as a singer in Harlem clubs and theatres before World War I. After recording *That Thing Called Love* (1920, OK) in place of Sophie Tucker, and as the first black jazz-blues singer to have recorded, Smith made *Crazy Blues* (1920, OK/Phonola). This was a huge success and made a fortune for both the singer and her promoter, Perry Bradford; it was also important in that it opened the way for the subsequent recording of other black singers. Following its success Smith had many engagements, touring as far as New Orleans and Dallas and appearing as the featured singer in her own shows. She possessed a lively stage personality, was very attractive and had a strong voice. Many of her best recordings were made with her Jazz Hounds, a group that included Johnny Dunn and, sometimes, Bubber Miley on the cornet, as on *I ain't gonna give nobody none o' this jelly roll* and *The Darktown Flapper's Ball* (both 1922, OK). *Jenny's Ball* (1931, OK), being better recorded, gives a more reliable indication of her appeal as a singer, however. She also made several films, both short subjects and full-length features, with bands such as that of Lucky Millinder in *Paradise in Harlem* (1939). Smith was a vaudeville and jazz performer rather than a blues singer and, unlike Bessie Smith, seldom used the blues form or blues inflections.

PAUL OLIVER

Smith, N(athaniel) Clark (*b* Fort Leavenworth, KS, 31 July 1877; *d* St Louis, 8 Oct 1933). American composer, conductor and music educator. His musical career began in Wichita, Kansas, where he taught at a music studio and conducted local bands. In 1898, during the Spanish-American War, he led the 8th Illinois Regiment Band. The following year he became a member of the M.B. Curtis All-Star Afro-American Minstrels, with whom he embarked on an 18-month world tour that included

concerts in Australia, New Zealand and Hawaii. He left the minstrel troupe in London, where he remained to study at the GSM.

Upon his return to the USA in 1901, Smith enrolled at the Chicago Musical College, where he earned the bachelor's degree in 1905. During this period he conducted the 8th Illinois Militia Band (1901–5), started a publishing house with J. Berni Barbour (1903), and organized an orchestra of black American performers, the first ensemble of its kind in Chicago. Furthermore, in 1904 he organized two additional ensembles: Smith's Mandolin and String Instruments Club and the N. Clark Smith Ladies Orchestra.

After accepting an Army commission in 1907, Smith left Chicago for the Tuskegee Institute, Tuskegee, Alabama, where he directed bands, orchestras and vocal ensembles. He toured with these groups throughout the American South and Midwest; the annual Atlanta Colored Music Festival became a regular stop. In 1913 he was promoted from captain to major and became a bandmaster at Western University, Quindaro, Kansas, where he remained until 1915. During this time he supplemented his education at the University of Kansas and the Horner Institute of Fine Arts. He spent the rest of his life teaching in public schools throughout the Midwest, including Lincoln High School (Kansas City, Missouri, 1916–22), Wendell Phillips High School (Chicago, 1925–6), and Sumner High School (St Louis, 1930–33). In 1919 he became a charter member of the National Association of Negro Musicians and in 1922 was hired by the Pullman Railroad Company to establish musical ensembles for the company's black American employees. From 1926 to 1930 he conducted several additional ensembles in the Chicago area and briefly attended the Sherwood School of Music.

Smith was the first, and arguably the most influential, teacher from the generation of black American music educators that flourished during the early decades of the 20th century. His bands, orchestras and vocal ensembles performed at the highest level, his demands as an instructor serving as an inspiration to his pupils. His compositions, which range from marches to orchestral works, include the *Tuskegee Institute March*, the *Negro Folk Suite* and the *Negro Choral Symphony* (1933). He also wrote for the piano and made arrangements of spirituals.

WILLIE STRONG

Smith, Patrick J(ohn) (*b* New York, 11 Dec 1932). American writer. He studied at Princeton University (BA 1955) and worked as an independent writer on music, founding in 1970 the *Musical Newsletter*, an adventurous periodical that produced many worthwhile articles during its seven years' life. Smith served as president of the Music Critics Association, 1977–81, and in 1985 became director of the Opera-Musical Theater programme of the National Endowment for the Arts; he relinquished that position in 1989 to become editor of *Opera News*. A well-informed writer with a marked interest in the literary aspects of opera, Smith produced the first English-language historical book on the opera libretto, *The Tenth Muse* (New York, 1970), and has also written *A Year at the Met* (New York, 1983).

□

Smith, Patti (Lee) (*b* Chicago, 30 Dec 1946). American rock singer-songwriter. She moved to New Jersey at the age of nine. As a teenager she worked in a factory and later attended Glassboro State Teachers College on an art scholarship. During that time, she became interested in poetry, particularly that of Arthur Rimbaud who remains a key influence, together with Albert Camus, William Burroughs, Allen Ginsberg, the Rolling Stones, Lennon and Dylan. Smith moved to New York in 1967 and by the early 1970s was a key player among New York's avant garde, writing, reading poetry (accompanied by the guitarist Lenny Kaye) and chronicling the music scene. With the playwright Sam Shepard, she wrote *Cowboy Mouth*. Having secured a recording contract, in 1974 she released her first single (*Hey Joe*, which features Smith's monologue for Patty Hearst, and B-side *Piss Factory*, another spoken piece about her experiences on a factory production line) which led to the formation of the Patti Smith Group. Their first album, *Horses* (Arista, 1975), produced by John Cale, set the style: provocative and combative, it was a clarion call to nascent punk rockers. *Rolling Stone* described it as 'a wonderful blend of ritualistic declamation, surrealist imagery and rock basics'. The Robert Mapplethorpe cover photograph, in which Smith stared insolently into the camera, became part of rock's iconography. Unorthodox, uncompromising and always the outsider, Smith was a catalytic figure on the new wave/punk scene on both sides of the Atlantic. Her second album, *Radio Ethiopia* (Arista, 1976), though less critically and commercially successful than its predecessor, captured the prevailing mood. *Easter* (Arista, 1978) brought her international success and featured a collaboration with Springsteen (*Because the Night*) which became a hit single. The 1980s were spent mostly with her family in retreat from the rock world. In 1996 she toured briefly with Dylan and released *Gone Again* (Arista), a memorial to her husband, who died two years earlier. She has published several volumes of poetry, including *Babel* (New York, 1978) and *The Coral Sea* (New York, 1996).

LIZ THOMSON

Smith, Pine Top [Clarence] (*b* Troy, AL, 11 June 1904; *d* Chicago, 14 March 1929). American blues singer and pianist. From about 1920 he toured as a pianist and tap-dancer in various reviews, including that of Ma Rainey, before being discovered by the pianist Charles 'Cow Cow' Davenport. In 1928–9 he made a number of recordings in Chicago, of which eight were released. Among these was the remarkably successful *Pine Top's Boogie Woogie* (1928, Voc.), probably the most influential and widely imitated of all blues recordings; a re-creation of a rent-party dance or 'boogie', it at once established and popularized the blues piano style known as BOOGIE-WOOGIE. Most of Smith's recordings were novelty pieces, such as *I'm sober now* (1929, Voc.) or *Now I ain't got*

nothin' at all (1929, Bruns.), which were comic monologues. Only *Pine Top's Blues* (1928, Voc.) was in the traditional blues vein; he sang this in a high, even petulant and childlike voice. He greatly influenced Albert Ammons, who used the 'powerhouse' rhythm of left-hand walking bass figures, but his own playing had a light, rolling quality also evident in the styles of his contemporaries Cripple Clarence Lofton, Charles Avery and Romeo Nelson. He was accidentally shot during a brawl in the masonic lodge where he was performing.

PAUL OLIVER

Smith, Robert (i) (*b* c1648; *d* ?London, before 22 Nov 1675). English composer and singer-lutenist. It is not known whether he was related to the other Smiths in the royal music, such as Henry, a member of the 24 Violins (1662–70), or John, a viol player in the Private Musick (1660–73). James Clifford (*The Divine Services and Anthems*, 2/1664) described him as 'one of the Children of his Majesties Chappel'. He wrote songs for at least ten plays produced by the King's Company and Duke's Company at Dorset Garden Theatre and Lincoln's Inn Fields between January 1672 and May 1673, and may be the author of some of the orchestral music normally attributed to Matthew Locke for Thomas Shadwell's adaptation of *The Tempest*, probably first performed on 30 April 1674. On 20 June 1673 he was sworn in as a royal musician without fee at the behest of Thomas Purcell, and on 3 August 1674 he became a member of the lutes and voices in place of Pelham Humfrey, who had died on 14 July. On 22 November 1675 Richard Hart (*d* 1690) was sworn in as his successor. He was evidently not married, for his estate was administered at his death by Philip Hildred. In one of the *Letters from the Dead to the Living* (London, 5/1719) attributed to Tom Brown, Henry Purcell reports to John Blow that 'Robin Smith is still as love-mad as ever he was; hangs half a dozen fiddles in his girdle, as the fellow does coney-skins, and scours up and down hell crying "a Reevs, a Reevs", as if the devil was in him'.

Smith's surviving music does not suggest he was a prodigy of the order of Pelham Humfrey, his close contemporary, although it is lively and accomplished. It was appreciated at the time, to judge from a passage in Thomas D'Urfey's play *The Fool Turn'd Critick* (November 1676). On being told that a song is by 'one Mr. *Smith*, and late Composer to the Kings Play-house', a character replies:

> Who *Bob*! a very Excellent Fellow madam, believe me, and one the Town Misses very much to my knowledge; for now a dayes what ever is the matter with 'em. I know not, but we have such Tunes, such lowsy lamentable Tunes, that 'twould make one forswear all Musick.

Another musician named Robert Smith (bur. London, 5 Oct 1647) was a singing-man of Westminster Abbey, and perhaps the author of two songs, *She which would not, I would choose* (*US-NYp* Drexel 4257) and *He that did ever scorn love's might* (RISM 1652[8], ed. in MB, xxxiii, 1971).

WORKS

SONGS FOR PLAYS

all published in 1673[3]/R

Ah Corydon in vain you boast, 1v, bc, Some happy soul come down and tell, 1v, bc, in The Fatal Jealousie (H.N. Payne), 1672

A heart in love's empire, 3vv, bc, in The Citizen Turned Gentleman (E. Ravenscroft), 1672

As I walked in the woods, 1v, bc, Come lay by your cares, 2vv, in The Miser (T. Shadwell), 1672

From friends all inspired, 1v, in The Morning Ramble (Payne), 1672

Long betwixt hope and fear, 2vv, in The Assignation (J. Dryden), 1672

O how I abhor the tumult and smoke of the town, 1v, bc, in Epsom Wells (Shadwell), 1672

Why should a foolish marriage vow, 1v, bc, in Marriage a la Mode (Dryden), 1672

Ah false Amintas can that hour, 1v, bc, Amintas led me to a grove, 1v, bc, in The Dutch Lover (A. Behn), 1673

Beauty no more shall suffer eclipse, 1v, bc, Fill round the health good natured and free, 1v, bc, in The Reformation (J. Arrowsmith), 1673

The day you wished arrived at last, 1v, bc, in Amboyna (Dryden), 1673

OTHER VOCAL

12 songs, 1675[7]/*R*, *The Circle* (London, 1675), T. D'Urfey, *The Fool Turn'd Critick* (London, 1677), 1685[4], *GB-Lbl*: And I'll go to my love, 2vv; At the sight of my Phillis, 1v, bc; A woman that's homely, 1v, bc; Be jolly my friends, 2vv; Farewell fair Armida, 2vv; Have you not in a chimney seen, 4vv; How bonny and brisk, 1v, bc; I found my Celia, 1v, bc; No, no, 'tis in vain, 1v; Phyllis the time is come, 1v, bc; 'Tis the grape that discovers, 1v, bc; What sighs and groans, 1v, bc

2 dialogues: O sorrow say where dost thou dwell (Nature and Sorrow), 2vv, bc, 1675[7]; O Time, thy wings (Philander, Time and Death), 3vv, bc, *Och*

6 anthems, music lost, texts in J. Clifford, The Divine Services and Anthems (London, 2/1664): God be merciful unto us; O God my heart is ready; O sing unto the Lord a new song (Ps xcvi); O sing unto the Lord a new song (Ps cxlix); Sing unto God, O ye kingdoms; When the Lord turned again

INSTRUMENTAL

for 2 violins and bass unless otherwise stated

3 act tunes, B♭, d, G, a 4, in The Tempest (semi-op, T. Shadwell, after W. Shakespeare), 1674, M. Locke, The English Opera (London, 1675), ed. in MB, li (1986); attrib. Smith in *US-NH*

9 suites, a, A, B♭, B♭, C, D, D, f, F, 1677[4]

Suite, g, a 4, *NYp* Drexel 5061

16 suites, g/G, g, a, c, A, B♭ ('New Years Day'), C, c, c, C, c, D, d, D, d, F, *NYp* Drexel 3849

Ground, B♭; chaconne, B♭; brawles, D, a 4; 2 airs, C; untitled theatre suite, a 4; suite, g, a 4; air, B♭, a 4; 3 airs 'made in Oxford', F, vn pt, *GB-Och* 1183

Almand, f, 3 airs, C, 2 airs, g, ground, B♭, some a 4 inc., *IRL-Dtc* 413

3 suites, G, g, a, *GB-Lbl*, see Sotheby (1999)

Don Gusman's Jigg, Apollo's Banquet (London, c1669)

4 untitled theatre suites, b pt, *US-NH* Filmer 7

Airs a 1, a 2, inc., *Apollo's Banquet* (London, 2/1678), T. Greeting, *The Pleasant Companion* (London, 3/1678), *GB-Lbl*, *Och* 90–91, 361–2, 1025–7, *W*, Scottish Record Office, Edinburgh

Suite, C, arr. kbd, 1673[6]/*R*, ed. C. Hogwood, *Melothesia* (Oxford, 1987)

3 airs, A, c, d, arr. kbd, *Ob*, *Och*

PETER HOLMAN

Smith, Robert (ii) (*b* Gainsborough, 1689; *d* Cambridge, 1768). English mathematician. He entered Trinity College, Cambridge, in 1708, and became a senior Fellow in 1739 and Master in 1742; he was also a Fellow of the Royal Society and Plumian Professor of Astronomy (1716–60). His work on acoustics is contained in *Harmonics, or the Philosophy of Musical Sounds* (London, 1749/*R*, enlarged 2/1759) and *Postscript . . . upon the Changeable Harpsichord* (London, 1762). The first includes a table showing the rates of beating of tempered 5ths on the various notes of the scale calculated for a series of pitches of performance; the temperaments used are mean-tone and Smith's own system of equal harmony. It is significant that his approach to the problem of tuning a keyboard instrument was through the judgment of the musician's ear: he tried out his equal harmony on the harpsichord, and the first organ of the Foundling Hospital, with its system of alternative notes actuated by selective stops, is said to have been built under his direction. In several striking respects he anticipated Helmholtz, who, however, did not know his work.

MURRAY CAMPBELL

Smith, Robert Archibald (*b* Reading, 16 Nov 1780; *d* Edinburgh, 3 Jan 1829). Scottish composer. The son of a silk-weaver from Paisley, he could play the flute and violin well at the age of ten, and was a church chorister, although largely self-taught. The family returned to Paisley by 1800, where he was apprenticed to his father; but in 1802 he left weaving to teach music, particularly choral singing. His classes were successful, and by 1807 he was precentor of Paisley Abbey. His reforming tendencies met with Presbyterian opposition but nevertheless his reputation as a choirmaster spread rapidly. He trained the Abbey Harmonic Choir to sing contemporary religious masterpieces with instrumental acompaniment, and his successes resulted in his appointment as precentor and choirmaster at St Geroge's, Edinburgh, a position of considerable prestige.

Smith's reputation as a Scottish lyricist was ensured by his songs (the best-known being *Jessie, the Flow'r o' Dunblane*, to words by Robert Tannahill), but his anthems are generally undistinguished. Three of his metrical psalm tunes are still in regular use: 'Selma' and 'Morven', which are strictly pentatonic, and 'Invocation'.

Smith's early death was deeply lamented, and John Thomson composed a funeral anthem (now lost) in his memory. His correspondence (in *GB-Gu*, MS Robertson 1222) reveals a charming, even mischievous personality despite the fact that he declared he would 'rather publish a volume of music than a page of any other matter'.

JEAN MARY ALLAN/JOHN PURSER

Smith, Stuart Saunders (*b* Portland, ME, 16 March 1948). American composer. He studied at the Hartt School of Music with Edward Diemente, among others, and at the University of Illinois (DMA 1977), where his teachers included Salvatore Martirano, Herbert Brün and Ben Johnston. He has taught at the University of Maryland, Baltimore County, and served as executive editor of the Percussive Arts Research Edition (1982–4).

Smith's works span a variety of genres and media, including jazz, atonality, poetry and experimental theatre. Open form and free jazz provide the conceptual frameworks for many of his works. In *Here and There* (1972) performers improvise with reference to a grid of processes; in *Gifts* (1974), melodies modelled on jazz improvisation are notated. Performances of Smith's sound-text poetry are usually accompanied by instruments (including radios) and found objects such as tree leaves, rocks and kitchen utensils. In *Return and Recall* (1976) and *Transitions and Leaps* (1990), trans-media compositions that focus on common processes to relate medium-specific materials, performers compose together using an ideogrammatic notational system that directs them to imitate, develop, repeat or replicate musical information. Babbitt has described Smith's varied output as 'a personalized seamless compound, a vast collection of awarenesses fused into a unified, single and singular vision' (Saunders, xiii).

JOHN P. WELSH

Smith, (Edward) Sydney (*b* Dorchester, 14 July 1839; *d* London, 3 March 1889). English composer. He received his first musical instruction from his parents and at the age of 16 went to Leipzig, where he studied the piano with Moscheles and Plaidy, the cello with Grützmacher, harmony and counterpoint with Hauptmann, Richter and Papperitz, and composition with Rietz. He returned to England in 1858 and in the following year settled in London, where he had a considerable reputation as a teacher. His compositions, exclusively for the piano, were written for the Victorian drawing room and mainly comprise miniatures, transcriptions and fantasias on operatic themes. Smith's knowledge of piano technique led him to develop a particular style in which brilliance and showmanship predominate. His works, designed to entertain rather than edify, are rarely performed nowadays, but at the time they were highly popular with a certain type of pianist eager to achieve the maximum display with the minimum effort. This was accomplished by the use of rapid scales, arpeggios, felicitous ornamentation and elaborate figuration, the profusion of which distinguished his salon pieces from those of his contemporaries such as Edward Bache and Walter Macfarren. The most successful of his many pieces were *La harpe éolienne*, *Le jet d'eau*, *The Spinning Wheel*, *Chanson Russe* and a Tarantella in E minor; they were as popular on the Continent as in England.

W.B.SQUIRE/JEREMY DIBBLE

Smith, Theodore [Schmidt, Theodor] (*b c*1740; *d c*1810). German composer and keyboard player, active mainly in England. Fétis gave his birthplace as Hanover, and Gerber identified him with Theodor Schmidt, who published symphonies in Paris about 1765. As 'T. Smith' he made his London début at Hickford's Room on 17 March 1766, performing a harpsichord concerto. He joined the Royal Society of Musicians on 1 February 1767; his name is spelt 'Theodor Smith' in their records, and on the title-page of his *Alfred*, but later he preferred 'Theodore'. After another concert at Hickford's Room on 21 May 1767, during which his Sinfonia concertante for violin and cello was performed, his musical activities shifted to the theatres and pleasure gardens, influenced by his marriage, about 1768, to the singer Maria Harris. She had been a pupil of Thomas Linley (i), and Smith composed a set of Vauxhall songs for her in 1769. 'Mrs Smith' made her acclaimed theatrical début with Garrick's company at Drury Lane as Sylvia in *Cymon* (20 October 1772). She went on to perform in many productions there, including Arne's *The Rose*, Garrick's adaptation of *Hamlet* (as Ophelia), and Dibdin's *The Wedding Ring* and *A Christmas Tale*. When Garrick rewrote Thomson's masque *Alfred* for a production on 9 October 1773, he asked Smith to compose new music, paying him £26 5s. Smith wrote an excellent overture in the style of J.C. Bach and five attractive songs, including a fine coloratura aria sung by his wife in the role of Emma. Performances also included songs Arne had written for the original production in 1740 and some Burney wrote for the 1751 revival under the name 'Temple of Apollo'. Arne and Drury Lane's house composer Dibdin were enraged at Garrick's bringing in, without consulting them, a composer who had had no theatrical experience, and Arne published an advertisement disclaiming responsibility for the music. Dibdin's complaint drew an angry reply from Garrick (6 October 1773) which, however, is somewhat devious about Smith's contribution.

According to Mrs Papendiek, Maria Smith left Theodore and eloped in the summer of 1774: 'a Mr Bishop took her off, and when the first shock had subsided, he

Title-page of Theodore Smith's 'Six Arietts' (London: Author, 1788)

prevailed upon Smith to accept a sum of money and be silent, for his wife would never return to him, and he, Bishop, would marry her'. If this story is true then it must have happened some time later than 1774, for the Smiths christened a son on 10 January 1776. That year Smith also composed an overture and new songs for Thomas Hull's farce *The Spanish Lady*, revived for his wife's benefit at Drury Lane on 9 April 1776. Around this time, however, Smith did lose interest in writing vocal music, and lived mainly by teaching. From 1779 onwards he published several sets of 'duets for two performers on one harpsichord or piano forte', with three sonatas in each set. The first was by far the most successful, perhaps because it was much the easiest to play; there were several reprints in London and one in Berlin. Smith's first set of concertos also appeared in Berlin, and he may have lived there for a short time around 1780. Smith also wrote at least 27 keyboard sonatas, some with flute or violin accompaniment.

It seems that Smith never remarried. He took a job teaching in a Chiswick girls' school for the poor reason that he wanted an occasional glimpse of his ex-wife when she went there to see her daughter. From moping he fell to bitterness: years later William Horsley reported that during his lessons with Smith in the 1790s he 'received small instruction and much ill usage'. By 1795 Smith was organist at Ebury Chapel in London (near Sloane Square), for which he published a collection of psalms, hymns and anthems (two of them by Arnold and Avison). The *Sacro Divertimento*, published about 1800, was apparently intended as a full evening's entertainment in the chapel; a long organ sonata is followed by a number of short anthems and hymns, together with an extract from Handel's *Messiah*.

ROGER FISKE/RACHEL E. COWGILL

Smith, William (i) (bap. Durham, 3 April 1603; *d* Durham, 19 April 1645). English composer. He has been confused with an earlier William Smythe (*c*1550–1600) who was by 1576 a minor canon of Durham Cathedral, and from 1589 until 1599 organist there, but he is now identifiable with the second son of Christopher Smith. There were two choristers with the name William Smith at Durham Cathedral in 1614, but on the grounds of age he ought to be assigned the dates of Christmas 1613 to at least July 1618 rather than 1609 to 1616. In August 1621 the Visitation Schedule names him as a King's Scholar at the grammar school, and in August 1624 as one of the lay clerks of the cathedral. On 30 October 1625 he married Grace Hodgeson in St Mary the Less, Durham, on 24 September 1626 he was ordained deacon and on 8 April 1627 the dean and chapter of the cathedral paid him 40s. 'for his painstaking in the time Mr Hutcheson, organist, was in the gaol'. Elected a minor canon on 20 July 1627, he often held the anual offices of sacrist (intermittently between 1627 and 1636) and precentor of the cathedral (intermittently between 1631 and 1645). Subsequent appointments included curate of Witton Gilbert (1629–31) 'in the regard of the good services that he has already performed', and rector of St Mary-le-Bow (1631–45).

During the 1620s great changes took place in the way that services were celebrated in the cathedral, causing a long and bitter lawsuit between the low- and high-church members of the chapter. Music was very much at the centre of the dispute, as the following extract from Peter Smart's written indictment will show:

> We [Smart and his colleagues] article and object that you, John Cosin [prebendary of the cathedral 1624–61, bishop 1661–72], and your fellows . . . have not only banished the singing of psalms, in the vulgar tunes, by authority allowed . . . but you have so changed the whole liturgy, that though it be not in Latin, yet by reason of the confusedness of voices of so many singers, with a multitude of melodious instruments . . . the greatest part of the service is no better understood, than if it were in Hebrew or in Irish . . . And this kind of administration . . . with so many pictures, and so strange gestures, and excessive music, is not used in any cathedral church in England, nor in Durham, till you, John Cosin became prebendary of the same.

Smith's music, all of which is contained in the Durham choir partbooks, well represents the complex style to which Smart so violently objected. It is highly polyphonic

in texture, very much after the manner of Orlando Gibbons's most ambitious work; indeed, Smith's *Awake up my glory* was for some time thought to be by Gibbons. With Smith, however, there is little development of themes, little repetition of text and a preference for certain minor keys. Smith's transcriptions (in *GB-DRc* organ books, MSS A1–3) include most of his own compositions and Byrd's Great Service.

After 1635, when Cosin went to Peterhouse, Cambridge, as master, Smith may have visited the college, though it is equally possible that music copied by him and by other members of the Durham choral foundation which was incorporated into the partbooks there could have been sent from Durham. Some 50 years after his death he was still remembered, not for his compositions, but for his virtuosity at the keyboard.

HARRY ESKEW

Smith, William C(harles) (*b* London, 22 July 1881; *d* Bromley, Kent, 20 Nov 1972). English musical librarian and bibliographer. His early education at Woolwich High School was supplemented with private violin and piano lessons. In 1898 he entered the Civil Service, serving first in the Inland Revenue and later in the Scottish Education Office. On 3 September 1900 he was transferred to the Department of Printed Books at the British Museum. After brief training in cataloguing he was selected to work in the Music Room as assistant to W. Barclay Squire. When the latter retired in 1920 Smith succeeded him as Assistant Keeper and held this office until his retirement at the end of 1944.

Smith was chiefly interested in the study of Handel and other aspects of 18th-century music in England. From 1924 onwards he contributed articles on these subjects to various musical journals. His work at the museum stimulated a particular interest in the printed music of the period, on which he became a leading authority. During these years he acquired the detailed and extensive knowledge that formed the foundation for the major bibliographical publications which he prepared during his retirement with the assistance of his colleague Charles Humphries. Smith began to assemble a personal collection of Handelian material in 1934. It eventually contained over 200 early Handel editions and some manuscripts. In 1962 it was purchased by Gerald Coke, who incorporated it into his own collection at Bentley, Hampshire, in 1968.

Smith's occasional writings, a selection of which were brought together in *Concerning Handel* (1948), show the least satisfactory side of his work. Though always a fastidious recorder of information, he was often unable to organize it properly and evaluate its significance. He never discussed music *per se*. But his bibliographical works are excellently arranged, detailed and generally accurate. The catalogues of early Handel editions and of the entire output of the Walshes from 1695 to 1766 are worthy achievements and have become standard works of reference. Smith gave an account of his life in *A Handelian's Notebook* (1965), which includes a complete list of his writings to 1964.

WRITINGS

A Bibliography of the Musical Works Published by John Walsh during the Years 1695–1720 (London, 1948, 2/1968)

Concerning Handel: his Life and Works (London, 1948)

with C. Humphries: *Music Publishing in the British Isles* (London, 1954, 2/1970 with suppl.) [*Humphries-SmithMP*]

The Italian Opera and Contemporary Ballet in London, 1789–1820 (London, 1955)

Handel: a Descriptive Catalogue of the Early Editions (London, 1960, 2/1970)

ANTHONY HICKS

Smith, William O(verton) [Bill] (*b* Sacramento, CA, 22 Sept 1926). American composer and clarinettist. He studied composition with Milhaud at Mills College and with Sessions at the University of California, Berkeley (MA 1953), and the clarinet with Arthur Christman at the Juilliard School and with Ulysse Delecluse at the Paris Conservatoire. In 1946 he co-founded the Dave Brubeck Octet. He taught and directed the Contemporary Group at the University of Washington, Seattle, from 1966 to 1997, whilst pursuing an extensive performing career in both jazz and avant garde music. His honours include the Prix de Paris, the Prix de Rome, two Guggenheim Fellowships and a BMI Jazz Pioneer Award. As a jazz musician he performs under the name Bill Smith.

Smith's *Schizophrenic Scherzo* (1947), written for the Brubeck Octet, was one of the first successful integrations of modern jazz and classical procedures, a style later dubbed 'third stream'. His Duo for Clarinet and Recorded Clarinet (1960) is the earliest example of a work for clarinet and tape. In Concerto for Jazz Soloist and Orchestra (1962) a 12-note row is employed in both the improvisational solo clarinet part and in the orchestral accompaniment. The 1961 album *Near Myth* uses multiphonics, extreme high notes (to *F''''*), muted clarinet, piano harmonics and drum sticks on the inside of the piano. He has written many works for the clarinet which explore ground-breaking performance techniques for the

instrument. He assembled the first and most comprehensive catalogue of fingerings for clarinet multiphonics (Rehfeldt, pp.99–121) and has explored: electrification of the instrument; the simultaneous use of mouthpieces on both lower and upper joints (*Five Fragments*, 1977); removal of the mouthpiece in order to play the instrument as a flute; playing the mouthpiece alone; computer-transformed sounds; vocalizing while playing, timbral trills, key clicks, muting, harmonics (*Variants*, 1963); playing two instruments at once (*Epitaphs*, 1993); and using an extended range.

WORKS
(*selective list*)

Schizophrenic Scherzo, cl, a sax, t sax, tpt, trbn, 1947; Conc., trbn, chbr orch, 1959; Duo, cl, tape, 1960; 5 Pieces, fl, cl, 1961; Conc. jazz soloist, orch, 1962; Variants, cl, 1963; Mosaic, cl, pf, 1964; Random Suite, cl, tape, 1965; Quadri, jazz ens, orch, 1968; Chronos, str qt, 1975; Five, brass qnt, 1976; 5 Frags., double cl, 1977; Intermission, S, SATB, various insts, 1978; Musing, 3 cl, opt. dancers, 1983; Illuminated Manuscript, wind qnt, cptr graphics, 1987; Jazz Set, vn, wind qnt, 1991; Epitaphs, double cl, 1993; Ritual, 2 cl, tape, projections, 1993; Soli, fl, cl, vn, vc, 1993; Five Pages, 2 cl, cptr, 1994; Duet in Two Tempos, 2 cl, 1996; Explorations, cl, chbr orch, 1998

IAN MITCHELL

Smith Brindle, Reginald (*b* Bamber Bridge, 5 Jan 1917). English composer and writer on music. His first professional training was in architecture, but this was cut short by war service, which took him to Africa and then to Italy. He won first prize in the Rome Army Arts Festival of 1946 with his *Fantasia passacaglia*. From 1946 to 1949, unable to find a place on a degree course in architecture, he studied music at the University College of North Wales, Bangor. He pursued his studies in composition in Italy, with Pizzetti at the Accademia di S Cecilia and with Dallapiccola, and felt drawn to the school of Florentine 12-note composers, which included such figures as Bartolozzi, Bussotti and Berio. He spent much of his time in that country during the following years, also working for Italian radio. He returned to Bangor to take up a university teaching appointment in 1967 and remained there until 1970, when he became professor of music at the University of Surrey, retiring in 1985.

The influence of the older generation of Italian composers may be evident in the music Smith Brindle was writing in the mid-1950s, in, for example, the tonally inclined serialism of his Variations on a Theme of Dallapiccola. But it is characteristic of him that he was not content to write in that style for very long. The serialist phase culminated in the expressive string writing of *Via crucis* (1960), which has much in common with the early music of the younger Italians, such as Berio and Bussotti. His subsequent career is marked by a series of more or less sudden moves from one enthusiasm to another. In 1967 he wrote for little else but percussion, completing three major pieces. This preoccupation was not predictable from his earlier works, though he had written for percussion with exceptional skill, particularly in the Concerto for five instruments and percussion; and it was not followed up by more works in the same medium, though he did write a useful book on the subject, *Contemporary Percussion*.

However, it is possible to trace a line of development through his music, at least until the early 1970s. From the strictly 12-note serial Symphony of 1954 to the liberated *Apocalypse* of 1970, there had been a progression (which the composer has acknowledged) towards the 'white sound' of electronic music. The gradual erosion of the serial organization of the earlier works and the growing interest in sound for its own sake is most consistent in the series of visionary orchestral works beginning around 1960, including *Cosmos*, *Homage to H.G. Wells* and *Creation Epic*. In 1971, after approaching the sort of sound he wanted in *Apocalypse* – by means of the clusters, glissandos, percussion cascades and improvisation sequences favoured by contemporary Polish composers – he temporarily abandoned the orchestra for the electronic studio.

Smith Brindle's electronic phase was of shorter duration. He has not entirely rejected electronic tape but, as in *Worlds without End* and *The Walls of Jericho*, he has used it in combination with voices or conventional instruments. The stimulus of later orchestral works, foreshadowed in *Amalgam* (1968), has been the idea of presenting archaic material, such as plainsong, simultaneously with complex aleatory textures on two contrasting levels.

Smith Brindle's style has not made it easy for the public to come to terms with him. There is a strong individuality in his music, and the fundamentally emotional inspiration is unmistakable. The individuality is to be heard in the personal melodic voice, which so touchingly survives the tumult of *Apocalypse*, and in the rhythmic themes which are an interesting aspect of many of his works. By example and by precept, and not least by his responsiveness to the innovations of his younger contemporaries, he has had a significant influence on the development of British music. Smith Brindle is the author of a number of widely admired books on modern music. Since 1933 he has also been active as a painter, exhibiting in London and elsewhere.

WORKS

Stage: The Death of Antigone (op, Sophocles, Euripides and Smith Brindle), 1969, Oxford, 1971

Smither, Howard E(lbert) (*b* Pittsburg, KS, 15 Nov 1925). American musicologist. After taking the BA at Hamline University in 1950, Smither undertook graduate work at Cornell University, where he studied musicology with Donald Grout and William Austin and music theory with Robert Palmer; he received the MA in 1952. From 1953 to 1954 he studied musicology with Rudolf von Ficker at the University of Munich. Returning to America, he received the PhD from Cornell in 1960. He began teaching at the Oberlin College Conservatory of Music in 1955 and remained there until 1960. He taught at the University of Kansas (1960–63) and at Tulane University (1963–8). In 1968 he joined the music faculty of the University of North Carolina where he was James Gordon Hanes Professor of music from 1979. He was elected president of the American Musicological Society for the period 1980–82 and he received a Fulbright fellowship to lecture at the Moscow Conservatory in 1990. He retired in 1993.

Smither's main area of research is the history of the oratorio, particularly in the 17th and 18th centuries. His investigations of the *laude* and Latin dramatic dialogue show the role of these genres in the development of the oratorio and his later writings investigate the oratorio of the 19th and 20th century. Together with Joyce L. Johnson, he is general editor of the facsimile series The Italian Oratorio, 1650–1800, for which he wrote introductions to 15 volumes, and he has prepared the edition *Oratorios of the Italian Baroque* (Concentus musicus, vii, Laaber, 1985).

PAULA MORGAN

Smithers, Don (LeRoy) (*b* New York, 17 Feb 1933). American musicologist, trumpeter and cornettist. He completed private studies with Roger M. Smith (Juilliard School) in 1957 and since then has specialized first on piccolo trumpet, then on cornett and natural trumpet. He was a member of the New York Pro Musica under Noah Greenberg. Smithers has been an impassioned proponent of Baroque trumpet playing without vent holes and has made several recordings for the Telefunken Das Alte Werk and Bach Cantata series.

Smithers studied musicology at Hofstra University (BS 1957), New York University (under Reese and LaRue 1957–8), Columbia University (Renaissance history under Mattingly 1957–8) and Oxford (under Westrup and Harrison 1963–6), where he took the doctorate in 1967 with a dissertation on the Baroque trumpet. Later he became associate professor of music at Syracuse University and in 1975 became director of the Collegium Musicum

and teacher of historical brass instruments at the Royal Conservatory, The Hague. His special area of research is Renaissance and Baroque music in the Holy Roman Empire. He has also edited sacred choral works by Purcell, Bach, Monteverdi, Handel and G.P. Colonna.

EDWARD H. TARR

Smiths, the. English rock group. It was formed in Manchester in 1982 by Morrissey (Stephen Patrick Morrissey; *b* Manchester, 22 May 1959; vocals), Johnny Marr (John Maher; *b* Manchester, 31 Oct 1963; electric guitar and keyboards), Andy Rourke (*b* Manchester, 1963; bass guitar) and Mike Joyce (*b* Manchester, 1 June 1963; drums). Its distinctive sound was created with Marr's ringing, Byrds-influenced lead guitar set against Morrissey's arch, caustic, almost yodelling vocal style. Early songs such as *This Charming Man* (1983) and *Hand in Glove* (1983) were infectious pieces of pop, but the band was also experimental, as in the mantra-like *How soon is now* (1984). Morrissey was the best British songwriter of his day, ironic and cutting on albums such as *Meat is Murder* (Rough Trade, 1984; their only UK number one), *The Queen is Dead* (Rough Trade, 1985) and *Strangeways Here We Come* (Rough Trade, 1987). In the mid-1980s the group released several fine singles such as *Ask* (1986) and *Panic* (1986); Morrissey became one of the icons of the decade and a focus for suburban teen and twenties angst. The Smiths greatly influenced later Britpop bands such as Oasis and Suede, and were heralded as saviours of British pop through their restatement of a quintessential Englishness in the face of the increasing hegemony of dance culture in the mid-1980s. Their international standing was low, however, and they remained a cult act rather than a mainstream commercial success in the UK; they disbanded in 1987.

Marr pursued solo projects as a session guitarist, producer, and member of Electronic with Bernard Sumner of New Order. Morrissey's solo work, notably on *Your Arsenal* (HMV, 1992) and *Vauxhall and I* (HMV, 1994; a UK number one and an American top 20 hit), surpassed his work with the Smiths and established his cult status in the USA. By now a powerful, if still bizarre, vocalist, his repertory included rockabilly style pop, harder rock songs, ballads (in 1994 he covered the standard *Moon River*) and daring slower numbers that used aural collages of sounds drawn from film and radio. Always controversial, he was dubbed a racist by some after the ambiguity of such songs as *National Front Disco* (1992), and was regarded as a spent force by the mid-1990s.

DAVID BUCKLEY

Smits. Dutch family of organ builders. The family workshop in Reek was started in about 1820 by the obscure Nicolaas Lambertus (*b* 1 April 1791; *d* 19 Oct 1831) with the assistance of his brother Frans Cornelius (i) (*b* 18 April 1800; *d* 19 April 1876). Frans, an organist, joined full-time in 1829 and took over the business after the sudden death of Nicolaas. The brothers were entirely self-taught; they learned by observing available instruments and studying the writings of Dom Bédos de Celles (*L'art du facteur d'orgues*, 1766–78) and Jan van Heurn (*De orgelmaaker*, 1804).

Frans was an extremely gifted artist whose instruments reconciled diverse elements of 18th-century organ building practice with the tastes of his own time. He was probably the first Dutch organ builder to appreciate fully the historical value of older instruments. Hitherto it had been common practice to freely re-use parts of old instruments (including chests and, especially, pipes) when building new ones. By contrast Frans tended to incorporate whole sections of an old organ into a new instrument, sometimes as its main or secondary part.

Because Frans was self-taught he was not bound to a particular tradition; his work is remarkably diverse. His cases, which tend to be very elaborately decorated, range in style from Baroque, to Classical and neo-Gothic. Although many organs still have the *Rugwerk*, some have a *Bovenwerk*, or *Onderwerk/Positief*, and sometimes the second manual is behind the *Hoofdwerk*. The arrangement of the mechanical parts is equally creative, whilst stop names are idiosyncratic: Veldfluit, Cifelet, Serpent, Fugara, Fiffaro, Pastorelle, Musette, Euphone and Harmonica. His reeds are either through or upbeating, while the mixtures have the most unusual compositions, many without fifths. Labial Cornets often have no Tierce, while Sesquialteras are not necessarily made in principal scaling. Keyboards are located either in front, at the side or behind the organ. The best organs have principals that have a melancholic, pure tone; widely scaled flutes that sound round, full, dark and introverted, and the upbeating reeds are powerful and fiery, in contrast to the free reeds, which are melodious and not at all harmonium like.

Most of Frans's organs were built for the newly resurgent Roman Catholic churches of the southern Netherlands; his instruments afforded the rapid changes of tone colour (even small organs were built with two manuals) and great flexibility (by means of divided flue and reed stops) that was sought after by these congregations. An independent pedal was often not needed in this tradition, and thus even larger organs with two and three manuals didn't always have one.

Principal surviving instruments include the parish church, Gemert (1833); St Jacobus de Meerdere, Den

Dungen (1836, originally in Haaren); Antonius van Padua, Winssen (1844); St Victor, Neerloon (1845); the Elisabethkerk, Grave (1846; *Rugwerk* lost); the Pieterskerk, 's-Hertogenbosch (1847; since 1978 in the Pieterskerk, Oirschot); St Lambertus, Rosmalen (1850); St Servatius, Schijndel (1852); St Maria Presentatie, Aarle-Rixtel (1854); H. Antonius Abt, Overlangel (1858); St Willibrordus binnen de Veste ('De Duif'), Amsterdam (1864–83); the Jozefskerk, Tilburg (1889), and St Jacobus, Zeeland (1895).

Two of Frans's 14 children became organ builders, Frans Cornelius (ii) (*b* 24 Dec 1834; *d* 2 June 1918) and Wilhelm Jacob (*b* 24 May 1844; *d* 13 April 1929); they renamed the firm 'Bros Smits'. The work of the third generation, both sons of Frans, Henri Wilhelm Joseph (*b* 14 May 1871; *d* 23 July 1944) and Frans Cornelius Joseph (*b* 10 Feb 1878; *d* 15 June 1928) was good but of less importance or artistry. After the 1860s the firm's organs became more Romantic; towards the end of the 19th century mass-produced parts were employed, along with pneumatic actions shortly after 1900. The third generation, which had no heirs, mostly maintained organs rather than building them, and the family firm came to an end in 1925. An extensive Smits archive has been deposited in the Instituut voor Muziekwetenschap in Utrecht.

MAARTEN ALBERT VENTE/ADRI DE GROOT

Smits van Waesberghe, Jos(eph Maria Antonius Franciscus) (*b* Breda, 18 April 1901; *d* Amsterdam, 9 Oct 1986). Dutch musicologist. He was educated at Jesuit seminaries and was ordained a priest. During his studies of philosophy (1922–6) and theology (1930–35) he took lessons from Louis van Tulder, Marius Monnikendam and Johan Winnubst. He taught at Canisius College, Nijmegen (1935–7), and at Ignatius College, Amsterdam (1937–43), as well as at the Rotterdam Conservatory (1939–43) and the Amsterdam Conservatory (1944–66). In 1947 he became an external lecturer in medieval music and music theory at the University of Amsterdam, where in 1957 he was appointed professor. The Pontificio Istituto di Musica Sacra at Rome awarded him an honorary doctorate in 1953. He wrote on many aspects of music and music theory in the Middle Ages and edited many medieval treatises on music, as well as the RISM volume *The Theory of Music from the Carolingian Era up to 1400* (1961). Another field of his studies was the 'biological rhythm' of musical man. In *De muzische mens: zijn motoriek* (1971) he suggested that man through the ages has listened unconsciously to his own 'inner clock', and that the tempo of relaxed walking and the (twice as fast) tempo of marching, together with the inner gradations, return in speaking, singing and so on. In his *Melodieleer* (1950) he created a theory of melody based on the response of people – especially children – to melody.

In addition to his importance as a scholar, Smits van Waesberghe was also an important administrator. He was, among others, general secretary of the Koninklijke Nederlandse Toonkunstenaars Vereniging (1945–58), secretary of the Nederlandse Toonkunstenaars Raad (which he founded in 1948) and president of the Nederlandse Sint-Gregoriusvereniging (1958–67). He was also the editor of several Dutch music periodicals and sat on government commissions on art policies.

ELLINOR BIJVOET/JOOST VAN GEMERT

Smoldon, W(illiam) L(awrence) (*b* London, 21 July 1892; *d* Weeley, Essex, 17 Aug 1974). English educationist and musicologist. He studied at Battersea Training College and King's College, London (BMus 1928), where A.W. Reed encouraged his research into medieval music drama (PhD 1940). From 1934 to 1947 he taught at Stratford Grammar School (where he had himself been a pupil) and from 1948 to 1962 at Cheshire County Training College as senior lecturer in music and lecturer in English. In 1967–8 he lectured at SUNY. Where previous scholars had largely concentrated on the literary texts of medieval music dramas Smoldon was chiefly concerned with their musical presentation in practical performing editions. He published acting editions of eight dramas, notably the plays of Daniel and Herod (both London, 1960) and the *Visitatio sepulchri* (London, 1964). He also published a number of songs, partsongs, piano pieces and suites.

DAVID SCOTT/R

Smolensky, Stepan Vasil'yevich (*b* Kazan, 8/20 Oct 1848; *d* Vasilsursk, nr Kazan, 21 July/2 Aug 1909). Russian musicologist. Although he studied law and philology, Smolensky's interest in church music asserted itself early in his student days when he conducted choral groups. He himself had a deep bass voice, and took part in the singing. After three years as a clerk at court (1872–5) he started teaching at the Kazan Seminary (1875–89) and studying the music of the Old Believers as well as the musical manuscripts in the library of the Kazan Theological Academy, which he catalogued. From 1889 to 1901 he was professor of the history of church music at the Moscow Conservatory (succeeding the founder of scholarly studies in Russian chant, D.V. Razumovsky), and at the same time he became the director of the Synodal School of Church Music in Moscow (1889–1901), where he built up a huge collection of more than 1000 musical manuscripts. From 1901 to 1903 he was the director of the imperial court chapel in St Petersburg (after Arensky's resignation). To the end of his life he worked on research into various problems in the history of Russian chant and was actively involved in the training of professional choir directors.

Smolensky was undoubtedly one of the most gifted scholars to investigate the history and evolution of the Russian chant, particularly the neumatic notation in use in Russia. His most important study is *Azbuka znamennogo peniya (Izveshcheniye o soglasneyshikh pometakh) startsa Alexandra Mezentsa (1668-vo goda)* (Kazan, 1888), a critical edition of the 'alphabet' of the reformed notation in use in the Russian Church. Although apparently not well acquainted with Byzantine notation and its evolution, Smolensky indulged in bold hypotheses, embracing them as fast as he would renounce them. In spite of some deficiencies, his work ranks among the most significant achievements of Russian musicology in the field of Russian chant.

MILOŠ VELIMIROVIĆ

Smolka, Jaroslav (*b* Prague, 8 April 1933). Czech musicologist and composer. He studied musicology with Očadlík and Sychra at Prague University (1951–6). His diploma work on Vycpálek's evolution as a composer (1956) determined his further scholarly interests in the history and theory of Czech 20th-century music. He also studied composition with Dobiáš (1953–6), though he devoted comparatively little time to composing thereafter. He

worked for the gramophone company Supraphon (1956–62), from 1959 as a writer of sleeve notes and music producer. In 1962 he joined the music faculty of the Prague Academy, where he became lecturer in music theory (1968). He obtained the CSc in 1964 with a standard work on the Czech cantata between the wars for which he was awarded the doctorate in 1966. He became professor and head of the department of theory and history of music (1991), and in 1994 he introduced the subject of music production at the same school. In 1996 he became the Dramaturg of the Czech Philharmonic. He also worked for a time as a music critic and popularizer. As a composer he has written songs, choruses, three string quartets, a trumpet sonata, works for bass clarinet and piano, guitar and cello, orchestral pieces, for example *Dialog tvarů* ('The Dialogue of Forms', 1989) and cello concerto *Jenom ne strach* ('Don't be Afraid', 1980), the chamber opera *Hra o zuby* ('A Play for Teeth', 1978) and other compositions.

JOSEF BEK

Smolka, Martin (*b* Prague, 11 August 1959). Czech composer. He studied composition at the Prague Conservatory and at the Academy of Music (1981–6). However, the essential influence upon him was private study with Marek Kopelent (1980–83). After completion of his studies he chose to live as a composer, occasionally working as a ballet répétiteur. In 1983 he was co-founder of the ensemble for new music Agon Orchestra. He was a leading figure in the ensemble as composer, artistic director and pianist. From the mid-1980s he worked with the Czech actor and producer Jaroslav Dušek on collective music theatre improvisations.

From the beginning Smolka was influenced by American minimalist music, whose principles, however, he reworked into the most emotional and agitated works such as *Slzy* ('Tears') (1983). From repetitive techniques he passed to block constructions made up of diatonic material (*Hudba hudbička* ('Music Sweet Music'), 1985–8). At the end of the 1980s Smolka's individual compositional style became fixed. It is characterized by a number of fundamental musical idioms (e.g. reverberation, gasp, disintegration etc.) combined in the construction of a composition around a programme (e.g. *Rain, a Window, Roofs, Chimneys, Pigeons and so . . . and Railway-Bridges, too*, 1992). In his treatment of genres Smolka often goes against convention. For example, in *A v sadech korálů, jež slabě zrůžověly* ('And in the orchard of corals, which turned vaguely rose'), the designation 'voice with piano' requires the solo voice to sing into an open piano in which the sound resonates. *Trzy motywy pastoralne* ('Three pastoral themes') uses Polish folk tunes as the basis of electronic music.

PETR KOFROŇ

Smol'sky, Dzmitri Branislavavich (*b* Minsk, 25 July 1937). Belarusian composer and teacher. He graduated from Bahatïrow's class at the National Conservatory at Minsk in 1960 and since 1962 has taught composition there (professor since 1986). He was a laureate of the State Prize of the BSSR in 1980 for his opera *Sivaya Lyagenda* ('The Grey Legend') and in 1987 was nominated People's Artist of the BSSR. The influences of Prokofiev and Shostakovich can be felt in his early compositions, but by the mid 1960s avant-garde tendencies – including serial, aleatory and sonoristic techniques – became more pronounced in works such as the piano suite *Igra sveta* ('The Play of Light'), the chamber oratorio *Pesni Khirosimï* ('Songs of Hiroshima') and *Oktafoniya*. By the turn of the 1970s he reached another watershed with a return to the traditions of 20th-century tonal music, even though the conciseness of thought, economy of means and the clear constructional logic of the earlier works are still present. From this time onwards large-scale genres predominate, national and typical features are accentuated, and attributes of neo-folklore can be felt. Although his emotionally expressive songs cycles enjoy popularity, the symphonies are his most valuable artistic creations. Here, the tendency toward philosophizing and heightened dramatic contrasts recall Shostakovich; unity of development is achieved and conditioned by concepts of 'mono-intonation'. Eschewing several formal attributes of the symphony, he enriches it with the inclusion of soloistic roles (in the Third Symphony the piano has a solo part, in the fourth, a violin and in the ninth, an electric guitar). The basis for the musical language of the symphonies is polystylism, making extensive use of collage technique. His scores are characterised by bright orchestral colours. Smol'sky is one of the most important Belarusian composers; his work has been defined by technical renewal and has reflected the stylistic evolution of Belarusian music in the second half of the 20th century.

RADOSLAVA ALADOVA

Smorzando (It.: 'extinguishing', 'dimming', 'moderating'; gerund of *smorzare*, scarcely current apart from musical contexts). Fading away. A direction similar in weight to MORENDO; it is abbreviated *smorz.* The form *smorzato* (past participle: 'very quiet') is mentioned in Brossard's *Dictionaire* (1703) as being extremely rare but found in Zotti's op.1.

See also DECRESCENDO and TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Smrček [Smirczeck, Smrschek, Smržek, Smrtžek], **Jan Matěj** [Blasius, Josef Blažej] (*b* Nové Město nad Metují, Bohemia, bap. ? 31 July 1746; *d* Vienna, 19 Aug 1813). Czech composer and music teacher. He entered the order of the Hospitallers, Prague, under the monastic name of Blasius, in 1773. In addition to his services as choirmaster of the order's various churches, Smrček was entrusted with high monastic offices (convent procurator in Vienna, Bohemian province procurator and sub-prior in Prague). In Vienna he came into contact with Joseph Haydn and studied composition under him; he is also reported to have arranged piano scores of Haydn's symphonies and other works. In August 1800 Smrček, at that time sub-prior of the Prague Hospitallers, fled to Dresden with his order's money. He was caught by German police and brought back to Prague. Police records in Prague give his name as Jan, and his age as 54. This suggests a date of birth five years earlier than the previously accepted date of 1751: the only Smrček born in Nové Město nad Metují in 1746 was christened Jan Matěj. His age is confirmed in papers held by his order. He died in Vienna, perhaps in the order prison.

Of his compositions mentioned by Dlabač (symphonies, piano concertos, church music), only the sacred works survive (most are in *CZ-Bm*, *Pnm*); they include four requiems, two offertories, a *Te Deum*, and settings of *Regina coeli* and *Salve regina*, as well as two arias for Advent, a Vesper service and two settings of *Rorate*. Their style, described as 'modest and agreeable' by Smrček's contemporaries, combines for the most part the formulae of a cultivated *galant* speech with simple melodic ideas close to the catholic church song. Some of them have a concertante organ part.

MILAN POŠTOLKA/MICHAELA FREEMANOVÁ

Smutný, Jiří (*b* Prague, 1 April 1932). Czech composer. In 1951 he completed his studies at the Prague Conservatory and enrolled at the academy, where his composition teachers were Karel Janeček and Hlobil. He became accompanist at the singing department of the academy in 1955, moving in 1956 to a similar appointment with the opera company at the National Theatre in Prague. His music draws on Janáček and Prokofiev in particular, and its dramatic vividness has led him to specialize in works for the stage. Smutný's major orchestral work is the piano concerto *Tristia* (1969), a punning title, since 'smutný' is the Czech for 'sad'.

OLDŘICH PUKL (text), JAROMÍR HAVLÍK (work-list)

Smyth, Edward. *See* SMITH, EDWARD.

Smyth, Dame **Ethel (Mary)** (*b* London, 22 April 1858; *d* Woking, 8 May 1944). English composer and writer. Though persistently neglected by the musical establishment, she was a significant and vital voice of the British musical renaissance. During her lifetime she received critical acclaim for her music and her autobiographical and polemical writings, as well as a reputation for militancy through her insistent demand for recognition for herself and other female musicians.

1. LIFE. Born into a military upper middle-class family, Smyth was educated at home and at a London boarding school. Her early musical education included lessons in harmony from Alexander Ewing. In 1877, despite her father's opposition to the idea of women studying music as a professional career, she entered the Leipzig Conservatory, where she studied composition under Reinecke, Jadassohn and Louis Maas. In 1878, disappointed by both staff and students, Smyth left the conservatory but remained in Leipzig, taking harmony and counterpoint lessons from Heinrich von Herzogenberg and receiving encouragement for her musical ambitions through involvement in musical circles which included Brahms, Grieg, Joachim and Clara Schumann. For over ten years she remained based in Europe, but kept in close contact with family and friends in England. Her early compositions, mostly songs, piano pieces and chamber music, were frequently heard at private concerts in Germany, while public hearings for her music included performances at the Leipzig Gewandhaus of her String Quintet op.1 (1883) and Violin Sonata op.7 (1887).

Smyth had settled back in England by the time of her orchestral début in London with her *Serenade* and *Antony and Cleopatra* overture at Crystal Palace in 1890. Both works received favourable reviews from a British press surprised to discover that E.M. Smyth was a woman, but less appreciative of her ebullient Mass in D, first performed by the Royal Choral Society in 1893 after considerable lobbying from her influential friends Mary Ponsonby and the Empress Eugénie. Smyth made no secret of her attraction to women, and her many passionate relationships influenced and affected her music in a variety of ways. The writing of a Mass had been inspired by her attachment to the devout Catholic Pauline Trevelyan.

Smyth's ambition had always been to compose opera. In 1892 she embarked on *Fantasio*, to a libretto by herself and her friend Harry Brewster after a play by Musset. The writing of opera and her tireless efforts, in spite of repeated setbacks, to obtain performances at British and European opera houses became central to Smyth's

1. Ethel Smyth, 1924

professional life. *Fantasio* was eventually performed in Weimar in 1898. Her next opera, *Der Wald* (1899–1901), also to a libretto by herself and Brewster, was first given in Berlin in 1902 and repeated that year in London.

The Wreckers (1902–4) also received its première in Germany (1906, Leipzig); the *Times* critic described it as 'one of the very few modern operas which must count among the great things in art'. Written to a libretto (originally in French) by Brewster, the opera is set in an 18th-century Cornish fishing village whose inhabitants lure ships on to the coastal rocks in order to plunder their cargo. Two lovers defy the tight-knit community and light warning beacons. Discovered by the other villagers, they are sentenced to die in a cave that will be filled by the incoming sea. Intense and dramatic, Smyth's music represented a move to what she described as her 'latest manner'. This was a lighter, less Germanic style, doubtless influenced by her exposure to Parisian musical circles through her infatuation with the influential patron, the Princesse de Polignac. Her four songs for mezzo-soprano and chamber ensemble to French texts (1908) also demonstrate this shift in her musical language.

At the turn of the century the British musical establishment was not well disposed to an unconventional, German-educated female composer, and Smyth faced considerable difficulties in obtaining public performances. Although the 1908 songs were successful in France and Germany, in Britain they were heard mainly at private parties given by society patrons. *The Wreckers* had to wait for a London performance until 1909, when it was produced at His Majesty's Theatre only with the financial support of one of Smyth's friends.

In 1910 Smyth met Emmeline Pankhurst and began two years of dedication to the women's suffrage campaign. Her most significant musical contribution was *Songs of Sunrise* for chorus and optional orchestra, which used her rousing anthem, *The March of the Women*, as a final movement (fig.2). The work had its première in 1911 at a concert of her music given by the LSO and Crystal Palace Choir under Smyth herself. Her involvement in the suffrage movement intensified her politicized awareness of her own position as a woman. Her next opera, *The Boatswain's Mate* (1913–14), whose feisty heroine outwits her bumbling suitor, is her most overtly feminist work. Composed to her own libretto after a short story by W.W. Jacobs, it is a lighthearted comedy and, though not performed until 1916, became the most frequently staged of her six operas.

For a composer who considered Germany her 'spiritual home' and who had two important opera performances scheduled there for 1915, World War I was particularly devastating. During the war years Smyth worked as a radiologist in France and confronted the fact that she was gradually losing her hearing. She continued to compose but also began to produce a steady stream of memoirs and essays, starting with two volumes of autobiography (*Impressions that Remained*, 1919). Her energetic writing style and vivid depiction of the people, passions and adventures of her life proved popular with the public and provided a welcome source of income when the deterioration in her hearing prevented her from composing.

Smyth's contribution to British music had been acknowledged as early as 1910 when she was awarded an honorary doctorate from Durham University. Further recognition followed when she was made DBE in 1922 and awarded an honorary doctorate from Oxford University in 1926. Her music received numerous performances in the 1920s including revivals of the Mass and a revised *Boatswain's Mate*. New works included two further operas, the 'dance-dream' *Fête galante* (1921–2) and the comic opera *Entente cordiale* (1923–4); a Concerto for violin and horn (1927); and her last large-scale work, *The Prison* (1929–30), to a metaphysical text by Brewster. Smyth was also in demand both as conductor of her own works and as a broadcaster. She used her celebrity, access to the press and campaigning abilities to fight for causes that included opportunities for British opera composers and women's right to play in mainstream professional orchestras. Her final years were invigorated by intense relationships with, among others, the writers Edith Somerville and Virginia Woolf.

2. Title-page of Ethel Smyth's 'The March of the Women' (London: Women's Press, 1911), dedicated to the Women's Social and Political Union; note the signature on the top left-hand corner: 'A souvenir of the 28th Aug 1911, E. Pankhurst'

2. WORKS. Smyth's earliest surviving works, the songs, chamber music and piano pieces written during her Leipzig years, show the influence of her German training and immersion in Brahmsian circles. The opp.3 and 4 lieder, probably dating from 1877, display the propulsive energy that characterizes so much of Smyth's music as well as a talent for vocal writing which was to find full expression in her operas. Several of the somewhat laboured piano works incorporate personal programmes, such as the second Piano Sonata, celebrating her infatuation with the actor Marie Geistinger; *Aus der Jugendzeit!!*, dedicated to her first serious love, Lisl von Herzogenberg; or the Variations on an Original Theme, with its depiction of the spirited horse which had thrown her into a ditch.

The three most notable chamber works of the period, the String Quintet op.1, Cello Sonata op.5 and Violin Sonata op.7 demonstrate an assured approach to form and an expressiveness that is most telling in the slow movements. The only substantial chamber work of Smyth's maturity was the String Quartet in E minor. Having composed two movements in 1902, she completed this lengthy but balanced work by adding two further movements in 1912.

Smyth's orchestral works of the 1890s are distinguished by effective use of instrumental colour, despite her lack of formal training in orchestration, and an abundance of ideas and themes. These qualities are found throughout her instrumental music, including the boisterous overture to *The Wreckers* and the evocative prelude to Act 2, *On the Cliffs of Cornwall*, both frequently performed as concert pieces. The virtuoso Concerto for Violin and Horn (1927) shows a characteristic thematic inventiveness mediated by the more restrained idiom of Smyth's later musical language.

Smyth's performances of her music, singing to her own piano accompaniment, were legendary. She was always drawn to writing for the voice, preferring choral works and songs with orchestral or chamber accompaniment to small-scale songs with piano accompaniment. The Mass in D (1891), one of the earliest works in which a clearly individual style can be heard, drives through to the final Gloria with controlled vigour and mastery of contrapuntal technique. Her other vocal works encompass the qualities of raw exuberance (*Hey Nonny No*, 1910), sensuality (the 1908 Songs), poignant tenderness (*Possession*, from Three Songs, 1913) and sombre philosophizing (*The Prison*, 1929–30).

Each of Smyth's six operas is sharply distinguished in form and musical language. She was dissatisfied with *Fantasio*, feeling that her through-composed score contained 'too much passion and violence' for the comic libretto. In the one-act 'Musik-Drama' *Der Wald* she was more successful at matching music to the tragic love story. With *The Wreckers* she reached the height of her dramatic power, creating a work rich in musical characterization and powerful evocations of the sea. The vocal writing is demanding but always compelling, especially in the climactic second-act love duet. A devotee of Gilbert and Sullivan's work, Smyth often argued that English composers were better suited to writing light rather than grand opera. *The Boatswain's Mate* is a small-scale comic opera with a deftness of touch in which set vocal pieces (some incorporating English folksongs) and spoken dialogue for the first act are contrasted with a through-composed second act. Her refined music for *Fête galante*, using old dance forms, reflects the neo-classicism inherent in Baring's story of *commedia dell'arte* entertainers and courtly masquerade. For the military farce *Entente cordiale* she constructed a straightforward score using spoken dialogue and tuneful vocal numbers.

Smyth's turbulent career demanded considerable self-belief and stamina, doubtless aided by her delight in strenuous outdoor pursuits. Although she was by no means the only professional female composer of her generation to achieve public recognition, her forthright determination and astute political awareness ensured that she remained a feminist icon even when her music ceased to be heard after her death. With such supporters as Fuller Maitland or Bruno Walter, Smyth held to the belief that her work would eventually be appreciated even when she was no longer there to fight for it. Since the 1980s, the work of scholars and musicians such as Elizabeth Wood and Odaline de la Martinez has ensured a place in the repertory for her varied and inventive music.

WORKS

STAGE

Fantasio (phantastiche Komödie, 2, H. Brewster and Smyth, after A. de Musset), 1892–4, Weimar, Hoftheater, 24 May 1898, vs (Leipzig, 1899)

Der Wald (Musik-Drama, 1, Brewster and Smyth), 1899–1901, Berlin, Kgl, 9 April 1902; as The Forest, London, CG, 18 July 1902; (Mainz, 1902); see also VOCAL [A Spring Canticle, 1899–1901]

Les naufrageurs [The Wreckers] (lyrical drama, 3, Brewster and Smyth), 1902–4; trans. H. Decker and J. Bernhoff as Strandrecht, Leipzig, Neues, 11 Nov 1906; trans. A. Strettell and Smyth, London, His Majesty's, 22 June 1909; vs (Leipzig, 1906); ov., prelude to Act 2 'On the Cliffs of Cornwall' (Leipzig, 1911)

The Boatswain's Mate (comedy, 1, Smyth, after W.W. Jacobs), 1913–14, rev. 1921; London, Shaftesbury, 28 Jan 1916; vs (Vienna, 1915)

Fête galante (dance-dream, 1, E. Shanks and Smyth, after M. Baring), 1921–2; Birmingham, Repertory, 4 June 1923; vs (Vienna, 1923); arr. as ballet 1932 (Vienna, 1933); see also ORCHESTRAL [suite, 1924]

Entente cordiale (postwar comedy, 1, Smyth), 1923–4; London, RCM, 22 July 1925; Bristol, Royal, 20 Oct 1926; vs (London, 1925); see also ORCHESTRAL [2 Melodies (London, 1929), suite, ?1935]

VOCAL

We watched her breathing through the night (T. Hood), partsong, SATB, 1876, unpubd; Lieder und Balladen (J. Eichendorff, E. Mörike, folksong), op.3, Mez, pf, *c*1877 (Leipzig, 1886); Lieder (G. Buchner, E. von Wildenbruch, Eichendorff, K. Groth, P. Heyse), op.4, Mez, pf, *c*1877 (Leipzig, 1886); The Song of Love (cant., Smyth, after Bible: *Song of Solomon*), op.8, S, T, chorus, orch, 1888; Mass in D, S, A, T, B, chorus, orch, 1891, rev. 1925 (London, 1893); A Spring Canticle (Smyth), chorus, orch, 1899–1901 (Mainz, 1903) [from prologue to Der Wald]; [4] Songs (H. de Régnier, anon.), Mez/Bar, vn, va, vc, fl, hp, perc, 1908 (London, 1909)

Hey Nonny No! (anon.), chorus, orch, 1910, rev. 1920 (Leipzig, 1911); Sleepless Dreams (D.G. Rossetti), chorus, orch, 1910 (Vienna, 1912); The March of the Women (C. Hamilton), unison vv, 1910 (London, 1911); Songs of Sunrise (Smyth, Hamilton), chorus (nos.2 and 3 with opt. orch), 1910 (London, 1911); 3 Moods of the Sea (A. Symons), Mez/Bar, orch (Vienna, 1913); 3 Songs (M. Baring, E. Carnie), Mez/Bar, pf (no.3 with orch) (Vienna, 1913); Dreamings (P. McGill), partsong, SSA (London, 1920); Soul's Joy (J. Donne), chorus (London, 1923) [from Fête galante]; The Prison (Smyth, after H. Brewster) S, B, chorus, orch, 1929–30 (London, 1930)

Unpubd: 5 partsongs on German church tunes; songs to French and German texts, 1v, pf

ORCHESTRAL

Serenade, D, 1890; Ov. to Shakespeare's Antony and Cleopatra, 1890; Fête galante, suite, 1924 (Vienna, 1939); Conc., vn, hn, orch, 1927, arr. vn, hn, pf (London, 1928); 2 Interlinked French Folk Melodies (London, 1929), arr. various inst combinations [from Entente cordiale]; 2 Orch Preludes, 1929–30 [from The Prison]; Entente cordiale, suite, ?1935

Unfinished: Sym., D, small orch (1 movt); Tragi-komische Ouvertüre (sketch)

CHAMBER

3 or more insts: Str Qt, d, 1880; Pf Trio, d, 1880; Str Qnt, E, op.1, 1883 (Leipzig, 1884), arr. as Suite (Leipzig, 1891); Str Qt, c, 1883; Str Trio, D, 1887; Str Qt, e, 1902–12 (Vienna, 1914); Variations on Bonny Sweet Robin (Ophelia's Song), fl, ob, pf, 1927 (London, 1928); Hot Potatoes, 4 tpt, 4 trbn, perc, 1930

1–2 insts: Pf Sonata, C, 1877; Pf Sonata 'Geistinger', c♯, 1877; Pf Sonata D, 1877 [2 movts only]; Variations on an Original Theme (of an Exceedingly Dismal Nature) D♭, pf, 1878; Aus der Jugendzeit!! E. v. H., pf, *c*1878–80; Prelude and Fugue, f♯, pf, 1880; Sonata, c, vc, pf, 1880; [4] Short Chorale Preludes, org, ?1882–4 (London, 1913), arr. str, solo insts (London, 1913);

Prelude and Fugue for Thin People, pf, *c*1883; Sonata, vc, pf, op.5 (Leipzig, 1887); Sonata, vn, pf, op.7 (Leipzig, 1887); Prelude on a Traditional Irish Air, org, 1938 (London, 1939)
Unfinished and undated early works: Str Qnt, b (1 movt); Str Qt, a 'no.1' (1 movt); Str Qt, C; Str Qt, E♭; Str Qt, E♭ (1 movt); Fugue, b, org; Chorale preludes, org; Suite in Dance Forms, pf; Fugue, C, pf; Canons and other pieces, pf

SOPHIE FULLER

Smyth, Richard. *See* BRAMSTON, RICHARD.

Snape Maltings. Opera house and concert hall opened in 1967, a principal venue of the ALDEBURGH FESTIVAL.

Snare drum. Side drum with snares. *See* DRUM, §II, 2.

Snares (Fr. *timbres*, *cordes*; Ger. *Schnarrsaiten*; It. *corde*). The strings of gut, metal or wire-covered silk which are stretched across the lower head of the military and orchestral side drum (hence 'snare' drum). Snares are also applied to the large tabor and the (upper) head of the *tambourin provençal*. The tension of the snare is regulated by a snare mechanism. The crisp brilliant tone of the snare drum is dependent on the correct adjustment of the snares (*see* DRUM).

Snares were introduced into Europe from the east. Arbeau described them as 'twisted threads' and illustrated a side drum with a dual cord in his *Orchésographie* (1588).

JAMES BLADES

Snegassius, Cyriacus. *See* SCHNEEGASS, CYRIACUS.

Snel, Joseph François (*b* Brussels, 30 July 1793; *d* Koekelberg, nr Brussels, 10 March 1861). Belgian violinist, conductor, composer and teacher. He received violin lessons from Corneille Vander Plancken and then studied at the Paris Conservatoire under Baillot and Dourlen while earning his living as a violinist at the Théâtre du Vaudeville. He returned to Brussels at the end of 1813, where he played the violin at the Théâtre de la Monnaie and devoted much time to teaching; in 1818 he founded with J.-H. Mees an academy for musical instruction using P. Galin's new 'Méloplaste' system. He became director of the bandmasters' school of the Netherlands in 1828 and inspector of the army music schools in 1829. As one of the most important musicians in the newly established Kingdom of Belgium, he served as conductor of the Société Royale de la Grande-Harmonie in 1831, *maître de chapelle* at the church of St Michel et Ste Gudule in 1835 and head of the music of the Civic Guard in 1837; he was also conductor at the Monnaie (1831–4).

Snel's Requiem was highly praised by Berlioz on his visit to Brussels in 1842. In the same year Snel was invited to The Hague by William II of the Netherlands to give a concert of his own works, and in 1847 he was named a member of the Classe des Beaux-arts of the Belgian Royal Academy.

WORKS
(*selective list*)

many MSS in B-Bc

BALLETS

all first performed at Brussels, Théâtre de la Monnaie

Frisac, ou La double noce (2), 13 Feb 1825, ov. in pf score (Brussels, *c*1825)
Le page inconstant (3), 27 June 1825
Le cinq juillet (1), 9 July 1825, collab. C.-L. Hanssens jr
Pourceaugnac (3, after Molière), 3 Feb 1826
Les enchantements de Polichinelle, 8 March 1829
Les barricades (1), 3 Feb 1830

OTHER WORKS

Sacred vocal: Messe de requiem, 4vv, chant, org, db; Tantum ergo and Genitori, 4vv, org, 3 trbn, vcs, db; several motets, 2–4vv, org, for the church of Ste Gudule
Secular vocal: Renais à l'espérance o ma noble patrie (cant.), 31 Dec 1831; cant. for the Société de la Grande-Harmonie, solo vv, 4vv, orch, 26 Feb 1842; Rebecca, sérénade, male vv, 3 trbn; 2 chants de fête, 4vv, hns, trbns; Hommage au roi, 4 male vv, vcs/trbns; Au roi et au peuple belge, hymn (J. Aubert), B, pf
Orch: Symphonie concertante, on themes from Guido et Ginevra; Vn Conc.; 2 cl concs.; Cl Concertino: Fantasia, on themes from Norma, cl, orch
Wind band: Caprice et variations brillantes; Grandes marches funèbres; Fantasias and potpourris, on themes from Gustave III, Robert le diable, Les Huguenots, Le domino noir, La fille du régiment, Les martyrs and others; Hn Concertino; Symphonies concertantes for hn, tpt; trpt trbn; 2 hn; 2 cornets à pistons
Chbr and piano: Sérénade espagnole, str qt; 2 duos, vn, pf; Rondo, pf 4 hands

ERIC BLOM/R

Snep, Johan [Sneppe, Jean] (*b* Utrecht, bap. 17 April 1659; *d* Aug 1719, bur. Zierikzee, 2 Sept 1719). Dutch organist, composer and poet. Having studied philosophy in Leiden, he married in 1687, and, probably in 1693, was appointed organist at St Lievens, Zierikzee, Zeeland. His daughters, Agnita Willemina and Johanna Catharina, became his deputies in 1718, and were therefore the first female organists of a reformed church in the Netherlands. He published several poems and a collection of ten *Sonates* op.1, for viola da gamba and continuo (Amsterdam, *c*1698). The sonatas include dances and other movements, among them a set of 30 variations in the third sonata. In the preface he expresses his admiration for the famous viol player Johannes Schenck, with whom he may have studied. The *Amsterdamsche Courant* of 1710 advertises a collection of songs for one and two voices with basso continuo (*Nederduytsche liederen*) by Snep, which is now lost.

MARY CYR/ALBERT CLEMENT

Snetzler [Schnetzler], **John** [Johannes] (*b* Schaffhausen, bap. 6 April 1710; *d* Schaffhausen, 28 Sept 1785). English organ builder of Swiss origin. He seems to have trained and worked initially with his cousin Johann Conrad Speissegger (1699–1781), another organ builder in Schaffhausen. Snetzler may have worked with J.I. Egedacher on the organ at Passau Cathedral (1732–3) and with Christian Müller at St Bavo, Haarlem (1735–8), but there is no conclusive evidence to support this. There is no firm evidence for the date of Snetzler's arrival in London, but the reported existence in 1838 of a claviorgan (by 'Schnetzler and Shudi') apparently made in 1731, but now missing, may indicate that Snetzler came quite young to London. The earliest two extant organs made by Snetzler in London are dated 1742. During the 1740s he made Germanic instruments for Moravian, Calvinist and other immigrant communities; there is evidence for 11 instruments made during this decade, including a CLAVIORGAN made in 1745 in association with Kirkman, but the introduction about 1749 of a standardized mahogany-cased chamber organ, with ornamentation probably designed and carved by his younger brother Leonard, began to fulfil a need for house organs stimulated by Handel's music.

Snetzler's first major church instrument, and the one that made his national reputation, was that ordered in October 1752 at the urging of the young Burney and installed in early 1754 at St Margaret's, King's Lynn, Norfolk. It was quite a large instrument for the time, with 27 speaking stops but, apart from some features of its mechanism, its Rococo case with exuberant carvings and Snetzler's use of two inverted-conical Dulciana ranks (which later he restricted, in cylindrical form, to chamber organs), it was musically a British-style church instrument. His work from then onwards comprised the building of chamber organs, including some 'bureau' organs, and fairly standardized church organs in roughly equal quantity; of these, the church organs are not generally well preserved, but a number of chamber organs are still in near-original condition.

Representative church organs in or near their original positions may still be found at St Laurence's, Ludlow (1764; altered casework and some pipework), Peterhouse Chapel, Cambridge (1765), Swithland Church, Leicestershire (1765), Charleston, South Carolina (1767; restored casework only), Beverley Minster, Yorkshire (1767–9; part of the case and pipework of Snetzler's largest church organ), St Peter's, Drogheda, Ireland (1770; casework, keyboards and pipework), St Andrew's, Nottingham (1776–7; pipework from the large organ made for St Mary's), and All Saints, Rotherham (1777; casework, keyboards and some pipework). Otherwise, many of the major organs made during Snetzler's most productive period – when he lived in the Oxford Road and supervised workshops in Soho which included a 'shop or warehouse' in Dean Street – have not survived or have been so altered that little or nothing now remains of them. These included organs for St John's, Halifax (1763–6), Trinity Church, New York (1764), the Octagon Chapel and Margaret's Chapel, Bath (1767 and *c*1775 respectively), and St Martin's, Leicester (1774).

Representative chamber organs, of various sizes and styles (none in their original surroundings), are to be found at All Saints, Sculthorpe, Norfolk (1755), Clare College, Cambridge (1755), St Mary's, Hillington, Norfolk (1756; a two-keyboard music room organ in a sinuous case), Hatchlands, near Guildford (1759), Eton College (1760, probably made for George III), Wesley's Chapel, Bristol (1761), South Dennis Congregational Church, Massachusetts (1762), the Museum zu Allerheiligen, Schaffhausen (1763; a 'bureau' organ) and St Andrew-by-the-Wardrobe, London (1769; one of 'twins', the other in Milborne Port, Somerset). Two chamber organs remain in their original situations: at Lodge Canongate, Edinburgh (1756; altered) and, uniquely well preserved mechanically, the larger house organ at Cobham Hall, Kent (1778–9). An organ of similar size (1774, with some pipework by Samuel Green, 1783), built inside a case designed by Robert Adam for the house of Sir Watkins Williams Wynn, at St James's Square, London, was sold by auction in April 1995 for £260,000 plus premium to the National Museums and Galleries of Wales. The catalogue of his work by Barnes and Renshaw (1993) identified altogether 113 instruments certainly or very likely made by Snetzler.

At the age of 60, Snetzler was naturalized (the warrant for a Bill of Denization, dated 12 April 1770, includes Abraham and Jacob Kirkman) and it seems that he thereupon took James Jones as a sort of partner in his business. Snetzler apparently retired in 1781 and travelled to Switzerland. As his will was made when he was resident in Westminster on 18 October 1784, it is clear that he returned to London. John Marsh (in his journal of 15/16 November 1783) described Jones as 'late partner with and successor to the famous Snetzler', and mentioned that Jones was then about to retire and sell off his stock. It would seem that Snetzler's business eventually fell into various hands, including those of John Nutt and Jonathan Ohrman (until the former's death in 1804, when Thomas Elliot seems to have taken over), as well as possibly Samuel Green (and his widow and successors, until *c*1847), Henry and John Lincoln, and Henry Bevington. Snetzler also influenced provincial instrument makers,

including Thomas Haxby and John Donaldson in Yorkshire and Brice and Richard Seede in Bristol.

Snetzler's church organs were described by those who knew them in their near-original condition as 'of exquisite beauty, fulness and richness of tone ... blended to absolute perfection', or as 'remarkable for the purity of their tone, and the extreme brilliancy of their Chorus stops' and as spirited, charming and cheerful. Snetzler apparently brought to his otherwise typically British organs a personal style of voicing and thoroughness of tonal finish derived from his south German background; but, apart from the Dulciana, he was not able to establish 'foreign' tonal novelties. The detailing of the casework and the keyboard fittings of Snetzler's organs is elegant, imaginative and south German Rococo in style. Church organ cases are usually made from wainscot (true-grained, imported) oak but occasionally employ 'Spanish' mahogany, an expensive material which Snetzler began to use in the cases of his chamber organs almost as soon as it became fashionable in 1730s London. By 1760, a second design of chamber organ case, incorporating a central near-circular 'oval' compartment of (usually) dummy pipes surrounded by a carved 'wreath' of knotted palms, was introduced; it may have been inspired by Robert Adam's neo-classical designs.

ALAN BARNES, MARTIN RENSHAW

Snodham, Thomas (*d* 1624). English music printer. He was orphaned at an early age; his aunt Lucretia and her husband, printer Thomas East, adopted him and made him an apprentice. He inherited East's business some time between 1608 and 1611. Two of his early imprints read 'Printed by Tho. Easte, alias Snodham', which has given rise to the conjecture that either East or Snodham changed his name, but the adoption details in East's will refute this. Snodham seems to have inherited East's position as the leading London music printer. He later formed a partnership with Matthew Lownes and John Browne, which lasted until his death, and printed many musical works in conjunction with them. Most of his music output is entirely original: although he acquired the copyrights of two other printers he rarely reprinted any of their works. Two exceptions were Snodham's editions of Thomas Morley's *Madrigals to Foure Voices* and John Wilbye's *The First Set of English Madrigals*, both *c*1611. These were produced with the false date of their original edition and incorrectly listed Thomas East as the printer, a strategy most likely intended to evade copyright issues. He printed William Corkine's *The Second Booke of Airs* (1612), four books of madrigals by Michael East (1610–24), the *Ayres* and *Lessons for 1, 2 and 3 Viols* (both 1609) by Alfonso Ferrabosco (ii) and Martin Peerson's *Private Musick* (1620). He was a worthy successor to East; he did not maintain such uniformly high standards, but he was more ready to experiment with existing styles of layout, as seen in Peerson's *Private Musick*, where he adapted the prevailing 'table-book' style, and George Mason's and John Earsden's *Ayres that were sung and played at Brougham Castle* (1618), which demonstrates an early example of a printed score, a remarkable achievement for a printer who worked with type. His premises were at St Botolph without Aldersgate but, curiously, he never included this address in any of his music imprints. His lack of care in dating volumes makes an exact chronology of his output difficult to establish. He was a printer in his own right for less than 13 years and there was no-one of comparable skill to succeed him. Most of his printing materials were acquired by Thomas Harper and, later, William Godbid.

MIRIAM MILLER/JEREMY L. SMITH

Snow, Moses (bap. 7 July 1661; *d* London, 20 Dec 1702). English singer, composer and organist. He was a lay clerk at Westminster Abbey from 1682 and organist of St Katherine Cree in the City of London from 1686. He held both posts concurrently with a place in the king's 'private musick' and the Chapel Royal from 1689; the latter 'extraordinary' at first, then advancing via epistler (1693) to a full place (1694). He sang tenor solos in Purcell's *Hail, bright Cecilia* (1692) and *Celebrate this festival* (1693). In 1696 he was granted the degree of MusB by Cambridge University.

27 songs by Snow (mostly rather undistinguished) occur in late 17th-century songbooks, especially in various issues of *The Theater of Music* (RISM 1685[5]–1687[5]; ed. in MLE, A1, 1983), *Comes amoris* (1686–1694[5]), *Vinculum societatis* (1687[6]–1691[7]) and *The Banquet of Musick* (1688[6]–1691[6]). *The Second Part of Musick's Hand-Maid* (1689[7]) contains a Jig and a Chaconne by him for harpsichord, and parts of an anthem (*O give thanks*) survive at Lichfield Cathedral.

IAN SPINK

Snow, Valentine (*b* ?London, *c*1700; *d* London, Dec 1770). English trumpeter. He was possibly the son of MOSES SNOW. Valentine Snow became the finest trumpeter of his day. In the early 1730s he was a member of Handel's orchestra. From 1733 he played with the Opera of Nobility, returning to Handel's company in May 1736 for *Atlanta*, the overture of which contains a spectacular solo trumpet part. In 1737 he was mentioned as a trumpeter in George II's First Troop of Horseguards, and in 1738 he became a charter member of The Royal Society

of Musicians. In the 1730s and 40s he frequently performed in the New Theatre in the Haymarket, Hickford's Room on Brewer Street and Vauxhall Gardens, where he 'was justly a favourite' (*BurneyH*). It was for Snow that Handel wrote the obbligato parts in *Messiah*, *Samson*, the 'Dettingen' *Te Deum*, *Judas Maccabaeus*, *Music for the Royal Fireworks* and other works. From these it can be deduced that Snow was more gifted for his endurance than for sheer range. He was appointed sergeant-trumpeter to the king in February 1753, succeeding John Shore. Towards the end of his life he was forced to pawn a collar, a mace and three trumpets, all of silver. At least two trumpet duets by him survive anonymously in 18th-century collections (in *US-Cn*) published by Bremner in London (ed. in F.J. Giesbert: *Barocke Spielstücke*, Mainz, n.d.). (S. Sorenson: 'Valentine Snow, Handel's Trumpeter', *Journal of the International Trumpet Guild*, iv (1979), 5–11)
